Phonon-assisted two-photon interband transitions in an indirect-band-gap semiconductor layered quantum well (QW) and quantum well wire (QWW) have been theoretically studied. The spectral dependence of the two-photon absorption (TPA) coefficients in one-dimensional (1D), alpha(sup (1)), 2D, alpha(sup (2)), and also 3D (bulk) alpha(sup (3)) systems have been found to vary according as (2(h/2pi) +/- (h/2pi)Omega - E(sub G))(sup beta) where (h/2pi)omega((h/2pi) Omega) is the photon (phonon) energy and E(sub G) is the effective indirect gap. beta takes the values 0,1,2 and 3 depending on the dimension of the system and the form of momentum matrix elements. The analytical expressions of the electron-phonon matrix elements in QW's systems are given. A numerical calculation in Si(0.5)Ge(0.5) for the TPA coefficients alpha(sup (1)), alpha(sup (2)) and alpha(sup (3)) shows that: alpha(sup (1)) (alpha(sup (2))) for polarization parallel to the confinement directions, is 4(2) orders bigger than alpha(sup (3)) for (allowed-allowed) transitions. Furthermore, (alpha)(sup (1)) is 2 orders of magnitude larger than (alpha)(sup (2)), for both photon polarizations w.r.t. the confinement directions in QW systems. This enhancement of (alpha)(sup (1)) over (alpha)(sup (2)) and (alpha)(sup (3)) is interpreted as due to the additional lateral quantum confinement of the carriers in QWW and also due to the intra subband momentum matrix elements. DOE

TWO-PHOTON ABSORPTION IN AN INDIRECT-GAP SEMICONDUCTOR QUANTUM WELL SYSTEMS 2. EXCITONIC TRANSITIONS
A. R. Hassan Aug. 1993 15 p
(DE94-628880; IC-93/263) Avail: CASI HC A03/MF A01 (US Sales Only)

A theory of phonon-assisted two-phonon exciton transitions in an indirect-band-gap semiconductor layered Quantum Wells (QW) and Quantum Well Wires (QWW) is developed. The expressions for the two-photon absorption coefficients in one-dimensional (1D), alpha(sup (1))(sub ex), 2D, alpha(sup (2))(sub ex) and 3D (bulk), alpha(sup (3))(sub ex) have been calculated. The spectra dependence of these expressions, at the vicinity of the band edge, are found to obey a law (2(h/2pi) omega +/- (h/2pi) Omega - E(sub G) + E(sup b)(sub ex))(sup beta) where (h/2(pi))omega ((h/2pi) Omega) is the photon (phonon) energy, E(sub G) is the effective indirect gap and E(sup b)(sub ex) is the exciton binding energy. The values of beta varies from -1/2 up to 3/2 depending on the dimension of the system and the type of the coupling matrix element involved in each transition process. Before the edge, the final exciton states are of s-symmetry or p-symmetry according to the photon polarizations with respect to the confinement directions in the QW's and to the selection rules allowed by the momentum matrix elements. A numerical estimation for the case Si(0.5)Ge(0.5) show that alpha(sup (1))(sub ex) for both photon polarizations (parallel and perpendicular to the confinement directions of the QW's) is enhanced over the values of alpha(sup (2))(sub ex) and alpha(sup (3))(sub ex) (allowed and forbidden transitions). Furthermore alpha(sup (2))(sub ex) is also enhanced over alpha(sup (3))(sub ex) values for bulk materials. This behaviour of alpha(sub ex)'s is interpreted as due to: (1) the additionalconfinement of the carriers which occur going from 3D (yields) 2D (yields) 1D systems; (2) the photon polarization configurations w.r.t. the confinement directions; and (3) the coupling matrixelements. DOE

THE ROLE OF TRIPLET CORRELATION FUNCTION IN DENSE FLUIDS
R. I. M. A. Rashid Sep. 1993 10 p

(DE94-628476; IC-93/325) Avail: CASI HC A02/MF A01 (US Sales Only)

In the theory of dense liquids, one usually introduces various correlation functions for describing properties of such systems. It has proved impossible to solve these correlation functions exactly and as such one often resorts to some meaningful approximations for their solutions. It is well known that unless proper precautions are taken, the approximate solutions will violate some useful sum rules and thermodynamic consistency conditions. Here the general rules for generating thermodynamically consistent approximate correlation functions are discussed. The role of triplet correlation is elucidated further by calculating a residual correction to the vacancy formation energy via three-particle correlation in rare gas solids. DOE

GAUGE DEPENDENCE AND NEW KIND OF TWO-DIMENSIONAL GRAVITY THEORY WITH TRIVIAL QUANTUM CORRECTIONS
A. T. Banin (Tomsk State Univ., USSR.) and I. L. Shapiro Dec. 1993 9 p
(DE94-628502; IC-93/217) Avail: CASI HC A02/MF A01 (US Sales Only)

We search for the new kinds of classical potentials in two-dimensional induced gravity, which provide the triviality of the one-loop quantum corrections. First of all the gauge dependence of the effective potential is studied. The unique effective potential, introduced by Vilkovisly in 1984 is found to manifest the gauge dependence due to some unusual properties of the theory under consideration. Then we take the gauge of harmonical type, which provides the one-loop finiteness off shell, and then the solution for the required classical potential is found. DOE

SUPERSYMMETRIC SINGLET MAJORONS AND COSMOLOGY
E. J. Chun, H. B. Kim (Seoul National Univ., Republic of Korea.), and A. Lukas (Technische Univ., Munich, Germany.) Feb. 1994 14 p
(DE94-628571; IC-94/40; SNUTP-94-15; TUM-TH-164/94) Avail: CASI HC A03/MF A01 (US Sales Only)

We examine cosmological constraints on the lepton number breaking scale in super-symmetric singlet majoron models. Special attention is drawn to the model dependence arising from the particular choice of a certain majoron extension and a cosmological scenario. We find that the bounds on the symmetry breaking scale can vary substantially. Large values of this scale can be allowed if the decoupling temperature of majoron and majorino exceeds the reheating temperature of inflation. In the opposite case an upper bound depending on the majoron model can be obtained which, however, is unlikely to be much larger than 10(exp 10) GeV. DOE

A SPACE-TIME LATTICE VERSION OF SCALAR ELECTRODYNAMICS
J. Kijowski and A. Thielmann (Polish Academy of Sciences, Warsaw, Poland.) Oct. 1993 30 p
(DE94-628577; IC-93/340) Avail: CASI HC A03/MF A01 (US Sales Only)

A Minkowski-lattice version of quantum scalar electrodynamics is constructed. Quantum field is consequently described in a gauge-independent way, i.e. the algebra of quantum observables of the theory is generated by gauge-invariant operators assigned to zero-, one-, and two-dimensional elements of the lattice. The operators satisfy canonical commutation relations. Field dynamics is formulated in terms of difference equations imposed on the field operators. The dynamics is obtained from a discrete version of the path-integral. DOE

N95-22812# International Centre for Theoretical Physics, Trieste (Italy).
THE OMEGA PI(SUP 0)-TRANSIENT FORM FACTOR WITHIN EFFECTIVE CHIRAL LAGRANGIAN APPROACH
A. N. Ivanov, N. I. Troitskaya, M. Nagy (Slovak Academy of Sciences, Bratislava, Czechoslovakia.), and M. P. Rekalo (Academy of Sciences of the Ukraine, Kharkov, Ukraine.) Jan. 1994 22 p
(DE94-628612; IC-94/29) Avail: CASI HC A03/MF A01 (US Sales Only)

The omega pi(sup 0)-transient form factor is explored within effective chiral Lagrangians, based on the extended Nambu-Jona-Lasinio model and incorporating a gauge-invariant vector dominance approach. It is shown that on the whole the experimental data can be described by the contribution of the virtual rho-meson with many channel parametrization of the imaginary part of the propagator. The processes omega yields pi(sup 0) mu(+) mu(-), e(+) e(-) yields pi(sup 0) omega and tau(-) yields nu(sub tau) pi(-) omega, connected with the omega pi(sup 0)-transient for factor, have been analyzed. The theoretical results are in reasonable agreement with experimental data. The explanation of the observed discrepancies between theoretical results and experimental data goes beyond the effective chiral Lagrangian approach. DOE

N95-23049# International Centre for Theoretical Physics, Trieste (Italy).
STRONG-COUPLING POLARON EFFECT IN QUANTUM DOTS
KaDi Zhu and ShiWei Gu (Tongji Univ., Shanghai, China.) Nov. 1993 10 p
(DE94-628485; IC-93/375) Avail: CASI HC A02/MF A01 (US Sales Only)

Strong-coupling polaron in a parabolic quantum dot is investigated by the Landau-Pekar variational treatment. The polaron binding energy and the average number of virtual phonons around the electron as a function of the effective confinement length of the quantum dot are obtained in Gaussian function approximation. It is shown that both the polaron binding energy and the average number of virtual phonons around the electron decrease by increasing the effective confinement length. The results indicate that the polaronic effects are more pronounced in quantum dots than those in two-dimensional and three-dimensional cases. DOE

BOSE CONDENSATION, MACROSCOPIC QUANTUM PHENOMENA AND ATOMIC SPATIAL CORRELATIONS IN SUPERFLUID He-4
J. Mayers Jun. 1994 10 p
(PB95-139085; RAL-94-063) Avail: Issuing Activity (National Technical Information Service (NTIS))

It is shown that the assumption of a Bose-Einstein condensation of a macroscopic number of particles into a single momentum state necessarily implies that the many particle wavefunction describing the system contains a component with phase coherence over the sample volume. This component has all of the properties usually associated with the 'condensate wavefunction' which is postulated to account for coherent phase effects in superconductors and superfluid He-4. The derivation is completely general, independent of assumptions about the form of the particle interaction, isotropy or anisotropy, translational invariance or temperature. It is shown that the condensate part of the wave function makes no contribution to the static pair correlation function g(r bar), thus explaining the reduction in amplitude of the oscillations in g(r bar) which are observed in neutron scattering measurements on He-4, as the temperature is reduced below the lambda point. SPIN POLARIZED PHOTOEMISSION STUDIES OF MAGNETIC QUANTUM WELL STATES
P. D. Johnson 1994 17 p Presented at the 14th International Colloquium on Magnetic Films and Surfaces, Duesseldorf, Germany, 29 Aug. - 2 Sep. 1994
(Contract DE-AC02-76CH-00016)
(DE95-004218; BNL-60869; CONF-940829-1) Avail: CASI HC A03/MF A01

There is currently considerable technological interest in the properties of transition metal multilayers. In these multilayers, which include Fe/Cr(001) and Cu/Co(001), it is possible to achieve either ferromagnetic or antiferromagnetic coupling of the adjacent ferromagnetic layers depending on the thickness of the intervening layer. The related giant magnetoresistance properties and the large enhancement of the Kerr rotation in these systems make them particularly interesting. In this paper, quantum well states with discrete binding energies dependent on the thickness of the film are observed in copper films deposited on a Co(001) substrate. They are found to be spin polarized, preferentially with minority spin. These states pass up to and through the Fermi level with a frequency identical to the long period of oscillation in the associated magnetic multilayers. In the pre-asymptotic limit the dispersion of these states away from the center of the zone is described by enhanced effective masses. This has implications for theories of the oscillatory exchange coupling that invoke the bulk Fermi surface. DOE

THE IMPACT OF QCD AND LIGHT-CONE QUANTUM MECHANICS ON NUCLEAR PHYSICS
S. J. Brodsky and F. Schlumpf (Maryland Univ., College Park, MD.) Dec. 1994 13 p Presented at the Electromagnetic Probes and the Structure of Hadrons and Nuclei, Erice, Italy, 15-23 Sep. 1994
(Contract DE-AC03-76SF-00515)
(DE95-004293; SU-SLAC-PUB-6729; CONF-9409259-1) Avail: CASI HC A03/MF A01

We discuss a number of novel applications of Quantum Chromodynamics to nuclear structure and dynamics, such as the reduced amplitude formalism for exclusive nuclear amplitudes. We particularly emphasize the importance of light-cone Hamiltonian and Fock State methods as a tool for describing the wavefunctions of composite relativistic many-body systems and their interactions. We also show that the use of covariant kinematics leads to nontrivial corrections to the standard formulae for the axial, magnetic, and quadrupole moments of nucleons and nuclei. DOE

SPONTANEOUS WAVE PACKET REDUCTION
G. C. Ghirardi Jun. 1994 23 p
(DE94-634280; IC-94/117) Avail: CASI HC A03/MF A01 (US Sales Only)

This article has taken into account the main conceptual difficulties met by standard quantum mechanics in dealing with physical processes involving macroscopic systems. An idea stressed has been how J. A. Wheeler's remarks and lucid analysis have been relevant in pinpointing and bringing to its extreme consequences the puzzling aspects of quantum phenomena. The recently proposed models of spontaneous dynamical reduction shown represent a consistent way to overcome the conceptual difficulties of the standard theory. Obviously, many nontrivial problems remain open, the first and more relevant one being that of generalizing the model theories considered to the relativistic case. This is the challenge of the dynamical reduction program. DOE

EFFECTIVE (MU)-TERM IN SUPERSTRING THEORY
I. Antoniadis (Ecole Polytechnique, Palaiseau, France.), E. Gava, K. S. Narain, and T. R. Taylor (Northeastern Univ., Boston, MA.) Apr. 1994 28 p
(DE94-634326; IC-94/72; NUB-3084; CPTH-A282-0194) Avail: CASI HC A03/MF A01 (US Sales Only)

In four-dimensional compactifications of the heterotic superstring theory the Kaehler potential has a form which generically induces a superpotential mass term for Higgs particles once supersymmetry is broken at low energies. This '(mu) term' is analyzed in a model-independent way at the three level and in the one loop approximation, and explicit expressions are obtained for orbifold compactifications. Additional contributions, which arise in the case of supersymmetry breaking induced by gaugino condensation are also discussed. DOE

TACHYONS - IT WAS THE END OF HISTORY?
V. S. Barashenkov 1994 18 p
(DE94-635439; JINR-R-2-94-18) Avail: CASI HC A03/MF A01 (US Sales Only)

Hypothesis about superluminal particle intensively discussed during the 70s and at the beginning of the 80s is almost forgotten now, though faster-than-light particles appear by string and other generalizations of modern theory. The present state of tachyon hypothesis is considered. Special consideration is given to effects and symmetries appearing by attempts of superluminal generalization of the Lorentz transformation. The possible ways to circumvent the difficulties are discussed. Tachyons cannot occur in macroscopic space-time regions, however one may hope to discover them in ultra small intervals where the concepts 'earlier' and 'later' acquire a relative meaning. DOE

COST AND SCHEDULE ANALYTICAL TECHNIQUES DEVELOPMENT Final Report
30 Nov. 1994 21 p
(Contract NAS8-38784)
(NASA-CR-196548; NAS 1.26:196548) Avail: CASI HC A03/MF A01
This contract provided technical services and products to the Marshall Space Flight Center's Engineering Cost Office (PP03) and the Program Plans and Requirements Office (PP02) for the period of 3 Aug. 1991 - 30 Nov. 1994. Accomplishments summarized cover the REDSTAR data base, NASCOM hard copy data base, NASCOM automated data base, NASCOM cost model, complexity generators, program planning, schedules, NASA computer connectivity, other analytical techniques, and special project support. SECURITY CLEARANCES: CONSIDERATION OF SEXUAL ORIENTATION IN THE CLEARANCE PROCESS. REPORT TO CONGRESSIONAL REQUESTERS
24 Mar. 1995 61 p
(GAO/NSIAD-95-21; B-258273) Avail: CASI HC A04/MF A01; GAO, PO Box 6015, Gaithersburg, MD 20884-6015 HC
This General Accounting Office (GAO) report is in response to issues relating to how sexual orientation is treated in the security clearance process for federal civilian and contractor employees. Specific areas include: (1) whether clearances are currently being denied or revoked based on individuals' sexual orientation, (2) whether sexual orientation is being used as a criterion in granting or revoking security clearances, and (3) how concealment of sexual orientation affects the granting or revoking of security clearances. The review was performed at eight agencies that, except for the Central Intelligence Agency, accounted for over 95 percent of the security clearances granted to civilian and contractor employees during fiscal year 1993. Security clearances were not reviewed at the CIA, Defense Intelligence Agency, nor the National Security Agency. Also, the scope of this work did not include military personnel. Derived from text

USING SIMULATION-BASED PROJECTION TO PLAN IN AN UNCERTAIN AND TEMPORALLY COMPLEX WORLD
Ed Yampratoom Sep. 1994 59 p
(Contract F30602-91-C-0010)
(TR-531) Avail: CASI HC A04/MF A01
Temporal projection is a crucial task in planning. In order to achieve its goals, the planner must be able to reason about the consequences of its actions. In the real world, the planner does not have complete information about the environment or even the consequences of its actions. The planner thus must be able to reason about the probabilistic nature of the world and the probabilistic effects of its action. Interactions between actions and events in the world are not only probabilistic; they also are temporally complex. Simultaneous events can interact in many different ways depending

on their temporal properties. An action's temporal relation to its preconditions and effects can also become quite complex. Existing projection systems are weak in their representations of temporally complex actions and events in a probabilistic world. Those that can handle probabilistic situations have a limited representation of temporal relations, while those that can handle complex temporal relations generally assume the world to be completely deterministic. Moreover, the speed of existing probabilistic projection systems are low. These systems are impractical to scale up to larger problems. In this thesis, we propose a practical projection system that can handle both the probabilistic nature of the world and the temporally complex nature of actions. The projection is based on simulation methods. Projection is done by simulating possible courses of events, one at a time. The simulation traces are then collected and processed by a projection module front-end, which provides the planner and the execution monitor with probabilistic estimates of propositions' values. The representation allowed by the system is rich in both the temporal and the probabilistic aspects. Author

NASA PROCUREMENT: CONTRACT AND MANAGEMENT IMPROVEMENTS AT THE JET PROPULSION LABORATORY. REPORT TO CONGRESSIONAL REQUESTERS
30 Dec. 1994 13 p
(GAO/NSIAD-95-40; B-259019) Avail: CASI HC A03/MF A01; GAO, PO Box 6015, Gaithersburg, MD 20884-6015

Selected contract provisions and internal controls at the Jet Propulsion Laboratory (JPL) are examined. JPL is NASA's only Federally Funded Research and Development Center (FFRDC) and is operated under contract by Caltech. JPL is NASA's field installation for solar system exploration and is a major operating division of Caltech. Together, these overlapping roles contribute to unique JPL management and oversight challenges. This report reviews the current contract between NASA and Caltech for the operation of the JPL. INSPECTOR GENERAL: ALLEGED MISCONDUCT BY NASA INSPECTOR GENERAL. REPORT TO CONGRESSIONAL REQUESTERS
10 Feb. 1995 9 p
(GAO/OSI-95-9; B-259046) Avail: CASI HC A02/MF A01; GAO, PO Box 6015, Gaithersburg, MD 20994-6015 HC

This GAO report addresses a March 25, 1994 request from John Glenn, Ranking Minority Member, Committee on Governmental Affairs, United States Senate, concerning the allegations of misconduct by the then-National Aeronautics and Space Administrations (NASA) Inspector General, William Colvin. This report discusses the investigative results concerning Mr. Colvin's activities, as follows: (1) prenotification of senior NASA employees who were targets of impending Office of the Inspector General (OIG) investigations; (2) unauthorized disclosure of grand jury-related information; and (3) premature closing of selected audits and investigations. A STUDY OF POLICY ISSUES AFFECTING THE DEFENSE TECHNICAL INFORMATION CENTER Final Report, Mar. - Oct. 1994
J. Timothy Sprehe 26 Oct. 1994 82 p Revised Sponsored by DTIC
(AD-A286629; DTIC-1994-S-1-Rev) Avail: CASI HC A05/MF A01

This is a report of a research project for the purpose of exploring the federal information policy environment in which DTIC finds itself. The report surveys current federal information policy including 1994 legislative and policy initiatives affecting the Privacy Act, the Paperwork Reduction Act, OMB Circular A-130, the Government Information Locator Service, the information infrastructure and other areas. Special attention was devoted to the Freedom of Information Act, especially electronic FOIA, and to public versus non-public information. The report examines how recent events affecting intellectual property in electronic and network environments will affect DTIC. The report asks the question as to whether the federal government needs a policy document to cover the special situation of scientific and technical information; it concludes that the policy setting of STI is so different from other federal information activities and faces such urgent issues that a separate STI policy is needed. DTIC

EXPERIENCE WITH CANDID: COMPARISON ALGORITHM FOR NAVIGATING DIGITAL IMAGE DATABASES
P. Kelly and M. Cannon 1994 13 p Presented at the 23rd AIPR Workshop on Image and Information Systems: Applications and Opportunities, Washington, DC, 12-14 Oct. 1994
(Contract W-7405-eng-36)
(DE95-000869; LA-UR-94-3086; CONF-9410211-1) Avail: CASI HC A03/MF A01

This paper presents results from the authors experience with CANDID (Comparison Algorithm for Navigating Digital Image Databases), which was designed to facilitate image retrieval by content using a query-by-example methodology. A global signature describing the texture, shape, or color content is first computed for every image stored in a database, and a normalized similarity measure between probability density functions of feature vectors is used to match signatures. This method can be used to retrieve images from a database that are similar to a user-provided example image. Results for three test applications are included. DOE

JACKSON SYSTEM DEVELOPMENT, ENTITY-RELATIONSHIP ANALYSIS AND DATA FLOW MODELS: A COMPARATIVE STUDY
R. J. Wieringa 11 Oct. 1993 26 p
(PB95-127338) Avail: CASI HC A03/MF A01

This paper compares Jackson System Development (JSD) with Entity-Relationship (ER) modelling and with data flow modelling. It is shown that the JSD method can be combined with ER modelling and that the result is a richer method than either of the two. The resulting method can serve as a basis for a practical object-oriented modelling method and has some resemblance to parts of well-known methods, like OMT. It is also argued that JSD and data flow modelling rest on opposite philosophies and cannot be combined in one modelling effort. This is illustrated by transforming a JSD model into a data flow model and listing the differences between the models. The results of this analysis are extrapolated to object-oriented models. NTIS

METHOD FOR BUILDING AND EVALUATING FORMAL SPECIFICATIONS OF OBJECT-ORIENTED CONCEPTUAL MODELS OF DATABASE SYSTEMS
R. J. Wieringa 15 Dec. 1993 138 p
(PB95-127353) Copyright Avail: Issuing Activity (National Technical Information Service (NTIS))

This report describes a Method for Conceptual Modeling (MCM) for building and evaluating formal specifications of object-oriented models of database system behavior. First, a general framework for information system development methods is given. In general, the following elements are needed: requirements determination, conceptual modeling, implementation, and project management methods. MCM is a conceptual modeling method, and must be supplemented with three other kinds of methods. These are: observation, induction, and evaluation methods. In this report, the author concentrates on induction and evaluation methods and merely makes a list of relevant observation methods. The result of following MCM is a conceptual model. NTIS

BROWSING SEMANTICS IN THE TOWER MODEL
W. vanderAalst, P. DeBra, G. J. Houben, and Y. Kornatzky (Ben Gurion Univ. of the Negev, Beersheva, Israel.) 1994 32 p Prepared in cooperation with Ben-Gurion Univ.
(PB95-127221) Avail: CASI HC A03/MF A01

Browsing through a hyperdocument often leads to orientation problems. In order to detect potential problems in the use of a hyperdocument, the authors reduce different types of browsing actions to a unified and well know formalism: the Petri net. In the paper, the authors describe hyperdocuments using an object-oriented model. The model describes objects using a number of different description layers, which are not fixed by the model, and of which none are excluded from the model. In order to use Petri nets to describe browsing, the operations dealing with the hierarchical structure of objects (composites, towers and cities) are translated into operations that are equivalent to the simple follow-link. They combine the operations offered by the hypertext system (or presentation layer) with the link structure of the document, in order to characterize the browsing semantics of document and system as a unity. They do this by translating system features into (virtual) link structures. By using existing analysis tools for (different kinds of) Petri nets one can easily detect potential browsing problems like unreachable nodes and links, dead ends, unlimited numbers of simultaneously displayed nodes, infinite loops, etc. Such analysis is most valuable to hypertext authors, whose biggest problem is the creation of the most appropriate links. PHOTON AND ELECTRON INTERACTION DATABASES AND THEIR USE IN MEDICAL APPLICATIONS
Dermott E. Cullen May 1994 8 p Presented at the World Congress on Medical Physics and Biomedical Engineering Jointly With the International Conference on Medical Physics, Rio de Janeiro, Brazil, 22-26 Aug. 1994
(Contract W-7405-eng-48)
(DE94-015558; UCRL-JC-117419; CONF-940802-1) Avail: CASI HC A02/MF A01

This paper discusses the All Particle-Method photon and electron interaction, and atomic relaxation data bases, that were initially developed for use in medical applications. Currently these data bases are being used in both medical and industrial applications. The All Particle Method data bases are designed to allow modelling of individual collisions in as much detail as possible. Elastic scattering can be modelled as single, as opposed to multiple, scattering events. Ionization can be modelled at the atomic subshell level, to define which subshell was ionized, spectrum of the initially emitted electron, as well as the spectra of electron and photons emitted as the atom relaxes back to neutrality. These data bases are currently being used in applications involving rather small spatial regions, where detailed calculations of individual events are required. While initially designed for use in medical applications, these data bases are now being used in a variety of industrial applications, e.g., transport in microelectronics. DOE

EFFECTIVE MANAGEMENT OF CLASSIFIED DOCUMENTS USING THE LIBRARY DOCUMENT SYSTEM M.S. Thesis
Kenneth F. Elkern, Jr. Sep. 1994 90 p
(AD-A286021) Avail: CASI HC A05/MF A01

Previous automated classified document systems developed commercially or in-house to serve classified libraries with 50,000 documents or less, have been limited by excessive cost or insufficient functionality. The problem addressed by this research was to improve the automated systems available to classified libraries with 50,000 documents or less, by upgrading the Library Document System (LDS) to meet the tracking and document search needs of librarians. The approach taken was to first conduct a survey of 25 classified libraries to assess their document tracking procedures and requirements. Next, a thorough examination of the commercial and in-house automated classified document systems was performed to determine the state of solutions available. Finally, a strategy for modifying LDS was outlined to incorporate the tracking and document search features desired, using modern relational database constructs, structured programming techniques, and user-friendly interface design. As a result of this work, LDS was upgraded to fulfill the needs of classified librarians with 50,000 documents or less. In particular the schemata of the system were extended, a sophisticated search facility was implemented, and a mouse-oriented user-friendly interface was provided. DTIC

MICROGRAVITY EXPERIMENTS SAFETY AND INTEGRATION REQUIREMENTS DOCUMENT TREE
Jean M. Hogan Cleveland, OH NASA Mar. 1995 210 p
(Contract NAS3-26360; RTOP 323-61-05)
(NASA-CR-195447; E-9511; NAS 1.26:195447) Avail: CASI HC A10/MF A03

This report is a document tree of the safety and integration documents required to develop a space experiment. Pertinent document information for each of the top level (tier one) safety and integration documents, and their applicable and reference (tier two) documents has been identified. This information includes: document title, revision level, configuration management, electronic availability, listed applicable and reference documents, source for obtaining the document, and document owner. One of the main conclusions of this report is that no single document tree

exists for all safety and integration documents, regardless of the Shuttle carrier. This document also identifies the need for a single point of contact for customers wishing to access documents. The data in this report serves as a valuable information source for the NASA Lewis Research Center Project Documentation Center, as well as for all developers of space experiments. Author

NASAwide ELECTRONIC PUBLISHING SYSTEM: ELECTRONIC PRINTING AND DUPLICATING, STAGE-2 EVALUATION REPORT (GSFC)
Richard C. Tuey, Robert Lane, and Susan V. Hart Jan. 1995 57 p
(NASA-TM-104615; Rept-95B00026; NAS 1.15:104615) Avail: CASI HC A04/MF A01

The NASA Scientific and Technical Information Office was assigned the responsibility to continue with the expansion of the NASAwide networked electronic duplicating effort by including the Goddard Space Flight Center (GSFC) as an additional node to the existing configuration of networked electronic duplicating systems within NASA. The subject of this report is the evaluation of a networked electronic duplicating system which meets the duplicating requirements and expands electronic publishing capabilities without increasing current operating costs. This report continues the evaluation reported in 'NASA Electronic Publishing System - Electronic Printing and Duplicating Evaluation Report' (NASA TM-106242) and 'NASA Electronic Publishing System - Stage 1 Evaluation Report' (NASA TM-106510). This report differs from the previous reports through the inclusion of an external networked desktop editing, archival, and publishing functionality which did not exist with the previous networked electronic duplicating system. Additionally, a two-phase approach to the evaluation was undertaken; the first was a paper study justifying a 90-day, on-site evaluation, and the second phase was to validate, during the 90-day evaluation, the cost benefits and productivity increases that could be achieved in an operational mode. A benchmark of the functionality of the networked electronic publishing system and external networked desktop editing, archival, and publishing system was performed under a simulated daily production environment. This report can be used to guide others in determining the most cost effective duplicating/publishing alternative through the use of cost/benefit analysis and return on investment techniques. A treatise on the use of these techniques can be found by referring to 'NASA Electronic Publishing System -Cost/Benefit Methodology' (NASA TM-106662). Author

SEARCH HANFORD ACCESSIBLE REPORTS ELECTRONICALLY SYSTEM REQUIREMENTS SPECIFICATION
K. J. Willers 28 Feb. 1994 24 p
(Contract DE-AC06-87RL-10930)
(DE95-004367; WHC-SD-GN-CSRS-30008-Rev-1) Avail: CASI HC A03/MF A01

The Emergency, Safety, & Quality (ESQ) Services organization of Westinghouse Hanford Company (WHC) is experiencing changes related to new programs. The programs include Corrective Actions Management Systems, Self-Assessment, Trend Analysis, and Lessons Learned analysis. The programs are pushing up organizational costs while funding and manpower levels are projected to be dropping. A large cost involved in implementing the new programs is the cost for people to locate unstructured information required to make decisions or write documentation. But, most resources for retrieving information are found in structured database systems. This means that unstructured information that must be located has to be found by one of these methods: (1) searching manually through documents; (2) searching individual documents one at a time with word processing programs; (3) searching through text fields with query systems primarily designed for structured database information; or (4) develop a text search and retrieval system designed for unstructured information. One example of this is using Occurrence Reporting Processing System (ORPS) and Quality, Environmental, and Safety Tracking (QUEST) documents. DOE

(Contract DE-AC06-87RL-10930)
(DE95-004369; WHC-SD-GN-CSDD-30006-Rev-1) Avail: CASI HC A03/MF A01

The Search Hanford Accessible Records Electronically (SHARE) system was produced by a combined team of personnel from Westinghouse Hanford Company (WHC) Corrective Action Data Systems (CADS) and Information Resource Management (IRM) Information and Scientific Systems (ISS) organizations. The ESQD Text Evaluation and exchange Tool (ETEXT) prototype was used as a basis for the requirements used to support this design/build effort. TOPIC was used to build the SHARE application. TOPIC is a text search and retrieval software product produced by the Verity Corporation. The TOPIC source code is not provided with the product, and the programs cannot be changed. TOPIC can be customized for special requirements. The software is fully documented. Help messages, menu and screen layouts, command edits and options, and internal system design are all described in the TOPIC documentation. This System Design Description (SDD) will not reiterate the TOPIC documentation and design. Instead, it will focus on the SHARE installation of TOPIC. This SDD is designed to assist the SHARE database/infobase administrator (DBA) in maintaining and supporting the application. It assumes that the assigned DBA is knowledgeable in using the TOPIC product, and is also knowledgeable in using a personal computer (PC), Disk Operating System (DOS) commands, and the document WHC-CM-3-10. SHARE is an Impact Level 4 system, and all activities related to SHARE must conform with the WHC-CM-3-10 procedures for an Impact Level 4 system. The Alternatives Analysis will be treated as a level 3-Q document, to allow for reference by potential future projects. DOE

SQUEEZING OUT ALL THE PERFORMANCE: USING INGRES FOR A C(SUP 3)I REPORTING SYSTEM
J. J. Tatar 1994 13 p Presented at the 1994 Ingres World, Chicago, IL, 2-6 Oct. 1994
(Contract W-31-109-eng-38)
(DE95-004591; ANL/DIS/CP-84377; CONF-9410204-2) Avail: CASI HC A03/MF A01

Argonne National Laboratory was tasked with developing a data interface between the Joint Theater Level Simulation (JTLS), a military simulation model, and the Warrior Preparation Center C(sup 3)I reporting system, an Ingres-based application. The problem was to build an application that could take buffered input/output (I/O) from the simulation and trade it for direct I/O into an Ingres database. At the same time, the database could have up to 100 concurrent users through the C(sup 3)I reporting system, making retrievals and generating reports, so lock contention had to be minimized. One advantage was that events did not have to be reported immediately. Rather, delays in data updates were desired to emulate reporting delays that occur in the real world. Because of the massive amount of state information generated by time series simulations, a single interface could not maintain the database. Therefore, the problem was partitioned among several processes. One process separated the stream, and others maintained the database with state data from the simulation. A number of specific features in the application are reviewed that may be of interest to other developers faced with the problem of developing applications that have a large transaction throughput. DOE

INFORMATION TECHNOLOGY STANDARDS PROCESS GUIDE
Apr. 1994 33 p
(DE95-003967; DOE/HR-0083) Avail: CASI HC A03/MF A01

This document presents a logical and realistic approach to implementation of the Information Technology Standards Program throughout the Department and its management and operating contractors, as described in Department of Energy 1360.3C, Information Technology Standards, dated October 19, 1992. To take better advantage of commercial advances and investments in information technology resources, it is paramount that the Department of Energy move as rapidly as programmatically feasible to an open systems environment. The process revolves around the selection of interface standards in areas such as multi-system and multi-processor interconnects, operating and database management systems, graphics, and security. This new approach will result in reduced production, operation, and maintenance costs, and more effective system integration. The Information Technology Standards Process Guide provides a model that may be tailored to Department of Energy sites. It also assists sites in understanding the Information Technology Standards Program. It is not an architectural description to be used in implementing a corporate information systems environment. FOURTH NASA GODDARD CONFERENCE ON MASS STORAGE SYSTEMS AND TECHNOLOGIES
Benjamin Kobler, ed. and P. C. Hariharan, ed. (Systems Engineering and Security, Inc., Greenbelt, MD.) Mar. 1994 387 p Conference held in College Park, MD, 28-30 Mar. 1995
(RTOP 505-00-00)
(NASA-CP-3295; Rept-95B00056; NAS 1.55:3295) Avail: CASI HC A17/MF A04

This report contains copies of all those technical papers received in time for publication just prior to the Fourth Goddard Conference on Mass Storage and Technologies, held March 28-30, 1995, at the University of Maryland, University College Conference Center, in College Park, Maryland. This series of conferences continues to serve as a unique medium for the exchange of information on topics relating to the ingestion and management of substantial amounts of data and the attendant problems involved. This year's discussion topics include new storage technology, stability of recorded media, performance studies, storage system solutions, the National Information infrastructure (Infobahn), the future for storage technology, and lessons learned from various projects. There also will be an update on the IEEE Mass Storage System Reference Model Version 5, on which the final vote was taken in July 1994. For individual titles, see N95-24109 through N95-24139.

APPLICATIONS DRIVERS FOR DATA PARKING ON THE INFORMATION SUPERHIGHWAY
Clark E. Johnson, Jr. and Thomas Foeller (Configured Health Care, Inc., Balsam Lake, WI.) *In* NASA. Goddard Space Flight Center, Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 1-5 (For primary document see N95-24108 07-82)
Avail: CASI HC A01/MF A04

As the cost of data storage continues to decline (currently about one-millionth of its cost four decades ago) entirely new applications areas become economically feasible. Many of these new areas involved the extraordinarily high data rates and universal connectivity soon to be provided by the National Information Infrastructure (NII). The commonly held belief is that the main driver for the NII will be entertainment applications. We believe that entertainment applications as currently touted (multi-media, 500 video channels, video-on-demand, etc.) will play an important but far from dominant role in the development of the NII and its data storage components. The most pervasively effective drivers will be medical applications such as telemedicine and remote diagnosis, education and environmental monitoring. These applications have a significant funding base and offer a clearly perceived opportunity to improve the nation's standard of living. The NII's wideband connectivity both nationwide and worldwide requires a broad spectrum of data storage devices with a wide-range of performance capabilities. These storage centers will be dispersed throughout the system. Magnetic recording devices will fill the majority of these new data storage requirements for at least the rest of

this century. The storage needs of various application areas and their respective market sizes will be explored. The comparative performance of various magnetic technologies and competitive alternative storage systems will be discussed. Author

THE DESIGN OF A PETABYTE ARCHIVE AND DISTRIBUTION SYSTEM FOR THE NASA ECS PROJECT
Parris M. Caulk *In* NASA. Goddard Space Flight Center, Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 7-17 (For primary document see N95-24108 07-82)
Avail: CASI HC A03/MF A04

The NASA EOS Data and Information System (EOSDIS) Core System (ECS) will contain one of the largest data management systems ever built - the ECS Science and Data Processing System (SDPS). SDPS is designed to support long term Global Change Research by acquiring, producing, and storing earth science data, and by providing efficient means for accessing and manipulating that data. The first two releases of SDPS, Release A and Release B, will be operational in 1997 and 1998, respectively. Release B will be deployed at eight Distributed Active Archiving Centers (DAAC's). Individual DAAC's will archive different collections of earth science data, and will vary in archive capacity. The storage and management of these data collections is the responsibility of the SDPS Data Server subsystem. It is anticipated that by the year 2001, the Data Server subsystem at the Goddard DAAC must support a near-line data storage capacity of one petabyte. The development of SDPS is a system integration effort in which COTS products will be used in favor of custom components in very possible way. Some software and hardware capabilities required to meet ECS data volume and storage management requirements beyond 1999 are not yet supported by available COTS products. The ECS project will not undertake major custom development efforts to provide these capabilities. Instead, SDPS and its Data Server subsystem are designed to support initial implementations with current products, and provide an evolutionary framework that facilitates the introduction of advanced COTS products as they become available. This paper provides a high-level description of the Data Server subsystem design from a COTS integration standpoint, and discussed some of the major issues driving the design. The paper focuses on features of the design that will make the system scalable and adaptable to changing technologies. Author

A DISTRIBUTED PARALLEL STORAGE ARCHITECTURE AND ITS POTENTIAL APPLICATION WITHIN EOSDIS
William E. Johnston, Brian Tierney, Jay Feuquay (Hughes STX Corp., Sioux Falls, SD.), and Tony Butzer (Hughes STX Corp., Sioux Falls, SD.) *In* NASA. Goddard Space Flight Center, Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 19-33 Sponsored by ARPA (For primary document see N95-24108 07-82)
(Contract DE-AC03-76SF-00098)
Avail: CASI HC A03/MF A04

We describe the architecture, implementation, use of a scalable, high performance, distributed-parallel data storage system developed in the ARPA funded MAGIC gigabit testbed. A collection of wide area distributed disk servers operate in parallel to provide logical block level access to large data sets. Operated primarily as a network-based cache, the architecture supports cooperation among independently owned resources to provide fast, large-scale, on-demand storage to support data handling, simulation, and computation. ROBOTIC TAPE LIBRARY SYSTEM LEVEL TESTING AT NSA: PRESENT AND PLANNED
Michael F. Shields *In* NASA. Goddard Space Flight Center, Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 35-44 (For primary document see N95-24108 07-82)
Avail: CASI HC A02/MF A04

In the present of declining Defense budgets, increased pressure has been placed on the DOD to utilize Commercial Off the Shelf (COTS) solutions to incrementally solve a wide variety of our computer processing requirements. With the rapid growth in processing power, significant expansion of high performance networking, and the increased complexity of applications data sets, the requirement for high performance, large capacity, reliable and secure, and most of all affordable robotic tape storage libraries has greatly increased. Additionally, the migration to a heterogeneous, distributed computing environment has further complicated the problem. With today's open system compute servers approaching yesterday's supercomputer capabilities, the need for affordable, reliable secure Mass Storage Systems (MSS) has taken on an ever increasing importance to our processing center's ability to satisfy operational mission requirements. To that end, NSA has established an in-house capability to acquire, test, and evaluate COTS products. Its goal is to qualify a set of COTS MSS libraries, thereby achieving a modicum of standardization for robotic tape libraries which can satisfy our low, medium, and high performance file and volume serving requirements. In addition, NSA has established relations with other Government Agencies to complete this in-house effort and to maximize our research, testing, and evaluation work. While the preponderance of the effort is focused at the high end of the storage ladder, considerable effort will be extended this year and next at the server class or mid range storage systems. THE ARCHITECTURE OF THE HIGH PERFORMANCE STORAGE SYSTEM (HPSS)
Danny Teaff, Dick Watson (Lawrence Livermore National Lab., Livermore, CA.), and Bob Coyne *In* NASA. Goddard Space Flight Center, Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 45-73 Sponsored by DOE (For primary document see N95-24108 07-82)
Avail: CASI HC A03/MF A04

The rapid growth in the size of datasets has caused a serious imbalance in I/O and storage system performance and functionality relative to application requirements and the capabilities of other system components. The High Performance Storage System (HPSS) is a scalable, next-generation storage system that will meet the functionality and performance requirements or large-scale scientific and commercial computing environments. Our goal is to improve the performance and capacity of storage by two orders of magnitude or more over what is available in the general or mass marketplace today. We are also providing corresponding improvements in architecture and functionality. This paper describes the architecture and functionality of HPSS. Author

A 500 MEGABYTE/SECOND DISK ARRAY **c60**
Thomas M. Ruwart and Matthew T. OKeefe *In* NASA. Goddard Space Flight Center, Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 75-90 Sponsored by Army (For primary document see N95-24108 07-82)
(Contract USRA-C-5555-23)
Avail: CASI HC A03/MF A04

Applications at the Army High Performance Computing Research Center's (AHPCRC) Graphic and Visualization Laboratory (GVL) at the University of Minnesota require a tremendous amount of I/O bandwidth and this appetite for data is growing. Silicon Graphics workstations are used to perform the post-processing, visualization, and animation of multi-terabyte size datasets produced by scientific simulations performed of AHPCRC supercomputers. The M.A.X. (Maximum Achievable Xfer) was designed to find the maximum achievable I/O performance of the Silicon Graphics CHALLENGE/Onyx-class machines that run these applications. Running a fully configured Onyx machine with 12-150MHz R4400 processors, 512MB of 8-way interleaved memory, 31 fast/wide SCSI-2 channel each with a Ciprico disk array controller we were able to achieve a maximum sustained transfer rate of 509.8 megabytes per second. However, after analyzing the results it became clear that the true maximum transfer rate is somewhat beyond this figure and we will need to do further testing with more disk array controllers in order to find the true maximum. NEW ARCHITECTURAL PARADIGMS FOR MULTI-PETABYTE DISTRIBUTED STORAGE SYSTEMS
Richard R. Lee *In* NASA. Goddard Space Flight Center, Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 91-98 (For primary document see N95-24108 07-82)
Avail: CASI HC A02/MF A04

In the not too distant future, programs such as NASA's Earth Observing System, NSF/ARPA/NASA's Digital Libraries Initiative and Intelligence Community's (NSA, CIA, NRO, etc.) mass storage system upgrades will all require multi-petabyte (petabyte: 1015 bytes of bitfile data) (or larger) distributed storage solutions. None of these requirements, as currently defined, will meet their objectives utilizing either today's architectural paradigms or storage solutions. Radically new approaches will be required to not only store and manage veritable 'mountain ranges of data', but to make the cost of ownership affordable, much less practical in today's (and certainly the future's) austere budget environment! Within this paper we will explore new architectural paradigms and project systems performance benefits and dollars per petabyte of information stored. We will discuss essential 'top down' approaches to achieving an overall systems level performance capability sufficient to meet the challenges of these major programs. Author (revised)

OPTIMIZING RAID PERFORMANCE WITH CACHE **c61**
Alex Bouzari *In* NASA. Goddard Space Flight Center, Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 99-103 (For primary document see N95-24108 07-82)
Avail: CASI HC A01/MF A04

We live in a world of increasingly complex applications and operating systems. Information is increasing at a mind-boggling rate. The consolidation of text, voice, and imaging represents an even greater challenge for our information systems. Which forced us to address three important questions: Where do we store all this information? How do we access it? And, how do we protect it against the threat of loss or damage? Introduced in the 1980s, RAID (Redundant Arrays of Independent Disks) represents a cost-effective solution to the needs of the information age. While fulfilling expectations for high storage, and reliability, RAID is sometimes subject to criticisms in the area of performance. However, there are design elements that can significantly enhance performance. They can be subdivided into two areas: (1) RAID levels or basic architecture. And, (2) enhancement schemes such as intelligent caching, support of tagged command queuing, and use of SCSI-2 Fast and Wide features. Derived from text

DOCUMENT IMAGE ARCHIVE TRANSFER FROM DOS TO UNIX **c61**
Susan E. Hauser, Michael J. Gill, and George R. Thoma *In* NASA. Goddard Space Flight Center, Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 105-113 (For primary document see N95-24108 07-82)
Avail: CASI HC A02/MF A04

An R&D division of the National Library of Medicine has developed a prototype system for automated document image delivery as an adjunct to the labor-intensive manual interlibrary loan service of the library. The document image archive is implemented by a PC controlled bank of optical disk drives which use 12 inch WORM platters containing bitmapped images of over 200,000 pages of medical journals. Following three years of routine operation which resulted in serving patrons with articles both by mail and fax, an effort is underway to relocate the storage environment from the DOS-based system to a UNIX-based jukebox whose magneto-optical erasable 5 1/4 inch platters hold the images. This paper describes the deficiencies of the current storage system, the design issues of modifying several modules in the system, the alternatives proposed and the tradeoffs involved. Author

PETABYTE MASS MEMORY SYSTEM USING THE NEWELL OPTICEL(TM) **c60**
Chester W. Newell *In* NASA. Goddard Space Flight Center, Fourth NASA Goddard Conference on Mass Storage Systems and Tecnologies Mar. 1994 p 123-136 (For primary document see N95-24108 07-82)
Avail: CASI HC A03/MF A04

A random access system is proposed for digital storage and retrieval of up to a Petabyte of user data. The system is comprised of stacked memory modules using laser heads writing to an optical medium, in a new shirt-pocket-sized optical storage device called the Opticel. The Opticel described is a completely sealed 'black box' in which an optical medium is accelerated and driven at very high rates to accommodate the desired transfer rates, yet in such a manner that wear is virtually eliminated. It essentially emulates a disk, but with storage area up to several orders of magnitude higher. Access time to the first bit can range from a few milliseconds to a fraction of a second, with time to the last bit within a fraction of a second to a few seconds. The actual times are dependent on the capacity of each Opticel, which ranges from 72 Gigabytes to 1.25 Terabytes. Data transfer rate is limited strictly by the head and electronics, and is 15 Megabits per second in the first version. Independent parallel write/read access to each Opticel is provided using dedicated drives and heads. A Petabyte based on the present Opticel and drive design would occupy 120 cubic feet on a footprint of 45 square feet; with further development, it could occupy as little as 9 cubic feet. Author

Avail: CASI HC A03/MF A04

The Goddard Space Flight Center (GSFC) Distributed Active Archive Center (DAAC) has been operational since October 1, 1993. Its mission is to support the Earth Observing System (EOS) by providing rapid access to EOS data and analysis products, and to test Earth Observing System Data and Information System (EOSDIS) design concepts. One of the challenges is to ensure quick and easy retrieval of any data archived within the DAAC's Data Archive and Distributed System (DADS). Over the 15-year life of EOS project, an estimated several Petabytes (10(exp 15)) of data will be permanently stored. Accessing that amount of information is a formidable task that will require innovative approaches. As a precursor of the full EOS system, the GSFC DAAC with a few Terabits of storage, has implemented a prototype of a constraint-based task and resource scheduler to improve the performance of the DADS. This Honeywell Task and Resource

Scheduler (HTRS), developed by Honeywell Technology Center in cooperation the Information Science and Technology Branch/935, the Code X Operations Technology Program, and the GSFC DAAC, makes better use of limited resources, prevents backlog of data, provides information about resources bottlenecks and performance characteristics. The prototype which is developed concurrently with the GSFC Version 0 (V0) DADS, models DADS activities such as ingestion and distribution with priority, precedence, resource requirements (disk and network bandwidth) and temporal constraints. HTRS supports schedule updates, insertions, and retrieval of task information via an Application Program Interface (API). The prototype has demonstrated with a few examples, the substantial advantages of using HTRS over scheduling algorithms such as a First In First Out (FIFO) queue. The kernel scheduling engine for HTRS, called Kronos, has been successfully applied to several other domains such as space shuttle mission scheduling, demand flow manufacturing, and avionics communications scheduling. A COMPARISON OF ROTARY- AND STATIONARY-HEAD TAPE RECORDERS **c35**
John R. Watkinson *In* NASA. Goddard Space Flight Center, Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 177-183 (For primary document see N95-24108 07-82)
Avail: CASI HC A02/MF A04

Digital recording may take advantage of many types of media, but usually a preferred type of drive or transport emerges for each. In magnetic tape recording, two approaches have emerged in which essentially the same medium is tracked in two radically different ways. This paper compares the characteristics of Rotary- and Stationary-Head transports in an attempt to establish which approach might be considered for a given application. The conclusion is that in many cases there is no obvious choice based on recording physics and that often the choice will be made on the experimental knowledge of the designer. Author

DIGITAL LINEAR TAPE (DLT) TECHNOLOGY AND PRODUCT FAMILY OVERVIEW **c60**
Demetrios Lignos *In* NASA. Goddard Space Flight Center, Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 211-231 (For primary document see N95-24108 07-82)
Avail: CASI HC A03/MF A04

The demand that began a couple of years ago for increased data storage capacity continues. Peripheral Strategies (a Santa Barbara, California, Storage Market Research Firm) projects the amount of data stored on the average enterprise network will grow by 50 percent to 100 percent per year. Furthermore, Peripheral Strategies says that a typical mid-range workstation system containing 30GB to 50GB of storage today will grow at the rate of 50 percent per year. Dan Friedlander, a Boulder, Colorado-based consultant specializing in PC-LAN backup, says, 'The average NetWare LAN is about 8GB, but there are many that have 30GB to 300GB.....' The substantial growth of storage requirements has created various tape technologies that seek to satisfy the needs of today's and, especially, the next generations's systems and applications. There are five leading tape technologies in the market today: QIC (Quarter Inch Cartridge), IBM 3480/90, 8mm, DAT (Digital Audio Tape) and DLT (Digital Linear Tape). Product performance specifications and user needs have combined to classify these technologies into low-end, mid-range, and high-end systems applications. Although the manufacturers may try to position their products differently, product specifications and market requirements have determined that QIC and DAT are primarily low-end systems products while 8mm and DLT are competing for mid-range systems applications and the high-end systems space, where IBM compatibility is not required. The 3480/90 products seem to be used primarily in the IBM market, for interchangeability purposes. There are advantages and disadvantages for each of the tape technologies in the market today. We believe that DLT technology offers a significant number of very important features and specifications that make it extremely attractive for most current as well as emerging new applications, such as Hierarchical Storage Management (HSM). This paper will demonstrate why we think that the DLT technology and family of DLT products will become the technology of choice for most new applications in the mid-range and high-end (non-IBM) markets. THE MAMMOTH PROJECT **c60**
Tim Gerchar *In* NASA. Goddard Space Flight Center, Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 233-236 (For primary document see N95-24108 07-82)
Avail: CASI HC A01/MF A04

On the surface MAMMOTH is a high performance 5.25-inch half-high 8mm helical scan tape drive that records a native 20 Gigabytes of data on Advanced Metal Evaporated media at a sustained throughput of 3 Megabyte per second over a high speed SCSI interface, that is scheduled for production in the second half of 1995. But it's much more than that. Inside its custom designed sheet metal enclosure lies one of the greatest technical achievements of its kind. Exabyte's strategic direction is to increase throughput and capacity while continuing to improve drive, data and media reliability to its products. MAMMOTH adheres to that direction and the description of its technical advances is described in this paper. MAMMOTH can be broken down into four main functional assemblies: high-performance integrated digital electronics, high-reliability tape transport mechanism, high-performance scanner, and advanced metal evaporated media. All this technology is packaged into a standard 5.25-inch half-high form factor that dissipates only 15 watts. Author

INFLUENCE OF TECHNOLOGY ON MAGNETIC TAPE STORAGE DEVICE CHARACTERISTICS **c35**
John J. Gniewek and Stephen M. Vogel *In* NASA. Goddard Space Flight Center, Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 237-251 (For primary document see N95-24108 07-82)
Avail: CASI HC A03/MF A04

There are available today many data storage devices that serve the diverse application requirements of the consumer, professional entertainment, and computer data processing industries. Storage technologies include semiconductors, several varieties of optical disk, optical tape, magnetic disk, and many varieties of magnetic tape. In some cases, devices are developed with specific characteristics to meet specification requirements. In other cases, an existing storage device is modified and adapted to a different application. For magnetic tape storage devices, examples of the former case are 3480/3490 and QIC device types developed for the high end and low end segments of the data processing industry respectively, VHS, Beta, and 8 mm formats developed for consumer video applications,

and D-1, D-2, D-3 formats developed for professional video applications. Examples of modified and adapted devices include 4 mm, 8 mm, 12.7 mm and 19 mm computer data storage devices derived from consumer and professional audio and video applications. With the conversion of the consumer and professional entertainment industries from analog to digital storage and signal processing, there have been increasing references to the 'convergence' of the computer data processing and entertainment industry technologies. There has yet to be seen, however, any evidence of convergence of data storage device types. There are several reasons for this. The diversity of application requirements results in varying degrees of importance for each of the tape storage characteristics. Author

APPROACHES TO 100 Gbit/SQ. IN. RECORDING DENSITY **c35**

Mark H. Kryder *In* NASA. Goddard Space Flight Center, Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 253-254 (For primary document see N95-24108 07-82)

Avail: CASI HC A01/MF A04

A recording density of 10 Gbit/sq. in. is being pursued by a number of companies and universities in the National Storage Industry Consortium. It is widely accepted that this goal will be achieved in the laboratory within a few years. In this paper approaches to achieving 100 Gbit/sq. in. storage densities are considered. A major obstacle to continued scaling of magnetic recording to higher densities is that as the bit size is reduced, the grain size in the magnetic media must be reduced in order that media noise does not become so large that the signal to noise ratio (SNR) degrades sufficiently to make detection impossible. At 100 Gbit/sq. in., the bit size is only 0.006 square micrometers, which, in order to achieve 30 dB SNR, requires a grain size of about 2.5 nm. Such small grains are subject to thermal instability, and the recorded information will degrade over time unless the magnetic anisotropy of the materials used is increased significantly, or the media thickness is made much larger than expected on the basis of scaling today's longitudinal media thickness. A flow geometry and flow rate for mixed flowing gas testing is proposed. Use of an impinging jet of humid polluted air can provide a uniform and reproducible exposure of coupons of metal-based magnetic media. Numerical analysis of the fluid flow and mass transfer in such as system has shown that samples confined within a distance equal to the nozzle radius on the surface of impingement are uniformly accessible to pollutants in the impinging gas phase. The critical factor is the nozzle height above the surface of impingement. In particular, the uniformity of exposure is less than plus/minus 2% for a volumetric flow rate of 1600 cm(exp 3)/minute total flow with the following specifications: For a one inch nozzle, the height of the nozzle opening above the stage should be 0.177 inches; for a 2 inch nozzle - 0.390 inches. Not only is the distribution uniform, but one can calculate the maximum delivery rate of pollutants to the samples for comparison with the observed deterioration. Author

Optical disk-based information systems are being used in private industry and many Federal Government agencies for on-line and long-term storage of large quantities of data. The storage devices that are part of these systems are designed with powerful, but not unlimited, media error correction capacities. The integrity of data stored on optical disks does not only depend on the life expectancy specifications for the medium. Different factors, including handling and storage conditions, may result in an increase of medium errors in size and frequency. Monitoring the potential data degradation is crucial, especially for long term applications. Efforts are being made by the Association for Information and Image Management Technical Committee C21, Storage Devices and Applications, to specify methods for monitoring and reporting to the user medium errors detected by the storage device while writing, reading or verifying the data stored in that medium. The Computer Systems Laboratory (CSL) of the National Institute of Standard and Technology (NIST) has a leadership role in the development of these standard techniques. In addition, CSL is researching other data integrity issues, including the investigation of error-resilient compression algorithms. NIST has conducted care and handling experiments on optical disk media with the objective of identifying possible causes of degradation. NIST work in data integrity and related standards activities is described. Author

We address in this paper data management techniques for efficiently retrieving requested subsets of large datasets stored on mass storage devices. This problem represents a major bottleneck that can negate the benefits of fast networks, because the time to access a subset from a large dataset stored on a mass storage system is much greater that the time to transmit that subset over a network. This paper focuses on very large spatial and temporal datasets generated by simulation programs in the area of climate modeling, but the techniques developed can be applied to other applications that deal with large multidimensional datasets. The main requirement we have addressed is the efficient access of subsets of information contained within much larger datasets, for the purpose of analysis and interactive visualization. We have developed data partitioning techniques that partition datasets into 'clusters' based on analysis of data access patterns and storage device characteristics. The goal is to minimize the number of clusters read from mass storage systems when subsets are requested. We emphasize in this paper proposed enhancements to current storage server protocols to permit control over physical placement of data on storage devices. We also discuss in some detail the aspects of the interface between the application programs and the mass storage system, as well as a workbench to help scientists to design the best reorganization of a dataset for anticipated access patterns. The goal of the NOAA/NESDIS Active Archive was to provide a method of access to an online archive of satellite data. The archive had to manage and store the data, let users interrogate the archive, and allow users to retrieve data from the archive. Practical issues of the system design such as implementation time, cost and operational support were examined in addition to the technical issues. There was a fixed window of opportunity to create an operational system, along with budget and staffing constraints. Therefore, the technical solution had to be designed and implemented subject to constraint imposed by the practical issues. The NOAA/NESDIS Active Archive came online in July of 1994, meeting all of its original objectives. Author

The Alaska SAR Facility (ASF) collects, processes, archives, and distributes data from synthetic aperture radar (SAR) satellites in support of scientific research. ASF has been in operation since 1991 and presently has an archive of over 100 terabytes of data. ASF is performing an analysis of its magnetic tape storage system to ensure long-term preservation of this archive. Future satellite missions have the possibility of doubling to tripling the amounts of data that ASF acquires. ASF is examining the current data systems and the high volume storage, and exploring future concerns and solutions. Author

The Goddard Space Flight Center (GSFC) Distributed Active Archive Center (DAAC) has been developed to enhance Earth Science research by improved access to remote sensor earth science data. Building and operating an archive, even one of a moderate size (a few Terabytes), is a challenging task. One of the critical components of this system is Unitree, the Hierarchical File Storage Management System. Unitree, selected two years ago as the best available solution, requires constant system administrative support. It is not always suitable as an archive and distribution data center, and has moderate performance. The Data Archive and Distribution System (DADS) software developed to monitor, manage, and automate the ingestion, archive, and distribution functions turned out to be more challenging than anticipated. Having the software and tools is not sufficient to succeed. Human interaction within the system must be fully understood to improve efficiency to improve efficiency and ensure that the right tools are developed. One of the lessons learned is that the operability, reliability, and performance aspects should be thoroughly addressed in the initial design. However, the GSFC DAAC has demonstrated that it is capable of distributing over 40 GB per day. A backup system to archive a second copy of all data ingested is under development. This backup system will be used not only for disaster recovery but will also replace the main archive when it is unavailable during maintenance or hardware replacement. The GSFC DAAC has put a strong emphasis on quality at all level of its organization. A Quality team has also been formed to identify quality issues and to propose improvements. The DAAC has conducted numerous tests to benchmark the performance of the system. These tests proved to be extremely useful in identifying bottlenecks and deficiencies in operational procedures. THE GROWTH OF THE UniTree MASS STORAGE SYSTEM AT THE NASA CENTER FOR COMPUTATIONAL SCIENCES: SOME LESSONS LEARNED
Adina Tarshish and Ellen Salmon *In its* Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 345-357 (For primary document see N95-24108 07-82)
Avail: CASI HC A03/MF A04

In October 1992, the NASA Center for Computational Sciences made its Convex-based UniTree system generally available to users. The ensuing months saw growth in every area. Within 26 months, data under UniTree control grew from nil to over 12 terabytes, nearly all of it stored on robotically mounted tape. HiPPI/UltraNet was added to enhance connectivity, and later HiPPI/TCP was added as well. Disks and robotic tape silos were added to those already under UniTree's control, and 18-track tapes were upgraded to 36-track. The primary data source for UniTree, the facility's Cray Y-MP/4-128, first doubled its processing power and then was replaced altogether by a C98/6-256 with nearly two-and-a-half times the Y-MP's combined peak gigaflops. The Convex/UniTree software was upgraded from version 1.5 to 1.7.5, and then to 1.7.6. Finally, the server itself, a Convex C3240, was upgraded to a C3830 with a second I/O bay, doubling the C3240's memory and capacity for I/O. This paper describes insights gained and reinforced with the burgeoning demands on the UniTree storage system and the significant increases in performance gained from the many upgrades. Author

NSSDC PROVIDES NETWORK ACCESS TO KEY DATA VIA NDADS
Jeanne Behnke and Joseph King *In its* Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 359-365 (For primary document see N95-24108 07-82)
Avail: CASI HC A02/MF A04

The National Space Science Data Center (NSSDC) is making a growing fraction of its most customer-desirable data electronically accessible via both the local and wide area networks. NSSDC is witnessing a great increase in its data dissemination owing to this network accessibility. To provide its customers the best data accessibility, the NSSDC makes data available from a nearline, mass storage system, the NSSDC Data Archive and Dissemination Service (NDADS). The NDADS, the initial version was made available in January 1992, is a customized system of hardware and software that provides users access to the nearline data via ANONYMOUS FTP, an e-mail interface (ARMS), and a C-based software library. In January 1992, the NDADS registered 416 requests for 1,957 files. By December of 1994, NDADS had been populated with 800 gigabytes of electronically accessible data and had registered 1458 requests for 20,887 files. In this report we describe the NDADS system, both hardware and software. Later in the report, we discuss some of the lessons that were learned as a result of operating NDADS, particularly in the area of ingest and dissemination. Author

NASA missions, both for earth science and for space science, collect huge amounts of data, and the rate at which data is being gathered is increasing. For example, the EOSDIS project is expected to collect petabytes per year. In addition, these archives are being made available to remote users over the Internet. The ability to manage the growth of the size and request activity of scientific archives depends on an understanding of the access patterns of scientific users. The National Space Science Data Center (NSSDC) of NASA Goddard Space Flight Center has run their on-line mass storage archive of space data, the National Data Archive and Distribution Service (NDADS), since November 1991. A large world-wide space research community makes use of NSSDC, requesting more than 20,000 files per month. Since the initiation of their service, they have maintained log files which record all accesses the archive. In this report, we present an analysis of the NDADS log files. We analyze the log files, and discuss several issues, including caching, reference patterns, clustering, and system loading. Author

EVALUATING THE EFFECT OF ONLINE DATA COMPRESSION ON THE DISK CACHE OF A MASS STORAGE SYSTEM
Odysseas I. Pentakalos (Maryland Univ. Baltimore County, Catonsville, MD.) and Yelena Yesha (Maryland Univ. Baltimore County, Catonsville, MD.) *In its* Fourth NASA Goddard Conference on Mass Storage Systems and Technologies Mar. 1994 p 383-391 (For primary document see N95-24108 07-82)
Avail: CASI HC A02/MF A04

A trace driven simulation of the disk cache of a mass storage system was used to evaluate the effect of an online compression algorithm on various performance measures. Traces from the system at NASA's Center

for Computational Sciences were used to run the simulation and disk cache hit ratios, number of files and bytes migrating to tertiary storage were measured. The measurements were performed for both an LRU and a size based migration algorithm. In addition to seeing the effect of online data compression on the disk cache performance measure, the simulation provided insight into the characteristics of the interactive references, suggesting that hint based prefetching algorithms are the only alternative for any future improvements to the disk cache hit ratio. A plan has been formulated and selected for a NASA Phase 2 SBIR award for using the VLBA tape recorder for recording general data. The VLBA tape recorder is a high-speed, high-density linear tape recorder developed for Very Long Baseline Interferometry (VLBI) which is presently capable of recording at rates up to 2 Gbit/sec and holding up to 1 Terabyte of data on one tape, using a special interface and not employing error correction. A general-purpose interface and error correction will be added so that the recorder can be used in other high-speed, high-capacity applications. Author

The Research Triangle Institute (RTI) is pleased to report the results of NASA contract NASW-4367, 'Operation of a Technology Applications

Team'. Through a period of significant change within NASA, the RTI Team has maintained its focus on helping NASA establish partnerships with U.S. industry for dual use development and technology commercialization. Our emphasis has been on outcomes, such as licenses, industry partnerships and commercialization of technologies that are important to NASA in its mission of contributing to the improved competitive position of U.S. industry. RTI's ongoing commitment to quality and customer responsiveness has driven our staff to continuously improve our technology transfer methodologies to meet NASA's requirements. For example, RTI has emphasized the following areas: (1) Methodology For Technology Assessment and Marketing: RTI has developed an implemented effective processes for assessing the commercial potential of NASA technologies. These processes resulted from an RTI study of best practices, hands-on experience, and extensive interaction with the NASA Field Centers to adapt to their specific needs; (2) Effective Marketing Strategies: RTI surveyed industry technology managers to determine effective marketing tools and strategies. The Technology Opportunity Announcement format and content were developed as a result of this industry input. For technologies with a dynamic visual impact, RTI has developed a stand-alone demonstration diskette that was successful in developing industry interest in licensing the technology; and (3) Responsiveness to NASA Requirements: RTI listened to our customer (NASA) and designed our processes to conform with the internal procedures and resources at each NASA Field Center and the direction provided by NASA's Agenda for Change. This report covers the activities of the Research Triangle Institute Technology Applications Team for the period 1 October 1993 through 31 December 1994. Author

The Research Triangle Institute (RTI) Team has maintained its focus on helping NASA establish partnerships with U.S. industry for dual use development and technology commercialization. Our emphasis has been on outcomes, such as licenses, industry partnerships and commercialization of technologies, that are important to NASA in its mission of contributing to the improved competitive position of U.S. industry. The RTI Team has been successful in the development of NASA/industry partnerships and commercialization of NASA technologies. RTI ongoing commitment to quality and customer responsiveness has driven our staff to continuously improve our technology transfer methodologies to meet NASA's requirements. For example, RTI has emphasized the following areas: (1) Methodology For Technology Assessment and Marketing: RTI has developed and implemented effective processes for assessing the commercial potential of NASA technologies. These processes resulted from an RTI study of best practices, hands-on experience, and extensive interaction with the NASA Field Centers to adapt to their specific needs. (2) Effective Marketing Strategies: RTI surveyed industry technology managers to determine effective marketing tools and strategies. The Technology Opportunity Announcement format and content were developed as a result of this industry input. For technologies with a dynamic visual impact, RTI has developed a stand-alone demonstration diskette that was successful in developing industry interest in licensing the technology. And (3) Responsiveness to NASA Requirements: RTI listened to our customer (NASA) and designed our processes to conform with the internal procedures and resources at each NASA Field Center and the direction provided by NASA's Agenda for Change. This report covers the activities of the Research Triangle Institute Technology Applications Team for the period 1 October 1993 through 31 December 1994. Author

TECHNOLOGY REINVESTMENT PROJECT'S FOCUS AREA: AFFORDABLE POLYMER MATRIX COMPOSITES FOR AIRFRAME STRUCTURES
1994 202 p Workshops held in Seattle, WA, 16 Nov. 1994; and Oakland, CA, 18 Nov. 1994
(PB95-136032) Avail: CASI HC A10/MF A03

The mission of the Technology Reinvestment Project (TRP) is to stimulate the transition to a growing, integrated, national industrial capability that provides the most advanced, affordable military systems and the most competitive commercial products. Programs are structured to expand high quality employment opportunities in dual-use technologies that demonstrably enhance U.S. competitiveness and national security. The publication contains the transparencies from the TRP workshops held in Seattle, WA and Oakland, CA in November, 1994. It includes general sessions on TRP, Technology Development, Regional Technology Alliances, and Manufacturing Education and Training, as well as the break out session on Affordable Polymer Matrix Composites for Airframe Structures. Also included are registration forms for both workshops. NTIS

IRAS SKY SURVEY ATLAS: EXPLANATORY SUPPLEMENT
S. L. Wheelock, T. N. Gautier, J. Chillemi, D. Kester, H. McCallon, C. Oken, J. White, D. Gregorich, F. Boulanger, and J. Good et al May 1994 158 p Sponsored in cooperation with Netherlands Agency for Aerospace Programs and Science and Engineering Research Council
(Contract NAS7-918)
(NASA-CR-197335; JPL-Publ-94-11; NAS 1.26:197335) Avail: CASI HC A08/MF A02

This Explanatory Supplement accompanies the IRAS Sky Survey Atlas (ISSA) and the ISSA Reject Set. The first ISSA release in 1991 covers completely the high ecliptic latitude sky, absolute value of beta is greater than 50 deg, with some coverage down to the absolute value of beta approx. equal to 40 deg. The second ISSA release in 1992 covers ecliptic latitudes of 50 deg greater than the absolute value of beta greater than 20 deg, with some coverage down to the absolute value of beta approx. equal to 13 deg. The remaining fields covering latitudes within 20 deg of the ecliptic plane are of reduced quality compared to the rest of the ISSA fields and therefore are released as a separate IPAC product, the ISSA Reject Set. The reduced quality is due to contamination by zodiacal emission residuals. Special care should be taken when using the ISSA Reject images. In addition to information on the ISSA images, some information is provided in this Explanatory Supplement on the IRAS Zodiacal History File (ZOHF), Version 3.0, which was described in the December 1988 release memo. The data described in this Supplement are available at the National Space Science Data Center (NSSDC) at the Goddard Space Flight Center. The interested reader is referred to the NSSDC for access to the IRAS Sky Survey Atlas (ISSA). Author

LONG TERM VARIABILITY OF B SUPERGIANT WINDS Final Report
Derck L. Massa 18 Jan. 1995 36 p
(NASA Order S-14634-F)
(NASA-CR-197925; NAS 1.26:197925; ARC-R-95-229) Avail: CASI HC A03/MF A01

The object of this observing proposal was to sample wind variability in B supergiants on a daily basis over a period of several days in order to determine the time scale with which density variability occurs in their winds. Three stars were selected for this project: 69 Cyg (B0 Ib), HD 164402 (B0 Ib), and HD 47240 (B1 Ib). Three grey scale representations of the Si IV lambda lambda 1400 doublet in each star are attached. In these figures, time (in days) increases upward, and the wavelength (in terms of velocity

relative to the rest wavelength of the violet component of the doublet) is the abscissa. The spectra are normalized by a minimum absorption (maximum flux) template, so that all changes appear as absorptions. As a result of these observations, we can now state with some certainty that typical B supergiants develop significant wind inhomogeneities with recurrence times of a few days, and that some of these events show signs of strong temporal coherence. MASS LOSS IN THE INTERACTING SEMI-DETACHED BINARY DELTA LIBRAE Final Report
George E. McCluskey, Jr., Carolina P. S. McCluskey, and Yoji Kondo 10 Feb. 1995 9 p Submitted for publication
(Grant NAG5-2100)
(NASA-CR-197924; NAS 1.26:197924) Avail: CASI HC A02/MF A01

The interacting Algol-type binary Delta Librae (AOV + G: V) has been observed with the International Ultraviolet Explorer (IUE) satellite. More than fifty high resolution spectra in the far-ultraviolet and mid-ultraviolet spectrum have been analyzed in order to model the mass flow in the Delta Librae system. The resonance lines of Si IV and C IV are present in absorption and vary in strength both secularly and with phase. The radial velocities of the Si IV and C IV absorption lines generally follow the orbital motion of the primary star but deviate by typically a few tens of kilometers per second in the direction of the observer. The presence of Si IV and C IV features indicates the existence of a region considerably hotter than the normal AOV photosphere and, since these lines are present at all phases, this region must be fairly extensive. These results are interpreted in terms of a 'pseudo-photosphere' around the equatorial region of the AOV star, created by matter being accreted from the G-type companion. The widths of the Si IV and C IV absorption features imply that some of the matter lost by the G-star leaves the system entirely. Author

MULTIBAND VLBI IMAGING OF THE JET IN 3C 345
F. T. Rantakyroe, L. B. Baath, and L. Matveenko 10 May 1994 18 p Prepared in cooperation with Akademiya Nauk SSSR
(PB95-139275) Avail: CASI HC A03/MF A01

The authors present two high dynamic range images of the quasar 3C 345 from observations at 0avelength 18 cm (1990.74) and a wavelength 49 cm (1990.72). The simultaneous observations at two wavelengths have made it possible to construct a spectral index map covering the core and the extended jet. At a distance of about 15 mas, the jet flares out and the emission beyond this is probably due to optically thick self-absorbed synchrotron radiation, while the radiation downstream is due to emission from an adiabatically expanding plasma. The authors conclude that the flaring out is either due to a standing shock caused by the jet passing into a region of different density, or due to large scale oscillations in a helical jet disrupting the collimated flow. DEVELOPMENT OF MICROCHANNEL PLATE X-RAY OPTICS Final Technical Report, 1 Jul. 1992 - 31 Dec. 1994
Philip Kaaret 9 Feb. 1995 12 p
(Grant NAGw-2721)
(NASA-CR-197935; NAS 1.26:197935) Avail: CASI HC A03/MF A01

The goal of this research program was to develop a novel technique for focusing x-rays based on the optical system of a lobster's eye. A lobster eye employs many closely packed reflecting surfaces arranged within a spherical or cylindrical shell. These optics have two unique properties: they have unlimited fields of view and can be manufactured via replication of identical structures. Because the angular resolution is given by the ratio of the size of the individual optical elements to the focal length, optical elements with size on the order of one hundred microns are required to achieve good angular resolution with a compact telescope. We employed anisotropic etching of single crystal silicon wafers for the fabrication of micron-scale optical elements. This technique, commonly referred to as silicon micromachining, is based on silicon fabrication techniques developed by the microelectronics industry. We have succeeded in producing silicon lenses with a geometry suitable for a 1-d focusing x-ray optics. These lenses have an aspect ratio (40:1) suitable for x-ray reflection and have very good optical surface alignment. We have developed a number of process refinements which improved the quality of the lens geometry and the repeatability of the etch process. In addition to the silicon fabrication, an x-ray beam line was constructed at Columbia for testing the optics. Most recently, we have done several experiments to find the fundamental limits that the anisotropic etch process placed on the etched surface roughness. Derived from text

[IUE OBSERVING PROGRAMS: NSOSS, VEOEB, AND PCOEB] Final Report
1995 18 p
(Grant NAG5-1913; SwRI Proj. 15-5301)
(NASA-CR-197424; NAS 1.26:197424) Avail: CASI HC A03/MF A01

The data reduction and analysis of IUE observations were completed. These results were presented from Venus SO2 (of the VEOEB program). The three IUE observing programs were NSOSS, VEOEB, and PCOEB. NSOSS consisted of comparative UV studies. The objectives of NSOSS included: making the first UV observations of 4179 Toutatis (a near-Earth asteroid), Himalia (a satellite of Jupiter), and Hyperion (the Saturnian satellite); obtaining the first radially-dependent information on the UV color of Saturn's rings; gathering uncontaminated UV spectra of Iapetus's bright and dark hemispheres; and obtaining a spectrum of Titania to initiate the comparative study of UV photometric properties in the Uranian system. VEOEB, as stated above, was a study of the SO2 of the Venus atmosphere and surface. Based on past Pioneer Venus and IUE observations, significant SO2 variations have been interpreted as indicating that the long term atmospheric SO2 abundance may be related to large, episodic infections from the surface or interior of Venus. If episodic events occur, then continuing observations of SO2 in the Venus atmosphere play a vital role in understanding Venus's current and past geologic evolution. PCOEB was a study of the Pluto-Charon system. The primary objective of PCOEB was to complete the coverage of the system's UV light curve in order to analyze the surface properties of Pluto-Charon. Publications, abstracts and articles, resulting from this grant are appended to this report. Derived from text

OBSERVATIONAL STUDIES OF THE CLEARING PHASE IN PROTO-PLANETARY DISK SYSTEMS Annual Report, 19 Mar. 1994 - Mar. 3 1995
Carol A. Grady 16 Mar. 1995 6 p
(Contract NASw-4756)
(NASA-CR-197900; NAS 1.26:197900; ARC-R95-234) Avail: CASI HC A02/MF A01

Progress in this study is summarized for its second year. An extensive program of high dispersion UV spectral studies using the IUE (International Ultraviolet Explorer) has resulted in acquisition of 40 Herbig Ae/Be star and related object spectra. We find that accreting, circumstellar gas is detected with velocities consistent with material in free-fall toward the stars in approximately 38% of the sample. With acquisition of optical measurements of the projected stellar rotational velocities, we find that the systems with accreting gas exhibit systematically higher projected rotational velocities than the systems showing signatures of outflowing material only. When combined with polarimetric and photometric data, the IUE spectra for these stars indicate that accretion in intermediate-mass pre-main sequence stars is confined to the plane of the circumstellar dust disk. This is in contrast to lower-mass PMS stars where accretion, persumably along magnetic field lines, is seen at polar latitudes. Our data alsc support significant clearing of the central regions of these circumstellar disks, as originally suggested. The model which most closely matches the observational data is accretion from a disk envelope, as developed by Calvet et al. (1994). Author (revised)

ROSAT OBSERVATION PROGRAM Annual Status Report, 1 Nov. 1993 - 31 Oct. 1994
Jules P. Halpern Mar. 1995 49 p
(Grant NAG5-1935)
(NASA-CR-197683; NAS 1.26:197683) Avail: CASI HC A03/MF A01

In this annual progress report (November 1, 1993 to October 31, 1994), the geminga pulsar was observed by the ROSAT PSPC for 37,000

s in September 1993, in order to make a more detailed study than was previously possible of the pulse profile and two-component spectrum, and to do phase-resolved spectroscopy. This exposure was 2.5 times longer than the original discovery observation. In addition, a shorter 4,000 s exposure was made in October 1992, simultaneously with a GRO observation of Geminga, in order to verify the absolute phasing of the X-ray and gamma-ray peaks. We verified that the spectrum can be described as the sum of two black bodies, whose temperatures are 6 x 10(exp 5) K and 3 - 4 x 10(exp 6) K, with the latter covering 3 x 10(exp -5) the area of the former. The pulse profiles indicate that the intensity of the two emitting regions peak is approximately 90 deg out of phase in rotation, but that the temperatures are otherwise independent of phase. An improved estimate of the distance can be made from the cooler (larger) blackbody component, yielding d = 440 +/- 120 pc. Another program of this report was to obtain PSPC spectra of an important class of Seyfert galaxies which have narrow lines and stron permitted Fe II emission. Sometines called I Zw 1 objects, or narrow-line Seyfert 1s, they are crucial to our understanding of Seyfert classification and models of Seyfert unification. We observed four new objects and, in addition, obtained data on 17 more from the ROSAT archive. A third program combined PSPC and HRI observations of selected Seyfert galaxies which have unusual and variable spectra. The purpose was to disentangle diffuse X-ray emission from the nuclear source, in order to properly interpret the soft X-ray spectral shapes in terms of partial covering and/or warm-absorber models. The targets of the program are NGC 3516, NGC 3227, and NGC 7314. So far, we have only performed a dtailed analysis on NGC 3516. The fourth program of this report is the NGC 1672, the second brightest Seyfert galaxy and one or the original 'composite' Seyfert/starburst galaxies which have evidence for both Seyfert activity and H II regions in their optical spectra. It is one of the lowest luminosity Seyfert 2 galaxies that can be studied in detail.

ENERGETIC PARTICLE OBSERVATIONS AT GEOSYNCHRONOUS ORBIT
E. Geoffrey and D. Reeves 1994 7 p Presented at the Ribubetsu Workshop on Magnetic Storms, Rikubetsu, Japan, 6-8 Oct. 1994
(Contract W-7405-eng-36)
(DE95-000873; LA-UR-94-3067; CONF-9410214-1) Avail: CASI HC A02/MF A01

The region of space near geosynchronous altitudes is important for the processes which contribute to magnetic storms. During substorms magnetic energy is converted to particle kinetic energy resulting in the 'substorm injections' commonly observed at geosynchronous orbit. These injections are manifested in energies from a few tens of keV to hundreds of keV and, on occasion, to the MeV energy range. The injected particles are subject to gradient and curvature drifts and therefore contribute to the ring current. It is common to think of a magnetic storm as a superposition of substorms in which the injection rate into the ring current exceeds the loss rate due to scattering, diffusion, and precipitation. In this paper the authors review current understanding of substorm injections and examine geosynchronous energetic particle data for the signatures of magnetic storms and for clues to the storm-substorm connection. BLACK HOLE FORMATION AND SPACE-TIME FLUCTUATIONS IN TWO DIMENSIONAL DILATON GRAVITY AND COMPLEMENTARITY
S. R. Das (Tata Inst. of Fundamental Research, Bombay, India.) and S. Mukherji Jan. 1994 32 p
(DE94-628514; IC-94/16; TIFR/TH-94-01) Avail: CASI HC A03/MF A01 (US Sales Only)

We study black hole formation in a model of two dimensional dilaton gravity and 24 massless scalar fields with a boundary. We find the most general boundary condition consistent with perfect reflection of matter and the constraints. We show that in the semiclassical approximation and for the generic value of a parameter which characterizes the boundary conditions, the boundary starts receding to infinity at the speed of light whenever the total energy of the incoming matter flux exceeds a certain critical value. This is also the critical energy which marks the onset of black hole formation. We then compute the quantum fluctuations of the boundary and of the rescaled scalar curvature and show that as soon as the incoming energy exceeds this critical value, and asymptotic observer using normal time resolutions will always measure large quantum fluctuations of space-time near the horizon, even though the freely falling observer does not. This is an aspect of black hole complementarity relating directly to quantum gravity effects. DOE

ORIGINS OF INTERSTELLAR AND SOLAR SYSTEM: CARBONACEOUS MATERIALS Final Technical Report, 1 Nov. 1990 - 31 Oct. 1994
Eric D. Feigelson 31 Oct. 1994 4 p
(Grant NAGw-2280)
(NASA-CR-197436; NAS 1.26:197436) Avail: CASI HC A01/MF A01

Carbon is a crucial atom in cosmochemistry. It is well-established that carbon is synthesized in stellar interiors after the main sequence, is ejected by red giants as small carbonaceous grains during their 'carbon star' phase, resides in the interstellar medium, and was later incorporated into the solar system. The mechanisms of carbon grain formation and later chemical processing are complex because, with only small thermodynamic differences,

carbon can take on a bewildering variety of forms: diamond; oxides; carbides; graphite; aliphatic hydrocarbons; polycyclic aromatic hydrocarbons (PAH's); fullerenes; amorphous carbon; and other compounds. These are evidence for many of the forms of carbon found in astronomical observations. We seek to understand the possible astrophysical sites and conditions of the origins of different forms of carbon by combining state-of-the-art capabilities of carbon chemistry with astrophysical modeling. The work is a collaboration between Prof. Frenklach, a leading carbon materials scientist with both laboratory and computer modeling expertise and Prof. Feigelson, an astrophysicist with interests in star formation. The largest effort under this grant was devoted to developing this concept into a comprehensive quantitative model. In addition to explaining the astronomical properties of red giants producing carbonaceous grains, our model also can incorporate recent meteoritic findings. Finally, our induced nucleation grain formation model provides a natural explanation for the widespread presence of PAH emission bands in the Galactic interstellar medium. A brief synopsis of other activities sponsored under this grant and a list of publications from this grant is included. Derived from text

STRUCTURE AND EVOLUTION OF LONG-LIVED SPIRAL PATTERNS IN GALAXIES
K. J. Donner and M. Thomasson 15 Jun. 1994 14 p Prepared in cooperation with Helsinki Univ.
(PB95-139242) Avail: CASI HC A03/MF A01

The authors use N-body simulations to study the non-linear evolution of spontaneous and tidally induced spiral patterns in galaxies on time-scales of several rotation periods of the disc. The authors find that the patterns can sometimes survive with an almost constant amplitude for five revolutions or more, and tend to be regenerated after disappearing temporarily. The pattern velocity is such that the corotation radius is where the self-gravity as measured by the swing amplification of the m = 2 component is strongest, and the amplitude of the pattern is larger when swing amplification is stronger. The shape of the spirals is independent of the origin of the pattern, and corresponds to a critical wave number. The pattern survives longer if the self-gravity of the disc is strong. If self-gravity is weak, the dominant tidal effect is a kinematic spiral at the inter Lindblad resonance. NTIS

INTERSTELLAR MOLECULES IN THE LARGE MAGELLANIC CLOUD
L. E. B. Johansson, H. Olofsson, A. Hjalmarson, R. Gredel, and J. H. Black 14 Jun. 1994 18 p Prepared in cooperation with European Southern Observatory, La Silla, Chile, and Steward Observatory, Tucson, AZ
(PB95-139267) Avail: Issuing Activity (National Technical Information Service (NTIS))

The authors present the results of a mm-wave molecular line search in the Large Magellanic Cloud obtained with the SEST (Swedish ESO Submillimeter Telescope) in the area of the N 159 complex of HII regions. Isotopomers of CO, CS, SO, CN, HCN, HNC, HCO(+) and H2CO have been detected. Some of these molecules have been observed in two transitions allowing excitation temperature estimates. For (13)CO and (12)CO the authors find temperatures close to, or in excess of 10 K, while C(18)O, CS and HCO(+) show temperatures between 5 and 10 K. All observed isotopomer intensity ratios suggest small optical depths provided that Galactic isotopic abundance ratios apply. NTIS

CDM AND OMEGA IN THE LOCAL NEIGHBORHOOD
A. M. Dunn (Cambridge Univ., Cambridge, England.) and R. Laflamme 1995 5 p Presented at the Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM, 2-6 Aug. 1994
(Contract W-7405-eng-36)
(DE95-003683; LA-UR-94-3766; CONF-940816-57) Avail: CASI HC A01/MF A01

Peebles has suggested an interesting method to trace back in time positions of galaxies called the least action method. This method applied on the Local Group galaxies seems to indicate that we live in an Omega approx. 0.1 Universe. The authors have studied a cold dark matter (CDM) N-body simulation with Omega = 0.2 and H = 50km/s /Mpc and compare trajectories traced back from the Least Action Principle and the center of mass of the particle forming CDM halos. They have shown that the agreement between these sets of trajectories is at best qualitative. They have also shown that the line of sight peculiar velocities are underestimated. This discrepancy is due to orphans, CDM particles which do not end up in halos. By varying the density parameter Omega in the least action principle the authors show that using this method they would underestimate the density of the Universe by a factor of 4-5. DOE

SEARCH FOR MILLIMETERWAVE CO EMISSION IN DAMPED LYMAN-ALPHA SYSTEMS
T. Wiklind and F. Combes 18 Jul. 1994 6 p Prepared in cooperation with Observatoire de Paris Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(PB95-139259) Avail: Issuing Activity (National Technical Information Service (NTIS))

A sensitive search for millimeterwave CO emission in 8 damped Lyman-alpha systems, 3 heavy element absorption line systems and one emission line galaxy, at redshifts ranging from 0.5 to 2.8, have yielded upper limits to the amount of molecular gas. The limits still allow relatively high H2 masses, but our results show that damped Lyman-alpha systems are not similar to the hyperluminous infrared galaxies at high redshifts found in the Infrared Astronomical Satellite (IRAS) database. One tentative detection of CO emission at z(sub a)=2.47 remains, but is very uncertain. We are not able to confirm a claimed detection of CO emission at z(sub a)=2.14 towards Q0528-250. NTIS

IMPACT SHOCK AND PENETRATION FRAGMENTATION IN POROUS MEDIA
T. Trucano and D. Grady 1994 27 p Presented at the 1994 Hypervelocity Impact Symposium, Santa Fe, NM, 16-20 Oct. 1994
(Contract DE-AC04-94AL-85000)
(DE94-018900; SAND-93-3866C; CONF-9410131-6) Avail: CASI HC A03/MF A01

In this paper, we discuss experimental, analytical, and computational techniques for studying the high velocity interaction of solid bodies with low density media. We assume that the velocity of the interaction is such that compressible effects in the solid are important. We are particularly interested in the dynamic mechanisms of deformation, erosion, and breakup which dominate the solid response at these high velocities. This is a problem of considerable current interest. Applications include the atmospheric propagation of high velocity aerosols, such as those that might be created in certain kinds of nuclear reactor accidents and explosive weapon accidents. An even more novel application is to the study of the impact of astrophysical bodies, such as meteors, asteroids, and comet fragments into planetary atmospheres. There is significant concern over the threats posed by impacts of these kinds on the earth. We will discuss the application of our methodology to understanding these impacts. In particular, we suggest that the experimental technique we present is applicable to scaled laboratory simulations of some of the phenomena that are believed to be important in atmospheric impacts. CHARGING OF INTERPLANETARY GRAINS Progress Report, 1 Apr. 1994 - 31 Mar. 1995
R. A. Baragiola, R. E. Johnson, and John L. Newcomb Jan. 1995 70 p (Grants NAGw-3954; NSF DMR-91-21272)
(NASA-CR-198032; NAS 1.26:198032; UVA/528488/MSE95/101) Avail: CASI HC A04/MF A01

The objective of this program is to quantify, by laboratory experiments, the charging of ices and other insulators subject to irradiation with electrons, ions and ultraviolet photons and to model special conditions based on the data. The system and conditions to be studied are those relevant for charging of dust in magnetospheric plasmas. The measurements are supplemented by computer simulations of charging or grains under a variety of conditions. Our work for this period involved experiments on water ice, improved models of charging of ice grains for Saturn's E-ring, and the construction of apparatus for electron impact studies and measurements of electron energy distributions. LANGMUIR-LIKE WAVES AND RADIATION IN PLANETARY FORESHOCKS Annual Progress Report, 1 Jan. 1994 - 31 Jan. 1995
Iver H. Cairns, P. A. Robinson, R. R. Anderson, D. A. Gurnett, and W. S. Kurth 31 Jan. 1995 7 p
(Grant NAGw-2040)
(NASA-CR-197376; NAS 1.26:197376) Avail: CASI HC A02/MF A01

The basic objectives of this NASA Grant are to develop theoretical understandings (tested with spacecraft data) of the generation and characteristics of electron plasma waves, commonly known as Langmuir-like waves, and associated radiation near f(sub p) and 2f(sub p) in planetary foreshocks. (Here f(sub p) is plasma frequency.) Related waves and radiation in the source regions of interplanetary type III solar radio bursts provide a simpler observational and theoretical context for developing and testing such understandings. Accordingly, applications to type III bursts constitute a significant fraction of the research effort. The testing of the new Stochastic Growth Theory (SGT) for type III bursts, and its extension and testing for foreshock waves and radiation, constitutes a major longterm strategic goal of the research effort. SOLAR MASS LOSS, SOLAR LITHIUM, AND SOLAR OSCILLATIONS
A. N. Cox and J. A. Guzik 1994 5 p Presented at the 1994 GONG Conference, Los Angeles, CA, May 1994
(Contract W-7405-eng-36)
(DE94-018262; LA-UR-94-2741; CONF-9405222-1) Avail: CASI HC A01/MF A01

Swenson and Faulkner, and Boothroyd et al. investigated the possibility that early main-sequence mass loss via a stronger early solar wind could be responsible for the observed solar lithium and beryllium depletion. This depletion requires a total mass loss of approx. 0.1, nearly independent of the mass loss timescale. The authors have calculated the evolution and oscillation frequencies of solar models including helium and heavier element diffusion, and such early solar mass loss. For models with gradual early mass loss (during approx. 1 Gyr), the early mass loss phase decreases the total amount of helium and heavier elements diffused from the convection zone, and the extent of the diffusion-produced composition gradient just below the convection zone, deteriorating the agreement with observed frequencies for intermediate (ell) modes. The mass loss phase must be confined to approx. 0.2 Gyr or less to solve simultaneously the solar Li/Be problem and avoid discrepancies with solar oscillation frequencies. DOE

PLASMA PROPERTIES AND MAGNETIC FIELD STRUCTURE OF THE SOLAR CORONA, BASED ON COORDINATED MAX 1991 OBSERVATIONS FROM SERTS, THE VLA, AND MAGNETOGRAPHS
Semiannual Report, 12 Jul. 1994 - 12 Jan. 1995
Jeffrey W. Brosius 12 Jan. 1995 12 p
(Contract NASw-4933)
(NASA-CR-197864; NAS 1.26:197864) Avail: CASI HC A03/MF A01

The purposes of this investigation are to determine the plasma properties and magnetic field structure of the solar corona using coordinated observations obtained with NASA/GSFC's Solar EUV rocket Telescope and Spectrograph (SERTS), the Very Large Array (VLA), and magnetographs. The observations were obtained under the auspices of NASA's Max '91 program. The methods of achieving the stated purposes of this investigation are: (1) to use SERTS spectra and spectroheliograms to determine coronal plasma properties such as temperature, density, and emission measure; (2) to use the coronal plasma properties to calculate the intensity of the thermal bremsstrahlung microwave emission from the coronal plasma (the minimum microwave intensity expected from the emitting plasma); (3) to establish which emission mechanism(s) contribute to the observed microwave emission by comparing the calculated thermal bremsstrahlung intensity with the observed microwave intensity; (4) to derive the coronal magnetic field for regions in which gyroemission contributes to the microwave emission by determining the appropriate harmonic of the local electron gyrofrequency; (5) to derive the coronal magnetic field for regions in which thermal bremsstrahlung emission alone is responsible for the observed microwave emission by calculating the magnetic field which yields the observed microwave polarization; (6) to derive three-dimensional models of the coronal plasma and magnetic field which are consistent with all of the EUV spectra and spectroheliograms, as well as with the intensity and polarization maps at all of the microwave observing frequencies; and (7) to compare the coronal magnetic field derived from the coordinated multiwaveband observations with extrapolations from photospheric magnetograms. LONG-BASELINE NEUTRINO OSCILLATION EXPERIMENTS
D. Crane and M. Goodman 1994 6 p Presented at the Snowmass 94: Particle and Astrophysics in the Next Millenium, Snowmass, CO, 29 Jun. - 14 Jul. 1994
(Contract W-31-109-eng-38)
(DE95-004636; ANL-HEP-CP-94-82; CONF-9406269-3) Avail: CASI HC A02/MF A01

There is no unambiguous definition for long baseline neutrino oscillation experiments. The term is generally used for accelerator neutrino oscillation experiments which are sensitive to Delta sq m less than 1.0 eV(sup 2), and for which the detector is not on the accelerator site. The Snowmass N2L working group met to discuss the issues facing such experiments. The Fermilab Program Advisory Committee adopted several recommendations concerning the Fermilab neutrino program at their Aspen meeting immediately prior to the Snowmass Workshop. This heightened the attention for the proposals to use Fermilab for a long-baseline neutrino experiment at the workshop. The plan for a neutrino oscillation program at Brookhaven was also thoroughly discussed. Opportunities at CERN were considered, particularly the use of detectors at the Gran Sasso laboratory. The idea to build a neutrino beam from KEK towards Superkamiokande was not discussed at the Snowmass meeting, but there has been considerable development of this idea since then. Brookhaven and KEK would use low energy neutrino beams, while FNAL and CERN would plan have medium energy beams. This report will summarize a few topics common to LBL proposals and attempt to give a snapshot of where things stand in this fast developing field. DOE

GAMMA RAY EMISSION FROM RADIO PULSARS Final Technical Report, 1 Aug. 1992 - 30 Nov. 1994
Roger W. Romani 30 Nov. 1994 2 p
(Grant NAG5-2307)
(NASA-CR-197917; NAS 1.26:197917) Avail: CASI HC A01/MF A01

While the proposed research received partial funding under this grant, during the term of support substantial progress was made on the development of a new model for the emission of gamma-rays from isolated rotation-powered pulsars. In phase one of the work, we showed how a modified version of the 'outer gap' model of pulsar emission could reproduce the double peaked profiles seen in CGRO pulsar observations. This work also demonstrated the spectrum of gap radiation varies significantly with position in the magnetosphere, and produced approximate computations of the emission from outer magnetosphere gap zones, including primary curvature radiation, gamma - gamma pair production and synchrotron radiation and inverse Compton scattering by the resulting secondary particles. This work was followed in phase two by a more complete treatment of the geometry of the radiation zone, and improved connections with observations at other wavelengths. Author

ANALYSIS OF DATA FROM THE ENERGETIC GAMMA-RAY EXPERIMENT OF THE GAMMA RAY OBSERVATORY Semiannual Status Report No. 7, 15 Aug. 1994 - 15 Feb. 1995
Donald A. Kniffen 15 Feb. 1995 12 p
(Grant NAG5-1742)
(NASA-CR-197347; NAS 1.26:197347) Avail: CASI HC A03/MF A01

The work under the Grant has involved continued participation with the Compton Gamma Ray Observatory Energetic Gamma-Ray Experiment Telescope (EGRET) Team in the analysis of data obtained during instrument operations and the preparation of scientific papers and proposals for future observations. The EGRET team continues to submit IAU Astronomical telegrams and present many papers at scientific meetings. The EGRET Team was also successful on many proposals for the Cycle 4 portion of the mission, including long high galactic latitude studies of the diffuse extragalactic radiation in both the Northern and Southern Galactic Sky. These studies will be used in an effort to establish whether this radiation is truly diffuse or the sum of radiation from unresolved discrete sources such as radio-loud quasars. Data analysis is complete for papers on behalf of the EGRET Team by the author on general sources in the anticenter region of the galaxy, with galactic latitudes from 125 to 220 deg. A paper on this subject is in preparation for publication in the Astrophysical Journal. Another is being prepared on EGRET observations of the COS-B source 2CG135. Work is in progress for a third on the contribution of unresolved pulsars to the galactic diffuse radiations; two other papers are in analysis phase. A number of papers have been published in the last reporting period, and several others are in press currently. A summary of the publications is described. Author

PERFORMANCE OF A LARGE SCALE SCINTILLATING FIBER TRACKER USING VLPC READOUT
Sep. 1994 7 p Presented at the Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM, 2-6 Aug. 1994
(Contract DE-AC02-76CH-03000)
(DE95-003746; FNAL/C-94/312; CONF-940816-64) Avail: CASI HC A02/MF A01

The authors report on results of a cosmic-ray test of a 3,072 channel scintillating fiber tracker using Visible Light Photon Counter (VLPC) readout. This system is a prototype for the D0 detector tracking upgrade, and represents a configuration that is similar to that planned for the final detector. A detailed description of the cosmic ray test, including trigger, fiber configuration, lightguides, VLPC cassettes and cryogenics, calibration system, and DAQ is given. Tracking results with a muon momentum cutoff of 2.5 GeV/c include R-(phi) and R-Z resolution studies, light yield/mip, and efficiency measurements. Preliminary analysis gives a most probable value of 19.2 photoelectrons/mip per fiber doublet, an R-(phi) resolution of 163 microns (before corrections for fiber position survey), and an efficiency of nearly 100% after accounting for known dead channels in the system. A STUDY OF EUV EMISSION FROM THE O4f STAR ZETA PUPPIS Final Report, 15 Feb. 1994 - 14 Feb. 1995
Wayne L. Waldron and John Vallerga (Eureka Scientific, Inc., Oakland, CA.) 9 Feb. 1995 9 p
(NASA Order S-14648-F)
(NASA-CR-197350; NAS 1.26:197350; ARC-R95-233) Avail: CASI HC A02/MF A01

Our 20 ks observation did not allow us to carry out our primary objective, i.e., to test the limitations of deeply embedded EUV and X-ray sources. However, it did provide a very useful constraint in our analysis of a newly acquired high S/N ROSAT PSPC X-ray spectrum of Zeta Pup. In addition, modifications to our stellar wind opacity code have been preformed to investigate the sensitivity of the EUV opacity energy range to different photospheric model flux inputs and different wind structures. These analyses provided the justification for a 140 ks follow up EUVE Cycle III observation of this star. We have recently been informed that our requested observation has been accepted as a Type 1 target for Cycle III. The remainder of this report focuses on the following: (1) a brief background on the status of X-ray emission from OB stars; (2) a discussion on the importance of EUV observations; (3) a discussion of our scientific objectives; and (4) a summary of our technical approach for our Cycle III observation (including the predicted EUV counts for various lines.) HIGH ENERGY COLLIMATING FINE GRIDS Final Technical Report, May 1993 - Mar. 1994
Victor M. Arrieta, Robert H. Tuffias, and Raffaele LaFeria Feb. 1995 12 p
(Contract NAS5-32530)
(NASA-CR-197688; NAS 1.26:197688; ULT/TR-94-6505) Avail: CASI HC A03/MF A01

The objective of this project was to demonstrate the fabrication of extremely tight tolerance collimating grids using a high-Z material, specifically tungsten. The approach taken was to fabricate grids by a replication method involving the coating of a silicon grid substrate with tungsten by chemical vapor deposition (CVD). A negative of the desired grid structure was fabricated in silicon using highly wafering techniques developed for the semiconductor industry and capable of producing the required tolerances. Using diamond wafering blades, a network of accurately spaced slots was machined into a single-crystal silicon surface. These slots were then filled with tungsten by CVD, via the hydrogen reduction of tungsten hexafluoride. Following tungsten deposition, the silicon negative was etched away to leave the tungsten collimating grid structure. The project was divided into five tasks: (1) identify materials of construction for the replica and final

collimating grid structures; (2) identify and implement a micromachining technique for manufacturing the negative collimator replicas (performed by NASA/JPL); (3) develop a CVD technique and processing parameters suitable for the complete tungsten densification of the collimator replicas; (4) develop a chemical etching technique for the removal of the collimator replicas after the tungsten deposition process; and (5) fabricate and deliver tungsten collimating grid specimens. Since 1964, the National Aeronautics and Space Administration (NASA) has supported a program of summer faculty fellowships for engineering and science educators. In a series of collaborations between NASA research and development centers and nearby universities, engineering faculty members spend 10 weeks working with professional peers on research. The Summer Faculty Program Committee of the American Society for Engineering Education supervises the programs. Objectives: (1) To further the professional knowledge of qualified engineering and science faculty members; (2) To stimulate and exchange ideas between participants and NASA; (3) To enrich and refresh the research and teaching activities of participants' institutions; (4) To contribute to the research objectives of the NASA center. For individual titles, see N95-23277 through N95-23333.

IDEALIZED TEXTILE COMPOSITES FOR EXPERIMENTAL/ANALYTICAL CORRELATION Abstract Only **c24**
Daniel O. Adams *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 57 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

Textile composites are fiber reinforced materials produced by weaving, braiding, knitting, or stitching. These materials offer possible reductions in manufacturing costs compared to conventional laminated composites. Thus, they are attractive candidate materials for aircraft structures. To date, numerous experimental studies have been performed to characterize the mechanical performance of specific textile architectures. Since many materials and architectures are of interest, there is a need for analytical models to predict the mechanical properties of a specific textile composite material. Models of varying sophistication have been proposed based on mechanics of materials, classical laminated plate theory, and the finite element method. These modeling approaches assume an idealized textile architecture and generally consider a single unit cell. Due to randomness of the textile architectures produced using conventional processing techniques, experimental data obtained has been of limited use for verifying the accuracy of these analytical approaches. This research is focused on fabricating woven textile composites with highly aligned and accurately placed fiber tows that closely represent the idealized architectures assumed in analytical models. These idealized textile composites have been fabricated with three types of layer nesting configurations: stacked, diagonal, and split-span. Compression testing results have identified strength variations as a function of nesting. Moire interferometry experiments are being used to determine localized deformations for detailed correlation with model predictions. Author

STUDY OF ATMOSPHERIC PARAMETERS MEASUREMENTS USING MM-WAVE RADAR IN SYNERGY WITH LITE-2 Abstract Only **c46**
Madeleine Y. Andrawis *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 58 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

The Lidar In-Space Technology Experiment, (LITE), has been developed, designed, and built by NASA Langley Research Center, to be flown on the space shuttle 'Discovery' on September 9, 1994. Lidar, which stands for light detecting and ranging, is a radar system that uses short pulses of laser light instead of radio waves in the case of the common radar. This

space-based lidar offers atmospheric measurements of stratospheric and tropospheric aerosols, the planetary boundary layer, cloud top heights, and atmospheric temperature and density in the 10-40 km altitude range. A study is being done on the use, advantages, and limitations of a millimeterwave radar to be utilized in synergy with the Lidar system, for the LITE-2 experiment to be flown on a future space shuttle mission. The lower atmospheric attenuation, compared to infrared and optical frequencies, permits the millimeter-wave signals to penetrate through the clouds and measure multi-layered clouds, cloud thickness, and cloud-base height. These measurements would provide a useful input to radiation computations used in the operational numerical weather prediction models, and for forecasting. High power levels, optimum modulation, data processing, and high antenna gain are used to increase the operating range, while space environment, radar tradeoffs, and power availability are considered. Preliminary, numerical calculations are made, using the specifications of an experimental system constructed at Georgia Tech. The noncoherent 94 GHz millimeter-wave radar system has a pulsed output with peak value of 1 kW. The backscatter cross section of the particles to be measured, that are present in the volume covered by the beam footprint, is also studied. Author

A MANUFACTURING DATABASE OF ADVANCED MATERIALS USED IN SPACECRAFT STRUCTURES Abstract Only **c18**

Han P. Bao *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 59 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

Cost savings opportunities over the life cycle of a product are highest in the early exploratory phase when different design alternatives are evaluated not only for their performance characteristics but also their methods of fabrication which really control the ultimate manufacturing costs of the product. In the past, Design-To-Cost methodologies for spacecraft design concentrated on the sizing and weight issues more than anything else at the early so-called 'Vehicle Level' (Ref: DOD/NASA Advanced Composites Design Guide). Given the impact of manufacturing cost, the objective of this study is to identify the principal cost drivers for each materials technology and propose a quantitative approach to incorporating these cost drivers into the family of optimization tools used by the Vehicle Analysis Branch of NASA LaRC to assess various conceptual vehicle designs. The advanced materials being considered include aluminum-lithium alloys, thermoplastic graphite-polyether etherketone composites, graphite-bismaleimide composites, graphite- polyimide composites, and carbon-carbon composites. Two conventional materials are added to the study to serve as baseline materials against which the other materials are compared. These two conventional materials are aircraft aluminum alloys series 2000 and series 7000, and graphite-epoxy composites T-300/934. The following information is available in the database. For each material type, the mechanical, physical, thermal, and environmental properties are first listed. Next the principal manufacturing processes are described. Whenever possible, guidelines for optimum processing conditions for specific applications are provided. Finally, six categories of cost drivers are discussed. They include, design features affecting processing, tooling, materials, fabrication, joining/assembly, and quality assurance issues. It should be emphasized that this database is not an exhaustive database. Its primary use is to make the vehicle designer aware of some of the most important aspects of manufacturing associated with his/her choice of the structural materials. The other objective of this study is to propose a quantitative method to determine a Manufacturing Complexity Factor (MCF) for each material being contemplated. This MCF is derived on the basis of the six cost drivers mentioned above plus a Technology Readiness Factor which is very closely related to the Technology Readiness Level (TRL) as defined in the Access To Space final report. Short of any manufacturing information, our MCF is equivalent to the inverse of TRL. As more manufacturing information is available, our MCF is a better representation (than TRL) of the fabrication processes involved. The most likely application for MCF is in cost modeling for trade studies. On-going work is being pursued to expand the potential applications of MCF. Author

INFINITE POSSIBILITIES: COMPUTATIONAL STRUCTURES TECHNOLOGY Abstract Only **c39**

Sherilee F. Beam *In its* 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 60 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

Computational Fluid Dynamics (or CFD) methods are very familiar to the research community. Even the general public has had some exposure to CFD images, primarily through the news media. However, very little attention has been paid to CST--Computational Structures Technology. Yet, no important design can be completed without it. During the first half of this century, researchers only dreamed of designing and building structures on a computer. Today their dreams have become practical realities as computational methods are used in all phases of design, fabrication and testing of engineering systems. Increasingly complex structures can now be built in even shorter periods of time. Over the past four decades, computer technology has been developing, and early finite element methods have grown from small in-house programs to numerous commercial software programs. When coupled with advanced computing systems, they help engineers make dramatic leaps in designing and testing concepts. The goals of CST include: predicting how a structure will behave under actual operating conditions; designing and complementing other experiments conducted on a structure; investigating microstructural damage or chaotic, unpredictable behavior; helping material developers in improving material systems; and being a useful tool in design systems optimization and sensitivity techniques. Applying CST to a structure problem requires five steps: (1) observe the specific problem; (2) develop a computational model for numerical simulation; (3) develop and assemble software and hardware for running the codes; (4) post-process and interpret the results; and (5) use the model to analyze and design the actual structure. Researchers in both industry and academia continue to make significant contributions to advance this technology with improvements in software, collaborative computing environments and supercomputing systems. As these environments and systems evolve, computational structures technology will evolve. By using CST in the design and operation of future structures systems, engineers will have a better understanding of how a system responds and lasts, more cost-effective methods of designing and testing models, and improved productivity. For informational and educational purposes, a videotape is being produced using both static and dynamic images from research institutions, software and hardware companies, private individuals, and historical photographs and drawings. The extensive number of CST resources indicates its widespread use. Applications run the gamut from simpler university-simulated problems to those requiring solutions on supercomputers. In some cases, an image or an animation will be mapped onto the actual structure to show the relevance of the computer model to the structure. Transferring the digital files to videotape presents a number of problems related to maintaining the quality of the original image, while still producing a broadcast quality videotape. Since researchers normally do not create a computer image using traditional composition theories or video production requirements, often the image loses some of its original digital quality and impact when transferred to videotape. Although many CST images are currently available, those that are edited into the final project must meet two important criteria: they must complement the narration, and they must be broadcast quality when recorded on videotape. SEPARATION OF CRACK EXTENSION MODES IN COMPOSITE DELAMINATION PROBLEMS Abstract Only **c39**

Jack L. Beuth *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 61 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

This work concerns fracture mechanics modeling of composite delamination problems. In order to predict delamination resistance, an applied stress intensity factor, K, or energy release rate, G, must be compared to a mode-dependent critical value of K or G from experiment. In the interfacial fracture analysis of most applications and some tests, the mode of crack extension is not uniquely defined. It is instead a function of distance from the crack tip due to the oscillating singularity existing at the tip. In this work, a consistent method is presented of extracting crack extension modes in such cases. In particular, use of the virtual crack closure technique (VCCT) to extract modes of crack extension is studied for cases of a

crack along the interface between two in-plane orthotropic materials. Modes of crack extension extracted from oscillatory analyses using VCCT are a function of the virtual crack extension length, delta. Most existing efforts to obtain delta-independent modes of crack extension involve changing the analysis in order to eliminate its oscillatory nature. One such method involves changing one or more properties of the layers to make the oscillatory exponent parameter, epsilon, equal zero. Standardized application of this method would require consistent criteria for identifying which properties can be altered without changing the physical aspects of the problem. Another method involves inserting a thin homogeneous layer (typically referred to as a resin interlayer) along the interface and placing the crack within it. The drawbacks of this method are that it requires increased modeling effort and introduces the thickness of the interlayer as an additional length parameter. The approach presented here does not attempt to alter the interfacial fracture analysis to eliminate its oscillatory behavior. Instead, the argument is made that the oscillatory behavior is non-physical and that if its effects were separated from VCCT quantities, then consistent, delta-independent modes of crack extension could be defined. Knowledge of the near-tip fields in a planar orthotropic material interfacial fracture analysis is used to determine the explicit delta dependence of VCCT parameters. Once this delta dependence is determined, energy release rates are defined with this delta dependence factored out. This modified VCCT method is applied to results from two finite element test cases. It is shown that, as predicted, delta-independent modes of crack extension result. The modified VCCT approach shows potential as a consistent method of extracting crack extension modes. It uses the same information from a finite element analysis (i.e., nodal forces and displacements) as the traditional VCCT method does. The A-independent modes extracted using the modified VCCT approach can also be used as guides to test the convergence of finite element solutions. Author

CROSSFLOW INSTABILITY CONTROL ON A SWEPT-WING: PRELIMINARY STUDIES Abstract Only **c02**
David H. Bridges *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 63 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

The pressure distribution on a swept wing causes the streamlines at the edge of the boundary layer to be curved. This pressure gradient normal to the external streamline creates a velocity component normal to the external streamline within the boundary layer which is referred to as the crossflow velocity. Because the crossflow velocity profile perpendicular to the wing surface has an inflection point, the profile is unstable. The stationary instability mode takes the form of crossflow vortices. Under these conditions, the boundary layer on the wing is extremely unstable and transition to turbulent flow takes place much closer to the leading edge of the wing than it would on an unswept wing. Higher skin friction drag is associated with turbulent flow, and so better aircraft performance could be obtained if the crossflow could be eliminated One method of controlling crossflow that is being investigated is boundary-layer suction. An extensive airfoil suction experiment in the 8 feet Transonic Pressure Tunnel (TPT) at NASA Langley Research Center will begin late in 1994. Because of the size, complexity, and expense associated with this test, a number of 'risk-reduction' tests are currently being conducted. The 20 x 28 in. Shear Flow Control Tunnel at NASA Langley is being used for some of these tests. Prior to the summer of 1994, a flat plate with a swept leading edge was installed in the 20 x 28 in. tunnel, with a displacement body mounted on the tunnel ceiling that created a pressure distribution on the plate similar to the pressure distribution on a swept wing. The flow over the plate was investigated during the summer of 1994 using a laser Doppler velocimeter (LDV) system. The LDV measurements indicated the possible presence of multiple disturbance modes, a rarely-seen phenomena since, in most tests, one disturbance mode dominates. The possible existence of multiple disturbance modes in the flat plate boundary layer, however, means that the flow in the 20 x 28 in. tunnel is of interest itself, and will be investigated more thoroughly in the future. With a view to these investigations, the boundary layer traverse mechanism in the 20 x 28 in. tunnel was modified to improve its performance, and strain gauges were mounted on the traverse in order to monitor its deflection during a test. Other preliminary work conducted in the 20 x 28 in. tunnel included the use of an infrared camera system. Previous work with this system showed that transition indeed could be detected, but the signal produced by the crossflow vortices was too weak to be detected. It was hoped that spraying the flat plate with naphthalene would augment the heat transfer associated with the crossflow vortices so that they would show up in a IR image; however, experiments showed that this would not work. Another set of tests was conducted in the 20 x 28 in. tunnel to determine the tripping requirements for a set of airfoil-shaped struts that will be used in the 8 feet TPT experiment. Since the Reynolds number associated with these struts is small, a laminar boundary layer would separate early, causing large fluctuations in the flow field. A turbulent boundary layer would remain attached further back, but tripping from laminar to turbulent flow at low Reynolds number is very difficult. However, trip strip configurations were found that should effectively trip the boundary layer at the required conditions. Currently underway is an investigation of the data acquisition requirements for the 8 feet TPT experiment, with the purpose of the finding the minimum amount of data needed to characterize sufficiently the swept-wing boundary layer. This study is being conducted using a numerically generated data set. Author

Avail: CASI HC A01/MF A02

Airport Surface Movement Area is but one of the actions taken to increase the capacity and safety of existing airport facilities. The System Integration Branch (SIB) has designed an integrated system consisting of an electronic moving display in the cockpit, and includes display of taxi routes which will warn controllers and pilots of the position of other traffic and warning information automatically. Although, this system has in test simulation proven to be accurate and helpful; the initial process of obtaining an airport layout of the taxi-routes and designing each of them is a very tedious and time-consuming process. Other methods of preparing the display maps are being researched. One such method is the use of the Geographical Information System (GIS). GIS is an integrated system of computer hardware and software linking topographical, demographic and other resource data that is being referenced. The software can support many areas of work with virtually unlimited information compatibility due to the system's open architecture. GIS will allow us to work faster with increased efficiency and accuracy while providing decision making capabilities. GIS is currently being used at the Langley Research Center with other applications and has been validated as an accurate system for that task. GIS usage for our task will involve digitizing aerial photographs of the topology for each taxi-runway and identifying each position according to its specific spatial coordinates. The information currently being used can be integrated with the GIS system, due to its ability to provide a wide variety of user interfaces. Much more research and data analysis will be needed before this technique will be used, however we are hopeful this will lead to better usage of man-power and technological capabilities for the future. Striations in Czochralski (CZ) grown crystals have been observed in materials such as GaAs, silicon, photorefractive crystals used for data storage, potassium titanyl phosphate crystals and LiNbO3. Several techniques have been used for investigating these defects including electron microscopy, laser scanning tomography, selective photoetching, X-ray diffuse scattering, interference orthoscopy, laser interferometry and micro-Fourier transform infrared spectroscopy mapping. A 2mm thick sample of the material to be investigated is illuminated with light that is absorbed and non-absorbed by the ion concentration to be observed. The back surface of the sample is focused onto a solid-state image detector and images of the input beam and absorbed (and diffracted) beams are captured at two wavelengths. The variation of the coefficient of absorption asa function of distance on the sample can be derived from these measurements. A Big Sky Software Beamcode system is used to capture and display images. Software has been written to convert the Beamcode data files to a format that can be imported into a spreadsheet program such as Quatro Pro. The spreadsheet is then used to manipulate and display data. A model of the intensity map of the striae collected by the imaging system has been proposed and a data analysis procedure derived. From this, the variability of the attenuation coefficient alpha can be generated. Preliminary results show that alpha may vary by a factor of four or five over distances of 100 mu m. Potential errors and problems have been discovered and additional experiments and improvements to the experimental setup are in progress and we must now show that the measurement techniques and data analysis procedures provide 'real' information. Striae are clearly visible at all wavelengths including white light. Their basic spatial frequency does not change radically, at least when changing from blue to green to white light. Further experimental and theoretical work can be done to improve the data collection techniques and to verify the data analysis procedures. Author

The Teacher Enhancement Institute (TEI) at NASA Langley Research Center was developed in response to Executive Order 12821 which mandates national laboratories to 'assist in the mathematics and science education of our Nation's students, teachers, parents, and the public by establishing programs at their agency to provide for training elementary and secondary school teachers to improve their knowledge of mathematics and science. Such programs, to the maximum extent possible, shall involve partnerships with universities, state and local elementary and secondary school authorities, corporations and community based organizations'. The faculty worked closely with one another and the invited speakers to insure that the sessions supported the objectives. Speakers were informed of the objectives and given guidance concerning form and function for the session. Faculty members monitored sessions to assist speakers and to provide a quality control function. Faculty provided feedback to speakers concerning general objective accomplishment. Participant comments were also provided when applicable. Post TEI surveys asked for specific comments about each TEI session. During the second of the two, two week institutes, daily critiques were provided to the participants for their reflection. This seemed to provide much improved feedback to speakers and faculty because the sessions were fresh in each participant's mind. Between sessions one and two, some changes were made to the program as a result of the formative evaluation process. Those changes, though, were minor in nature and comprised what may be called 'fine tuning' a well conceived and implemented program. After the objectives were written, an assessment instrument was developed to test the accomplishment of the objectives. This instrument was actually two surveys, one given before the TEI and one given after the TEI. In using such a series, it was expected that changes in the participants induced by attendance at TEI may be discovered. Because the institute was limited in time and depth of exposure, attitudinal changes (self-assessment of ability and confidence) were chosen to be surveyed. On the pre-survey, seven general categories of questions were asked. The post-survey repeated three of these categories, providing a pre and post evaluation of the same questions and added a fourth category which asked the participant to self-assess objective accomplishment. The assessment process for TEI was valuable when one looks at the final accomplishments of the TEI. A number of aspects stand out: (1) formative evaluation during project development allowed the goals and objectives to guide the development of the institute; (2) formative evaluation provided positive guidance to presenters in developing and implementing their session; (3) formative evaluation helped presenters to improve or focus their sessions; (4) summative evaluation provided managers a way to gauge the success of the institute; (5) summative evaluation provided a benchmark for future programs to be measured against. HOLOGRAPHIC INTERFEROMETRIC TOMOGRAPHY FOR RECONSTRUCTING FLOW FIELDS Abstract Only **c35**
Soyoung S. Cha *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 68 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

Holographic interferometric tomography is a technique for instantaneously capturing and quantitatively reconstructing three-dimensional flow fields. It has a very useful application potential for high-speed aerodynamics. However, three major challenging tasks need to be accomplished before its practical applications. First, fluid flows are mostly unsteady or at least non repeatable. Consequently, a means for Instantaneously recording three-dimensional flow fields, that is, a simple holographic technique for simultaneously recording multi-directional projections, needs to be developed. Second, while holographic interferometry provides enormous data storage capabilities, expeditious data extraction from complicated interferograms is very important for timely near real-time applications. Third, unlike medical applications, flow tomography does not provide complete data sets but instead involves ill-posed reconstruction problems of incomplete projection and limited angular scanning. During this summer research period, new experimental techniques and corresponding hardware were developed and tested to address the above mentioned tasks. The first task was achieved by diffuser illumination. This concept allows instantaneous capture of many projections with a conventional setup for single-projection recording. For the second task, a phase-shifting technique was incorporated. This technique allows one to acquire multiple phase-stepped interferograms for a single projection and thus to extract phase information from intensity data almost at real-time. For the third task, the research that has been extensively conducted previously was utilized. In this research period, a complete experimental setup that provides the above three major capabilities was designed, built, and tested by integrating all the techniques. A simple laboratory experiment for simulating wind-tunnel testing was then conducted. A test flow was produced by employing a relatively simple device that generated a gravity-driven flow. The flow was then experimentally investigated to check the viability of the holographic interferometric tomographic technique before wind-tunnel application. Author

FABRIC GEOMETRY DISTORTION DURING COMPOSITES PROCESSING Abstract Only **c24**
Julie Chen *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 69 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

Waviness and tow misalignment are often cited as possible causes of data scatter and lower compression stiffness and strength in textile composites. Strength differences of as much as 40 percent have been seen in composites that appear to have the same basic material and structural properties -- i.e., yarn orientation, yarn size, interlacing geometry. Fabric geometry distortion has been suggested as a possible reason for this discrepancy, but little quantitative data or substantial evidence exists. The focus of this research is to contribute to the present understanding of the causes and effects of geometric distortion in textile composites. The initial part of the study was an attempt to gather qualitative information on

a variety of textile structures. Existing and new samples confirmed that structures with a significant direction presence would be more susceptible to distortion due to the compaction process. Thus, uniweaves (fiber vol frac: 54-72 percent) biaxial braids (vf: 34-58 percent) demonstrated very little fabric geometry distortion. In stitched panels, only slight buckling of z-direction stitches was observed, primarily near the surface. In contrast, for structures with high compaction ratios -- e.g., large cylindrical yarns (2.5:1) orpowder towpreg (4:1) -- there were visible distortions where previously smooth and periodic undulations were transformed to abrupt changes in direction. A controlled study of the effect of forming pressure on distortion was conducted on type 162 glass plain weave fabrics. Panels (6 x 6 in) were produced via a resin infusion type setup, but with an EPON 815 epoxy resin. Pressures ranging from hand layup to 200 psi were used (vf: 34-54 percent). Photomicrographs indicated that at pressures up to 50 psi, large changes in thickness were due primarily to resin squeeze out. At higher pressures, when intimate contact was made between the layers, there was some tow flattening and in-plane shifting to optimize nesting. However, even at 200 psi the period and amplitude of the tow undulation remained constant, suggesting that for this relatively fine fabric, distortions from compaction were not a problem. Because of the interest in using larger tows (to reduce cost) and more complex structures, tests were also run on 2D triaxial glass braid (113 yd/lb at 0, 225 yd/lb at +/- 45). Forming pressures of 20, 50, 200, and 500 psi were used, and short block compression tests were run. The 500 psi specimen had a 10 percent decrease in modulus and an almost 50 percent decrease in strength (vs. 20 psi). Because the total fiber wgt/panel was kept constant, the thickness varied from 0.32 to 0.22 in (49-70 percent vf). Yet, the strength value is clearly below what would be expected, even with the decrease in thickness. Photomicrographs of these samples will be taken to determine if more fabric distortion exists in the 500 psi specimens. Finally, because the ultimate goal is to be able to predict and control distortion in a variety of textile structures, a model compaction test was developed to directly measure the deformation of the tows during compaction. Layers of dry glass fabric were placed in a mold with a clear plexiglass window. The yarn amplitude and period was then calculated using image analysis of the videotaped deformation. Preliminary tests demonstrated the feasibility of this technique for simple fabrics with large tows. Author

DIRECT NUMERICAL SIMULATIONS AND MODELING OF A SPATIALLY-EVOLVING TURBULENT WAKE Abstract Only **c34**

John M. Cimbala *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 70 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

Understanding of turbulent free shear flows (wakes, jets, and mixing layers) is important, not only for scientific interest, but also because of their appearance in numerous practical applications. Turbulent wakes, in particular, have recently received increased attention by researchers at NASA Langley. The turbulent wake generated by a two-dimensional airfoil has been selected as the test-case for detailed high-resolution particle image velocimetry (PIV) experiments. This same wake has also been chosen to enhance NASA's turbulence modeling efforts. Over the past year, the author has completed several wake computations, while visiting NASA through the 1993 and 1994 ASEE summer programs, and also while on sabbatical leave during the 1993-94 academic year. These calculations have included two-equation (K-omega and K-epsilon) models, algebraic stress models (ASM), full Reynolds stress closure models, and direct numerical simulations (DNS). Recently, there has been mutually beneficial collaboration of the experimental and computational efforts. In fact, these projects have been chosen for joint presentation at the NASA Turbulence Peer Review, scheduled for September 1994. DNS calculations are presently underway for a turbulent wake at Re(sub theta) = 1000 and at a Mach number of 0.20. (Theta is the momentum thickness, which remains constant in the wake of a two dimensional body.) These calculations utilize a compressible DNS code written by M. M. Rai of NASA Ames, and modified for the wake by J. Cimbala. The code employs fifth-order accurate upwind-biased finite differencing for the convective terms, fourth-order accurate central differencing for the viscous terms, and an iterative-implicit time-integration scheme. The computational domain for these calculations starts at x/theta = 10, and extends to x/theta = 610. Fully developed turbulent wake profiles, obtained from experimental data from several wake generators, are supplied at the computational inlet, along with appropriate noise. After some adjustment period, the flow downstream of the inlet develops into a fully three-dimensional turbulent wake. Of particular interest in the present study is the far wake spreading rate and the self-similar mean and turbulence profiles. At the time of this writing, grid resolution studies are underway, and a code is being written to calculate turbulence statistics from these wake calculations; the statistics will be compared to those from the ongoing PIV wake measurements, those of previous experiments, and those predicted by the various turbulence models. These calculations will lead to significant long-term benefits for the turbulence modeling effort. In particular, quantities such as the pressure-strain correlation and the dissipation rate tensor can be easily calculated from the DNS results, whereas these quantities are nearly impossible to measure experimentally. Improvements to existing turbulence models (and development of new models) require knowledge about flow quantities such as these. Present turbulence models do a very good job at prediction of the shape of the mean velocity and Reynolds stress profiles in a turbulent wake, but significantly underpredict the magnitude of the stresses and the spreading rate of the wake. Thus, the turbulent wake is an ideal flow for turbulence modeling research. By careful comparison and analysis of each term in the modeled Reynolds stress equations, the DNS data can show where deficiencies in the models exist; improvements to the models can then be attempted. As part of my assignment connected with the Scientific and Technical Photography & Lab (STPL) at the NASA Langley Research Center I conducted a series of interviews and observed the day to day operations of the STPL with the ultimate objective of becoming exposed first hand to a scientific and technical photo/imaging department for which my school prepares its graduates. I was also asked to share my observations with the staff in order that these comments and observations might assist the STPL to better serve its customers. Meetings with several individuals responsible for various wind tunnels and with a group that provides photo-optical instrumentation services at the Center gave me an overview of the services provided by the Lab and possible areas for development. In summary form these are some of the observations that resulted from the interviews and daily contact with the STPL facility. (1) The STPL is perceived as a valuable and almost indispensable service group within the organization. This comment was invariably made by everyone. Everyone also seemed to support the idea that the STPL continue to provide its current level of service and quality. (2) The STPL generally is not perceived to be a highly technically oriented group but rather as a provider of high quality photographic illustration and documentation services. In spite of the importance and high marks assigned to the STPL there are several observations that merit consideration and evaluation for possible inclusion into the STPL's scope of expertise and future operating practices. (1) While the care and concern for artistic rendition of subjects is seen as laudable and sometimes valuable, the time that this often requires is seen as interfering with keeping the tunnels operating at maximum productivity. Tunnel managers would like to shorten down-time due to photography, have services available during evening hours and on short notice. It may be of interest to the STPL that tunnel managers are incorporating ever greater imaging capabilities in their facilities. To some extent this could mean a reduced demand for traditional photographic services. (2) The photographic archive is seen as a Center resource. Archiving of images, as well as data, is a matter of concern to the investigators. The early holdings of the Photographic Archives are quickly deteriorating. The relative inaccessibility of the material held in the archives is problematic. (3) In certain cases delivery or preparation of digital image files instead of, or along with, hardcopy is already being perceived by the STPL's customers

as desirable. The STPL should make this option available, and the fact that it has, or will have this capability widely known. (4) The STPL needs to continue to provide expert advice and technical imaging support in terms of application information to users of traditional photographic and new electronic imaging systems. Cooperative demo projects might be undertaken to maintain or improve the capabilities of the Lab. (5) STPL personnel do not yet have significant electronic imaging or electronic communication skills and improvements in this is an area could potentially have a positive impact on the Center. (6) High speed photographic or imaging services are often mentioned by the STPL as being of primary importance to their mission but the lab supports very few projects calling for high speed imaging services. Much high speed equipment is in poor state of repair. It is interesting to note that when the operation of lasers, digital imaging or quantitative techniques are requested these are directed to another NASA department. Could joint activities be initiated to solve problems? (7). The STPL could acquire more technical assignments if examples of the areas where they posses expertise would be circulated around the center. The fact that the STPL owns high speed video capability could be 'advertised' among its customer base if there truly was an interest in building up a customer base in this area. The STPL could participate in events like TOPS as an exhibitor, as well as a documenter, of the event.

METHOD DEVELOPMENT FOR COMPENSATING TEMPERATURE EFFECTS IN PRESSURE SENSITIVE PAINT MEASUREMENTS Abstract Only **c27**

Carlo Greg N. Demandante *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 72 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

Pressure sensitive luminescent paints (PSP) have recently emerged as a viable technique for aerodynamic pressure measurements. The technique uses a surface coating which contains probe molecules that luminesce when excited by light of an appropriate wavelength. The photoluminescence of these materials is known to be quenched by the presence of molecular oxygen. Since oxygen is a fixed mole fraction of the air, the coating's luminescence intensity varies inversely with air pressure. Digital imaging of the luminescence varying across a coated surface produces a pressure distribution map over that surface. One difficulty encountered with this technique is the temperature effect on the luminescence intensity. Present PSP formulations have significant sensitivity to temperature. At the moment, the most practical way of correcting for temperature effects is to calibrate the paint in place at the operating temperatures by using a few well-placed pressure taps. This study is looking at development of temperature indicating coatings that can be applied and measured concurrently with PSP, and use the temperature measurement to compute the correct pressure. Two methods for this dual paint formulation are proposed. One method will use a coating that consists of temperature sensitive phosphors in a polymer matrix. This is similar in construction to PSP, except that the probe molecules used are selected primarily for their temperature sensitivity. Both organic phosphors (e.g., europium thenoyltrifluoroacetonate, bioprobes) and inorganic phosphors (e.g., Mg4(F)GeO6:Mn, La2O2S:Eu, Radelin Type phosphors, Sylvania Type phosphors) will be evaluated for their temperature sensing potential. The next method will involve a novel coating composing of five membered heterocyclic conducting polymers which are known to show temperature dependent luminescence (e.g., poly(3-alkylthiopene), poly(3-alkylselenophene), poly(3-alkylfuran)). Both methods will involve applying a bottom layer of temperature sensitive coating followed by a top coating of PSP. An oxygen-impermeable polymer can be used as the temperature sensitive coating matrix, or it can be layered in between the coatings to prevent oxygen quenching of the bottom coating's luminescence. The probe molecules of the coatings will be excited by a broad band of light, with the different emissions detected and measured at their distinct wavelengths. Developmental research of these coatings is still in progress; however, preliminary results look very promising.

TEAMS AND TEAMWORK AT NASA LANGLEY RESEARCH CENTER Abstract Only **c81**

Terry L. Dickinson *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 73 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

The recent reorganization and shift to managing total quality at the NASA Langley Research Center (LaRC) has placed an increasing emphasis on teams and teamwork in accomplishing day-to-day work activities and long-term projects. The purpose of this research was to review the nature of teams and teamwork at LaRC. Models of team performance and teamwork guided the gathering of information. Current and former team members served as participants; their collective experience reflected membership in over 200 teams at LaRC. The participants responded to a survey of open-ended questions which assessed various aspects of teams and teamwork. The participants also met in a workshop to clarify and elaborate on their responses. The work accomplished by the teams ranged from high-level managerial decision making (e.g., developing plans for LaRC reorganization) to creating scientific proposals (e.g., describing spaceflight projects to be designed, sold, and built). Teams typically had nine members who remained together for six months. Member turnover was around 20 percent; this turnover was attributed to heavy loads of other work assignments and little formal recognition and reward for team membership. Team members usually shared a common and valued goal, but there was not a clear standard (except delivery of a document) for knowing when the goal was achieved. However, members viewed their teams as successful. A major factor in team success was the setting of explicit a priori rules for communication. Task interdependencies between members were not complex (e.g., sharing of meeting notes and ideas about issues), except between members of scientific teams (i.e., reliance on the expertise of others). Thus, coordination of activities usually involved scheduling and attendance of team meetings. The team leader was designated by the team's sponsor. This leader usually shared power and responsibilities with other members, such that team members established their own operating procedures for decision making. Sponsors followed a hands-off policy during team operations, but they approved and reviewed team products. Most teams, particularly high-level decision-making teams, had little or no authority to carry out their decisions. Team members had few interpersonal conflicts. They monitored each other respectfully about meeting deadlines. Feedback and backup behaviors were seen as desirable aspects of teamwork, wanted by the members, and done appropriately.

NONDESTRUCTIVE EVALUATION OF FATIGUE DAMAGE IN ALUMINUM 2024 BY X-RAY DIFFRACTION Abstract Only **c38**

Milton W. Ferguson *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 74 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

Aluminum alloys are widely used in the automobile and aerospace industries. This is due to their attractive low density-high modulus and low density-high strength characteristics. Unfortunately, cyclic stress-strain deformations alter the microstructure of aluminum alloys when they are placed into service. These structural changes can lead to fatigue damage and ultimately service failure. Since x-ray diffraction analysis is known to be a sensitive nondestructive indicator of structural changes due to deformations, this technique is being used to evaluate changes in the microstructure of cycled aluminum 2024 commercial alloys. Line shapes, widths, and positions in an x-ray diffraction pattern depend on microstructural properties such as grain size, grain orientation, residual stress, microstrain, etc. Changes in the microstructure due to fatigue will appear as changes in the diffraction pattern. One parameter used to characterize a reflection in a diffraction pattern is the full width at half maximum (FWHM). Preliminary x-ray diffraction results on cycled Al 2024 indicate that the (111) and (222) reflections of the matrix phase do not show any variations in the FWHM due to an increase in the fatigue cycles. However, the FWHM of the (200) and (400) reflections of the same phase unexpectedly showed a dramatic decrease. These results can be interpreted as due to the relaxation of some initial nonuniform residual stresses in the matrix phase lattice. Further work is in progress to evaluate the FWHM of the second phase of the cycled alloys.

CONTROL OF FLOW SEPARATION IN AIRFOIL/WING DESIGN APPLICATIONS Abstract Only **c02**

Thomas A. Gally *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 75 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

Existing aerodynamic design methods have generally concentrated on the optimization of airfoil or wing shapes to produce a minimum drag while satisfying some basic constraints such as lift, pitching moment, or thickness. Since the minimization of drag almost always precludes the existence of separated flow, the evaluation and validation of these design methods for their robustness and accuracy when separated flow is present has not been aggressively pursued. However, two new applications for these design tools may be expected to include separated flow and the issues of aerodynamic design with this feature must be addressed. The first application of the aerodynamic design tools is the design of airfoils or wings to provide an optimal performance over a wide range of flight conditions (multipoint design). While the definition of 'optimal performance' in the multipoint setting is currently being hashed out, it is recognized that given a wide enough range of flight conditions, it will not be possible to ensure a minimum drag constraint at all conditions, and in fact some amount of separated flow (presumably small) may have to be allowed at the more demanding flight conditions. Thus a multipoint design method must be tolerant of the existence of separated flow and may include some controls upon its extent. The second application is in the design of wings with extended high speed buffet boundaries of their flight envelopes. Buffet occurs on a wing when regions of flow separation have grown to the extent that their time varying pressures induce possible destructive effects upon the wing structure or adversely effect either the aircraft controllability or the passenger comfort. A conservative approach to the expansion of the buffet flight boundary is to simply expand the flight envelope of nonseparated flow under the assumption that buffet will also thus be alleviated. However, having the ability to design a wing with separated flow and thus to control the location, extent, and severity of the separated flow regions may allow aircraft manufacturers to gain an advantage in the early design stages of an aircraft, when configuration changes are relatively inexpensive to make. Continuing the work begun last year, an airfoil design package has been modified to provide some control over the existence and extent of flow separation. This package consists of a 2-D Navier-Stokes flow solver which is coupled to the CDISC (constrained direct/iterative surface curvature) design method. The first modification is a prediction method for determining whether separation is likely based solely upon a given pressure distribution. If separation is predicted but is undesirable, the new routines will modify the pressure distribution to alleviate the problem. This new pressure distribution is then used in the design method to generate a new aerodynamic shape. Since separation may be acceptable in some cases, particularly if the separation does not extend to the trailing edge, another added logic estimates the extent of separation based upon a correlation with calculated separated flow cases. If the flow behind a shock induced separation is not predicted to reattach before the trailing edge, the logic weakens the shock strength and otherwise alters the pressure distribution in order to promote reattachment. This later addition is as yet unreliable due to secondary separation effects, but additional work is being pursued to improve the method. Author

LOCATING BUILDINGS IN AERIAL PHOTOS Abstract Only **c43**

James S. Green *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 77 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

Algorithms and techniques for use in the identification and location of large buildings in digitized copies of aerial photographs are developed and tested. The building data would be used in the simulation of objects located in the vicinity of an airport that may be detected by aircraft radar. Two distinct approaches are considered. Most building footprints are rectangular in form. The first approach studied is to search for right-angled corners that characterize rectangular objects and then to connect these corners to complete the building. This problem is difficult because many nonbuilding objects, such as street corners, parking lots, and ballparks often have well defined corners which are often difficult to distinguish from rooftops. Furthermore, rooftops come in a number of shapes, sizes, shadings, and textures which also limit the discrimination task. The strategy used linear sequences of different samples to detect straight edge segments at multiple angles and to determine when these segments meet at approximately right-angles with respect to each other. This technique is effective in locating corners. The test image used has a fairly rectangular block pattern oriented about thirty degrees clockwise from a vertical alignment, and the overall measurement data reflect this. However, this technique does not discriminate between buildings and other objects at an operationally suitable rate. In addition, since multiple paths are tested for each image pixel, this is a time consuming task. The process can be speeded up by preprocessing the image to locate the more optimal sampling paths. The second approach is to rely on a human operator to identify and select the building objects and then to have the computer determine the outline and location of the selected structures. When presented with a copy of a digitized aerial photograph, the operator uses a mouse and cursor to select a target building. After a button on the mouse is pressed, with the cursor fully within the perimeter of the building, the program scans from the position of the cursor to a perimeter position where a shift in grayscale is detected. Once at the perimeter, the process traces along it, around the building, until it eventually returns to the perimeter starting point. Spatial resolution limits cause the perimeter trace to be somewhat course so that a line straightening algorithm is employed. One result is that the building corner positions become more distinctly defined. Author

DIRECT NUMERICAL SIMULATION OF SHEARED TURBULENT FLOW Abstract Only **c34**

Vascar G. Harris *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 78 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

The summer assignment to study sheared turbulent flow was divided into three phases which were: (1) literature survey, (2) computational familiarization, and (3) pilot computational studies. The governing equations of fluid dynamics or Navier-Stokes equations describe the velocity, pressure, and density as functions of position and time. In principle, when combined with conservation equations for mass, energy, and thermodynamic state of the fluid a determinate system could be obtained. In practice the Navier-Stokes equations have not been solved due to the nonlinear nature and complexity of these equations. Consequently, the importance of experiments in gaining insight for understanding the physics of the problem has been an ongoing process. Reasonable computer simulations of the problem have occured as the computational speed and storage of computers has evolved. The importance of the microstructure of the turbulence dictates the need for high resolution grids in extracting solutions which contain the physical mechanisms which are essential to a successful simulation. The recognized breakthrough occurred as a result of the pioneering work of Orzag and Patterson in which the Navier-Stokes equations were solved numerically utilizing a time saving toggling technique between physical and wave space, known as a spectral method. An equally analytically unsolvable problem, containing the same quasi-chaotic nature as turbulence, is known as the three body problem which was studied computationally as a first step this summer. This study was followed by computations of a two dimensional (2D) free shear layer. Author (revised)

ANALYSIS OF THE LONGITUDINAL HANDLING QUALITIES AND PILOT-INDUCED-OSCILLATION TENDENCIES OF THE HIGH-ANGLE-OF-ATTACK RESEARCH VEHICLE (HARV) Abstract Only **c08**

Ronald A. Hess *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 79 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

The NASA High-Angle-of Attack Research Vehicle (HARV), a modified F-18 aircraft, experienced handling qualities problems in recent flight tests

at NASA Dryden Research Center. Foremost in these problems was the tendency of the pilot-aircraft system to exhibit a potentially dangerous phenomenon known as a pilot-induced oscillation (PIO). When they occur, PIO's can severely restrict performance, sharply dimish mission capabilities, and can even result in aircraft loss. A pilot/vehicle analysis was undertaken with the goal of reducing these PIO tendencies and improving the overall vehicle handling qualities with as few changes as possible to the existing feedback/feedforward flight control laws. Utilizing a pair of analytical pilot models developed by the author, a pilot/vehicle analysis of the existing longitudinal flight control system was undertaken. The analysis included prediction of overall handling qualities levels and PIO susceptability. The analysis indicated that improvement in the flight control system was warranted and led to the formulation of a simple control stick command shaping filter. Analysis of the pilot/vehicle system with the shaping filter indicated significant improvements in handling qualities and PIO tendencies could be achieved. A non-real time simulation of the modified control system was undertaken with a realistic, nonlinear model of the current HARV. Special emphasis was placed upon those details of the command filter implementation which could effect safety of flight. The modified system is currently awaiting evaluation in the real-time, pilot-in-the-loop, Dual-Maneuvering-Simulator (DMS) facility at Langley. Author

ELECTRONIC PHOTOGRAPHY AT NASA LANGLEY RESEARCH CENTER Abstract Only **c35**

Jack M. Holm *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 80 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

The field of photography began a metamorphosis several years ago which promises to fundamentally change how images are captured, transmitted, and output. At this time the metamorphosis is still in the early stages, but already new processes, hardware, and software are allowing many individuals and organizations to explore the entry of imaging into the information revolution. Exploration at this time is prerequisite to leading expertise in the future, and a number of branches at LaRC have ventured into electronic and digital imaging. Their progress until recently has been limited by two factors: the lack of an integrated approach and the lack of an electronic photographic capability. The purpose of the research conducted was to address these two items. In some respects, the lack of electronic photographs has prevented application of an integrated imaging approach. Since everything could not be electronic, the tendency was to work with hard copy. Over the summer, the Photographics Section has set up an Electronic Photography Laboratory. This laboratory now has the capability to scan film images, process the images, and output the images in a variety of forms. Future plans also include electronic capture capability. The current forms of image processing available include sharpening, noise reduction, dust removal, tone correction, color balancing, image editing, cropping, electronic separations, and halftoning. Output choices include customer specified electronic file formats which can be output on magnetic or optical disks or over the network, 4400 line photographic quality prints and transparencies to 8.5 by 11 inches, and 8000 line film negatives and transparencies to 4 by 5 inches. The problem of integrated imaging involves a number of branches at LaRC including Visual Imaging, Research Printing and Publishing, Data Visualization and Animation, Advanced Computing, and various research groups. These units must work together to develop common approaches to image processing and archiving. The ultimate goal is to be able to search for images using an on-line database and image catalog. These images could then be retrieved over the network as needed, along with information on the acquisition and processing prior to storage. For this goal to be realized, a number of standard processing protocols must be developed to allow the classification of images into categories. Standard series of processing algorithms can then be applied to each category (although many of these may be adaptive between images). Since the archived image files would be standardized, it should also be possible to develop standard output processing protocols for a number of output devices. If LaRC continues the research effort begun this summer, it may be one of the first organizations to develop an integrated approach to imaging. As such, it could serve as a model for other organizations in government and the private sector. Author

SYSTEM IDENTIFICATION OF THE LARGE-ANGLE MAGNETIC SUSPENSION TEST FIXTURE (LAMSTF) Abstract Only **c09**

Jen-Kuang Huang *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 81 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

The Large-Angle Magnetic Suspension Test Fixture (LAMSTF), a laboratory-scale research project to demonstrate the magnetic suspension of objects over wide ranges of attitudes, has been developed. This system represents a scaled model of a planned Large-Gap Magnetic Suspension System (LGMSS). The LAMSTF consists of a small cylindrical permanent magnet suspended element which is levitated above a planar array of five electromagnets mounted in a circular configuration. The cylinder is a rigid body and can be controlled to move in five independent degrees of freedom. Six position variables are sensed indirectly by using infrared light-emitting diodes and light-receiving phototransistors. The motion of the suspended cylinder is in general nonlinear and hence only the linear, time-invariant perturbed motion about an equilibrium state is considered. One of the main challenges in this project is the control of the suspended element over a wide range of orientations. An accurate dynamic model plays an essential role in controller design. The analytical model is first derived and open-loop characteristics discussed. The system is shown to be highly unstable and requires feedback control for system identification. Projection filters are first proposed to identify the state space model from closed-loop input/output test data in the time domain. This method is then extended to identify linear systems from the frequency test data. A canonical transformation matrix is also derived to transform the identified state space model into the physical coordinate. The LAMSTF system is stabilized by using a linear quadratic regulator (LQR) feedback controller for closed-loop identification. The rate information is obtained by calculating the back difference of the sensed position signals. Only the closed-loop random input/output data are recorded. Preliminary results from numerical simulations demonstrate that the identified system model is fairly accurate from either time domain or frequency-domain data. Experiments will be performed to validate the proposed closed-loop identification algorithms. Author

INTERLAMINAR SHEAR TEST METHOD DEVELOPMENT FOR LONG TERM DURABILITY TESTING OF COMPOSITES Abstract Only **c24**

Peter G. Ifju *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 82 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

The high speed civil transport is a commercial aircraft that is expected to carry 300 passengers at Mach 2.4 over a range of more than 6000 nautical miles. With the existing commercial structural material technology (i.e., aluminum) the performance characteristics of the high speed civil transport would not be realized. Therefore there has been a concerted effort in the development of light weight materials capable of withstanding elevated temperatures for long duration. Thermoplastic composite materials are such candidate materials and the understanding of how these materials perform over the long term under harsh environments is essential to safe and effective design. The matrix dominated properties of thermoplastic composites are most affected by both time and temperature. There is currently an effort to perform short term testing to predict long term behavior of in-plane mechanical properties E22 (transverse modulus of elasticity) and G12 (shear modulus). Out-of-plane properties such as E33, G13, and G23 are inherently more difficult to characterize. This is especially true for the out-of-plane shear modulus G23 and hence there is no existing acceptable standard test method. Since G23 is the most matrix dominated property, it is essential that a test method be developed. A shear test methodology is developed to do just that. The test method, called the double notched specimen, along with the previously developed shear gage was tested at room temperature. Mechanical testing confirmed the attributes of the methodology. A finite element parametric study was conducted for specimen optimization. Moire interferometry, a high sensitivity laser optical method, was used for full-field analysis of the specimen. From this work,

material parameters will be determined and thus enable the prediction of long term material behavior of laminates subjected to general loading states. Author (revised)

TASK SCHEDULING IN DATAFLOW COMPUTER ARCHITECTURES Abstract Only **c60**

Constantine Katsinis *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 83 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

Dataflow computers provide a platform for the solution of a large class of computational problems, which includes digital signal processing and image processing. Many typical applications are represented by a set of tasks which can be repetitively executed in parallel as specified by an associated dataflow graph. Research in this area aims to model these architectures, develop scheduling procedures, and predict the transient and steady state performance. Researchers at NASA have created a model and developed associated software tools which are capable of analyzing a dataflow graph and predicting its runtime performance under various resource and timing constraints. These models and tools were extended and used in this work. Experiments using these tools revealed certain properties of such graphs that require further study. Specifically, the transient behavior at the beginning of the execution of a graph can have a significant effect on the steady state performance. Transformation and retiming of the application algorithm and its initial conditions can produce a different transient behavior and consequently different steady state performance. The effect of such transformations on the resource requirements or under resource constraints requires extensive study. Task scheduling to obtain maximum performance (based on user-defined criteria), or to satisfy a set of resource constraints, can also be significantly affected by a transformation of the application algorithm. Since task scheduling is performed by heuristic algorithms, further research is needed to determine if new scheduling heuristics can be developed that can exploit such transformations. This work has provided the initial development for further long-term research efforts. A simulation tool was completed to provide insight into the transient and steady state execution of a dataflow graph. A set of scheduling algorithms was completed which can operate in conjunction with the modeling and performance tools previously developed. Initial studies on the performance of these algorithms were done to examine the effects of application algorithm transformations as measured by such quantities as number of processors, time between outputs, time between input and output, communication time, and memory size. RELIABILITY ANALYSIS IN THE OFFICE OF SAFETY, ENVIRONMENTAL, AND MISSION ASSURANCE (OSEMA) Abstract Only **c38**

Paul J. Kauffmann *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 84 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

The technical personnel in the SEMA office are working to provide the highest degree of value-added activities to their support of the NASA Langley Research Center mission. Management perceives that reliability analysis tools and an understanding of a comprehensive systems approach to reliability will be a foundation of this change process. Since the office is involved in a broad range of activities supporting space mission projects and operating activities (such as wind tunnels and facilities), it was not clear what reliability tools the office should be familiar with and how these tools could serve as a flexible knowledge base for organizational growth. Interviews and discussions with the office personnel (both technicians and engineers) revealed that job responsibilities ranged from incoming inspection to component or system analysis to safety and risk. It was apparent that a broad base in applied probability and reliability along with tools for practical application was required by the office. A series of ten class sessions with a duration of two hours each was organized and scheduled. Hand-out materials were developed and practical examples based on the type of work performed by the office personnel were included. Topics covered were: Reliability Systems - a broad system oriented approach to reliability; Probability Distributions - discrete and continuous distributions; Sampling and Confidence Intervals - random sampling and sampling plans; Data Analysis and Estimation - Model selection and parameter estimates; and Reliability Tools - block diagrams, fault trees, event trees, FMEA. In the future, this information will be used to review and assess existing equipment and processes from a reliability system perspective. An analysis of incoming materials sampling plans was also completed. This study looked at the issues associated with Mil Std 105 and changes for a zero defect acceptance sampling plan. Author

RAMAN-SHIFTING AN ArF EXCIMER LASER TO GENERATE NEW LINES FOR OBTAINING OPTICAL DIAGNOSTIC BASED INFORMATION IN FLOW FIELDS Abstract Only **c36**

Edmond B. Koker *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 85 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

The application of tunable excimer lasers in combustion and flow diagnostics is almost routine nowadays. The properties of this laser system that enable density and temperature measurements in supersonic and hypersonic flow fields to be conducted are its high power, high repetition rate, and high spectral brightness. The limitation imposed by this system on these measurements is the paucity of lines in the wavelength region, the vacuum-ultraviolet, where species of interest, such as OH, N2, O2, H2, H2O, CO, NO, etc., are susceptible to electronic excitation to high-lying states. To circumvent this problem one normally resorts to nonlinear optical techniques such as frequency conversion via stimulated Raman scattering (SRS), more commonly known as Raman shifting or Raman mixing, to extend these nonintrusive and nonperturbing techniques to the shorter wavelengths in the VUV region and, for that matter, to longer wavelengths in the infrared region, if the need arises. The theoretical basis of SRS and its application are well documented in the literature. In essence, the Raman shift is a consequence of the inelastic scattering of the incident radiation by the sample. Most of the scattered radiation from the molecules of the sample is unchanged in frequency. However, a small fraction of the incident radiation is changed in frequency. This shift is a result of the fact that some of the incident photons on colliding with the molecules of the sample give up some of their energy and emerge with a lower energy resulting in the lower-frequency Stokes radiation. Other incident photons may increase their energy by colliding with the vibrationally excited molecules of the medium and emerge as higher-frequency antistokes radiation. The generation of the latter is the main objective of this project. The process, however, depends on several factors, including the beam quality of the pump laser, the cross-section of the gaseous medium, the gas pressure, and the ambient temperature of the gas near the focal region. Furthermore, since the Raman shifting process is polarization sensitive, it is necessary to have all of the laser energy in a single polarization. These factors were taken into consideration in the execution of the project. The implementation of the Raman shift was accomplished by focusing the 193 nm output of an ArF excimer laser (Lamda-Physik LPX 150) into a 1-meter long high pressure recirculating Raman cell filled with H2 gas. The laser system was modified in order to improve the mode quality of the pump beam to enhance the Raman shifting. To accomplish this feat, a prism beam expander and grating on the oscillator discharge provided wavelength tuning over the excimer gain profile. Furthermore, a triple-pass configuration, as opposed to unstable resonator optics, was employed in the operation of the amplifier cavity so that when the oscillator output radiation, focused by a 51-cm focal length fused silica lens through a 50 micron pinhole (serving as a spatial filter) and recollimated with a 25-cm focal length lens, was fed into the amplifier, it was injection locked, thereby providing tunable radiation with relatively low divergence. The forward scattered radiation emanating from the impingement of the modified pump beam on the Raman cell was detected using an energy meter after the latter had been separated from it using a dispersing prism. OPTIMIZED DESIGN OF A HYPERSONIC NOZZLE Abstract Only **c09**

Ramesh Krishnamurthy *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship

Program Dec. 1994 p 86 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

Conventional procedures for designing nozzles involve the design of an inviscid contour (using the method of characteristics) that is corrected with a displacement thickness calculated from boundary-layer theory. However, nozzles designed using this classical procedure have been shown to exhibit poor flow quality at Mach numbers characteristic of hypersonic applications. The nozzle to be designed will be a part of the NASA HYPULSE facility which is being used for hypervelocity flight research. Thus, the flow quality of the nozzle is a critical question that needs to be addressed. Design of nozzles for hypersonic applications requires a proper assessment of the effects of the thick boundary layer on the inviscid flowfield. Since the flow field is largely supersonic, the parabolized form of the Navier-Stokes (PNS) equations can be used. The requirement of a uniform flow at the exit plane of the nozzle can be used to define an objective function as part of an optimization procedure. The design procedure used in this study involves the coupling of a nonlinear (least-squares) optimization algorithm with an efficient, explicit PNS solver. The thick boundary layers growing on the walls of the nozzle limit the extent of the usable core region (region with uniform flow) for testing models (especially rectangular). In order to maximize the region of uniform flow, it was decided to have the exit plane of this nozzle to be (nearly) rectangular. Thus, an additional constraint on the nozzle shape resulted, namely the nozzle will have a shape transitioning from a circular one at the inlet to that of a rectangle at the exit. In order to provide for a smooth shape transition, the cross sectional contour of the nozzle is defined by a superellipse. The nozzle is taken to be a meter in length. The axial variations of the major and minor radii of the superellipse are governed by cubic splines. The design parameters are the coefficients of the splines associated with the local nozzle wall slopes. Extensive calculations have been made (with a three-dimensional Euler code) to understand the effects of various parameters such as location of the knot points of the spline function, different ways of characterizing the uniformity of the flow in the exit plane, as well as the effect of constraining the area of the nozzle to be invariant. Turbulent flow (measurements indicate that the flow at the nozzle inlet is turbulent) calculations are now being performed (with the inviscidly designed nozzle contours) to assess the flow quality.

STOCHASTIC DECISION ANALYSIS Abstract Only **c81**

Thomas A. Lacksonen *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 87 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

Small space flight project design at NASA Langley Research Center goes through a multi-phase process from preliminary analysis to flight operations. The process insures that each system achieves its technical objectives with demonstrated quality and within planned budgets and schedules. A key technical component of early phases is decision analysis, which is a structure procedure for determining the best of a number of feasible concepts based upon project objectives. Feasible system concepts are generated by the designers and analyzed for schedule, cost, risk, and technical measures. Each performance measure value is normalized between the best and worst values and a weighted average score of all measures is calculated for each concept. The concept(s) with the highest scores are retained, while others are eliminated from further analysis. This project automated and enhanced the decision analysis process. Automation of the decision analysis process was done by creating a user-friendly, menu-driven, spreadsheet macro based decision analysis software program. The program contains data entry dialog boxes, automated data and output report generation, and automated output chart generation. The enhancements to the decision analysis process permit stochastic data entry and analysis. Rather than enter single measure values, the designers enter the range and most likely value for each measure and concept. The data can be entered at the system or subsystem level. System level data can be calculated as either sum, maximum, or product functions of the subsystem data. For each concept, the probability distributions are approximated for each measure and the total score for each concept as either constant, triangular, normal, or log-normal distributions. Based on these distributions, formulas are derived for the probability that the concept meets any given constraint, the probability that the concept meets all constraints, and the probability that the concept is within a given amount of the best score. Formulas are also derived for the probability that one concept's total score is within a given amount of a second concept's total score. These probabilistic calculations provide more realistic data entry and output information for designers, enabling designers to better determine which concepts to eliminate and which concepts to retain at the decision points of each design phase.

DESIGN AND IMPLEMENTATION OF TWO TWO-WEEK TEACHER ENHANCEMENT INSTITUTES Abstract Only **c80**

Lynn Lambert *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 88 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

During this summer, I have been part of a four team effort that planned and executed two two-week Teacher Enhancement Institutes (TEI) for 40 K-8 teachers from this area. The TEI was designed to enhance teachers' background in aeronautics and technology so that they would be better equipped to encourage and to train students in the mathematics, science, and technology fields. The teachers were given a stipend and three graduate credits from Christopher Newport University for their participation in this program. The four ASEE fellows worked together to develop objectives and a schedule of activities for each two-week session based on the program outline given in the grants that were funding this effort. We divided the responsibilities in coordinating and implementing each part of the TEI based on the specific strengths and background of each ASEE fellow. My specific responsibilities were: (1) to develop the course syllabus and generally handle all matters involved with the graduate course; (2) coordinate the follow-up sessions; and (3) design and manage half of the technology sessions that we had scheduled (approximately 30% of the TEI was devoted to technology). Because the first two responsibilities were primarily administrative in nature, I will address only the last. The technology sessions were divided into computer-only and other technologies (e.g., television and digital technology including scanning, digital photography and CD-ROM). I had responsibility for the computer-only technology sessions. The emphasis of these sessions was on use of the Internet specifically to locate and use educational resources. To maximize learning, these sessions were hands-on with two teachers at each computer. Each teacher received instruction in, and actually used, the most popular tools available on the Internet: email (they were given temporary accounts at NASA LaRC), anonymous ftp and archie, gopher and veronica, mosaic, and telnet. Teachers participated in hands-on workshops to learn about these programs, but were also given time during the two-week session to explore on their own and to find resources on the Net that specifically met their needs. In order to ensure that Internet access continues after their return to the classroom, all teachers who did not have them also applied for Learning Link accounts (from WHRO, the local public television station) and Virginia Pen accounts (from the Department of Education of Virginia), both of which allow textbased access to Internet. In addition to getting exposure to and practice with Internet tools, teachers were also given a hands-on seminar (and also given practice time) on ClarisWorks, an integrated word processing, spreadsheet, database, and paint package. The technology sessions (and TEI as a whole) were enthusiastically received by both new and more experienced teachers as extremely helpful in improving their ability to use technology in developing lesson plans.

ACCELERATED PANEL METHODS USING THE FAST MULTIPOLE METHOD Abstract Only **c34**

James F. Leathrum, Jr. *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 89 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

Panel methods are commonly used in computational fluid dynamics for the solution of potential flow problems. The methods are a numerical

technique based on the surface distribution of singularity elements. The solution is the process of finding the strength of the singularity elements distributed over the body's surface. This process involves the solution of the matrix problem Pq = p' for a set of unknowns q. The Fast Multipole Method is used to directly compute q without using matrix solvers. The algorithm works in O(N) time for N points, a great improvement over standard matrix solvers. In panel methods, the surface of a body is divided into a series of quadrilateral panels. The methods involve the computation of the influence of all other panels on each individual panel. The influence is based on the surface distribution, though this can be approximated by the area for distant panels. An alternative approximation, though with arbitrary accuracy, is to develop a multipole expansion about the center of the panel to describe the effect of a given panel on distant points in space. The expansion is based on the moments of the panel, thus allow the use of various surface distributions without changing the basic algorithm, just the computation of the various moments. The expansions are then manipulated in a tree walk to develop Taylor series expansions about a point in space which describe the effect of all distant panels on any point within a volume of convergence. The effect of near panels then needs to be computed directly, but the effect of all distant panels can be computed by simply evaluating the resulting expansion. The Fast Multipole Method has been applied to panel methods for the solution of source and doublet distributions. A major feature of the algorithm is that the algorithm does not change to derive the potential and velocity for sources and doublets. The same expansions can be used for both sources and doublets. Since the velocity is related to the potential, and the doublet potential is related to the z-component of the source velocity, all values can be derived from the same expansion by taking a series of partial derivatives. This requires more expansion terms to be kept since terms are lost in the process of taking partial derivatives. Thus to maintain accuracy for the doublet computation, more terms are required than if just evaluating for sources. The resulting Fast Multipole code should then parallelize better than classical panel methods due to the locality of data dependencies found in the Fast Multipole Method. Theoretically the parallelized code should execute in O(log N) time with O(N) processors, though this is not practical. Ongoing work includes implementing the parallel accelerated panel method, including methods to improve the load balancing of the problem by taking advantage of the known geometry of panels, and to encorporate sensitivity analysis into the algorithm. ON-LINE, ADAPTIVE STATE ESTIMATOR FOR ACTIVE NOISE CONTROL Abstract Only **c63**

Tae W. Lim *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 90 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

Dynamic characteristics of airframe structures are expected to vary as aircraft flight conditions change. Accurate knowledge of the changing dynamic characteristics is crucial to enhancing the performance of the active noise control system using feedback control. This research investigates the development of an adaptive, on-line state estimator using a neural network concept to conduct active noise control. In this research, an algorithm has been developed that can be used to estimate displacement and velocity responses at any locations on the structure from a limited number of acceleration measurements and input force information. The algorithm employs band-pass filters to extract from the measurement signal the frequency contents corresponding to a desired mode. The filtered signal is then used to train a neural network which consists of a linear neuron with three weights. The structure of the neural network is designed as simple as possible to increase the sampling frequency as much as possible. The weights obtained through neural network training are then used to construct the transfer function of a mode in z-domain and to identify modal properties of each mode. By using the identified transfer function and interpolating the mode shape obtained at sensor locations, the displacement and velocity responses are estimated with reasonable accuracy at any locations on the structure. The accuracy of the response estimates depends on the number of modes incorporated in the estimates and the number of sensors employed to conduct mode shape interpolation. Computer simulation demonstrates that the algorithm is capable of adapting to the varying dynamic characteristics of structural properties. Experimental implementation of the algorithm on a DSP (digital signal processing) board for a plate structure is underway. The algorithm is expected to reach the sampling frequency range of about 10 kHz to 20 kHz which needs to be maintained for a typical active noise control application. Author

DESIGN OF A VARIABLE AREA DIFFUSER FOR A 15-INCH MACH 6 OPEN-JET TUNNEL Abstract Only **c09**

Norman W. Loney *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 91 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

The Langley 15-inch Mach 6 High Temperature Tunnel was recently converted from a Mach 10 Hypersonic Flow Apparatus. This conversion was effected to improve the capability of testing in Mach 6 air at relatively high reservoir temperatures not previously possible at Langley. Elevated temperatures allow the matching of the Mach numbers, Reynolds numbers, and ratio of wall-to-adiabatic-wall temperatures (TW/Taw) between this and the Langley 20-inch Mach 6 CF4 Tunnel. This ratio is also matched for Langley's 31-inch Mach 10 Tunnel and is an important parameter useful in the simulation of slender bodies such as National Aerospace Plane (NASP) configurations currently being studied. Having established the nozzle's operating characteristics, the decision was made to install another test section to provide model injection capability. This test section is an open-jet type, with an injection system capable of injecting a model from retracted position to nozzle centerline between 0.5 and 2 seconds. Preliminary calibrations with the new test section resulted in Tunnel blockage. This blockage phenomenon was eliminated when the conical center body in the diffuser was replaced. The issue then, is to provide a new and more efficient variable area diffuser configuration with the capability to withstand testing of larger models without sending the Tunnel into an unstart condition. Use of the 1-dimensional steady flow equation with due regard to friction and heat transfer was employed to estimate the required area ratios (exit area / throat area) in a variable area diffuser. Correlations between diffuser exit Mach number and area ratios, relative to the stagnation pressure ratios and diffuser inlet Mach number were derived. From these correlations, one can set upper and lower operating pressures and temperatures for a given diffuser throat area. In addition, they will provide appropriate input conditions for the full 3-dimensional computational fluid dynamics (CFD) code for further simulation studies. Author

DEFLECTIONS OF ANISOTROPIC SANDWICH BEAMS WITH VARIABLE FACE SHEETS AND CORE THICKNESSES Abstract Only **c39**

Chu-Ho Lu *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 92 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

A sandwich construction consists of a low-density core material with high strength face sheets bounded to the top and bottom surfaces. The construction has been widely used in the aerospace and marine industries due to its outstanding characteristics such as noise absorption, weight minimization, heat insulation, and better bending stiffness. In sandwich structures used in high-performance aircraft, the face sheets are often made of fiber-reinforced composite materials and the core is made of honeycomb. The structures may also have variable thickness so as to satisfy aerodynamic requirements. In the stress analysis, the constant-thickness face sheets are usually considered as membrane and the core is assumed to be inextensible but deformable in the thickness direction. The static behavior of variable-thickness, isotropic and homogeneous sandwich beams was successfully studied by employing a constant-thickness theory but allowing stiffnesses to vary in accordance with local thickness variations. It has been recently found in a refined theory that the analyses based on the constant thickness theory locally can lead to significant errors in structural responses if the sandwich beam is thickness-tapered and the cores are deformable in transverse shear. The errors arise mainly from two factors: (1) the transverse shear components of the membrane forces in the face sheets alter the transverse shears carried by the core; and (2) the face-sheet membrane strains arise

from transverse shear deformation of the core. In practice the variable thickness may not only exist in core but also in face sheets. The thickness-variations may even be a type of step function. In this case the transverse shear stress in the face sheets and bending stress in the core should be taken into account in the refined theory mentioned. In the present study, energy principles are employed in deriving governing equations for general bending of anisotropic sandwich beams with variable thickness in both face sheets and cores. Solutions to these equations are based on a finite difference scheme. As an example in application, a simply supported thickness-tapered sandwich beam subject to a concentrated load at its center is considered. Let W' be the maximum deflection of the beam in which face sheets are considered as membrane, while W'' is that based on using the modified refined theory. It is found that W' is always larger than W'', however, the magnitude of (W'- W'') appears to be insensitive to the change of the taper of the beam. Author

RESIDUAL STRENGTH OF THIN PANELS WITH CRACKS Abstract Only **c39**

Erdogan Madenci *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 93 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

The previous design philosophies involving safe life, fail-safe and damage tolerance concepts become inadequate for assuring the safety of aging aircraft structures. For example, the failure mechanism for the Aloha Airline accident involved the coalescence of undetected small cracks at the rivet holes causing a section of the fuselage to peel open during flight. Therefore, the fuselage structure should be designed to have sufficient residual strength under worst case crack configurations and in-flight load conditions. Residual strength is interpreted as the maximum load carrying capacity prior to unstable crack growth. Internal pressure and bending moment constitute the two major components of the external loads on the fuselage section during flight. Although the stiffeners in the form of stringers, frames and tear straps sustain part of the external loads, the significant portion of the load is taken up by the skin. In the presence of a large crack in the skin, the crack lips bulge out with considerable yielding; thus, the geometric and material nonlinearities must be included in the analysis for predicting residual strength. Also, these nonlinearities do not permit the decoupling of in-plane and out-of-plane bending deformations. The failure criterion combining the concepts of absorbed specific energy and strain energy density addresses the aforementioned concerns. The critical absorbed specific energy (local toughness) for the material is determined from the global specimen response and deformation geometry based on the uniaxial tensile test data and detailed finite element modeling of the specimen response. The use of the local toughness and stress-strain response at the continuum level eliminates the size effect. With this critical parameter and stress-strain response, the finite element analysis of the component by using STAGS along with the application of this failure criterion provides the stable crack growth calculations for residual strength predictions. TEACHER ENHANCEMENT INSTITUTE Abstract Only **c80**

Tina Marshall-Bradley *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 94 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

During the 1980's, a period of intense concern over educational quality in the United States, few indicators of U.S. student achievement garnered the interest of policy makers and pundits as successfully as the results of international testing in mathematics and science. This concern was so great that as a part of the Goals 2000 initiative, President George Bush indicated that 'By the year 2000, U.S. students should be first in the world in mathematics and science.' The Clinton Administration is placing a major emphasis, not only on rigorous academic standards and creating a new system for assessing students' progress, but also including professional development as a major focus. The argument being that teachers need more sustained, intensive training to prepare them to teach to higher standards. Executive order 12821 mandates that national laboratories 'assist in the mathematics and science education of our Nation's students, teachers, parents and the public by establishing programs at their agency to provide for training elementary and secondary school teachers to improve their knowledge of mathematics and science'. These and other issues led to the development of ideas for a project that addresses the need for excellence in mathematics, science and technology instruction. In response to these initiatives the NASA/LaRC Teacher Enhancement Institute was proposed. The TEI incorporated systemic reform perspectives, enhanced content knowledge for teachers, and teacher preparation. Emphasis was also placed on recruiting those educators who teach in impoverished urban school districts with at-risk student populations who have been traditionally under represented in science, mathematics, technology and engineering. Participants in the Teacher Enhancement Institute were 37 teachers from grades K-8, teaching in Region 2 in the state of Virginia, as well as 2 preservice teachers from Norfolk State University and one teacher from Dublin, Virginia, where a Science/Mathematics model school has been established. Teachers selected for this project represented school systems where income levels are extremely low, and students served tend not to receive innovative instruction in mathematics and science and their use of technology is limited. The Teacher Enhancement Institute contained several features, that when combined, allowed for a unique experience. Some of these features included local teachers, administrators and school board members as presenters, instruction and use of technology every day, tours of select features of the research facility, briefings by NASA/LaRC scientists, engineers and researchers as well as individuals from the Continuous Electron Beam Accelerator Facility (CEBAF). Another unique feature of this program is to have participants convene on three separate occasions throughout the academic year to discuss strategies for information dissemination and implementation results. Teachers' attitudes towards the use of technology, their ability to develop lessons using technology and their ability to develop lessons using information obtained through TEI were assessed using instruments developed by TEI summer faculty members. Data from these instruments were analyzed and reported in a final report submitted to the director of the Office of Education. Author

AEROACOUSTIC COMPUTATION OF GUST-BLADE INTERACTION Abstract Only **c71**

James E. Martin *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 95 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

To better understand and address the challenges faced in computing the acoustics of flow fields, test problems must be considered. In the present study, the sound radiated by the interaction of a flat plate with an oncoming gust containing a two component, mean velocity is computed. The gust has a uniform mean flow in x with Mach number M(infinity) equal to 0.5. The gust's mean velocity in y is of smaller amplitude and is given by: v = 0.1 sin(pi/8(x/M(sub infinity) - t)). This problem has been posed for an upcoming ICASE/LaRC workshop on benchmark problems in computational aeroacoustics. A plate with a length of 30 units in x is used. The plate is assumed to be infinitesimally thin and is centered at the origin. All variables are made dimensionless using the scales specified. Acoustic quantities are obtained by numerically integrating the linearized Euler equations. Integration is performed on the computational domain -100.0 less than or equal to x less than or equal to 100.0, -100.0 less than or equal to y less than or equal to 100.0, using unit length grid spacing in x and in y. An integration scheme is sought which will provide accurate solution to the small quantities of interest at a minimal computational expense. Results indicate that with the given discretization a scheme of minimal fourth order accuracy might be adequate to approximate the waves within the given flow. Thus, a variation of the MacCormack scheme with fourth order accuracy in space and second order accuracy in time was chosen. A scheme with sixth order accuracy in space has also been implemented and results compared with those of the fourth order accurate scheme. To ensure no mass flux, zero normal velocity is assigned at the plate. This condition will induce a discontinuity in the pressure across the plate location. Values for the perturbation pressure p' along the surface of the plate are obtained using a one-sided, third order Taylor expansion, such that p'(sub y) = O. In accordance with the Kutta condition, perturbation pressure at the trailing edge is assigned to zero. In the far field, radiation

boundary conditions have been implemented. The effectiveness of the far field conditions are validated by computing in a larger computational domain and comparing the results. Early in time, sound waves begin to radiate from the plate. A Doppler effect is observed. After the initial transients disappear, the strongest waves leave the trailing edge at an approximate 45 degree angle. The intensity pattern of pressure fluctuations shows five lobes (of increasing magnitude with increasing downstream direction) emerging from the plate. Undesirable short wave contaminants are observed in the computed pressure distribution along the plate surface. For a more accurate solution at small scales, a more refined discretization will be required. Author

INNER LOOP FLIGHT CONTROL FOR THE HIGH-SPEED CIVIL TRANSPORT Abstract Only **c08**

Brett A. Newman *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 96 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

High-speed aerospace vehicles which employ high strength, light weight, yet deformable materials may exhibit significant interaction between the rigid-body and vibrational dynamics. Preliminary High-Speed Civil Transport (HSCT) configurations are a prime example. Traditionally, separate control systems have been used to augment the rigid-body and vibrational dynamics. In the HSCT arena, the highly coupled motions may not allow this design freedom. The research activity addresses two specific issues associated with the design and development of an integrated flight control system (FCS) for HSCT configurations, which are discussed next. The HSCT is expected to have a short period instability at subsonic speeds. Flight vehicles with this characteristic (i.e., F-16, F-22, X-29, Space Shuttle) are stabilized with what is called a superaugmented pitch rate loop. One concern is 'Will this stability augmentation logic work for a HSCT?' Studies show that an idealized pitch rate design would be acceptable, but is not realistic. Investigations using a contaminated pitch rate design reveal serious hurdles to overcome in the FCS design. Mounting location for the pitch rate sensor is critical. Results indicate a forward location leads to destabilizing pick-up of aeroelastic modes, while aft locations lead to undesirable coupling of the dominate pitch mode with the first aeroelastic mode. Intermediate locations for the sensor may not be acceptable. The source of the problem is the presence of low frequency aeroelastic modes in HSCT configurations, which are not present in vehicles currently using the superaugmented logic. To say the least, a conventional superaugmented pitch rate loop strategy may have undesirable characteristics. An unconventional strategy, which attempts to eliminate the above deficiencies by blending several pitch rate signals, indicates an improvement in the FCS architecture feasibility, but is still lacking in some respects. The HSCT configuration does not have aerodynamic surfaces in the vicinity of the nose (i.e., no canard or vane). A second concern is 'Can the fuselage bending/torsion aeroelastic modes be effectively augmented without sufficient control input near the vehicle nose?' The superaugmented FCS results above may be suggesting the necessity of a secondary feedback loop to achieve an acceptable integrated FCS. Preliminary analysis of HSCT aeroelastic mode shapes indicate the use of existing wing leading edge devices as a second control input may be lacking in control authority for the rigid-body attitude and aeroelastic modes. An effort is underway to incorporate generic wing leading edge devices and canards into a generic HSCT model for the purpose of assessing additional control authority and it's use in candidate FCS designs. A generic HSCT mathematical model was necessary for the studies above. A HSCT category model is available in NASA-CR-172201. This model describes the linear, longitudinal dynamics about the following flight condition: ascent, W = 730,000 lbs, h = 6,500 ft, M = 0.6. The model incorporates the full rigid-body variable set, as well as eighteen aeroelastic modes. Elevator deflection serves as the control input. Modifications to the model include the incorporation of relaxed static stability (i.e., static margin from -7.3% to +10%) and additional control inputs. Author

BENCHMARK PROBLEMS IN COMPUTATIONAL AEROACOUSTICS Abstract Only **c71**

Freda Porter-Locklear *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 97 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

A recent directive at NASA Langley is aimed at numerically predicting principal noise sources. During my summer stay, I worked with high-order ENO code, developed by Dr. Harold Atkins, for solving the unsteady compressible Navier-Stokes equations, as it applies to computational aeroacoustics (CAA). A CAA workshop, composed of six categories of benchmark problems, has been organized to test various numerical properties of code. My task was to determine the robustness of Atkins' code for these test problems. In one category, we tested the nonlinear wave propagation of the code for the one-dimensional Euler equations, with initial pressure, density, and velocity conditions. Using freestream boundary conditions, our results were plausible. In another category, we solved the linearized two-dimensional Euler equations to test the effectiveness of radiation boundary conditions. Here we utilized MAPLE to compute eigenvalues and eigenvectors of the Jacobian given variable and flux vectors. We experienced a minor problem with inflow and outflow boundary conditions. Next, we solved the quasi one dimensional unsteady flow equations with an incoming acoustic wave of amplitude 10(exp -6). The small amplitude sound wave was incident on a convergent-divergent nozzle. After finding a steady-state solution and then marching forward, our solution indicated that after 30 periods the acoustic wave had dissipated (a period is time required for sound wave to traverse one end of nozzle to other end). LANGLEY RESEARCH CENTER STRATEGIC PLAN FOR EDUCATION Abstract Only **c80**

Sandra B. Proctor *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 98 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

Research assignment centered on the preparation of final draft of the NASA Langley Strategic Plan for Education. Primary research activity consisted of data collection, through interviews with LaRC Office of Education and NASA Headquarters staff, university administrators and faculty, and school administrators / teachers; and documentary analysis. Pre-college and university programs were critically reviewed to assure effectiveness, support of NASA and Langley's mission and goals; National Education Goals; and educational reform strategies. In addition to these mandates, pre-college programs were reviewed to address present and future LaRC activities for teacher enhancement and preparation. University programs were reviewed with emphasis on student support and recruitment; faculty development and enhancement; and LaRC's role in promoting the utilization of educational technologies and distance learning. The LaRC Strategic Plan for Education will enable the Office of Education to provide a focused and well planned continuum of education programs for students, teachers and faculty. It will serve to direct and focus present activities and programs while simultaneously offering the flexibility to address new and emerging directions based on changing national, state, and agency trends. THIN TAILORED COMPOSITE WING FOR CIVIL TILTROTOR Abstract Only **c05**

Masoud Rais-Rohani *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 99 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

The tiltrotor aircraft is a flight vehicle which combines the efficient low speed (i.e., take-off, landing, and hover) characteristics of a helicopter with the efficient cruise speed of a turboprop airplane. A well-known example of such vehicle is the Bell-Boeing V-22 Osprey. The high cruise speed and range constraints placed on the civil tiltrotor require a relatively thin wing to increase the drag-divergence Mach number which translates into lower compressibility drag. It is required to reduce the wing maximum thickness-to-chord ratio t/c from 23% (i.e., V-22 wing) to 18%. While a reduction in wing thickness results in improved aerodynamic efficiency, it has an adverse effect on the wing structure and it tends to reduce structural stiffness. If ignored, the reduction in wing stiffness leads to susceptibility

to aeroelastic and dynamic instabilities which may consequently cause a catastrophic failure. By taking advantage of the directional stiffness characteristics of composite materials the wing structure may be tailored to have the necessary stiffness, at a lower thickness, while keeping the weight low. The goal of this study is to design a wing structure for minimum weight subject to structural, dynamic and aeroelastic constraints. The structural constraints are in terms of strength and buckling allowables. The dynamic constraints are in terms of wing natural frequencies in vertical and horizontal bending and torsion. The aeroelastic constraints are in terms of frequency placement of the wing structure relative to those of the rotor system. The wing-rotor-pylon aeroelastic and dynamic interactions are limited in this design study by holding the cruise speed, rotor-pylon system, and wing geometric attributes fixed. To assure that the wing-rotor stability margins are maintained a more rigorous analysis based on a detailed model of the rotor system will need to ensue following the design study. The skin-stringer-rib type architecture is used for the wing-box structure. The design variables include upper and lower skin ply thicknesses and orientation angles, spar and rib web thicknesses and cap areas, and stringer cross-sectional areas. These design variables will allow the maximum tailoring of the structure to meet the design requirements most efficiently. Initial dynamic analysis has been conducted using MSC/NASTRAN to determine the baseline wing's frequencies and mode shapes. For the design study we intend to use the finite-element based code called WIDOWAC (Wing Design Optimization With Aeroeastic Constraints) that was developed at NASA Langley in early 1970's for airplane wing structural analysis and preliminary design. Currently, the focus is on modification and validation of this code which will be used for the civil tiltrotor design efforts. Author

DIFFERENTIAL GPS AND SYSTEM INTEGRATION OF THE LOW VISIBILITY LANDING AND SURFACE OPERATIONS (LVLASO) DEMONSTRATION Abstract Only **c04**

James M. Rankin *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 100 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

The LVLASO Flight Demonstration of ASTA concepts (FDAC) integrates NASA-Langley's electronic moving map display and Transport Systems Research Vehicle (TSRV) (a modified Boeing 737 aircraft); ARINC's VHF data link, GPS ground station, and automated controller workstation; and Norden's surface radar/airport movement safety system. Aircraft location is shown on the electronic map display in the cockpit. An approved taxi route as well as other aircraft and surface traffic are also displayed. An Ashtech Z12 Global Positioning System (GPS) receiver on the TSRV estimates the aircraft's position. In Differential mode (DSPS), the Ashtech receiver accepts differential C/A code pseudorange corrections from a GPS ground station. The GPS ground station provides corrections up to ten satellites. The corrections are transmitted on a VHF data link at a 1 Hz. rate using the RTCM-104 format. DGPS position estimates will be within 5 meters of actual aircraft position. DGPS position estimates are blended with position, velocity, acceleration, and heading data from the TSRV Air Data/Inertial Reference System (ADIRS). The ADIRS data is accurate in the short-term, but drifts over time. The DGPS data is used to keep the ADIRS position accurate. Ownship position, velocity, heading, and turn rate are sent at a 20 Hz. rate to the electronic map display. Airport traffic is detected by the airport surface radar system. Aircraft and vehicles such as fuel trucks and baggage carts are detected. The traffic's location, velocity, and heading are sent to the TSRV. To prevent traffic symbology from jumping each second when a location update arrives, velocity and heading are used to predict a new traffic location for each display update. Possible runway incursions and collisions can be shown on the electronic map. Integrating the different systems used in the FDAC requires attention to the underlying coordinate systems. The airport diagram displayed on the electronic map is obtained from published navigational charts. The charts reference the North American Datum of 1927 (NAD27) or a local state-plane coordinate system. GPS uses the World Geodetic Standard of 1984 (WGS84). Both NAD27 and WGS84 model the Earth as an ellipsoid, however, they use a different origin and different size ellipsoids. Latitudes and longitudes given in these systems can be converted to a Cartesian system with the origin at the Earth's center. The surface radar detects traffic in a locally-level, rho-theta coordiante system. The electronic airport diagram is stored using a flat XY coordinate system. The map origin is at the tower and is referenced as True North up. All ownship and other traffic positions must be converted to the electronic map's frame of reference for display. Author

PRELIMINARY IDENTIFICATION OF BUFFET PROBLEMS IN HIGH SPEED CIVIL TRANSPORT Abstract Only **c08**

Krishnaswamy Ravindra *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 101 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

In the present study, some effort is made to identify whether empennage buffet is a relevant factor in the design and operation of the High Speed Civil Transport (HSCT). Based on some results of the only operational supersonic transport, Concorde and the innumerable studies that exist on the tail buffet of high performance airplanes, CFD analyses on the HSCT as well as low speed wind tunnel tests on models, it appears as though buffet will be a factor that needs attention in the proper design of empennage structure. Utilizing the existing empirical relation between the reduced frequency of the leading edge vortices and the geometric parameters, it is estimated that the characteristic frequencies of the vortices from the wing cranks are in the range of certain fundamental frequencies of the wing-fuselage-empennage structure. Buffet is believed to be critical during take-off, climb, descent and landing. Computational and experimental data available in open literature indicate coherent vortex flow structure in the empennage region at supersonic cruise speeds. This raises further concern on the fatigue life of the empennage structure. Three second generation supersonic transport designs taken from open literature are briefly compared with the 'empennage buffet' in mind. Future research efforts relating to buffet studies on the HSCT are summarized. A bibliography pertaining to the present research, including relevant studies on the first generation supersonic transport is presented. The effect of rounded wing leading edges on the present frequency estimates needs further study. The effect of engine exhaust on the flow field in the empennage region also needs further study. PREPARATION OF COURSE MATERIALS: ELEMENTARY MATHEMATICS OF POWERED FLIGHT Abstract Only **c80**

George T. Rublein *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 102 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

Non-science students at William and Mary will soon be required to take a mathematics course in order to earn a bachelor's degree. A standard menu of technique courses is the usual way in which universities provide for this requirement: Trigonometry, probability, geometry for teachers, and the like. In this work, we attempt to break away from these largely unsuccessful choices. Our intent is to prepare material that sets a variety of simple mathematical procedures in the context of a commonly experienced part of students' lives: riding in commercial airplanes. The work, begun last summer at Langley, is now close to completion and trial in upcoming fall term at William and Mary. As of this writing, the narrative is complete for 12 to 14 projected sections. We have prepared material on wind triangles, wind roses, navigation maps, drag induced loss of velocity for unpowered missiles (tennis balls), luggage and its effect on center of gravity, localized magnetic declination and VOR orientation, geometry of great circles, terminal velocity for falling bodies, pressure vessels: tires and balloons and blimps, global structure of declination lines, map projections (mercator, azimuthal equidistant, Lambert), ears and their reaction to altitude change. The next section will treat lift, drag and thrust. The last will treat control surfaces. The entire approach avoids any effort to investigate mathematical topics that arise in the solution of problems. And by the same token, we avoid any organized attempt to explain aeronautical engineering, even on an elementary level. We look only at enough mathematics to do a problem and we select only engineering topics that permit some kind of (elementary) mathematical analysis. In the end, we

will think of the material as successful if two things happen: Students must come away with some confidence that even lay people can quantify parts of their surroundings. Other potential instructors must be willing to gain enough familiarity with the physical content of the material so that it can be used at other universities. Author

ASSOCIATED WITH AEROSPACE VEHICLES DEVELOPMENT OF METHODOLOGIES FOR THE ESTIMATION OF THERMAL PROPERTIES Abstract Only **c39**

Elaine P. Scott *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 103 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

Thermal stress analyses are an important aspect in the development of aerospace vehicles at NASA-LaRC. These analyses require knowledge of the temperature distributions within the vehicle structures which consequently necessitates the need for accurate thermal property data. The overall goal of this ongoing research effort is to develop methodologies for the estimation of the thermal property data needed to describe the temperature responses of these complex structures. The research strategy undertaken utilizes a building block approach. The idea here is to first focus on the development of property estimation methodologies for relatively simple conditions, such as isotropic materials at constant temperatures, and then systematically modify the technique for the analysis of more and more complex systems, such as anisotropic multi-component systems. The estimation methodology utilized is a statistically based method which incorporates experimental data and a mathematical model of the system. Several aspects of this overall research effort were investigated during the time of the ASEE summer program. One important aspect involved the calibration of the estimation procedure for the estimation of the thermal properties through the thickness of a standard material. Transient experiments were conducted using a Pyrex standard at various temperatures, and then the thermal properties (thermal conductivity and volumetric heat capacity) were estimated at each temperature. Confidence regions for the estimated values were also determined. These results were then compared to documented values. Another set of experimental tests were conducted on carbon composite samples at different temperatures. Again, the thermal properties were estimated for each temperature, and the results were compared with values obtained using another technique. In both sets of experiments, a 10-15 percent off-set between the estimated values and the previously determined values was found. Another effort was related to the development of the experimental techniques. Initial experiments required a resistance heater placed between two samples. The design was modified such that the heater was placed on the surface of only one sample, as would be necessary in the analysis of built up structures. Experiments using the modified technique were conducted on the composite sample used previously at different temperatures. The results were within 5 percent of those found using two samples. Finally, an initial heat transfer analysis, including conduction, convection and radiation components, was completed on a titanium sandwich structural sample. Experiments utilizing this sample are currently being designed and will be used to first estimate the material's effective thermal conductivity and later to determine the properties associated with each individual heat transfer component. POTENTIAL AEROSPACE APPLICATIONS OF HIGH TEMPERATURE SUPERCONDUCTORS Abstract Only **c33**

Raouf Selim *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 104 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

The recent discovery of High Temperature Superconductors (HTS) with superconducting transition temperature, T(sub c), above the boiling point of liquid nitrogen has opened the door for using these materials in new and practical applications. These materials have zero resistance to electric current, have the capability of carrying large currents and as such have the potential to be used in high magnetic field applications. One of the space applications that can use superconductors is electromagnetic launch of payloads to low-earth-orbit. An electromagnetic gun-type launcher can be used in small payload systems that are launched at very high velocity, while sled-type magnetically levitated launcher can be used to launch larger payloads at smaller velocities. Both types of launchers are being studied by NASA and the aerospace industry. The use of superconductors will be essential in any of these types of launchers in order to produce the large magnetic fields required to obtain large thrust forces. Low Temperature Superconductor (LTS) technology is mature enough and can be easily integrated in such systems. As for the HTS, many leading companies are currently producing HTS coils and magnets that potentially can be mass-produced for these launchers. It seems that designing and building a small-scale electromagnetic launcher is the next logical step toward seriously considering this method for launching payloads into low-earth-orbit. A second potential application is the use of HTS to build sensitive portable devices for the use in Non Destructive Evaluation (NDE). Superconducting Quantum Interference Devices (SQUID's) are the most sensitive instruments for measuring changes in magnetic flux. By using HTS in SQUID's, one will be able to design a portable unit that uses liquid nitrogen or a cryocooler pump to explore the use of gradiometers or magnetometers to detect deep cracks or corrosion in structures. A third use is the replacement of Infra-Red (IR) sensor leads on Earth Orbit Systems (EOS) with HTS leads. IR detectors on these EOS missions are cooled to a 4.2K to improve their signal to noise ratio. They are connected to data acquisitions systems using manganin wires (low thermal conductors) to reduce the heat load on the cryogen. Replacing these wires with HTS leads will increase the lifetime of these missions by about 50 percent. This is a promising application that is ready for actual implementation on such systems. The analysis also show that an the number of IR detectors increase in larger EOS systems, substantial increase in the lifetime of each mission will be realized by using HTS leads instead of the manganin ones. UPWARD APPRAISAL AS A MEANS FOR IMPROVING SUPERVISORY PERFORMANCE AND PROMOTING PROCESS IMPROVEMENT, WITH LONG-TERM IMPLICATIONS FOR ORGANIZATIONAL CHANGE Abstract Only **c81**

Denise V. Siegfeldt *In its* 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 105 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

This study represents the implementation phase of an organizational development project which was initiated last year in the Management Support Division (MSD) at Langley Research Center to diagnose organizational functioning. As a result of MSD survey data from last year's effort, a Quality Action Team was created to address the responses compiled from the MSD Organizational Assessment Questionnaire and Follow-Up Questionnaire. The team was officially named the MSD Employee Relations Improvement Team (MERIT). MERIT's goal was to analyze major concerns generated by the questionnaires and to present feasible solutions to management which would improve supervisory performance, promote process improvement; and ultimately, lead to a better organization. The team met weekly and was very disciplined in following guidelines needed to ensure a fully functioning team. Several TQM tools were used during the team process, including brainstorming and the cause and effect diagram. One of the products produced by MERIT was a 'report card', more formally known as an upward appraisal system, to evaluate supervisory performance in the division office, its three branches, and in teams. Major areas of emphasis on the 47 item report card were those identified by employees through the previously administered questionnaires as needing to be improved; specifically, training, recognition, teamwork, supervision and leadership, and communication. MERIT created an enlarged and modified version of the report card which enabled scores for each individual supervisor to be recorded on a separate form, along with summary results and employee comments. Report card results have been compiled and fed back to the Division Chief and Assistant Division Chief. These individuals will in turn, feed the results back to the remaining supervisors and the team leaders. Although results differ among supervisors, some similarities exist. Communication generally appears to be adequate, which represents an improvement over last year. In contrast, recognition and teamwork are the two major areas where improvement in supervisory performance seems to be most needed. The initial report card results will serve as a baseline

against which future performance ratings will be compared. Once supervisors have been presented with their data and given an opportunity to analyze and discus the results, they will be assisted in developing an action plan for improving their performance and work processes. They will be provided with ongoing support from management in following through with the action plan. Author

TEACHER ENHANCEMENT INSTITUTE Abstract Only **c80**
Ron W. Simmons *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 106 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

In a team building, team teaching strategy with four faculty, can learning strategies such as educational technology and problem based learning be provided to forty local teachers of primary, elementary, and secondary students? The impetus for the effort is to provide information about science and engineering at NASA and motivate students to pursue careers in science and technology. Teachers, identified and selected through a rigorous application procedure, participated in a two week workshop for a graduate credit. Teachers were exposed to computer applications such as INTERNET, MOSAIC, Power Machintosh word processing, NASA scientists, and laboratory experiments. Teachers were evaluated on level and quality of their participation, design of teacher application materials and relevant lesson plans and presentations. The results show that teachers, regardless of preparation and background, can learn science and engineering applications and develop relevant materials to transfer information to their classroom. Follow-up during the academic year will show that teachers are successfully using materials. Author

HANDLING QUALITIES OF THE HIGH SPEED CIVIL TRANSPORT Abstract Only **c08**
U. Peter Solies *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 107 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

The low speed handling qualities of a High Speed Civil Transport class aircraft have been investigated by using data of the former Advanced Supersonic Transport (AST) 105. The operation of such vehicles in the airport terminal area is characterized by 'backside' performance. Main objectives of this research effort were: (Q) determination of the nature and magnitude of the speed instability associated with the backside of the thrust required curve; (2) confirmation of the validity of existing MIL-SPEC handling qualities criteria; (3) safety of operation of the vehicle in the event of autothrottle failure; and (4) correlation of required engine responsiveness with level of speed instability. Preliminary findings comprise the following: (1) The critical velocity for speed instability was determined to be 196 knots, well above the projected approach speed of 155 knots. This puts the vehicle far on the backside of its thrust required curve. While the aircraft can be configured to have static and dynamic stability at this trim point, a significant speed instability emerges, if a pilot or autopilot attempts flight path control with elevator and/or canard control surfaces only. This requires a properly configured autothrottle and/or variable aerodynamic drag devices which can provide speed stability; (2) An AST 105 type vehicle meets MIL-SPEC criteria only in part. While the damping criteria for phugoid and short period motion are met easily, the AST 105 falls short of the required minimum short period frequency, meaning that the HSCT is too sluggish in pitch to meet the military criteria. Obviously the military specification do not consider a vehicle with such high pitch inertia. With regard to speed stability and flight path stability criteria, the vehicle meets levels 2 and 3 of the military requirements, indicating that it would be landed safety with manual controls in case of an autothrottle failure, even though the pilot workload would be high; and (3) This requires quick thrust response to throttle adjustment, however. If the engine responsiveness is slow, the aircraft handling qualities are further deteriorated. Progress has been made in correlating required engine responses dyanmics with the given level of speed instability of the vehicle. Author (revised)

COMPUTATIONAL MODELLING OF Er(3+): GARNET LASER MATERIALS Abstract Only **c36**
Lee H. Spangler *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 108 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

The Er(3+) ion has attracted a lot of interest for four reasons: (1) Its (4)I(sub 13/2) yields (4)I(sub 15/2) transition lases in the eyesafe region near 1.5 micron; (2) the (4)I(sub 13/2) transition lases near 2.8 micron, an important wavelength for surgical purposes; (3) it displays surprisingly efficient upconversion with lasing observed at 1.7, 1.2, 0.85, 0.56, 0.55, and 0.47 micron following 1.5 micron pumping; and (4) it has absorption bands at 0.96 and 0.81 micron and thus can be diode pumped. However, properties desirable for upconversion reduce the efficiency of 1.5 and 3 micron laser operation and vice versa. Since all of the processes are influenced by the host via the crystal field induced stark splittings in the Er levels, this project undertook modelling of the host influence on the Er lasinng behavior. While growth and measurement of all ten Er(3+) doped garnets is the surest way of identifying hosts which maximize upconversion (or conversly, 1.5 and 3 micron performance), it is also expensive - costing approximately $10,000/material or approximately $100,000 for the materials computationally investigated here. The calculations were performed using a quantum mechanical point charge model developed by Clyde Morrison at Harry Diamond Laboratories. The programs were used to fit the Er:YAG experimental energy levels so that the crystal field parameters, B(sub nm) could be extracted. From these radial factors, rho (sub n) were determined for Er(3+) in garnets. These, in combination with crystal field components, Anm, available from X-ray data, were used to predict energy levels for Er in the other nine garnet hosts. The levels in Er:YAG were fit with an rms error of 12.2/cm over a 22,000/cm range. Predicted levels for two other garnets for which literature values were available had rms errors of less than 17/cm , showing the calculations to be reliable. Based on resonances between pairs of calculated stark levels, the model predicts GSGG as the best host for 1.5 micron laser operation, GSGG or YSAG as the best host for a 2.8 micron operation, and LuGG as the best host for an upconversion material. A NEW LOOK AT THE SIMULTANEOUS ANALYSIS AND DESIGN OF STRUCTURES Abstract Only **c39**
Alfred G. Striz *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 109 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

The minimum weight optimization of structural systems, subject to strength and displacement constraints as well as size side constraints, was investigated by the Simultaneous ANalysis and Design (SAND) approach. As an optimizer, the code NPSOL was used which is based on a sequential quadratic programming (SQP) algorithm. The structures were modeled by the finite element method. The finite element related input to NPSOL was automatically generated from the input decks of such standard FEM/optimization codes as NASTRAN or ASTROS, with the stiffness matrices, at present, extracted from the FEM code ANALYZE. In order to avoid ill-conditioned matrices that can be encountered when the global stiffness equations are used as additional nonlinear equality constraints in the SAND approach (with the displacements as additional variables), the matrix displacement method was applied. In this approach, the element stiffness equations are used as constraints instead of the global stiffness equations, in conjunction with the nodal force equilibrium equations. This approach adds the element forces as variables to the system. Since, for complex structures and the associated large and very sparce matrices, the execution times of the optimization code became excessive due to the large number of required constraint gradient evaluations, the Kreisselmeier-Steinhauser function approach was used to decrease the computational effort by reducing the nonlinear equality constraint system to essentially a single combined constraint equation. As the linear equality and inequality constraints require much less computational effort to evaluate, they were kept in their previous form to limit the complexity of the KS function evaluation. To date, the standard three-bar, ten-bar, and 72-bar trusses have been tested. For the standard SAND approach, correct results were obtained for all three trusses although convergence became slower for the 72-bar truss. When the matrix displacement method was used,

correct results were still obtained, but the execution times became excessive due to the large number of constraint gradient evaluations required. Using the KS function, the computational effort dropped, but the optimization seemed to become less robust. The investigation of this phenomenon is continuing. As an alternate approach, the code MINOS for the optimization of sparse matrices can be applied to the problem in lieu of the Kreisselmeier-Steinhauser function. This investigation is underway. APPLICATION OF ELECTRON PARAMAGNETIC RESONANCE IMAGING TO THE CHARACTERIZATION OF THE ULTEM(R) EXPOSED TO 1 MeV ELECTRONS. CORRELATION OF RADICAL DENSITY DATA TO TIGER CODE CALCULATIONS Abstract Only **c72**

Naushadalli K. Suleman *In its* 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 110 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

A major long-term goal of the Materials Division at the NASA Langley Research Center is the characterization of new high-performance materials that have potential applications in the aircraft industry, and in space. The materials used for space applications are often subjected to a harsh and potentially damaging radiation environment. The present study constitutes the application of a novel technique to obtain reliable data for ascertaining the molecular basis for the resilience and durability of materials that have been exposed to simulated space radiations. The radiations of greatest concern are energetic electrons and protons, as well as galactic cosmic rays. Presently, the effects of such radiation on matter are not understood in their entirety. It is clear however, that electron radiation causes ionization and homolytic bond rupture, resulting in the formation of paramagnetic spin centers in the polymer matrices of the structural materials. Since the detection and structure elucidation of paramagnetic species are most readily accomplished using Electron Paramagnetic Resonance (EPR) Spectroscopy, the NASA LaRC EPR system was brought back on-line during the 1991 ASEE term. The subsequent 1992 ASEE term was devoted to the adaptation of the EPR core system to meet the requirements for EPR Imaging (EPRI), which provides detailed information on the spatial distribution of paramagnetic species in bulk media. The present (1994) ASEE term was devoted to the calibration of this EPR Imaging system, as well as to the application of this technology to study the effects of electron irradiation on Ultem(exp R), a high performance polymer which is a candidate for applications in aerospace. The Ultem was exposed to a dose of 2.4 x 10(exp 9) Rads (1-MeV energy/electron) at the LaRC electron accelerator facility. Subsequently, the exposed specimens were stored in liquid nitrogen, until immediately prior to analyses by EPRI. The intensity and dimensions of the EPR Images that were generated for the irradiated specimens showed that the electrons penetrated the material to a depth of approximately 0.125 inch. These data show a very high degree of correlation to the energy deposition profile as predicted by the Tiger Code, a Monte Carlo code that provides guidelines for the transport of electrons in matter. Subsequent efforts will focus on delineating the transport properties of energetic protons in Ultem(R). Author

THEORETICAL STUDIES OF SPECTROSCOPIC PROBLEMS OF IMPORTANCE FOR ATMOSPHERIC RADIATION MEASUREMENTS Abstract Only **c46**

Richard H. Tipping *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 111 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

Many of the instruments used to deduce the physical parameters of the Earth's atmosphere necessary for climate studies or for pollution monitoring (for instance, temperature versus pressure or number densities of trace molecules) rely on the existence of accurate spectroscopic data and an understanding of the physical processes responsible for the absorption or emission of radiation. During the summer, research was either continued or begun on three distinct problems: (1) an improved theoretical framework for the calculation of the far-wing absorption of allowed spectral lines; (2) a refinement of the calculation of the collision-induced fundamental spectrum of N2; and (3) an investigation of possible line-mixing effects in the fundamental spectrum of CH4. Progress in these three areas is summarized below. During the past few years, we have developed a theoretical framework for the calculation of the absorption of radiation by the far wings of spectral lines. Such absorption due to water vapor plays a crucial role in the greenhouse effect as well as limiting the retrieval of temperature profiles from satellite data. Several improvements in the theory have been made and the results are being prepared for publication. Last year we published results for the theoretical calculation of the absorption of radiation due to the dipoles induced during binary collisions of N2 molecules using independently measured molecular parameters; the results were in reasonable agreement with experimental data. However, recent measurements have revealed new fine structure that has been attributed to line-mixing effects. We do not think that this is correct, rather that the structure results from short-range anisotropic dipoles. We are in the process of including this refinement in our theoretical calculation in order to compare with the new experimental data. Subtle changes in the spectra of CH4 measured by researchers at Langley have also been attributed to line-mixing effects. By analyzing the same spectral lines we have attempted to verify or rule out possible line-mixing mechanisms. Due to the complexity and richness of the spectrum of this highly symmetric molecule, as well as the small magnitude of the effects, a detailed first-principle calculation of the mixing is a difficult problem. Before such a program is undertaken it is important to glean as much information as possible concerning the possible mechanisms by a systematic analysis of the existing data. Author

COMPUTER MODELING OF THE SENSITIVITY OF A LASER WATER VAPOR SENSOR TO VARIATIONS IN TEMPERATURE AND AIR SPEED Abstract Only **c36**

George F. Tucker *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 112 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

Currently, there is disagreement among existing methods of determining atmospheric water vapor concentration at dew-points below -40 C. A major source of error is wall effects which result from the necessity of bringing samples into the instruments. All of these instruments also have response times on the order of seconds. NASA Langley is developing a water vapor sensor which utilizes the absorption of the infrared radiation produced by a diode laser to estimate water vapor concentration. The laser beam is directed through an aircraft window to a retroreflector located on an engine. The reflected beam is detected by an infrared detector located near the laser. To maximize signal to noise, derivative signals are analyzed. By measuring the 2f/DC signal and correcting for ambient temperature, atmospheric pressure and air speed (which results in a Doppler shifting of the laser beam), the water vapor concentration can be retrieved. Since this is an in situ measurement there are no wall effects and measurements can be made at a rate of more than 20 per second. This allows small spatial variations of water vapor to be studied. In order to study the sensitivity of the instrument to variations in temperature and air speed, a computer program which generated the 2f, 3f, 4f, DC and 2f/DC signals of the instrument as a function of temperature, pressure and air speed was written. This model was used to determine the effect of errors in measurement of the temperature and air speed on the measured water vapor concentration. Future studies will quantify the effect of pressure measurement errors, which are expected to be very small. As a result of these studied, a retrieval algorithm has been formulated, and will be applied to data taken during the PEM-West atmospheric science field mission. Spectroscopic studies of the water vapor line used by the instrument will be used to refine this algorithm. To prepare for these studies, several lasers have been studied to determine their output frequency range and power. Author

THE SOFTWARE ANALYSIS PROJECT FOR THE OFFICE OF HUMAN RESOURCES Abstract Only **c81**

Robert L. Tureman, Jr. *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 113 (For primary document see N95-23276 07-99)
Avail: CASI HC A01/MF A02

There were two major sections of the project for the Office of Human Resources (OHR). The first section was to conduct a planning study to analyze software use with the goal of recommending software purchases and determining whether the need exists for a file server. The second section was analysis and distribution planning for retirement planning computer program entitled VISION provided by NASA Headquarters. The software planning study was developed to help OHR analyze the current administrative desktop computing environment and make decisions regarding software acquisition and implementation. There were three major areas addressed by the study: current environment new software requirements, and strategies regarding the implementation of a server in the Office. To gather data on current environment, employees were surveyed and an inventory of computers were produced. The surveys were compiled and analyzed by the ASEE fellow with interpretation help by OHR staff. New software requirements represented a compilation and analysis of the surveyed requests of OHR personnel. Finally, the information on the use of a server represents research done by the ASEE fellow and analysis of survey data to determine software requirements for a server. This included selection of a methodology to estimate the number of copies of each software program required given current use and estimated growth. The report presents the results of the computing survey, a description of the current computing environment, recommenations for changes in the computing environment, current software needs, management advantages of using a server, and management considerations in the implementation of a server. In addition, detailed specifications were presented for the hardware and software recommendations to offer a complete picture to OHR management. The retirement planning computer program available to NASA employees will aid in long-range retirement planning. The intended audience is the NASA civil service employee with several years until retirement. The employee enters current salary and savings information as well as goals concerning salary at retirement, assumptions on inflation, and the return on investments. The program produces a picture of the employee's retirement income from all sources based on the assumptions entered. A session showing features of the program was conducted for key personnel at the Center. After analysis, it was decided to offer the program through the Learning Center starting in August 1994. MULTIDISCIPLINARY DESIGN OPTIMIZATION USING GENETIC ALGORITHMS Abstract Only **c15**

Resit Unal *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 114 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

Multidisciplinary design optimization (MDO) is an important step in the conceptual design and evaluation of launch vehicles since it can have a significant impact on performance and life cycle cost. The objective is to search the system design space to determine values of design variables that optimize the performance characteristic subject to system constraints. Gradient-based optimization routines have been used extensively for aerospace design optimization. However, one limitation of gradient based optimizers is their need for gradient information. Therefore, design problems which include discrete variables can not be studied. Such problems are common in launch vehicle design. For example, the number of engines and material choices must be integer values or assume only a few discrete values. In this study, genetic algorithms are investigated as an approach to MDO problems involving discrete variables and discontinuous domains. Optimization by genetic algorithms (GA) uses a search procedure which is fundamentally different from those gradient based methods. Genetic algorithms seek to find good solutions in an efficient and timely manner rather than finding the best solution. GA are designed to mimic evolutionary selection. A population of candidate designs is evaluated at each iteration, and each individual's probability of reproduction (existence in the next generation) depends on its fitness value (related to the value of the objective function). Progress toward the optimum is achieved by the crossover and mutation operations. GA is attractive since it uses only objective function values in the search process, so gradient calculations are avoided. Hence, GA are able to deal with discrete variables. Studies report success in the use of GA for aircraft design optimization studies, trajectory analysis, space structure design and control systems design. In these studies reliable convergence was achieved, but the number of function evaluations was large compared with efficient gradient methods. Applicaiton of GA is underway for a cost optimization study for a launch-vehicle fuel-tank and structural design of a wing. The strengths and limitations of GA for launch vehicle design optimization is studied. Author

HIGH-LIFT FLOW-PHYSICS FLIGHT EXPERIMENTS ON A SUBSONIC CIVIL TRANSPORT AIRCRAFT (B737-100) Abstract Only **c02**

Cornelis P. vanDam *In* Hampton Univ., 1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program Dec. 1994 p 115 (For primary document see N95-23276 07-99)

Avail: CASI HC A01/MF A02

As part of the subsonic transport high-lift program, flight experiments are being conducted using NASA Langley's B737-100 to measure the flow characteristics of the multi-element high-lift system at full-scale high-Reynolds-number conditions. The instrumentation consists of hot-film anemometers to measure boundary-layer states, an infra-red camera to detect transition from laminar to turbulent flow, Preston tubes to measure wall shear stress, boundary-layer rakes to measure off-surface velocity profiles, and pressure orifices to measure surface pressure distributions. The initial phase of this research project was recently concluded with two flights on July 14. This phase consisted of a total of twenty flights over a period of about ten weeks. In the coming months the data obtained in this initial set of flight experiments will be analyzed and the results will be used to finalize the instrumentation layout for the next set of flight experiments scheduled for Winter and Spring of 1995. The main goal of these upcoming flights will be: (1) to measure more detailed surface pressure distributions across the wing for a range of flight conditions and flap settings; (2) to visualize the surface flows across the multi-element wing at high-lift conditions using fluorescent mini tufts; and (3) to measure in more detail the changes in boundary-layer state on the various flap elements as a result of changes in flight condition and flap deflection. These flight measured results are being correlated with experimental data measured in ground-based facilities as well as with computational data calculated with methods based on the Navier-Stokes equations or a reduced set of these equations. Also these results provide insight into the extent of laminar flow that exists on actual multi-element lifting surfaces at full-scale high-life conditions. Preliminary results indicate that depending on the deflection angle, the slat and flap elements have significant regions of laminar flow over a wide range of angles of attack. Boundary-layer transition mechanisms that were observed include attachment-line contamination on the slat and inflectional instability on the slat and fore flap. Also, the results agree fairly well with the predictions reported in a paper presented at last year's AIAA Fluid Dynamics Conference. The fact that extended regions of laminar flow are shown to exist on the various elements of the high-lift system raises the question what the effect is of loss of laminar flow as a result of insect contamiantion, rain or ice accumulation on high-life performance. LDEF: 69 MONTHS IN SPACE. THIRD POST-RETRIEVAL SYMPOSIUM, PART 1

Arlene S. Levine, ed. Feb. 1995 530 p Symposium held in Williamsburg, VA, 8-12 Nov. 1993; sponsored by NASA, Washington and AIAA

(RTOP 233-03-02-03)

(NASA-CP-3275-Pt-1; L-17430A-Pt-1; NAS 1.55:3275-Pt-1) Avail: CASI HC A23/MF A04

This volume (Part 1 of 3) is a compilation of papers presented at the Third Long Duration Exposure Facility (LDEF) Post-Retrieval Symposium. The papers represent the data analysis of the 57 experiments flown on the LDEF. The experiments include materials, coatings, thermal systems, power and propulsion, science (cosmic ray, interstellar gas, heavy ions, micrometeoroid, etc.), electronics, optics, and life science. In addition, papers on preliminary data analysis of EURECA, EOIM-3, and other spacecraft are included. For individual titles, see N95-23797 through N95-23843.

LDEF ENVIRONMENT MODELING UPDATES **c25**

Tim Gordon (Applied Science Technology, Inc., Littleton, CO.), Ray Rantanen

(ROR Enterprises, Athol, ID.), and Ann F. Whitaker *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 3-11 (For primary document see N95-23796 07-99)
Avail: CASI HC A02/MF A04

An updated gas dynamics model for gas interactions around the LDEF is presented that includes improved scattering algorithms. The primary improvement is more accurate predictions of surface fluxes in the wake region. The code used is the Integrated Spacecraft Environments Model (ISEM). Additionally, initial results of a detailed ISEM prediction model of the Solar Array Passive LDEF Experiment (SAMPLE), A0171, is presented. This model includes details of the A0171 geometry and outgassing characteristics of the many surfaces on the experiment. The detailed model includes the multiple scattering that exists between the ambient atmosphere, LDEF outgassing, and atomic oxygen erosion products. Predictions are made for gas densities, surface fluxes and deposition at three different time periods of the LDEF mission. Author

OUTGASSING PRODUCTS FROM ORBITER TPS MATERIALS c25
Gale A. Harvey, Tom J. Lash, and J. Richard Rawls *In its* LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 13-20 (For primary document see N95-23796 07-99)
Avail: CASI HC A02/MF A04

The Space Transportation System (STS) orbiters are known to be significant sources of outgassing in low earth orbit (LEO). Infrared and mass spectra of residues and outgassing from orbiter thermal protection tile and an external blanket are presented. Several sources of methyl and phenyl methyl silicones are identified. About fifty pounds of silicones are estimated to be outgassed during an STS mission. Author

EURECA 11 MONTHS IN ORBIT: INITIAL POST FLIGHT INVESTIGATION RESULTS c18
Alan Dover, Roberto Aceti, and Gerhard Drolshagen *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 23-35 (For primary document see N95-23796 07-99)
Avail: CASI HC A03/MF A04

This paper gives a brief overview of the European free flying spacecraft 'EURECA' and the initial post flight investigations following its retrieval in June 1993. EURECA was in low earth orbit for 11 months commencing in August 1992, and is the first spacecraft to be retrieved and returned to Earth since the recovery of LDEF. The primary mission objective of EURECA was the investigation of materials and fluids in a very low micro-gravity environment. In addition other experiments were conducted in space science, technology and space environment disciplines. The European Space Agency (ESA) has taken the initiative in conducting a detailed post-flight investigation to ensure the full exploitation of this unique opportunity. Author

DOSIMETRIC RESULTS ON EURECA c93
G. Reitz *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 37-42 (For primary document see N95-23796 07-99)
Avail: CASI HC A02/MF A04

Detector packages were exposed on the European Retrievable Carrier (EURECA) as part of the Biostack experiment inside the Exobiology and Radiation Assembly (ERA) and at several locations around EURECA. The packages consist of different plastic nuclear track detectors, nuclear emulsions and thermoluminescence dosimeters (TLD's). Evaluation of these detectors yields data on absorbed dose and particle and LET spectra. Preliminary results of absorbed dose measurements in the EURECA dosimeter packages are reported and compared to results of the LDEF experiments. The highest dose rate measured on EURECA is 63.3 plus or minus 0.4 mGy d(exp -1) behind a shielding thickness of 0.09 g cm(exp -2) in front of the detector package. Author

PRELIMINARY RESULTS OF RADIATION MEASUREMENTS ON EURECA c93
E. V. Benton and A. L. Frank *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 43-50 (For primary document see N95-23796 07-99)
(Grant NAG9-235)
Avail: CASI HC A02/MF A04

The eleven-month duration of the EURECA mission allows long term radiation effects to be studied similarly to those of the Long Duration Exposure Facility (LDEF). Basic data can be generated for projections of crew doses and electronic and computer reliability on spacecraft missions. A radiation experiment has been designed for EURECA which uses passive integrating detectors to measure average radiation levels. The components include a Trackoscope, which employs fourteen plastic nuclear track detector (PNTD) stacks to measure the angular dependence of LET (greater than or equal to 6 keV/microns) radiation. Also included are TLD's for total absorbed doses, thermal/resonance neutron detectors (TRND's) for low energy neutron fluences and a thick PNTD stack for depth dependence measurements. LET spectra are derived from the PNTD measurements. Preliminary TLD results from seven levels within the detector array show that integrated doses inside the flight canister varied from 18.8 plus or minus 0.6 cGy to 38.9 plus or minus 1.2 cGy. The TLD's oriented toward the least shielded direction averaged 53 percent higher in dose than those oriented away from the least shielded direction (minimum shielding toward the least shielded direction varied from 1.13 to 7.9 g/cm(exp 2), Al equivalent). The maximum dose rate on EURECA (1.16 mGy/day) was 37 percent of the maximum measured on LDEF and dose rates at all depths were less than measured on LDEF. The shielding external to the flight canister covered a greater solid angle about the canister than in the LDEF experiments. Author

PERFORMANCE CHARACTERIZATION OF EURECA RETROREFLECTORS WITH FLUOROPOLYMER-FILLED SiO(x) PROTECTIVE COATINGS c27
Bruce A. Banks, Sharon K. Rutledge, and Michael Cales (Cleveland State Univ., OH.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 51-63 (For primary document see N95-23796 07-99)
Avail: CASI HC A03/MF A04

Aluminized corner-cube polymethylmethacrylate retroreflectors were coated with 92% SiO(x) - 8% fluoropolymer (by volume) and flown on the EURECA spacecraft. The fluoropolymer-filled SiO(x) protective coating was found to be durable to atomic oxygen when exposed in a ground-based plasma asher to an anticipated mission fluence of 2x10(exp 20) atoms/cm(exp 2). Unprotected retroreflector surfaces were found to develop highly diffuse reflectance characteristics, thus inhibiting their use for laser retroreflector purposes. A noncontacting retroreflector optical characterization system was constructed and used to measure the optical retroreflection characteristics of the following retroreflector materials: uncoated unexposed, coated unexposed, both uncoated and coated ground laboratory atomic oxygen exposed, and coated exposed to space atomic oxygen on the EURECA spacecraft. A comparison of the optical characterizations is presented. Author

EFFECT OF THE SPACE ENVIRONMENT ON MATERIALS FLOWN ON THE EURECA/TICCE-HVI EXPERIMENT c18
Carl R. Maag, Tim J. Stevenson (Mare Crisium, Old Carisbrooke, England.), William G. Tanner (Baylor Univ., Waco, TX.), and Janet Borg (Centre National de la Recherche Scientifique, Orsay, France.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 65-70 (For primary document see N95-23796 07-99)
Avail: CASI HC A02/MF A04

The primary benefit of accurately quantifying and characterizing the space environmental effects on materials is longer instrument and spacecraft life. Knowledge of the limits of materials allows the designer to optimize the spacecraft design so that the required life is achieved. Materials such as radiator coatings that have excellent durability result in the design of smaller radiators than a radiator coated with a lower durability coating.

This may reduce the weight of the spacecraft due to a more optimum design. Another benefit of characterizing materials is the quantification of outgassing properties. Spacecraft which have ultraviolet or visible sensor payloads are susceptible to contamination by outgassed volatile materials. Materials with known outgassing characteristics can be restricted in these spacecraft. Finally, good data on material characteristics improves the ability of analytical models to predict material performance. A flight experiment was conducted on the European Space Agency's European Retrievable Carrier (EuReCa) as part of the Timeband Capture Cell Experiment (TICCE). Our main objective was to gather additional data on the dust and debris environments, with the focus on understanding growth as a function of size (mass) for hypervelocity particles 1E-06 cm and larger. In addition to enumerating particle impacts, hypervelocity particles were to be captured and returned intact. Measurements were performed post-flight to determine the flux density, diameters, and subsequent effects on various optical, thermal control and structural materials. In addition to these principal measurements, the experiment also provided a structure and sample holders for the exposure of passive material samples to the space environment, e.g., the effects of thermal cycling, atomic oxygen, etc. Preliminary results are presented, including the techniques used for intact capture of particles. LDEF CONTRIBUTIONS TO COSMIC RAY AND RADIATION ENVIRONMENTS RESEARCH Abstract Only **c93**

Thomas A. Parnell *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 89 (For primary document see N95-23796 07-99)

Avail: CASI HC A01/MF A04

LDEF-1 carried three experiments which are producing significant advances in our knowledge of ultra heavy and anomalous cosmic rays, solar flare particles, and heavy nuclei in the trapped belts. Nine other experiments made measurements on the radiation environments or performed dosmetric monitoring. Data from those experiments, and from measurements of induced radioactivity in LDEF components have significantly improved our knowledge of LEO radiation environment. Measurements at various locations shielding depths of radiation absorbed dose, linear energy transfer spectra, proton, neutron and heavy ion fluences, and induced radioactivity have been made, and many of these results have been compared to models. This has allowed the assessment of accuracy, and the potential for improvement, of the models. Serendipitous results from the radiation measurements include the discovery of atmospheric Be-7 plated on the front surface of LDEF, which has motivated a series of new investigations. A sample of measurements and modeling results will be presented, as well as the status of archiving the measurements and models. Author

TRAPPED IRON MEASURED ON LDEF **c93**

R. Beaujean, D. Jonathal, S. Barz, and W. Enge *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 91-99 Sponsored by BMFT (For primary document see N95-23796 07-99)

(Grant DARA-OS-9001)

Avail: CASI HC A02/MF A04

Heavy ions far below the cutoff energy were detected on the 28.5 deg inclination orbit of LDEF in a plastic track detector experiment. The Fe-group particles show a constant energy spectrum at 50 less than or equal to E less than or equal to 200 MeV/nuc. The steep energy spectrum of Fe-particles at 20 less than or equal to E less than or equal to 50 MeV/nuc and the arrival directions of these ions is consistent with a trapped component incident in the South Atlantic Anomaly at values of L=1.4-1.6. CHARACTERISTICS OF LOW ENERGY IONS IN THE HEAVY IONS IN SPACE (HIIS) EXPERIMENT **c72**

Thomas Kleis, Allan J. Tylka (Naval Research Lab., Washington, DC.), Paul R. Boberg (Naval Research Lab., Washington, DC.), James H. Adams, Jr. (Naval Research Lab., Washington, DC.), and Lorraine P. Beahm (Naval Research Lab., Washington, DC.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 101-112 Sponsored by ONR (For primary document see N95-23796 07-99)

(NASA Order W-18409)

Avail: CASI HC A03/MF A04

We present preliminary data on heavy ions (Z greater than or equal to 10) detected in the topmost Lexan sheets of the track detector stacks of the Heavy Ions in space (HIIS) experiment (M0001) on LDEF. The energy interval covered by these observations varies with the element, with (for example) Ne observable at 18-100 MeV nuc and Fe at 45-200 MeV/nuc. All of the observed ions are at energies far below the geomagnetic cutoff for fully-ionized particles at the LDEF orbit. Above 50 MeV/nuc (where most of our observed particles are Fe), the ions arrive primarily from the direction of lowest geomagnetic cutoff. This suggests that these particles originate outside the magnetosphere from a source with a steeply-falling spectrum and may therefore be associated with solar energetic particle (SEP) events. Below 50 MeV/nuc, the distribution of arrival directions suggests that most of the observed heavy ions are trapped in the Earth's magnetic field. Preliminary analysis, however, shows that these trapped heavy ions have a very surprising composition: they include not only Ne and Ar, which are expected from the trapping of anomalous cosmic rays (ACR's), but also Mg and Si, which are not part of the anomalous component. Our preliminary analysis shows that trapped heavy ions at 12 less than or equal to Zeta less than or equal to 14 have a steeply-falling spectrum, similar to that reported by the Kiel experiment (exp 1,2,3) on LDEF (M0002) for trapped Ar and Fe at E less than 50 MeV/nuc. The trapped Mg, Si, and Fe may also be associated with SEP events, but the mechanism by which they have appeared to deep in the inner magnetosphere requires further theoretical investigation. Author

Avail: CASI HC A03/MF A04

It has long been known that low-energy solar energetic particles (SEP's) are partially-ionized. For example, in large, so-called 'gradual' solar energetic particle events, at approximately 1 MeV/nucleon the measured mean ionic charge state, Q, of Fe ions is 14.1 +/- 0.2, corresponding to a plasma temperature of approximately 2 MK in the coronal or solar-wind source material. Recent studies, which have greatly clarified the origin of solar energetic particles and their relation to solar flares, suggest that ions in these SEP events are accelerated not at a flare site, but by shocks propagating through relatively low-density regions in the interplanetary medium. As a result, the partially-ionized states observed at low energies are expected to continue to higher energies. However, up to now there have been no high-energy measurements of ionic charge states to confirm this notion. We report here HIIS observations of Fe-group ions at 50-600 MeV/nucleon, at energies and fluences which cannot be explained by fully-ionized galactic cosmic rays, even in the presence of severe geomagnetic cutoff suppression. Above approximately 200 MeV/nucleon,

all features of our data -- fluence, energy spectrum, elemental composition, and arrival directions -- can be explained by the large SEP events of October 1989, provided that the mean ionic charge state at these high energies is comparable to the measured value at approximately 1 MeV/nucleon. By comparing the HIIS observations with measurements in interplanetary space in October 1989, we determine the mean ionic charge state of SEP Fe ions at approximately 200-600 MeV/nucleon to be Q = 13.4 plus or minus 1.0, in good agreement with the observed value at approximately 1 MeV/nucleon. The source of the ions below approximately 200 MeV/nucleon is not yet clear. Partially-ionized ions are less effectively deflected by the Earth's magnetic field than fully-ionized cosmic rays and therefore have greatly enhanced access to low-Earth orbit. Moreover, at the high energies observed in HIIS, these ions can penetrate typical amounts of shielding. We discuss the significance of the HIIS results for estimates of the radiation hazard posed by large SEP events to satellites in low-Earth orbit, including the proposed Space Station orbit. Finally, we comment on previous reports of low-energy below-cutoff Fe-group ions, which some authors have interpreted as evidence for partially-ionized galactic cosmic rays. The LDEF flux levels are much smaller than the corresponding fluxes in these previous reports, implying that the source of these ions has an unusual solar-cycle variation and/or strongly increases with decreasing altitude. Total absorbed doses measured with TLD's, linear energy transfer (LET) spectra measured with plastic track detectors, and low energy neutrons measured on LDEF have been compared with model calculations. The total absorbed doses measured in TLD's were higher than predicted in the calculations of Armstrong et al. and differ from the calculations of Atwell et al. LDEF LET spectra are dependent on detector orientation, shielding and experiment location. These factors need to be taken into account when modeling the LDEF LET spectra. LET spectra measured with plastic nuclear track detectors (PNTD's) also deviate significantly from calculations especially for high LET particles (LET(sub infinity) H2O greater than 100keV/micron). Modeling efforts to date do not include the contribution of proton induced secondaries. Analysis of polycarbonate PNTD's from the West-side of LDEF has revealed a very high fluence of tracks (greater than 1 x 10(exp 7) tracks/cm(exp 2) under 2 gm/cm(exp 2) shielding). Fluence drops off rapidly as shielding depth increases. Tracks only form in the region of the detector closest to the surface, not in the bulk of the detector. To date no adequate explanation for this observation has been found. We plan to measure range distribution of very high LET (LET (sub infinity) H2O greater than 500 keV/micron) secondary particles produced in silicon wafer by high energy primary cosmic ray particles. Refinements of experimental techniques and model calculations are being carried out in order to understand existing discrepancies between experimental measurements and calculations. Author

FISSION FOIL MEASUREMENTS OF NEUTRON AND PROTON FLUENCES IN THE A0015 EXPERIMENT **c72**

A. L. Frank, E. V. Benton, T. W. Armstrong (Science Applications International Corp., Prospect, TN.), and B. L. Colborn (Science Applications International Corp., Prospect, TN.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 149-158 (For primary document see N95-23796 07-99)
(Contract NAS8-39610)
Avail: CASI HC A02/MF A04

Results are given from sets of fission foil detectors (FFD's) (Ta-181, Bi-209, Th-232, U-238) which were included in the A0015 experiment to measure combined proton/neutron fluences. Use has been made of recent FFD high energy proton calibrations for improved accuracy of response. Comparisons of track density measurements have been made with the predictions of environmental modeling based on simple 1-D (slab) geometry. At 1 g/cm(exp 2) (trailing edge) the calculations were approximately 25 percent lower than measurements; at 13 g/cm(exp 2) (Earthside) calculations were more than a factor of 2 lower. A future 3-D modeling of the experiment is needed for a more meaningful comparison. Approximate mission proton doses and neutron dose equivalents were found. At Earthside (13 g/cm(exp 2) the dose was 171 rad and dose equivalent was 82 rem. At the trailing edge (1 g/cm(exp 2) dose was 315 rad and dose equivalent was 33 rem. The proton doses are less than expected from TLD doses by 16 percent and 37 percent, respectively. These differences can be explained by uncertainties in the proton and neutron spectra and in the method used to separate proton and neutron contributions to the measurements. Author

MEASUREMENT OF TRAPPED PROTON FLUENCES IN MAIN STACK OF P0006 EXPERIMENT **c72**

N. Nefedov, I. Csige, E. V. Benton, R. P. Henke, E. R. Benton, and L. A. Frigo *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 159-166 (For primary document see N95-23796 07-99)
(Grant NAG8-282)
Avail: CASI HC A02/MF A04

We have measured directional distribution and Eastward directed mission fluence of trapped protons at two different energies with plastic nuclear track detectors (CR-39 with DOP) in the main stack of the P0006 experiment on LDEF. Results show arriving directions of trapped protons have very high anisotropy with most protons arriving from the West direction. Selecting these particles we have determined the mission fluence of Eastward directed trapped protons. We found experimental fluences are slightly higher than results of the model calculations of Armstrong and Colborn. Author

CONTRIBUTION OF PROTON-INDUCED SHORT RANGE SECONDARIES TO THE LET SPECTRA ON LDEF **c72**

E. R. Benton, I. Csige, E. V. Benton, and L. A. Frigo *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 167-177 (For primary document see N95-23796 07-99)
(Contract NAS8-38610)
Avail: CASI HC A03/MF A04

The contribution to the LET (linear energy transfer) spectrum from proton-induced short range secondaries was investigated by making measurements of total track density and LET spectra in CR-39 Plastic Nuclear Track Detectors (PNTD's) at varying shielding depths in the A0015 West-side stack. Proton-induced short range secondaries were found to make a significant contribution to the LET spectra, especially in the region above 100 keV/micron. At present, calculational models do not include this component. Total track density was measured at five shielding depths and was seen to increase as a function of shielding. LET spectra were measured under two shielding depths (2.6 and 9.2 g/cm(exp 2)) and stayed fairly constant as a function of shielding. Prerecovery estimates of LET

spectra dropped off rapidly in the 100-300 keV/micron region, while the measured LET spectra extended to higher LET's. Track density and LET spectra measurements of secondaries were made in a CR-39 PNTD stack exposed to 154 MeV accelerator protons. Similarities in LET spectra measured in the A0015 experiment and in the 154 MeV accelerator proton stack demonstrate that a useful first step in modeling the contribution to the LET spectra of secondaries induced by the spectrum of trapped protons would be to model a mono-energetic proton beam being transported through a one-dimensional geometry. CHARGE, ENERGY AND LET SPECTRA OF HIGH LET PRIMARY AND SECONDARY PARTICLES IN CR-39 PLASTIC NUCLEAR TRACK DETECTORS OF THE P0006 EXPERIMENT Abstract Only **c72**
I. Csige, L. A. Frigo, E. V. Benton, and K. Oda (Kobe Univ. of Mercantile Marine, Japan.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 179 Sponsored by NASA. Marshall Space Flight Center (For primary document see N95-23796 07-99)
Avail: CASI HC A01/MF A04

We have measured the charge, energy and linear energy transfer (LET) spectra of about 800 high LET (LET(sub infinity) H2O greater than 50 keV/micron) particles in CR-39 plastic nuclear track detectors in the P0006 experiment of LDEF. Primary particles with residual range at the reference surface greater than about 2 microns and secondary particles produced in the detector material with total range greater than about 4 microns were measured. We have used a multi-etch technique and an internal calibration to identify and measure the energy of the particles at the reference surface. The LET spectrum was obtained from the charge and energy distribution of the particles. Author

PREDICTIONS OF LET SPECTRA MEASURED ON LDEF **c72**
T. W. Armstrong, B. L. Colborn, and E. V. Benton (San Francisco Univ., CA.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 181-188 Sponsored by NASA. Marshall Space Flight Center (For primary document see N95-23796 07-99)
Avail: CASI HC A02/MF A04

The linear energy transfer (LET) spectra measured by plastic (CR-39) detectors in Exp. P0006 on LDEF are much higher at high LET than expected from methods commonly used to predict LET spectra produced by the space ionizing radiation environment. This discrepancy is being investigated by examining modeling approximations used in the predictions, and some interim results are presented. Author

DOING PHOTONS WITH MERLIN 2 AT OROVILLE **c72**
Alan R. Smith and Donna L. Hurley *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 189-197 (For primary document see N95-23796 07-99)
(Contract NASA Order H-06815-D; DE-ACO3-76SF-00098)
Avail: CASI HC A02/MF A04

A very large n-type high-purity Ge-semiconductor detector has recently been installed in the Lawrence Berkeley Laboratory's underground low-background facility at Oroville. The detector (named MERLIN II) is mounted in a low-activity cryostat and has a rated 'efficiency' of about 115 percent -- nearly 4 times higher than our original MERLIN detector, which was used extensively to measure the minute amounts of radioactivity in samples from the LDEF satellite. We discuss gamma-spectrometric analyses with MERLIN II on some of the same LDEF samples, providing direct evidence for improvement in performance achieved with the larger detector. Author

STATUS OF LDEF ACTIVATION MEASUREMENTS AND ARCHIVE **c72**
B. Alan Harmon, Thomas A. Parnell, and Christopher E. Laird *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 199-201 (For primary document see N95-23796 07-99)
Avail: CASI HC A01/MF A04

We review the status of induced radioactivity measurements for the LDEF spacecraft which includes studies of the nuclide, target, directional and depth dependences of the activation. Analysis of the data has focused on extraction of the specific activities for many materials to develop a global picture of the low Earth orbital environment to which the LDEF was subjected. Preliminary comparisons of data in a previous review showed that it was possible to make meaningful intercomparisons between results obtained at different facilities. Generally these comparisons were good and gave results to within 10-20 percent, although some analysis remains. These results clearly provide constraints for recent calculations being performed of the radiation environment of the LDEF. We are not anticipating a period of production of final activation results. An archive is being prepared jointly between NASA/Marshall and Eastern Kentucky University which will include gamma ray spectra and other intermediate results. Author

Avail: CASI HC A03/MF A04

As part of the program to utilize LDEF data for evaluation and improvement of current ionizing radiation environmental models and related predictive methods for future LEO missions, calculations have been carried out to compare with the induced radioactivity measured in metal samples placed on LDEF. The predicted activation is about a factor of two lower than observed, which is attributed to deficiencies in the AP8 trapped proton model. It is shown that this finding based on activation sample data is consistent with comparisons made with other LDEF activation and dose data. Plans for confirming these results utilizing additional LDEF data sets, and plans for model modifications to improve the agreement with LDEF data, are discussed. Author

Be-10 IN TERRESTRIAL BAUXITE AND INDUSTRIAL ALUMINUM: AN LDEF FALLOUT **c26**
J. C. Gregory (Alabama Univ., Huntsville, AL.), A. Albrecht (Rutgers Univ., New Brunswick, NJ.), G. Herzog (Rutgers Univ., New Brunswick, NJ.), J. Klein (Pennsylvania Univ., Philadelphia, PA.), R. Middleton (Pennsylvania Univ., Philadelphia, PA.), B. A. Harmon, and T. A. Parnell *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 227-230 (For primary document see N95-23796 07-99)
Avail: CASI HC A01/MF A04

Work has continued on the search for Be-10 on metals other than aluminum flown on LDEF. Much time-consuming extractive chemistry has been performed at Rutgers University on turnings obtained from the ends

of two stainless steel trunnions from LDEF and the prepared samples will be run on the University of Pennsylvania accelerator mass spectrometer. We have continued to investigate our discovery of naturally-occurring Be-10 contamination in bauxite and industrial aluminums from different sources. Measurements of Be-10 in ores from three different sites, and from four different samples of commercial aluminum have been made. Our investigators indicate that the contamination in commercial aluminum metal originates in its principal ore, bauxite. The levels in some bauxite samples were much greater than the maximum possible for in situ production by cosmic ray secondaries. Absorption of atmospheric Be-10 by surface ores exposed to rainfall is a reasonable explanation. Author

GERMINATION, GROWTH RATES, AND ELECTRON MICROSCOPE ANALYSIS OF TOMATO SEEDS FLOWN ON THE LDEF **c51**
Ernest C. Hammond, Jr., Kevin Bridgers, and Cecelia Wright Brown *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 231-252 (For primary document see N95-23796 07-99)
Avail: CASI HC A03/MF A04

The tomato seeds were flown in orbit aboard the Long Duration Exposure Facility (LDEF) for nearly six years. During this time, the tomato seeds received an abundant exposure to cosmic radiation and solar wind. Upon the return of the LDEF to earth, the seeds were distributed throughout the United States and 30 foreign countries for analysis. The purpose of the experiment was to determine the long term effect of cosmic rays on living tissue. Our university analysis included germination and growth rates as well as Scanning Electron Microscopy and X-ray analysis of the control as well as Space-exposed tomato seeds. In analyzing the seeds under the Electron Microscope, usual observations were performed on the nutritional and epidermis layer of the seed. These layers appeared to be more porous in the Space-exposed seeds than on the Earth-based control seeds. This unusual characteristic may explain the increases in the space seeds growth pattern. (Several test results show that the Space-exposed seeds germinate sooner than the Earth-Based seeds. Also, the Space-exposed seeds grew at a faster rate). The porous nutritional region may allow the seeds to receive necessary nutrients and liquids more readily, thus enabling the plant to grow at a faster rate. Roots, leaves and stems were cut into small sections and mounted. After sputter coating the specimens with Argon/Gold Palladium Plasma, they were ready to be viewed under the Electron Microscope. Many micrographs were taken. The X-ray analysis displayed possible identifications of calcium, potassium, chlorine, copper, aluminum, silicon, phosphate, carbon, and sometimes sulfur and iron. The highest concentrations were shown in potassium and calcium. The Space-exposed specimens displayed a high concentration of copper and calcium in the two specimens. There was a significantly high concentration of copper in the Earth-based specimens, whereas there was no copper in the Space-exposed specimens. Author

Since the return of the Long Duration Exposure Facility (LDEF) in January, 1990, members of the Meteoroid and Debris Special Investigation Group (M&D SIG) at the Johnson Space Center (JSC) in Houston, Texas have been examining LDEF hardware in an effort to expand the knowledge base regarding the low-Earth orbit (LEO) particulate environment. In addition to the various investigative activities, JSC is also the location of the general Meteoroid & Debris database. This publicly accessible database contains information obtained from the various M&D SIG investigations, as well as limited data obtained by individual LDEF Principal Investigators. LDEF exposed approximately 130 m(exp 2) of surface area to the LEO particulate environment, approximately 15.4 m(exp 2) of which was occupied by structural frame components (i.e., longerons and intercoastals) of the spacecraft. The data reported here was obtained as a result of detailed scans of LDEF intercoastals, 68 of which reside at JSC. The limited amount of data presently available on the A0178 thermal control blankets was reported last year and will not be reiterated here. The data presented here are limited to measurements of crater diameters and their frequency of occurrence (i.e., flux). Author

MICROMETEOROIDS AND DEBRIS ON LDEF COMPARISON WITH MIR DATA **c18**
Jean-Claude Mandeville and Lucinda Berthoud *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 275-285 Sponsored by European Commission (For primary document see N95-23796 07-99)
Avail: CASI HC A03/MF A04

Part of the LDEF tray allocated to French experiments (FRECOPA) has been devoted to the study of dust particles. The tray was located on the face of LDEF directly opposed to the velocity vector. Crater size distributions have made possible the evaluation of the incident microparticle flux in the near-Earth environment. Comparisons are made with measurements obtained on the other faces of LDEF (tray clamps), on the leading edge (MAP) and with results of a similar experiment flown on the MIR space station. The geometry of impact craters, depth in particular, provides useful information on the nature of impacting particles and the correlation of geometry with the chemical analysis of projectile remnants inside craters make possible a discrimination between meteoroids and orbital debris. Emphasis has been laid on the size distribution of small craters in order to assess a cut-off in the distribution of particles in LEO. Special attention has been paid to the phenomenon of secondary impacts. A comparison of flight data with current models of meteoroids and space debris shows a fair agreement for LDEF, except for the smaller particles: the possible contribution of orbital debris in GTO orbits to the LDEF trailing edge flux is discussed. For MIR, flight results show differences with current modeling: the possible enhancement of orbital debris could be due to the contaminating presence of a permanently manned space station. Author

SMALL CRATERS ON THE METEOROID AND SPACE DEBRIS IMPACT EXPERIMENT **c18**
Donald H. Humes *In its* LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 287-322 (For primary document see N95-23796 07-99)
Avail: CASI HC A03/MF A04

Examination of 9.34 m(exp 2) of thick aluminum plates from the Long Duration Exposure Facility (LDEF) using a 25X microscope revealed 4341 craters that were 0.1 mm in diameter or larger. The largest was 3 mm in diameter. Most were roughly hemispherical with lips that were raised above the original plate surface. The crater diameter measured was the diameter at the top of the raised lips. There was a large variation in the number density of craters around the three-axis gravity-gradient stabilized spacecraft. A model of the near-Earth meteoroid environment is presented which uses a meteoroid size distribution based on the crater size distribution on the space end of the LDEF. An argument is made that nearly all the craters on the space end must have been caused by meteoroids and that very few could have been caused by man-made orbital debris. However, no chemical analysis of impactor residue that will distinguish between meteoroids and man-made debris is yet available. A small area (0.0447 m(exp 2)) of one of the plates on the space end was scanned with a 200X microscope revealing 155 craters between 10 micron and 100 micron in diameter and 3 craters smaller than 10 micron. This data was used to extend the size distribution of meteoroids down to approximately 1 micron. New penetration equations developed by Alan Watts were used to relate crater dimensions to meteoroid size. The equations suggest that meteoroids must have a density near 2.5 g/cm(exp 3) to produce craters of the shape found on the LDEF. The near-Earth meteoroid model suggests that about 80 to 85 percent of the 100 micron to 1 mm diameter craters on the twelve peripheral rows of the LDEF were caused by meteoroids, leaving 15 to 20 percent to be caused by man-made orbital debris. (Grant NAG1-1218)

Avail: CASI HC A03/MF A04

Many of the IDE metal-oxide-silicon (MOS) capacitor-discharge impact sensors remained active during the entire Long Duration Exposure Facility (LDEF) mission. An optical survey of impact sites on the active surfaces of these sensors has been extended to include all sensors from the low-flux sides of LDEF (i.e. the west or trailing side, the earth end, and the space end) and 5-7 active sensors from each LDEF's high-flux sides (i.e. the east or leading side, the south side, and the north side). This survey was facilitated by the presence of a relatively large (greater than 50 micron diameter) optical signature associated with each impact site on the active sensor surfaces. Of the approximately 4700 impacts in the optical survey data set, 84% were from particles in the 0.5 to 3 micron size range. An estimate of the total number of hypervelocity impacts on LDEF from particles greater than 0.5 micron diameter yields a value of approximately 7 x 10(exp 6). Impact feature dimensions for several dozen large craters on MOS sensors and germanium witness plates are also presented. Impact fluxes calculated from the IDE survey data closely matched surveys of similar size impacts (greater than or equal to 3 micron diameter craters in Al, or marginal penetrations of a 2.4 micron thick Al foil) by other LDEF investigators. Since the first year IDE data were electronically recorded, the flux data could be divided into three long term time periods: the first year, the entire 5.8 year mission, and the intervening 4.8 years (by difference). The IDE data show that there was an order of magnitude decrease in the long term microparticle impact flux on the trailing side of LDEF, from 1.01 to 0.098 x 10(exp -4) m(exp 2)/s, from the first year in orbit compared to years 2-6. The long term flux on the leading edge showed an increase from 8.6 to 11.2 x 10(exp -4) m(exp -2)/s over this same time period. (Short term flux increases up to 10,000 times the background rate were recorded on the leading side during LDEF's first year in orbit.) The overall east/west ratio was 44, but during LDEF's first year in orbit the ratio was 8.5, and during years 2-6 the ratio was 114. Long term microparticle impact fluxes on the space end decreased from 1.12 to 0.55 x 10(exp -4) m(exp -2)/s from the first year in orbit compared to years 2-6. The earth end showed the opposite trend with an increase from 0.16 to 0.38 x 10(exp -4) m(exp -2)/s. Fluxes on rows 6 and 12 decreased from 6.1 to 3.4 and 6.7 to 3.7 x 10(exp -4) m(exp -2)/s, respectively, over the same time periods. This resulted in space/earth microparticle impact flux ratios of 7.1 during the first year and 1.5 during years 2-6, while the south/north, space/north and space/south ratios remained constant at 1.1, 0.16 and 0.17, respectively, during the entire mission. This information indicates the possible identification of long term changes in discrete microparticle orbital debris component contributions to the total impact flux experienced by LDEF. A dramatic decrease in the debris population capable of striking the trailing side was detected that could possibly be attributed to the hiatus of western launch activity experienced from 1986-1989. A significant increase in the debris population that preferentially struck the leading side was also observed and could possibly be attributed to a single breakup event that occurred in September of 1986. A substantial increase in the microparticle debris population that struck the earth end of LDEF, but not the space end, was also detected and could possibly be the result of a single breakup event at low altitude. These results point to the importance of including discrete orbital debris component contribution changes in flux models in order to achieve accurate predictions of the microparticle environment that a particular spacecraft will experience in earth orbit. The only reliable, verified empirical measurements of these changes are reported in this paper. Further time-resolved in-situ measurements of these debris populations are needed to accurately assess model predictions and mitigation practices. Author

PENETRATION RATES OVER 30 YEARS IN THE SPACE AGE **c18**

J. A. M. McDonnell and J. M. Baron *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 337-351 Sponsored by Science and Engineering Research Council (For primary document see N95-23796 07-99)

Avail: CASI HC A03/MF A04

Experimental data from spacecraft providing impact penetration rates and cratering for metallic targets is reviewed. Data includes NASA Explorers 16 and 23 and the Pegasus series, the second US-UK satellite Ariel 2, Space Shuttle STS-3 (MFE), recovered surfaces on Solar Max Satellite, The Long Duration Exposure Facility (LDEF) and EuReCa TiCCE. Factors concerning exposure to the environment are considered and, especially, material properties which affect the penetration resistance. Reference to a common material, Aluminum alloy 2024-T3, is effected and the data then compared to define firstly an average impact flux over the period. The data is examined, in the context of possible satellite and space debris growth rates, to determine the constancy of the flux. This also provides strong constraints on the current space debris component. It is found that the impact data are consistent with domination by natural meteoroid sources. Growth rates are not evident within the period 1980-1990 and Eureca TiCCE fluxes in 1993, for particles penetrating foils of around 10 microns thickness, supports the constancy of the flux. At larger dimensions the 1993 Eureca TiCCE fluxes show an 8-fold increase but this is considered not inconsistent with the selective exposure to meteoroid streams of a satellite stabilized in heliocentric co-ordinates for an 11 month period. Author

The Interplanetary Dust Experiment (IDE) provided high time resolution

detection of microparticle impacts on the Long Duration Exposure Facility satellite. Particles, in the diameter range from 0.2 microns to several hundred microns, were detected impacting on six orthogonal surfaces of the gravity-gradient stabilized LDEF spacecraft. The total sensitive surface area was about one square meter, distributed between LDEF rows 3 (Wake or West), 6 (South), 9 (Ram or East), 12 (North), as well as the Space and Earth ends of LDEF. The time of each impact is known to an accuracy that corresponds to better than one degree in orbital longitude. Because LDEF was gravity-gradient stabilized and magnetically damped, the direction of the normal to each detector panel is precisely known for each impact. The 11 1/2 month tape-recorded data set represents the most extensive record gathered of the number, orbital location, and incidence direction for microparticle impacts in low Earth orbit. Perhaps the most striking result from IDE was the discovery that microparticle impacts, especially on the Ram, South, and North surfaces, were highly episodic. Most such impacts occurred in localized regions of the orbit for dozens or even hundreds of orbits in what we have termed Multiple Orbit Event Sequences (MOES). In addition, more than a dozen intense and short-lived 'spikes' were seen in which impact fluxes exceeded the background by several orders of magnitude. These events were distributed in a highly non-uniform fashion in time and terrestrial longitude and latitude. Author

THE ORBITAL CHARACTERISTICS OF DEBRIS PARTICLE RINGS AS DERIVED FROM IDE OBSERVATIONS OF MULTIPLE ORBIT INTERSECTIONS WITH LDEF **c90**

William J. Cooke, John P. Oliver, and Charles G. Simon *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 361-371 (For primary document see N95-23796 07-99)

Avail: CASI HC A03/MF A04

During the first 346 days of the LDEF's almost 6 year stay in space, the metal oxide silicon detectors of the Interplanetary Dust Experiment (IDE) recorded over 15,000 impacts, most of which were separated in time by integer multiples of the LDEF orbital period (called multiple orbit event sequences, or MOES). Simple celestial mechanics provides ample reason to expect that a good deal of information about the orbits of the impacting debris particles can be extracted from these MOES, and so a procedure, based on the work of Greenberg, has been developed and applied to one of these events, the so-called 'May swarm'. This technique, the 'Method of Differential Precession,' allows for the determination of the geometrical elements of a particle orbit from the change in the position of the impact point with time. The application of this approach to the May swarm gave the following orbital elements for the orbit of the particles striking LDEF during this MOES: a = 6746.5 km; 0.0165 less than e less than 0.025; i = 66.55 deg; Omega(sub 0) = 179.0 deg plus or minus 0.2 deg; omega = 178.1 deg plus or minus 0.2 deg. Examination of LDEF's various surfaces shows numerous craters and holes due to hypervelocity impacts of meteoroids and man-made orbital debris. In this paper, the crater numbers as reported by Humes have been analyzed in an effort to understand the orbital debris and natural meteoroid environment in LEO. To determine the fraction of man-made to natural impacts, the side to top ratio of impacts and results of the Chemistry of Micrometeoroids Experiment are used. For craters in the 100 micron to 500 micron size range, about 25 percent to 30 percent of the impacts on the forward-facing surfaces and about 10 percent of the impacts on the trailing surfaces were estimated due to man-made orbital debris. A technique has been developed to convert crater numbers to particle fluxes, taking the fact into account that the distributions of impact velocity and incidence angle vary over the different surfaces of LDEF, as well as the ratio of the surface area flux to the cross-sectional area flux. Applying this technique, Humes' data concerning craters with limiting lip diameters of 100 micron, 200 micron and 500 micron have been converted into orbital debris and meteoroid fluxes ranging from about 20 micron to 200 micron particle diameter. The results exhibit good agreement with orbital debris model and meteoroid model. The converted meteoroid flux is slightly larger than Grun's model (by 40 to 70 percent). The converted orbital debris flux is slightly lower than Kessler's model for particle diameter smaller than about 30 micron and slightly larger than the model for particle diameter larger than about 40 micron. Taking also into account the IDE data point at about 0.8 micron particle diameter, it suggests to change the slope log (flux) versus log (diameter) of orbital debris flux in the 1 micron to 100 micron particle diameter range from 2.5 to 1.9. Avail: CASI HC A03/MF A04

Hypervelocity impact experiments were performed to further test the survivability of carbonaceous impactors and to determine potential products that may have been synthesized during impact. Diamonds were launched by the Ames two-stage light gas gun into Al plate at velocities of 2.75 and 3.1 km sec(exp -1). FESEM imagery confirms that diamond fragments survived in both experiments. Earlier experiments found that diamonds were destroyed on impact above 4.3 km sec(exp -1). Thus, the upper stability limit for diamond on impact into Al, as determined from our experimental conditions, is between 3.1 and 4.3 km sec(exp -1). Particles of the carbonaceous chondrite Nogoya were also launched into Al at a velocity of 6.2 km sec (exp -1). Laser desorption (L (exp 2) MS) analyses of the impactor residues indicate that the lowest and highest mass polycyclic aromatic hydrocarbons (PAH's) were largely destroyed on impact; those of intermediate mass (202-220 amu) remained at the same level or increased in abundance. In addition, alkyl-substituted homologs of the most abundant pre-impacted PAH's were synthesized during impact. These results suggest that an unknown fraction of some organic compounds can survive low to moderate impact velocities and that synthesized products can be expected to form up to velocities of, at least, 6.5 km sec(exp -1). We also present examples of craters formed by a unique microparticle accelerator that could launch micron-sized particles of almost any coherent material at velocities up to approximately 15 km sec(exp -1). Many of the experiments have a direct bearing on the interpretation of LDEF craters. Author

ANALYTICAL ELECTRON MICROSCOPY OF LDEF IMPACTOR RESIDUES **c90**

Ronald P. Bernhard (Lockheed Engineering and Sciences Co., Houston, TX.), Ruth A. Barrett (Lockheed Engineering and Sciences Co., Houston, TX.), and Michael E. Zolensky *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 401-413 (For primary document see N95-23796 07-99)

Avail: CASI HC A03/MF A04

The LDEF contained 57 individual experiment trays or tray portions specifically designed to characterize critical aspects of meteoroid and debris environment in low-Earth orbit (LEO). However, it was realized from the beginning that the most efficient use of the satellite would be to characterize impact features from the entire surface of the LDEF. With this in mind particular interest has focused on common materials facing in all 26 LDEF facing directions; among the most important of these materials has been the tray clamps. Therefore, in an effort to better understand the nature and flux of particulates in LEO, and their effects on spacecraft hardware, we are analyzing residues found in impact features on LDEF tray clamp surfaces. This paper summarizes all data from 79 clamps located on Bay A & B of the LDEF. We also describe current efforts to characterize impactor residues recovered from the impact craters, and we have found

that a low, but significant, fraction of these residues have survived in a largely unmelted state. These residues can be characterized sufficiently to permit resolution of the impactor origin. We have concentrated on the residue from chondritic interplanetary dust particles (micrometeoroids), as these represent the harshest test of our analytical capabilities. Author

Avail: CASI HC A03/MF A04

Approximately 1000 impact craters on the Chemistry of Meteoroid Experiment (CME) have been analyzed by means of Scanning Electron Microscopy (SEM) and Energy Dispersive X-ray Analysis (EDXA) to determine the compositional make-up of projectile residues. This report completes our systematic survey of gold and aluminum surfaces exposed at the trailing-edge (A03) and forward-facing (A11) LDEF sites, respectively. The major categories for the projectile residues were (1) natural, with diverse subgroups such as chondritic, monomineralic silicates, and sulfides, and (2) man made, that were classified into aluminum (metallic or oxide) and miscellaneous materials (such as stainless steel, paint flakes, etc). On CME gold collectors on LDEF's trailing edge approximately 11 percent of all craters greater than 100 micron in diameter were due to man-made debris, the majority (8.6 percent) caused by pure aluminum, approximately 31.4 percent were due to cosmic dust, while the remaining 58 percent were indeterminate via the analytical techniques utilized in this study. The aluminum surfaces located at the A11 forward-facing site did not permit analysis of aluminum impactors, but approximately 9.4 percent of all craters were demonstratably caused by miscellaneous debris materials and approximately 39.2 percent were the result of natural particles, leaving approximately 50 percent which were indeterminate. Model considerations and calculations are presented that focus on the crater-production rates for features greater than 100 micron in diameter, and on assigning the intermediate crater population to man-made or natural particles. An enhancement factor of 6 in the crater-production rate of natural impactors for the 'forward-facing' versus the 'trailing-edge' CME collectors was found to best explain all observations (i.e., total crater number(s), as well as their computational characteristics). Enhancement factors of 10 and 4 are either too high or too low. It is also suggested that approximately 45 percent of all craters greater than 100 micron in diameter are caused by man-made impactors on the A11 surfaces. This makes the production rate for craters greater than 100 micron in diameter, resulting from orbital debris, a factor of 40 higher on the forward-facing sides as opposed to the trailing-edge direction. DEBRIS AND METEOROID PROPORTIONS DEDUCED FROM IMPACT CRATER RESIDUE ANALYSIS **c90**

Lucinda Berthoud, Jean-Claude Mandeville, Christian Durin (Centre National d'Etudes Spatiales, Toulouse, France.), and Janet Borg (Centre National de la Recherche Scientifique, Orsay, France.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 431-444 Sponsored by European Commission (For primary document see N95-23796 07-99)

Avail: CASI HC A03/MF A04

This study is a further investigation of space-exposed samples recovered from the LDEF satellite and the Franco-Russian 'Aragatz' dust collection experiment on the Mir Space Station. Impact craters with diameters ranging from 1 to 900 micron were found on the retrieved samples. Elemental analysis of residues found in the impact craters was carried out using Energy Dispersive X-ray spectrometry (EDX). The analyses show evidence of micrometeoroid and orbital debris origins for the impacts. The proportions of these two components vary according to particle size and experimental position with respect to the leading edge of the spacecraft. On the LDEF leading edge 17 percent of the impacts were apparently caused by micrometeoroids and 11 percent by debris; on the LDEF trailing edge 23 percent of the impacts are apparently caused by micrometeoroids and 4 percent consist of debris particles - mostly larger than 3 micron in diameter - in elliptical orbits around the Earth. For Mir, the analyses indicate that micrometeoroids form 23 percent of impacts and debris 9 percent. However, we note that 60-70 percent of the craters are unidentifiable, so the definitive proportions of natural v. man-made particles are yet to be determined. Experiments carried out using a light gas gun to accelerate glass spheres and fragments demonstrate the influence of particle shape on crater morphology. The experiments also show that it is more difficult to analyze the residues produced by an irregular fragment than those produced by a spherical projectile. If the particle is travelling above a certain velocity, it vaporizes upon impact and no residues are left. Simulation experiments carried out with an electrostatic accelerator indicate that this limit is about 14 km/s for Fe particles impacting Al targets. This chemical analysis cut-off may bias interpretations of the relative populations of meteoroid and orbital debris. Oblique impacts and multiple foil detectors provide a higher likelihood of detection of residues as the velocities involved are lower. Author

MICRO-ABRASION PACKAGE CAPTURE CELL EXPERIMENT ON THE TRAILING EDGE OF LDEF: IMPACTOR CHEMISTRY AND WHIPPLE BUMPER SHIELD EFFICIENCIES **c18**

Howard J. Fitzgerald and Hajime Yano *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 445-457 Sponsored by European Social Fund, Overseas Research Studentship, Daiwa Anglo-Japanese Foundation, and the Anglo-American Educational Exchange Scholarship Fund (For primary document see N95-23796 07-99)

Avail: CASI HC A03/MF A04

Four of the eight available double layer microparticle capture cells, flown as the experiment A0023 on the trailing (West) face of LDEF, have been extensively studied. An investigation of the chemistry of impactors has been made using SEM/EDX techniques and the effectiveness of the capture cells as bumper shields has also been examined. Studies of these capture cells gave positive EDX results, with 53 percent of impact sites indicating the presence of some chemical residues, the predominant residue identified as being silicon in varying quantities. Two dimensional elemental ion maps have been recorded for hundreds of microparticle impact sites and contamination features on LDEF surfaces. Since the majority of the analyzed surfaces were metal-oxide-silicon (MOS) impact detectors from the Interplanetary Dust Experiment, a series of 'standard' and 'blank' analyses of these surfaces are included. Hypervelocity impacts of forsterite olivine microparticles on activated flight sensors served as standards while stylus and pulsed laser simulated 'impacts' served as analytical blanks. Results showed that despite serious contamination issues, impactor residues can be identified in greater than 1/3 of the impact sites. While aluminum oxide particles could not be detected on aluminum surfaces, they were detected on germanium surfaces from row 12. Remnants of manmade debris impactors consisting of paint chips and bits of metal were identified on surfaces from LDEF Rows 3 (west or trailing side), 6 (south), 9 (ram or leading side), 12 (north) and the space end. Higher than expected ratios of manmade microparticle impacts to total microparticle

impacts were found on the space end and the trailing side. These results were consistent with time-tagged and time-segregated microparticle impact data from the IDE and other LDEF experiments. A myriad of contamination interferences were identified and their effects on impactor debris identification mitigated during the course of this study. These interferences include pre-, post and inflight deposited surface contaminants as well as indigenous heterogeneous material contaminants. Non-flight contaminations traced to human origins, including spittle and skin oils, contributed significant levels of alkali-rich carbonaceous interferences. A ubiquitous layer of in-flight deposited silicaceous contamination varied in thickness with location on LDEF, even on a micro scale. In-flight deposited (low velocity) contaminants include urine droplets and bits of metal film from eroded thermal blankets. Author

Avail: CASI HC A03/MF A04

Previous secondary ion mass spectrometry (SIMS) studies of extended impact features from LDEF capture cell experiment AO187-2 showed that it is possible to distinguish natural and man-made particle impacts based on the chemical composition of projectile residues. The same measurement technique has now been applied to specially prepared gold target impacts from experiment AO187-1 in order to identify the origins of projectiles that left deposits too thin to be analyzed by conventional energy-dispersive x-ray (EDX) spectroscopy. The results indicate that SIMS may be the method of choice for the analysis of impact deposits on a variety of sample surfaces. SIMS was also used to determine the isotopic compositions of impact residues from several natural projectiles. Within the precision of the measurements all analyzed residues show isotopically normal compositions. Author

Avail: CASI HC A02/MF A04

A 5.2 mm crater in Al-metal represents the largest found on LDEF. We have examined this crater by field emission scanning electron microscopy (FESEM), energy dispersive spectroscopy (EDS) and time-of-flight/secondary ion mass spectroscopy (TOF-SIMS) in order to determine if there is any evidence of impactor residue. Droplet and dome-shaped columns, along with flow features, are evidence of melting. EDS from the crater cavity and rim show Mg, C, O and variable amounts of Si, in addition to Al. No evidence for a chondritic impactor was found, and it hypothesized that the crater may be the result of impact with space debris. Author

THE EFFECT OF IMPACT ANGLE ON CRATERS FORMED BY HYPERVELOCITY PARTICLES **c39**

David C. Hill, M. Frank Rose, Steve R. Best, Michael S. Crumpler, Gary D. Crawford, Ralph H.-C. Zee, and Michael J. Bozack *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 483-498 (For primary document see N95-23796 07-99)

(Grant NAG1-1329)

Avail: CASI HC A03/MF A04

The Space Power Institute (SPI) at Auburn University has conducted experiments on the effects of impact angle on crater morphology and impactor residue retention for hypervelocity impacts. Copper target plates were set at angles of 30 deg, 45 deg, 60 deg, and 75 deg from the particle flight path. For the 30 deg and 45 deg impacts, in the velocity regime greater than 8 km s(exp -1) the resultant craters are almost identical to normal incidence impacts. The only difference found was in the apparent distribution of particle residue within the crater, and further research is needed to verify this. The 60 deg and 75 deg impacts showed marked differences in crater symmetry, crater lip shape, and particle residue distribution in the same velocity regime. Impactor residue shock fractionation effects have been quantified in first-order. It is concluded that a combination of analysis techniques can yield further information on impact velocity, direction, and angle of incidence. Author

EXPERIMENTAL INVESTIGATION OF THE RELATIONSHIP BETWEEN IMPACT CRATER MORPHOLOGY AND IMPACTING PARTICLE VELOCITY AND DIRECTION **c39**

N. G. Mackay, S. F. Green, D. J. Gardner, and J. A. M. McDonnell *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 499-508 (For primary document see N95-23796 07-99)

Avail: CASI HC A02/MF A04

Interpretation of the wealth of impact data available from the Long Duration Exposure Facility, in terms of the absolute and relative populations of space debris and natural micrometeoroids, requires three dimensional models of the distribution of impact directions, velocities and masses of such particles, as well as understanding of the impact processes. Although the stabilized orbit of LDEF provides limited directional information, it is possible to determine more accurate impact directions from detailed crater morphology. The applicability of this technique has already been demonstrated but the relationship between crater shape and impactor direction and velocity has not been derived in detail. We present the results of impact experiments and simulations: (1) impacts at micron dimensions using the Unit's 2MV Van de Graaff accelerator; (2) impacts at mm dimensions using a Light Gas Gun; and (3) computer simulations using AUTODYN-3D from which an empirical relationship between crater shape and impactor velocity, direction and particle properties we aim to derive. Such a relationship can be applied to any surface exposed to space debris or micrometeoroid particles for which a detailed pointing history is available. Author

This paper describes the work that is done at the Lehrstuhl fur Raumfahrttechnik (lrt) at the Technische Universitat Munchen to examine particle impacts into germanium surfaces which were flown on board the LDEF satellite. Besides the description of the processing of the samples, a brief overview of the particle launchers at our institute is given together with descriptions of impact morphology of high- and hypervelocity particles into germanium. Since germanium is a brittle, almost glass-like material, the impact morphology may also be interesting for anyone dealing with materials such as optics and solar cells. The main focus of our investigations is to learn about the impacting particle's properties, for example mass, velocity and direction. This is done by examining the morphology, various geometry parameters, crater obliqueness and crater volume. Author

CRATERING AND PENETRATION EXPERIMENTS IN TEFLON TARGETS AT VELOCITIES FROM 1 TO 7 km/s Abstract Only **c39**

Friedrich Hoerz, Ronald P. Bernhard (Lockheed Engineering and Sciences

Co., Houston, TX.), Mark J. Cintala, and Thomas H. See (Lockheed Engineering and Sciences Co., Houston, TX.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 521 (For primary document see N95-23796 07-99)
Avail: CASI HC A01/MF A04

Approximately 20 sq m of protective thermal blankets, largely composed of Teflon, were retrieved from the Long Duration Exposure Facility (LDEF) after the spacecraft had spent approximately 5.7 years in space. Examination of these blankets revealed that they contained thousands of hypervelocity impact features ranging from micron-sized craters to penetration holes several millimeters in diameter. We conducted impact experiments in an effort to reproduce such features and to -- hopefully -- understand the relationships between projectile size and the resulting crater or penetration-hole diameter over a wide range of impact velocity. Such relationships are needed to derive the size- and mass-frequency distribution and flux of natural and man-made particles in low-Earth orbit. Powder propellant and light-gas guns were used to launch soda-lime glass spheres of 3.175 mm (1/8 inch) nominal diameter (Dp) into pure Teflon FEP targets at velocities ranging from 1 to 7 km/s. Target thickness (T) was varied over more than three orders of magnitude from infinite halfspace targets (Dp/T less than 0.1) to very thin films (Dp/T greater than 100). Cratering and penetration of massive Teflon targets is dominated by brittle failure and the development of extensive spall zones at the target's front and, if penetrated, the target's rear side. Mass removal by spallation at the back side of Teflon targets may be so severe that the absolute penetration-hole diameter (Dh) can become larger than that of a standard crater (Dc) at relative target thicknesses of Dp/T = 0.6-0.9. The crater diameter is infinite halfspace Teflon targets increases -- at otherwise constant impact conditions -- with encounter velocity by a factor of V0.44. In contrast, the penetration-hole size is very thin foils (Dp/T greater than 50) is essentially unaffected by impact velocity. Penetrations at target thicknesses intermediate to these extremes will scale with variable exponents of V. Our experimental matrix is sufficiently systematic and complete, up to 7 km/s, to make reasonable recommendations for the velocity-scaling of Teflon craters and penetrations. We specifically suggest that cratering behavior and associated equations dominate all impacts in which the shock-pulse duration of the projectile (tp) is shorter than that of the target (tt). We also demonstrate that each penetration hole from space-retrieved surfaces may be assigned a unique projectile size, provided an impact velocity is known or assumed. This calibration seems superior to the traditional ballistic-limit approach.

DIMENSIONAL SCALING FOR IMPACT CRATERING AND PERFORATION **c18**
Alan J. Watts and Dale Atkinson *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 1 Feb. 1995 p 523-535 (For primary document see N95-23796 07-99)
Avail: CASI HC A03/MF A04

POD Associates have revisited the issue of generic scaling laws able to adequately predict (within better than 20 percent) cratering in semi-infinite targets and perforations through finite thickness targets. The approach used was to apply physical logic for hydrodynamics in a consistent manner able to account for chunky-body impacts such that the only variables needed are those directly related to known material properties for both the impactor and target. The analyses were compared and verified versus CTH hydrodynamic code calculations and existing data. Comparisons with previous scaling laws were also performed to identify which (if any) were good for generic purposes. This paper is a short synopsis of the full report available through the NASA Langley Research Center, LDEF Science Office. Author

This volume is a compilation of papers presented at the Third Long Duration Exposure Facility (LDEF) Post-Retrieval Symposium. The papers represent the data analysis of the 57 experiments flown on the LDEF. The experiments include materials, coatings, thermal systems, power and propulsion, science (cosmic ray, interstellar gas, heavy ions, micrometeoroid, etc.), electronics, optics, and life science. In addition, papers on preliminary data analysis of EURECA, EOIM-3, and other spacecraft are included. This second of three parts covers spacecraft construction materials. For individual titles, see N95-23897 through N95-23916.

Major materials findings obtained during LDEF post-flight investigations over the past three and one-half years are reported. The summary of findings to date includes results for thermal control coatings, thin polymeric films, composites, metals, adhesives, contamination, and environments definitions. Reaction rates of selected materials exposed to atomic oxygen are presented. Results useful for model verification and comparison with ground based facility data are specifically highlighted. Potential areas for future work are described. In conclusion, a rationale for a second long term flight experiment is presented. Author

The overall goals of the Long Duration Exposure Facility (LDEF) investigations, established by the Materials Special Investigation Group (MSIG) prior to LDEF retrieval, are to provide useful engineering data to people designing and building spacecraft, and secondarily, to obtain data of potential interest to materials researchers. The specific objectives are to support predictions of materials lifetimes under the various low earth orbit (LEO) environments to determine how long the material will physically survive; to estimate the engineering performance lifetimes of these same materials under specific LEO exposures; to identify materials and processes by which given materials degrade; and to provide insights into development of new, more inherently LEO environmentally resistant materials. To achieve the established objectives, two criteria were established to select which materials had the highest priorities for analyses. The first criteria was to examine materials which are still being used on new spacecraft. The second priority was to examine materials with multiple exposure locations on LDEF, because this provided the opportunity to develop predictions on how a material will behave as the exposure environment varies. The goals as defined led to the identification of silverized Teflon (Ag/FEP), chromic acid anodized aluminum, and certain thermal control paints used on LDEF as the material types of highest priority for examination. Ag/FEP was chosen because of an excellent a/e ratio (extremely low), and extensive flight history. Also influencing the decision was the fact that the Hubble Space Telescope uses Ag/FEP as its primary passive thermal control system (and was launched shortly after LDEF retrieval) and that a number of other spacecraft are using or considering this material for use. The various forms of Ag/FEP were used on virtually every side of the LDEF except the earth end. The potential uses of this material, and the location distribution and therefore, exposure conditions, have provided the rationale and opportunity for a comprehensive study of this material. LDEF POLYMERIC MATERIALS: A SUMMARY OF LANGLEY CHARACTERIZATION **c27**

Philip R. Young, Wayne S. Slemp, Karen S. Whitley, Carol R. Kalil (Analytical Services and Materials, Inc., Hampton, VA.), Emilie J. Siochi (Lockheed Engineering and Sciences Co., Hampton, VA.), James Y. Shen (Lockheed Engineering and Sciences Co., Hampton, VA.), and A. C. Chang (Lockheed Engineering and Sciences Co., Hampton, VA.) *In its* LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 2 Feb. 1995 p 567-599 (For primary document see N95-23896 07-99)

Avail: CASI HC A03/MF A03

The NASA Long Duration Exposure Facility (LDEF) enabled the exposure of a wide variety of materials to the low earth orbit (LEO) environment. This paper provides a summary of research conducted at the Langley Research Center into the response of selected LDEF polymers to this environment. Materials examined include graphite fiber reinforced epoxy, polysulfone, and additional polyimide matrix composites, films of FEP Teflon, Kapton, several experimental high performance polyimides, and films of more traditional polymers such as poly(vinyl toluene) and polystyrene. Exposure duration was either 10 months or 5.8 years. Flight and control specimens were characterized by a number of analytical techniques including ultraviolet-visible and infrared spectroscopy, thermal analysis, scanning electron and scanning tunneling microscopy, x-ray photoelectron spectroscopy, and, in some instances, selected solution property measurements. Characterized effects were found to be primarily surface phenomena. These effects included atomic oxygen-induced erosion of unprotected surfaces and ultraviolet-induced discoloration and changes in selected molecular level parameters. No gross changes in molecular structure or glass transition temperature were noted. The intent of this characterization is to increase our fundamental knowledge of space environmental effects as an aid in developing new and improved polymers for space application. A secondary objective is to develop benchmarks to enhance our methodology for the ground-based simulation of environmental effects so that polymer performance in space can be more reliably predicted. SURFACE CHARACTERIZATION OF LDEF CARBON FIBER/POLYMER MATRIX COMPOSITES **c24**

Holly L. Grammer (Virginia Polytechnic Inst. and State Univ., Blacksburg, VA.), James P. Wightman (Virginia Polytechnic Inst. and State Univ., Blacksburg, VA.), Philip R. Young, and Wayne S. Slemp *In its* LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 2 Feb. 1995 p 601-612 (For primary document see N95-23896 07-99)

(Grant NAG1-1186)
Avail: CASI HC A03/MF A03

XPS (x-ray photoelectron spectroscopy) and SEM (scanning electron microscopy) analysis of both carbon fiber/epoxy matrix and carbon fiber/polysulfone matrix composites revealed significant changes in the surface composition as a result of exposure to low-earth orbit. The carbon 1s curve fit XPS analysis in conjunction with the SEM photomicrographs revealed significant erosion of the polymer matrix resins by atomic oxygen to expose the carbon fibers of the composite samples. This erosion effect on the composites was seen after 10 months in orbit and was even more obvious after 69 months. Author

SPACE ENVIRONMENTAL EFFECTS ON POLYMER MATRIX COMPOSITES AS A FUNCTION OF SAMPLE LOCATION ON LDEF **c27**

R. C. Tennyson, G. R. Cool, and D. G. Zimcik (Canadian Space Agency, Ottawa, Ontario.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 2 Feb. 1995 p 613-629 (For primary document see N95-23896 07-99)

Avail: CASI HC A03/MF A03

This paper presents results on the effect of circumferential location on the variation in solar absorptance (alpha(sub S)) and infrared emittance (epsilon) for five different polymer matrix composites (PMC), and variations in erosion depth due to atomic oxygen (AO) for fourteen different PMC materials. In addition, a chemical content design parameter (gamma) has been found that correlates well with the erosion yield obtained from space flight data and hyperthermal AO tests for hydrocarbon polymeric materials. This parameter defines the ratio of the total number of atoms in a repeat monomer unit to the difference between the total carbon content and the total number of intermolecular oxygen atoms in the same repeat unit. NONLINEAR VISCOELASTIC CHARACTERIZATION OF POLYMER MATERIALS USING A DYNAMIC-MECHANICAL METHODOLOGY **c27**

Thomas W. Strganac, Debbie Flowers Payne, Bruce A. Biskup, and Alan Letton *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 2 Feb. 1995 p 631-644 (For primary document see N95-23896 07-99)

(Grant NAG5-673)
Avail: CASI HC A03/MF A03

Polymer materials retrieved from LDEF exhibit nonlinear constitutive behavior; thus the authors present a method to characterize nonlinear viscoelastic behavior using measurements from dynamic (oscillatory) mechanical tests. Frequency-derived measurements are transformed into time-domain properties providing the capability to predict long term material performance without a lengthy experimentation program. Results are presented for thin-film high-performance polymer materials used in the fabrication of high-altitude scientific balloons. Predictions based upon a linear test and analysis approach are shown to deteriorate for moderate to high stress levels expected for extended applications. Tests verify that nonlinear viscoelastic response is induced by large stresses. Hence, an approach is developed in which the stress-dependent behavior is examined in a manner analogous to modeling temperature-dependent behavior with time-temperature correspondence and superposition principles. The development leads to time-stress correspondence and superposition of measurements obtained through dynamic mechanical tests. Predictions of material behavior using measurements based upon linear and nonlinear approaches are compared with experimental results obtained from traditional creep tests. Excellent agreement is shown for the nonlinear model. Author

THE EFFECT OF SIMULATED LOW EARTH ORBIT RADIATION ON POLYIMIDES (UV DEGRADATION STUDY) **c27**

John S. Forsythe, Graeme A. George, David J. T. Hill, James H. ODonnell, Peter J. Pomery, and Firas A. Rasoul *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 2 Feb. 1995 p 645-656 (For primary document see N95-23896 07-99)

Avail: CASI HC A03/MF A03

UV degradation of polyimide films in air and vacuum were studied using UV-visible, ESR, FTIR, and XPS spectroscopies. The UV-visible spectra of polyimide films showed a blue shift in the absorption compared to Kapton. This behavior was attributed to the presence of bulky groups and kinks along the polymer chains which disrupt the formation of a charge transfer complex. The UV-visible spectra showed also that UV irradiation of polyimides result extensively in surface degradation, leaving the bulk of the polymer intact. ESR spectra of polyimides irradiated in vacuum revealed the formation of stable carbon-centered radicals which give a singlet ESR spectrum, while polyimides irradiated in air produced an asymmetric signal shifted to a lower magnetic field, with a higher g value and line width. This signal was attributed to oxygen-cenetered radicals of peroxy and/or alkoxy type. The rate of radical formation in air was two fold higher than for vacuum irradiation, and reached a plateau after a short time. This suggests a continuous depletion of radicals on the surface via an ablative degradation process. FTIR, XPS, and weight loss studies supported this postulate. An XPS study of the surface indicated a substantial increase in the surface oxidation after irradiation in air. The sharp increase in the C-O binding energy peak relative to the C-C peak was believed to be associated with an aromatic ring opening reaction. Author

THE SURFACE PROPERTIES OF FLUORINATED POLYIMIDES EXPOSED TO VUV AND ATOMIC OXYGEN **c27**

John S. Forsythe, Graeme A. George, David J. T. Hill, James H. ODonnell, Peter J. Pomery, and Firas A. Rasoul *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 2 Feb. 1995 p 657-665 (For primary document see N95-23896 07-99)
Avail: CASI HC A02/MF A03

The effect of atomic oxygen flux and VUV radiation alone and in combination on the surface of fluorinated polyimide films was studied using XPS spectroscopy. Exposure of fluorinated polyimides to VUV radiation alone caused no observable damage to the polymer surface, while an atomic oxygen flux resulted in substantial oxidation of the surface. On the other hand, exposure to VUV radiation and atomic oxygen in combination caused extensive oxidation of the polymer surface after only 2 minutes of exposure. The amount of oxidized carbon on the polymer surface indicated that there is aromatic ring opening oxidation. The changes in the O1s/C1s, N1s/C1s, and F1s/C1s ratios suggested that an ablative degradation process is highly favorable. A synergistic effect of VUV radiation in the presence of atomic oxygen is clearly evidenced from the XPS study. The atomic oxygen could be considered as the main factor in the degradation process of fluorinated polyimide films exposed to a low earth orbit environment.

Avail: CASI HC A03/MF A03

LDEF greatly extended the range of data available for metals exposed to the low-Earth-orbital environment. The effects of low-Earth-orbital exposure on metals include meteoroid and debris impacts, solar ultraviolet radiation, thermal cycling, cosmic rays, solar particles, and surface oxidation and contamination. This paper is limited to changes in surface composition and texture caused by oxidation and contamination. Surface property changes afford a means to study the environments (oxidation and contamination) as well as in-space stability of metal surfaces. We compare thermal-optical properties for bare aluminum and anodized aluminum clamps flown on LDEF. We also show that the silicon observed on the LDEF tray clamps and tray clamp bolt heads is not necessarily evidence of silicon contamination of LDEF from the shuttle. The paper concludes with a listing of LDEF reports that have been published thus far that contain significant findings concerning metals.

Avail: CASI HC A03/MF A03

The optical properties of silver films and their oxides are measured to better characterize such films for use as sensors for atomic oxygen. Good agreement between properties of measured pure silver films and reported optical constants is observed. Similar comparisons for silver oxide have not been possible because of a lack of reported constants, but self-consistencies and discrepancies in our measured results are described.

Avail: CASI HC A03/MF A03

Thin films of the metals Cu, Ni, Pt, Au, Sn, Mo, and W deposited on fused silica flats were exposed at ambient temperature on the leading and trailing faces of the LDEF. Reflectances of these films were measured from 250 to 2500 nm and compared with controls. The exposed films were subjected to the LDEF external environment including atomic oxygen, molecular contamination, and solar ultraviolet. Major changes in optical and infrared reflectance were seen for Cu, Mo, Ni, and W films on the leading face of LDEF and are attributed to partial conversion of metal to metal oxide. Smaller changes in optical properties are seen on all films and are probably caused by thin contaminant films deposited on top of the metal. The optical measurements are correlated with film thickness measurements, x-ray photoelectron spectroscopy, optical calculations, and, in the case of Cu, with x-ray diffraction measurements. In a few cases, comparisons with results from a similar UAH experiment on STS-8 have been drawn.

FURTHER INVESTIGATIONS OF EXPERIMENT A0034 ATOMIC OXYGEN STIMULATED OUTGASSING **c27**
Roger C. Linton, Miria M. Finckenor, and Rachel R. Kamenetzky *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 2 Feb. 1995 p 727-736 (For primary document see N95-23896 07-99)
(Contract NAS8-39924)
Avail: CASI HC A02/MF A03

Thermal control coatings within the recessed compartments of LDEF Experiment A0034 experienced the maximum leading edge fluence of atomic oxygen with considerably less solar UV radiation exposure than top-surface mounted materials of other LDEF experiments on either the leading or the trailing edge. This combination of exposure within A0034 resulted in generally lower levels of darkening attributable to solar UV radiation than for similar materials on other LDEF experiments exposed to greater cumulative solar UV radiation levels. Changes in solar absorptance and infrared thermal emittance of the exposed coatings are thus unique to this exposure. Analytical results for other applications have been found for environmentally induced changes in fluorescence, surface morphology, light scattering, and the effects of coating outgassing products on adjacent mirrors and windows of the A0034 experiment. Some atmospheric bleaching of the thermal control coatings, in addition to that presumably experience during reentry and recovery operations, has been found since initial post-flight observations and measurements.

ATOMIC OXYGEN INTERACTIONS WITH PROTECTED ORGANIC MATERIALS ON THE LONG DURATION EXPOSURE FACILITY (LDEF) **c23**
Bruce A. Banks, Kim K. deGroh, Justine L. Bucholz (Ohio Aerospace Inst., Brook Park, OH.), and Michael R. Cales (Cleveland State Univ., OH.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 2 Feb. 1995 p 737-753 (For primary document see N95-23896 07-99)
Avail: CASI HC A03/MF A03

The Long Duration Exposure Facility (LDEF) has provided an excellent opportunity to understand the nature of directed atomic oxygen interactions with protected polymers and composites. Although there were relatively few samples of materials with protective coatings on their external surfaces on LDEF which were exposed to a high atomic oxygen fluence, analysis of such samples has enabled an examination of the shape of atomic oxygen undercut cavities at defect sites in the protective coatings. Samples of front-surface aluminized (Kapton) polyimide were inspected by scanning electron microscopy to identify and measure crack defects in the aluminum protective coatings. After chemical removal of the aluminum coating, measurements were also made of the width of the oxidized undercut cavities below the crack defects. The LDEF flight undercut cavity geometries were then compared with Monte Carlo computational model undercut cavity predictions. The comparison of the LDEF results and computational modeling indicates agreement in specific undercut cavity geometries for atomic oxygen

reaction probabilities dependent upon the 0.68 to 3.0 power of the energy. However, no single energy dependency was adequate to replicate flight results over a variety of aluminum crack widths. Author

TREND ANALYSIS OF IN-SITU SPECTRAL REFLECTANCE DATA FROM THE THERMAL CONTROL SURFACES EXPERIMENT (TCSE) **c24**

Donald R. Wilkes (AZ Technology, Huntsville, AL.), P. S. LeMaster (AZ Technology, Huntsville, AL.), Richard J. Mell (AZ Technology, Huntsville, AL.), Edgar R. Miller (AZ Technology, Huntsville, AL.), and James M. Zwiener *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 2 Feb. 1995 p 755-769 (For primary document see N95-23896 07-99)

Avail: CASI HC A03/MF A03

The Thermal Control Surfaces Experiment (TCSE) on the LDEF was a comprehensive experiment that combined in-space measurements with extensive pre- and post-flight analyses of thermal control surfaces to determine the effects of exposure to the low earth orbit (LEO) space environment. The TCSE is the first space experiment to directly measure in-situ total hemispherical reflectance of thermal control surfaces in the same way they are routinely measured in the laboratory. In-space optical measurements performed by the TCSE provide the unique opportunity for trend analysis of the performance of materials in the space environment. Such trend analysis of flight data offers the potential to develop an empirical life time prediction model for several thermal control surfaces. For material research, trend analysis of the TCSE flight data, particularly the spectral data, can provide insight into the damage mechanisms of space exposure. Trend analysis for the TCSE samples has been limited to those materials that were not significantly eroded by the atomic oxygen (AO) environment. The performance of several materials on the LDEF mission was dominated by AO effects. Trend analysis was performed on both the detailed spectral reflectance measurements (in-space, pre-flight, and post-flight) and on the integrated solar absorptance. Results of this analysis for the five selected TCSE materials are presented along with the spectral flight data. Possible degradation and effects mechanisms will be discussed to better understand and predict the behavior of these materials in the LEO space environment. Author

WHISKER/CONE GROWTH ON THE THERMAL CONTROL SURFACES EXPERIMENT NO. S0069 **c27**

James M. Zwiener, James E. Coston, Jr., Edgar R. Miller (AZ Technology, Huntsville, AL.), Richard J. Mell (AZ Technology, Huntsville, AL.), and Donald R. Wilkes (AZ Technology, Huntsville, AL.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 2 Feb. 1995 p 771-790 (For primary document see N95-23896 07-99)

Avail: CASI HC A03/MF A03

An unusual surface 'growth' was found during scanning electron microscope (SEM) investigations of the Thermal Control Surface Experiment (TCSE) S0069 front thermal cover. This 'growth' is similar to the cone type whisker growth phenomena as studied by G. K. Wehner beginning in the 1960's. Extensive analysis has identified the most probable composition of the whiskers to be a silicate type glass. Sources of the growth material are outgassing products from the experiment and orbital atomic oxygen, which occurs naturally at the orbital altitudes of the LDEF mission in the form of neutral atomic oxygen. The highly ordered symmetry and directionality of the whiskers are attributed to the long term (5.8 year) stable flight orientation of the LDEF. Author

FOUR SPACE APPLICATION MATERIAL COATINGS ON THE LONG-DURATION EXPOSURE FACILITY (LDEF) **c27**

John J. Scialdone and Carroll Clatterbuck *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 2 Feb. 1995 p 803-823 (For primary document see N95-23896 07-99)

Avail: CASI HC A03/MF A03

Four material coatings of different thicknesses were flown on the LDEF to determine their ability to perform in the harsh space environment. The coatings, located in the ram direction of the spacecraft, were exposed for 10 months to the low-Earth orbit (LEO) environments experienced by the LDEF at an orbit of 260 nautical miles. They consisted of indium oxide (In2O3), silicon oxide (SiO(x)), clear RTV silicone, and silicone with silicate-treated zinc oxide (ZnO). These coatings were flown to assess their behavior when exposed to atomic oxygen and to confirm their good radiative properties, stability, electrical conductivity, and resistance to UV exposure. The flown samples were checked and compared with the reference unflown samples using high-magnification optical inspection, ESCA analysis, weight changes, and dimensional changes. These comparisons indicated the following. The 1000 A SiO(x) coating eroded uniformly, with minor changes in its radiative properties. The 100 A In2O3 coating eroded completely down to the Kapton backing, with resultant losses of reflectance. The RTV-615 showed erosion, with carbon (C) content losses, while the Si remained constant, with a doubling of the oxygen (O) concentration. The RTV-615 silicone with K2SiO3-treated ZnO changed from flat to glossy white in appearance. It lost C, was etched, and increased its O content. The upper layers showed no remaining Zn or K. Losses of reflectance occurred within certain wavelength bands. It was not possible to evaluate the experimental oxygen reaction rate using the calculated atomic oxygen fluence of 2.6 x 10(exp 20) atoms/cm(exp 2) for the exposure of these coatings during the flight. The bakeout of the coatings was not carried out prior to the flight. Hence, the coating weight and dimensional losses included losses by outgassing products. Author

ORGANIC MATRIX COMPOSITE PROTECTIVE COATINGS FOR SPACE APPLICATIONS **c23**

Harry W. Dursch and Pete George *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 2 Feb. 1995 p 825-842 (For primary document see N95-23896 07-99)

(Contract NAS1-19427)

Avail: CASI HC A03/MF A03

Successful use of composites in low earth orbit (LEO) depends on their ability to survive long-term exposure to atomic oxygen (AO), ultraviolet radiation, charged particle radiation, thermal cycling, and micrometeoroid and space debris. The AO environment is especially severe for unprotected organic matrix composites surfaces in LEO. Ram facing unprotected graphite/epoxy flown on the 69-month Long Duration Exposure Facility (LDEF) mission lost up to one ply of thickness (5 mils) resulting in decreased mechanical properties. The expected AO fluence of the 30 year Space Station Alpha mission is approximately 20 times that seen on LDEF. This exposure would result in significant material loss of unprotected ram facing organic matrix composites. Several protective coatings for composites were flown on LDEF including anodized aluminum, vacuum deposited coatings, a variety of thermal control coatings, metalized Teflon, and leafing aluminum. Results from the testing and analysis of the coated and uncoated composite specimens flown on LDEF's leading and trailing edges provide the baseline for determining the effectiveness of protectively coated composites in LEO. In addition to LDEF results, results from shuttle flight experiments and ground based testing will be discussed. Author

STRUCTURE AND PROPERTIES OF POLYMERIC COMPOSITE MATERIALS DURING 1501 DAYS OUTER SPACE EXPOSURE AT SALYUT-7 ORBITAL STATION **c27**
Oleg V. Startsev and Eugene F. Nikishin (Salyut Design Office 18, Moscow, Russia.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 2 Feb. 1995 p 843-857 (For primary document see N95-23896 07-99)
Avail: CASI HC A03/MF A03

Specimens of polymeric composite materials for aviation and space applications such as glass fiber reinforced plastics (GFRP), carbon fiber reinforced plastics (CFRP), organic fiber reinforced plastics (OFRP), and hybrid plastics (HP) based on epoxy compounds were exposed to the space environment on the surface of Salyut-7 orbital station. The space exposure lasted 1501 days as a maximum. The data relating to the change in mechanical properties, mass losses, glass transition temperature, linear thermal expansion coefficient, and microstructure after various periods of exposure are given. It has been found that the change in properties is caused by the processes of binder postcuring and microerosion of the exposed surface of plastics. The phenomenon of strengthening of the surface layer of hybrid composites, due to which the nature of destruction changes at bending loads, has been revealed. Author

Avail: CASI HC A02/MF A03

The Long Duration Exposure Facility (LDEF) and the accompanying experiments were composed of and contained a wide variety of materials, representing the largest collection of materials flown in low earth orbit (LEO) and retrieved for ground-based analysis to date. The results and implications of the mechanical, thermal, optical, and electrical data from these materials are the foundation on which future LEO spacecraft and missions will be built. The LDEF Materials Special Investigation Group (MSIG) has been charged with establishing and developing databases to document these materials and their performance to assure not only that the data are archived for future generations but also that the data are available to the spacecraft user community in an easily accessed, user-friendly form. This paper gives an overview of the current LDEF Materials Databases, their capabilities, and availability. An overview of the philosophy and format of a developing handbook on LEO effects on materials is also described. Author

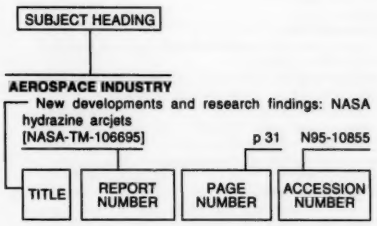
DEFENSE TECHNOLOGY PLAN
Sep. 1994 191 p
(AD-A285415) Avail: CASI HC A09/MF A02

This technology plan is a compilation of individual plans each covering one of the 19 technology areas comprising everything but basic research that collectively describe the total Department of Defense Science and Technology effort. The primary purpose of this plan is to document the objectives that we are trying to achieve and the science and technology efforts that are being pursued in order to reach these objectives. The plan also identifies the funding that has been allocated for these objectives and the timeframes in which these technologies will be available to be transitioned to new warfighting capabilities. The 19 technology area plans cover: aerospace propulsion and power; air and space vehicles; battlespace environments; biomedicine; chemical and biological defense; clothing, textiles, and food; command, control, and communications (C3); computing and software; conventional weapons; electronics; electronic warfare and directed energy weapons; environmental quality and civil engineering; human systems interface; manpower, personnel, and training; materials, processes, and structures; sensors; ships/watercraft and ground vehicles; manufacturing science and technology; and modeling and simulation. CASI

N95-24179# Department of Defense, Washington, DC. Defense Research and Engineering.
DEFENSE SCIENCE AND TECHNOLOGY STRATEGY
Sep. 1994 38 p
(AD-A285414) Avail: CASI HC A03/MF A01

The methods of the Department of Defense for managing science and technology in order to ensure the technological superiority of U.S. military forces is described. The following topics are addressed: the overall vision, the science and technology contribution to military capability needs, strategic investment priorities, the science and technology program, and guiding principles for science and technology management. These guiding principles include transitioning technology to address warfighting needs, reducing cost, strengthening the commercial-military industrial base, promoting basic research, and assuring quality. CASI

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The page number helps you locate the citation in the abstract section. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus*.

A

ABEL FUNCTION
Weyl connection and non-Abelian gauge field
|DE94-635440| p 1851 N95-23969

ABIOGENESIS
Revitalization of the Gemenc-area, Baja, Hungary. 1: A study on hydrological possibilities to revitalise the ecosystem in the Keselyues-area. 2: Towards the restoration of the Gyueruesalj floodplain
|PB95-139283| p 1718 N95-23469

ABSORPTION CROSS SECTIONS
Comparison of exact solution with Eikonal approximation for elastic heavy ion scattering
|NASA-TP-3498| p 1817 N95-22929
Simulation of absorption edge densitometry
|DE95-004393| p 1635 N95-23360

ABSORPTION SPECTRA
Simulation of absorption edge densitometry
|DE95-004393| p 1635 N95-23360
Statistical properties of the time histories of cosmic gamma-ray bursts detected by the BATSE experiment of the Compton gamma-ray observatory
|NASA-CR-197425| p 1871 N95-23546
Mapping of the Ronda peridotite massif (Spain) from AVIRIS spectro-imaging survey: A first attempt p 1707 N95-23878
Spectral variations in a collection of AVIRIS imagery p 1707 N95-23879
Monitoring land use and degradation using satellite and airborne data p 1707 N95-23880
Optimal band selection for dimensionality reduction of hyperspectral imagery p 1709 N95-23887
Investigations on the 1.7 micron residual absorption feature in the vegetation reflection spectrum p 1710 N95-23891
Lattice relaxation study on self-trapped exciton and biexciton in neutral and charged fullerenes
|DE94-635788| p 1844 N95-23986

ABSORPTION SPECTROSCOPY
Solvation of isolated transition metal ions
|DE95-002978| p 1638 N95-22571
Ligand K-edge x-ray adsorption spectroscopic studies of the electronic structure of inorganic model complexes and metalloprotein active sites
|DE95-003338| p 1840 N95-22851

ABSORPTIVITY
Optical absorption in an indirect-gap semiconductor quantum well systems
|DE94-628878| p 1849 N95-22759
Two-photon absorption in an indirect-gap semiconductor quantum well systems 1. Interband transitions
|DE94-628879| p 1849 N95-22760
Two-photon absorption in an indirect-gap semiconductor quantum well systems 2. Excitonic transitions
|DE94-628880| p 1849 N95-22761
Transient radiation-induced absorption in materials for the DOI laser
|DE95-004549| p 1828 N95-24161

ABSTRACTS
Plinius intermediate report
|PB95-135216| p 1648 N95-23128

ABUNDANCE
Krypton isotope analysis using near-resonant stimulated Raman spectroscopy
|DE95-005061| p 1635 N95-23348
Temporal changes in endmember abundances, liquid water and water vapor over vegetation at Jasper Ridge p 1708 N95-23882

ACCELERATED LIFE TESTS
Advanced development of PV encapsulants
|DE95-000246| p 1728 N95-23062
Interlaminar shear test method development for long term durability testing of composites p 1631 N95-23300
Exfoliation corrosion and stress corrosion cracking behaviour of Al-Li alloys p 1641 N95-23498
Specific features of corrosion behavior of stainless maraging steels for aerospace application p 1642 N95-23501
Eddy current detection of pitting corrosion around fastener holes p 1643 N95-23507
Test method and test results for environmental assessment of aircraft materials p 1643 N95-23509

ACCELERATION (PHYSICS)
Quick look report of acceleration measurements on Mir Space Station during Mir-16
|NASA-TM-106835| p 1621 N95-22667
Summary of OARE flight calibration measurements
|NASA-TM-109159| p 1688 N95-23012
New pellet production and acceleration technologies for high speed pellet injection system HIPEL in Large Helical Device
|NISF-326| p 1835 N95-23566

ACCELEROMETERS
Quick look report of acceleration measurements on Mir Space Station during Mir-16
|NASA-TM-106835| p 1621 N95-22667
Summary of OARE flight calibration measurements
|NASA-TM-109159| p 1688 N95-23012
Material characterization system
|AD-D016536| p 1800 N95-23073
USML-1 microgravity glovebox experiment no. 1 Passive Accelerometer System
|NASA-CR-196575| p 1653 N95-23552

ACCEPTABILITY
Accepting the T3D
|DE95-000924| p 1762 N95-22679

ACCESS CONTROL
Modelling and analysis of a high speed data bus with predicate/transition nets
|PB95-140695| p 1764 N95-23538

ACCESS TIME
Improved small satellite access of the space network
|NASA-CR-197863| p 1657 N95-22944

ACCIDENT PREVENTION
Mishap risk control for advanced aerospace/composite materials p 1628 N95-23031

ACCOMMODATION COEFFICIENT
Calculation of satellite drag coefficients
|AD-A285118| p 1622 N95-23781

ACCOUNTING
DOD budget: Selected categories of planned funding for fiscal years 1995-99. Report to Congressional requesters
|GAO/NSIAD-95-92| p 1864 N95-24062

ACCRETION DISKS
Observational studies of the clearing phase in proto-planetary disk systems
|NASA-CR-197900| p 1866 N95-23561

ACCURACY
On the accuracy of CFD-based pressure drop predictions for right-angle ducts p 1682 N95-23634
CFD modeling of turbulent duct flows for coolant channel analysis p 1682 N95-23635

ACETATES
Transmethylation reactions during methanogenesis from acetate in Methanosarcina barkeri
|DE94-016222| p 1745 N95-22873
Advanced development of PV encapsulants
|DE95-000246| p 1728 N95-23062

ACETYLENE
Ethylene oxidation chemistry in a well-stirred reactor
|DE95-004823| p 1635 N95-23381

ACOUSTIC ATTENUATION
Theoretical estimates of high frequency acoustic attenuation and backscattering from suspended sand particles in the ocean and in an estuary
|DSTO-TR-0078| p 1743 N95-23667

ACOUSTIC FREQUENCIES
Capacitive acoustic wave detector and method of using same
|NASA-CASE-LAR-13890-1| p 1799 N95-22921
The sound insulations of studio doors. Part 2: Door seals
|BBC-RD-1994/15| p 1654 N95-24045

ACOUSTIC INSTABILITY
The sound insulations of studio doors. Part 1: Door blanks
|BBC-RD-1994/14| p 1654 N95-24093

ACOUSTIC MEASUREMENT
The sound insulations of studio doors. Part 1: Door blanks
|BBC-RD-1994/14| p 1654 N95-24093

ACOUSTIC PROPAGATION
Capacitive acoustic wave detector and method of using same
|NASA-CASE-LAR-13890-1| p 1799 N95-22921

ACOUSTIC SCATTERING
Theoretical estimates of high frequency acoustic attenuation and backscattering from suspended sand particles in the ocean and in an estuary
|DSTO-TR-0078| p 1743 N95-23667

ACOUSTICS
Dynamic response of a transducer mounted at one end of an acoustical cavity which is subjected to a specified pressure at the open end of the cavity
|DE95-004192| p 1799 N95-23379

ACOUSTO-OPTICS
Programmable hyperspectral image mapper with on-array processing
|NASA-CASE-NPO-17794-1-CU| p 1819 N95-22765
Field observations using an AOTF polarimetric imaging spectrometer p 1702 N95-23850

ACTINIDE SERIES
EXTRA.M: A computing code system for analysis of the Purex process with mixer settlers for reprocessing
|DE94-785273| p 1635 N95-23476

ACTIVATION (BIOLOGY)
Activation of the jun-D gene in human myeloid cells by 1-(beta)-D-arabinofuranosylcytosine
|DE94-016591| p 1746 N95-22912

ACTIVATION ANALYSIS
Investigation of mechanical properties and their relation to the internal structure of nanocrystalline metals and composites
|DE95-001151| p 1627 N95-22683

ACTIVATION ENERGY
Thermal activation of steady-state creep in polycrystalline copper
|DE94-627394| p 1839 N95-22607

ACTIVE CONTROL
Segregated rigid and structural control for a photolithography positioning system
|DE95-002603| p 1766 N95-23134
Active control of panel vibrations induced by a boundary layer flow
|NASA-CR-197867| p 1608 N95-23182
On-line, adaptive state estimator for active noise control p 1784 N95-23308
Supersonic laminar flow control research
|NASA-CR-197938| p 1609 N95-23669
Active vision in satellite scene analysis p 1778 N95-23738

ACTIVITY (BIOLOGY)
Neurodynamic oscillators p 1749 N95-22987

ACTIVITY CYCLES (BIOLOGY)
The 1993 Gordon Research Conference on Chronobiology
|NASA-CR-197990| p 1748 N95-24047

ACTS
Design and implementation of an experiment scheduling system for the ACTS satellite p 1620 N95-23756

ACTUATORS
High gain GaAs photoconductive semiconductor switches: Measurement of filament velocity and reduced trigger energy
|DE95-001884| p 1661 N95-22844
Environmental Systems Management Analysis and Reporting Network (E-SMART)
|AD-A279766| p 1732 N95-22856
Superconductivity devices: Commercial use of space
|NASA-CR-197885| p 1648 N95-22883
Design and application of electromechanical actuators for deep space missions
|NASA-CR-197957| p 1694 N95-22909
A microcontroller-based three degree-of-freedom manipulator testbed
|NASA-CR-197423| p 1696 N95-23409
Motor drive technologies for the power-by-wire (PBW) program: Options, trends and tradeoffs
|NASA-TM-106885| p 1616 N95-23671

ADA (PROGRAMMING LANGUAGE)
Comparing data synchronization in Ada 9X and Orca
|PB95-127999| p 1754 N95-22529

ADAPTIVE CONTROL
Investigation of Federal Standard 1045 high-frequency ALE radio performance in the Southern Trans-Auroral Zone
|PB94-204831| p 1655 N95-22636
Direct adaptive performance optimization of subsonic transports: A periodic perturbation technique
|NASA-TM-4676| p 1612 N95-22829
Adaptive control of linear systems based on approximate models
|PB95-139333| p 1767 N95-23199
Computational control of flexible aerospace systems
|NASA-CR-197902| p 1621 N95-23260

ADAPTIVE FILTERS
Maximum-likelihood spectral estimation and adaptive filtering techniques with application to airborne Doppler weather radar
|NASA-CR-197699| p 1658 N95-23670

ADDITIVES
Process for preparing an assembly of an article and a polyimide which resists dimensional change, delamination and debonding when exposed to changes in temperature
|NASA-CASE-LAR-14538-2| p 1649 N95-23254
Carbon doping of III-V compound semiconductors
|DE95-003431| p 1844 N95-24013

ADENOSINE TRIPHOSPHATE
Computational Fluid Dynamics (CFD) analyses in support of Space Shuttle Main Engine (SSME) heat exchanger (HX) vane cracking investigation p 1679 N95-23619

ADHESION TESTS
Corrosion protection measures for CFC/metal joints of fuel integral tank structures of advanced military aircraft p 1644 N95-23510

ADHESIVE BONDING
Permeability testing of composite material and adhesive bonds for the DC-XA composite feedline program
|NASA-TM-108483| p 1630 N95-23551

ADHESIVES
Evaluation of adhesive materials used on the Long Duration Exposure Facility
|NASA-CR-4646| p 1626 N95-22918
A kinetic study of hydrolysis of polyester elastomer in magnetic tape p 1652 N95-24124

ADIABATIC EQUATIONS
Berry phase by description of the quantum systems in the Kustaanheimo-Stiefel bundle
|DE94-628410| p 1847 N95-22620

ADSORPTION
Hydrogen vibrational density of states of adsorbed water on rare-earth modified zirconia
|DE95-001127| p 1632 N95-22681
Reflectivity studies on adsorbed block copolymers under shear
|DE95-003676| p 1649 N95-23568

ADVANCED SOLID ROCKET MOTOR (STS)
ASRM multi-port igniter flow field analysis p 1683 N95-23639
A fine-grid model for the ASRM aft segment with gimballed nozzle p 1685 N95-23648
Application of CFD analysis to design support and problem resolution for ASRM and RSRM p 1685 N95-23649

ADVANCED VERY HIGH RESOLUTION RADIOMETER
Improved AVHRR data navigation using automated land feature recognition to correct a satellite orbital model
|CSIRO-TR-34| p 1718 N95-24026
Determining coniferous forest cover and forest fragmentation with NOAA-9 advanced very high resolution radiometer data p 1720 N95-24103
Land surface temperature measurements from EOS MODIS data
|NASA-CR-197969| p 1721 N95-24190

ADVECTION
Unification of some advection schemes in two dimensions
|NASA-CR-195044| p 1790 N95-23465

AERIAL PHOTOGRAPHY
A multispectral scanner survey of the Tonopah Test Range, Nevada. Date of survey: August 1993
|DE95-003920| p 1717 N95-22503
Locating buildings in aerial photos p 1721 N95-23295

AERIAL RECONNAISSANCE
Annual tropical cyclone report, 1993
|AD-A285097| p 1742 N95-23255
Remote sensing of smoke, clouds, and fire using AVIRIS data p 1704 N95-23860
Application of MAC-Europe AVIRIS data to the analysis of various alteration stages in the Landdmannalauger Hydrothermal Area (South Iceland) p 1709 N95-23885

AEROACOUSTICS
Supersonic jet noise reductions predicted with increased jet spreading rate
|NASA-TM-106872| p 1800 N95-23178
Aeroacoustic computation of gust-blade interaction p 1800 N95-23313
Benchmark problems in computational aeroacoustics p 1800 N95-23315
Institute for Computational Mechanics in Propulsion (ICOMP)
|NASA-TM-106884| p 1677 N95-23464

AERODYNAMIC BALANCE
System for determining aerodynamic imbalance
|NASA-CASE-ARC-11913-1| p 1688 N95-23377

AERODYNAMIC CHARACTERISTICS
Thin tailored composite wing for civil tiltrotor p 1613 N95-23317
Aerodynamic flight control to increase payload capability of future launch vehicles
|NASA-CR-197704| p 1619 N95-24032

AERODYNAMIC COEFFICIENTS
Calculation of satellite drag coefficients
|AD-A285118| p 1622 N95-23781

AERODYNAMIC CONFIGURATIONS
Impeller flow field characterization with a laser two-focus velocimeter p 1675 N95-23440

AERODYNAMIC DRAG
Calculation of satellite drag coefficients
|AD-A285118| p 1622 N95-23781

AERODYNAMIC HEAT TRANSFER
Numerical computation of aerodynamics and heat transfer in a turbine cascade and a turn-around duct using advanced turbulence models p 1675 N95-23444

AERODYNAMIC INTERFERENCE
A wall interference assessment/correction system
|NASA-CR-197421| p 1667 N95-23183

AERODYNAMIC LOADS
System for determining aerodynamic imbalance
|NASA-CASE-ARC-11913-1| p 1688 N95-23377
Review of some results of the author's fatigue investigations with applications in engineering and material science
|TAE-698| p 1699 N95-23662

AERODYNAMIC NOISE
Supersonic jet noise reductions predicted with increased jet spreading rate
|NASA-TM-106872| p 1800 N95-23178

AERODYNAMICS
Mach 10 computational study of a three-dimensional scramjet inlet flow field
|NASA-TM-4602| p 1667 N95-23210
Aerodynamic design optimization with sensitivity analysis and computational fluid dynamics
|NASA-CR-197419| p 1608 N95-23218
A hybrid vehicle evaluation code and its application to vehicle design
|DE95-004205| p 1662 N95-23334
Aerodynamic surface distension system for high angle of attack forebody vortex control
|NASA-CASE-ARC-11979-1| p 1612 N95-23390
Aerodynamic design and analysis of a highly loaded turbine exhaust p 1673 N95-23435
Numerical computation of aerodynamics and heat transfer in a turbine cascade and a turn-around duct using advanced turbulence models p 1675 N95-23444
NTS-spill test facility wind tunnel exhaust plume characterization
|DE95-003630| p 1616 N95-24019

AEROELASTICITY
High-performance parallel analysis of coupled problems for aircraft propulsion
|NASA-CR-197440| p 1614 N95-23088
Flutter analysis of composite box beams
|NASA-CR-197931| p 1615 N95-23392
User's guide for ECAP2D: An Euler unsteady aerodynamic and aeroelastic analysis program for two dimensional oscillating cascades, version 1.0
|NASA-CR-189146| p 1699 N95-24189

AERONAUTICAL ENGINEERING
Research and Technology, 1994
|NASA-TM-106764| p 1607 N95-24025

AEROSOLS
Ocean observations with EOS/MODIS: Algorithm development and post launch studies
|NASA-CR-197402| p 1717 N95-22916
Modeling aerosol emissions from the combustion of composite materials p 1629 N95-23038
Ocean observations with EOS/MODIS: Algorithm development and post launch studies
|NASA-CR-197894| p 1718 N95-23473
Estimation of aerosol optical depth and additional atmospheric parameters for the calculation of apparent reflectance from radiance measured by the Airborne Visible/Infrared Imaging Spectrometer p 1704 N95-23863
Assessing the relative contribution of biogenic and fossil processes to visibility scattering aerosols found in remote areas: Near-term Organic Research Program
|DE95-003149| p 1735 N95-24146
Laboratory studies of the sensitivity of tropospheric ozone to the chemistry of sea salt aerosol
|DE95-003607| p 1735 N95-24147

AEROSPACE ENGINEERING
FY 1994 scientific and technical reports, articles, papers, and presentations
|NASA-TM-108480| p 1856 N95-23225
Third International Symposium on Artificial Intelligence, Robotics, and Automation for Space 1994
|NASA-CR-197340| p 1767 N95-23672
An expert system for diagnosing anomalies of spacecraft p 1770 N95-23684
Research and Technology, 1994
|NASA-TM-106764| p 1607 N95-24025

AEROSPACE ENVIRONMENTS
Low Earth orbit thermal control coatings exposure flight tests: A comparison of U.S. and Russian results
|NASA-CR-4647| p 1626 N95-22919
LDEF materials results for spacecraft applications: Executive summary

NASA Technology Applications Team: Commercial applications of aerospace technology
|NASA-CR-197870| p 1865 N95-23091
Design and implementation of two two-week Teacher Enhancement Institutes p 1853 N95-23306
Endeavor: Now and then
|NASA-TM-110539| p 1620 N95-23664
The next decade of space robotics p 1768 N95-23673
Commercialization of JPL Virtual Reality calibration and redundant manipulator control technologies p 1768 N95-23676
An intelligent ground operator support system p 1769 N95-23681
Distributed intelligence for ground/space systems p 1770 N95-23685
Overview of the LDEF MSIG databasing activities p 1864 N95-23916
AEROSPACE VEHICLES
Associated with aerospace vehicles development of methodologies for the estimation of thermal properties p 1700 N95-23321
Moving mass trim control for aerospace vehicles
|DE95-002602| p 1622 N95-23532
AEROTHERMOCHEMISTRY
Preconditioning for the Navier-Stokes equations with finite-rate chemistry p 1670 N95-23421
AFTERBODIES
Experimental results for a hypersonic nozzle/afterbody flow field
|NASA-TM-4638| p 1609 N95-23250
Validation of a Computational Fluid Dynamics (CFD) code for supersonic axisymmetric base flow p 1686 N95-23652
AGE FACTOR
Some performance effects of age and low blood alcohol levels on a computerized neuropsychological test
|DOT/FAA/AM-95/7| p 1749 N95-23788
Effects of age and low doses of alcohol on compensatory tracking during angular acceleration
|DOT/FAA/AM-95/3| p 1750 N95-23934
AGGREGATES
Effect of critical field on screened dielectric breakdown growth
|DE94-628482| p 1661 N95-23046
Effects of long-range coupling on aggregation
|DE94-628483| p 1842 N95-23047
Small angle x ray scattering studies of aggregation in supercritical fluid solutions
|DE95-004576| p 1843 N95-23579
AGING (MATERIALS)
Decomposition mechanisms in thermally-aged thin-film explosives
|DE95-000741| p 1652 N95-22838
Advanced development of PV encapsulants
|DE95-000246| p 1728 N95-23062
Long-term aging of type 308 stainless steel welds: Effects on properties and microstructure
|DE94-018961| p 1640 N95-23132
Effect of loading direction and long-term aging on fatigue-crack growth in Al-Li alloy 2090 p 1641 N95-23499
Problems of predicting material property retention during long term service p 1644 N95-23514
Oklahoma City air logistics center (USAF) aging aircraft corrosion program p 1607 N95-23519
AGING (METALLURGY)
Analysis of physiochemical processes during solder aging
|DE95-003811| p 1638 N95-22576
AGRICULTURE
The significance of hair mineral analysis as a means for assessing internal body burdens of environmental pollutants
|DE94-633512| p 1734 N95-23541
Monitoring land use and degradation using satellite and airborne data p 1707 N95-23880
MAX-91: Polarimetric SAR results on Montespertoli site p 1712 N95-23940
MAC Europe 1991 campaign: AIRSAR/AVIRIS data integration for agricultural test site classification p 1715 N95-23952
AIR
Krypton isotope analysis using near-resonant stimulated Raman spectroscopy
|DE95-005061| p 1635 N95-23348
Airborne rotary air separator study
|NASA-CR-189099| p 1614 N95-24053
Effects of jet strength on NOx formation in premixed impinging jet combustion with minimum heat losses
|NAL-TR-1237T| p 1637 N95-24181
AIR BREATHING ENGINES
Airborne rotary air separator study
|NASA-CR-189099| p 1614 N95-24053
AIR CONDITIONING
Load calculation and system evaluation for electric vehicle climate control
|DE95-004350| p 1695 N95-23358
AIR COOLING
Evaluation of thermal barrier and PS-200 self-lubricating coatings in an air-cooled rotary engine
|NASA-CR-195445| p 1614 N95-23222
AIR FILTERS
Applied research on air pollution using nuclear-related analytical techniques
|DE94-633513| p 1734 N95-23542
Extraction and detection of pesticide residues from air filter inserts using supercritical carbon dioxide
|DE95-004579| p 1735 N95-23580
Airborne rotary air separator study
|NASA-CR-189099| p 1614 N95-24053
AIR FLOW
CFD analysis of turbopump volutes p 1674 N95-23436
Phase 2: HGM air flow tests in support of HEX vane investigation p 1674 N95-23438
AIR INTAKES
Three-dimensional Navier-Stokes analysis and redesign of an imbedded bellmouth nozzle in a turbine cascade inlet section p 1671 N95-23423
AIR JETS
Reproducible direct exposure environmental testing of metal-based magnetic media p 1690 N95-24129
AIR LAND INTERACTIONS
HAPEX-Sahel: Basic description of methods and data sets
|PB95-127262| p 1701 N95-22639
AIR LAW
Oceanic operations: An authoritative guide to oceanic operations
|FAA-AFS-550| p 1610 N95-24065
AIR NAVIGATION
Cueing light configuration for aircraft navigation
|NASA-CASE-ARC-11982-1| p 1611 N95-23393
Oceanic operations: An authoritative guide to oceanic operations
|FAA-AFS-550| p 1610 N95-24065
AIR POLLUTION
Preliminary assessment of air toxic emissions in the natural gas industry, phase 1
|PB95-135547| p 1732 N95-22865
Oxidants and oxidation in the Earth's atmosphere
|NASA-CR-197945| p 1734 N95-23460
Review of research results for the photocatalytic oxidation of hazardous wastes in air
|DE95-004004| p 1734 N95-23480
Applied research on air pollution using nuclear-related analytical techniques
|DE94-633513| p 1734 N95-23542
Remote sensor test range update
|DE95-003629| p 1735 N95-24018
Reproducible direct exposure environmental testing of metal-based magnetic media p 1690 N95-24129
Assessing the relative contribution of biogenic and fossil processes to visibility scattering aerosols found in remote areas: Near-term Organic Research Program
|DE95-003149| p 1735 N95-24146
AIR PURIFICATION
Life support systems analysis and technical trades for a lunar outpost
|NASA-TM-109927| p 1751 N95-23194
AIR TRAFFIC CONTROL
The role of flight progress strips in en route air traffic control: A time-series analysis
|DOT/FAA/AM-95/4| p 1611 N95-23565
Functions of external cues in prospective memory
|DOT/FAA/AM-95/9| p 1750 N95-24088
AIR TRAFFIC CONTROLLERS (PERSONNEL)
The role of flight progress strips in en route air traffic control: A time-series analysis
|DOT/FAA/AM-95/4| p 1611 N95-23565
AIR TRANSPORTATION
Report of proceedings: Aviation Accident Investigation Symposium. Volume 2: Participant presentations
|PB94-917007| p 1610 N95-23598
Oceanic operations: An authoritative guide to oceanic operations
|FAA-AFS-550| p 1610 N95-24065
AIRBORNE EQUIPMENT
A multispectral scanner survey of the Tonopah Test Range, Nevada. Date of survey: August 1993
|DE95-003920| p 1717 N95-22503
Combining optical and microwave remote sensing data of forest vegetation: MAC Europe 1991
|PB95-127312| p 1717 N95-22538
Upgrade of the 92 GHz airborne multi-channel meteorological radiometer (AMMR)
|NASA-CR-197875| p 1742 N95-23208
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 1: AVIRIS Workshop
|NASA-CR-197877-VOL-1| p 1701 N95-23844
Lithologic discrimination and alteration mapping from AVIRIS Data, Socorro, New Mexico p 1701 N95-23847
Automating spectral unmixing of AVIRIS data using convex geometry concepts p 1702 N95-23848
AVIRIS calibration using the cloud-shadow method p 1702 N95-23849
Instantaneous field of view and spatial sampling of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1702 N95-23851
Airborne Visible/Infrared Imaging Spectrometer (AVIRIS): Recent improvements to the sensor p 1690 N95-23852
Comparison of methods for calibrating AVIRIS data to ground reflectance p 1703 N95-23854
Discrimination of poorly exposed lithologies in AVIRIS data p 1703 N95-23858
Use of data from the AVIRIS onboard calibrator p 1704 N95-23861
Inflight calibration of AVIRIS in 1992 and 1993 p 1690 N95-23862
Estimation of aerosol optical depth and additional atmospheric parameters for the calculation of apparent reflectance from radiance measured by the Airborne Visible/Infrared Imaging Spectrometer p 1704 N95-23863
Use of the Airborne Visible/Infrared Imaging Spectrometer to calibrate the optical sensor on board the Japanese Earth Resources Satellite-1 p 1624 N95-23864
A role for AVIRIS in the Landsat and Advanced Land Remote Sensing Systems program p 1705 N95-23866
Classification of high dimensional multispectral image data p 1705 N95-23868
Simulation of landsat thematic mapper imagery using AVIRIS hyperspectral imagery p 1705 N95-23869
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 3: AIRSAR Workshop
|NASA-CR-197354-VOL-3| p 1712 N95-23938
AIRBORNE RADAR
TOGA/COARE AMMR 1992 data processing
|NASA-CR-197289| p 1736 N95-22867
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 3: AIRSAR Workshop
|NASA-CR-197354-VOL-3| p 1712 N95-23938
Interferometric synthetic aperture radar imagery of the Gulf Stream p 1712 N95-23939
MAX-91: Polarimetric SAR results on Montespertoli site p 1712 N95-23940
Glaciological studies in the central Andes using AIRSAR/TOPSAR p 1713 N95-23942
Comparison of inversion models using AIRSAR data for Death Valley, California p 1713 N95-23945
Geologic mapping using integrated AIRSAR, AVIRIS, and TIMS data p 1714 N95-23946
Unusual radar echoes from the Greenland ice sheet p 1714 N95-23951
An improved algorithm for retrieval of snow wetness using C-band AIRSAR p 1715 N95-23954
Relating P-band AIRSAR backscatter to forest stand parameters p 1716 N95-23959

AIRCRAFT ACCIDENT INVESTIGATION
Report of proceedings: Aviation Accident Investigation Symposium. Volume 2: Participant presentations
[PB94-917007] p 1610 N95-23598
Aircraft accident report. Runway overrun following rejected takeoff. Continental airlines flight 795, McDonnell Douglas MD-82, N18835, LaGuardia Airport, Flushing, NY, 2 March 1994
[PB95-910401] p 1610 N95-23609
Aviation Accident Investigation Symposium. Volume 1: Industry recommendations and Safety Board responses
[PB94-917005] p 1611 N95-24105
AIRCRAFT ACCIDENTS
Mishap risk control for advanced aerospace/composite materials p 1628 N95-23031
Aircraft accident report. Runway overrun following rejected takeoff. Continental airlines flight 795, McDonnell Douglas MD-82, N18835, LaGuardia Airport, Flushing, NY, 2 March 1994
[PB95-910401] p 1610 N95-23609
Aircraft fires, smoke toxicity, and survival: An overview
[DOT/FAA/AM-95/8] p 1610 N95-24024
A review of civil aviation fatal accidents in which lost/disoriented was a cause/factor: 1981-1990
[DOT/FAA/AM-95/1] p 1611 N95-24071
AIRCRAFT APPROACH SPACING
Guidance and control requirements for high-speed Rollout and Turnoff (ROTO)
[NASA-CR-195026] p 1614 N95-22674
AIRCRAFT COMPARTMENTS
Living in space
[NASA-TM-110536] p 1751 N95-23274
AIRCRAFT CONSTRUCTION MATERIALS
Mishap risk control for advanced aerospace/composite materials p 1628 N95-23031
Technology reinvestment project's focus area: Affordable polymer matrix composites for airframe structures
[PB95-136032] p 1865 N95-23168
Development and verification of a resin film infusion/resin transfer molding simulation model for fabrication of advanced textile composites
[NASA-CR-197439] p 1648 N95-23179
Test method and test results for environmental assessment of aircraft materials p 1643 N95-23509
US Navy operating experience with new aircraft construction materials p 1645 N95-23517
Review of some results of the author's fatigue investigations with applications in engineering and material science
[TAE-698] p 1699 N95-23662
AIRCRAFT CONTROL
Guidance and control requirements for high-speed Rollout and Turnoff (ROTO)
[NASA-CR-195026] p 1614 N95-22674
Nonlinear system guidance in the presence of transmission zero dynamics
[NASA-TM-4661] p 1654 N95-22804
Flight test of the X-29A at high angle of attack: Flight dynamics and controls
[NASA-TP-3537] p 1612 N95-22806
Design of high performance multivariable control systems for supermaneuverable aircraft at high angle of attack
[NASA-CR-197661] p 1615 N95-22908
Stable H(infinity) controller design for the longitudinal dynamics of an aircraft
[NASA-TM-106847] p 1615 N95-22954
Analysis of the longitudinal handling qualities and pilot-induced-oscillation tendencies of the High-Angle-of-Attack Research Vehicle (HARV) p 1616 N95-23297
Handling qualities of the High Speed Civil Transport p 1616 N95-23325
Feedback control laws for highly maneuverable aircraft
[NASA-CR-197944] p 1615 N95-23410
AIRCRAFT DESIGN
Euler Technology Assessment program for preliminary aircraft design employing SPLITFLOW code with Cartesian unstructured grid method
[NASA-CR-4649] p 1608 N95-22917
Euler technology assessment for preliminary aircraft design employing OVERFLOW code with multiblock structured-grid method
[NASA-CR-4651] p 1608 N95-23095
Control of flow separation in airfoil/wing design applications p 1609 N95-23294
Thin tailored composite wing for civil tiltrotor p 1613 N95-23317
AIRCRAFT ENGINES
High-performance parallel analysis of coupled problems for aircraft propulsion
[NASA-CR-197440] p 1614 N95-23088
Engines-only flight control system
[NASA-CASE-ARC-11944-1] p 1615 N95-23389
AIRCRAFT GUIDANCE
Guidance and control requirements for high-speed Rollout and Turnoff (ROTO)
[NASA-CR-195026] p 1614 N95-22674
Nonlinear system guidance in the presence of transmission zero dynamics
[NASA-TM-4661] p 1654 N95-22804
Knowledge-based guidance and control functions
[AGARD-AR-325] p 1751 N95-23601
AIRCRAFT ICING
Additional improvements to the NASA Lewis ice accretion code LEWICE
[NASA-TM-106849] p 1665 N95-22669
Collaborative research on aircraft icing and charging processes in ice
[AD-A285102] p 1609 N95-23201
Experimental technique and assessment for measuring the convective heat transfer coefficient from natural ice accretions
[NASA-TM-106864] p 1668 N95-23248
AIRCRAFT INDUSTRY
Report of proceedings: Aviation Accident Investigation Symposium. Volume 2: Participant presentations
[PB94-917007] p 1610 N95-23598
AIRCRAFT MAINTENANCE
POD assessment of NDI procedures using a round robin test
[AGARD-R-809] p 1697 N95-23602
Enhancement of F/A-18 operational flight measurements: Data report for phase 1
[DSTO-TR-0049] p 1613 N95-23666
AIRCRAFT MODELS
An investigation of helicopter dynamic coupling using an analytical model
[NASA-CR-197420] p 1612 N95-23217
Inner loop flight control for the High-Speed Civil Transport p 1616 N95-23314
AIRCRAFT NOISE
The use of cowl camber and taper to reduce rotor/stator interaction noise
[NASA-CR-195421] p 1799 N95-22675
AIRCRAFT PARTS
Review of some results of the author's fatigue investigations with applications in engineering and material science
[TAE-698] p 1699 N95-23662
AIRCRAFT PERFORMANCE
Guidance and control requirements for high-speed Rollout and Turnoff (ROTO)
[NASA-CR-195026] p 1614 N95-22674
Direct adaptive performance optimization of subsonic transports: A periodic perturbation technique
[NASA-TM-4676] p 1612 N95-22829
Design of high performance multivariable control systems for supermaneuverable aircraft at high angle of attack
[NASA-CR-197661] p 1615 N95-22908
AIRCRAFT PILOTS
Aviator's night vision imaging system preflight adjustment/assessment procedures
[AD-A285829] p 1750 N95-22513
AIRCRAFT POWER SUPPLIES
Motor drive technologies for the power-by-wire (PBW) program: Options, trends and tradeoffs
[NASA-TM-106885] p 1616 N95-23671
AIRCRAFT RELIABILITY
Oklahoma City air logistics center (USAF) aging aircraft corrosion program p 1607 N95-23519
AIRCRAFT SAFETY
Additional improvements to the NASA Lewis ice accretion code LEWICE
[NASA-TM-106849] p 1665 N95-22669
Handling qualities of the High Speed Civil Transport p 1616 N95-23325
Report of proceedings: Aviation Accident Investigation Symposium. Volume 2: Participant presentations
[PB94-917007] p 1610 N95-23598
Aircraft fires, smoke toxicity, and survival: An overview
[DOT/FAA/AM-95/8] p 1610 N95-24024
A multibody/finite element analysis approach for modeling of crash dynamic responses
[NIAR-94-3] p 1610 N95-24050
Aviation Accident Investigation Symposium. Volume 1: Industry recommendations and Safety Board responses
[PB94-917005] p 1611 N95-24105
AIRCRAFT STABILITY
System for determining aerodynamic imbalance
[NASA-CASE-ARC-11913-1] p 1688 N95-23377
Aerodynamic flight control to increase payload capability of future launch vehicles
[NASA-CR-197704] p 1619 N95-24032
AIRCRAFT STRUCTURES
Review of aeronautical fatigue investigation in the Netherlands during the period March 1991-March 1993
[PB95-139184] p 1612 N95-23161
Double pass retroreflection for corrosion detection in aircraft structures p 1642 N95-23503
Non-destructive detection of corrosion for life management p 1643 N95-23505
Health and usage monitoring systems: Corrosion surveillance p 1607 N95-23506
New nondestructive techniques for the detection and quantification of corrosion in aircraft structures p 1644 N95-23512
Organic coating technology for the protection of aircraft against corrosion p 1644 N95-23513
Corrosion detection and monitoring of aircraft structures: An overview p 1644 N95-23515
Experience of in-service corrosion on military aircraft p 1644 N95-23516
US Navy operating experience with new aircraft construction materials p 1645 N95-23517
Oklahoma City air logistics center (USAF) aging aircraft corrosion program p 1607 N95-23519
AIRFIELD SURFACE MOVEMENTS
Automation technology using Geographic Information System (GIS) p 1863 N95-23284
AIRFOIL PROFILES
Control of flow separation in airfoil/wing design applications p 1609 N95-23294
AIRFRAME MATERIALS
Technology reinvestment project's focus area: Affordable polymer matrix composites for airframe structures
[PB95-136032] p 1865 N95-23168
Corrosion detection and management of advanced airframe materials
[AGARD-CP-565] p 1641 N95-23496
The corrosion and protection of advanced aluminium - lithium airframe alloys p 1641 N95-23497
Non-destructive detection of corrosion for life management p 1643 N95-23505
New nondestructive techniques for the detection and quantification of corrosion in aircraft structures p 1644 N95-23512
AIRFRAMES
Oklahoma City air logistics center (USAF) aging aircraft corrosion program p 1607 N95-23519
AIRGLOW
Investigation of the role of gravity waves in the generation of equatorial bubbles
[NASA-CR-197962] p 1739 N95-23272
AIRLINE OPERATIONS
Aircraft accident report. Runway overrun following rejected takeoff. Continental airlines flight 795, McDonnell Douglas MD-82, N18835, LaGuardia Airport, Flushing, NY, 2 March 1994
[PB95-910401] p 1610 N95-23609
The airline quality report, 1994
[NIAR-94-11] p 1610 N95-24012
AIRPORTS
Evaluation of neutron techniques for illicit substance detection
[DE95-002988] p 1632 N95-22764
Automation technology using Geographic Information System (GIS) p 1863 N95-23284
AIRSPACE
Oceanic operations: An authoritative guide to oceanic operations
[FAA-AFS-550] p 1610 N95-24065
ALCOHOLS
Regulation of alcohol fermentation in Escherichia coli
[DE94-016227] p 1745 N95-22874
Some performance effects of age and low blood alcohol levels on a computerized neuropsychological test
[DOT/FAA/AM-95/7] p 1749 N95-23788
Effects of age and low doses of alcohol on compensatory tracking during angular acceleration
[DOT/FAA/AM-95/3] p 1750 N95-23934
ALERTNESS
Method of encouraging attention by correlating video game difficulty with attention level
[NASA-CASE-LAR-15022-1] p 1749 N95-22579
ALGAE
The red edge in arid region vegetation: 340-1060 nm spectra p 1708 N95-23881
ALGEBRA
Lectures on Fermat's last theorem
[DE94-628392] p 1795 N95-22617
Q-analytic functions on quantum spaces
[DE94-628412] p 1847 N95-22621
Graph isomorphism models for non interleaving process algebra
[PB95-110490] p 1786 N95-22714
A space-time lattice version of scalar electrodynamics
[DE94-628577] p 1850 N95-22784
Idempotents in Banach algebra
[DE94-628429] p 1787 N95-22794
Trisecant curve associated to a smooth curve in P(sub 3) of degree d greater than g+2
[DE94-628425] p 1787 N95-22809

Molecular vibrational states during a collision
p 1814 N95-22964
Covariant deformed oscillator algebras
p 1797 N95-22978
Algebraic semantics of basic message sequence charts
| PB95-138970 | p 1657 N95-23151
Taxonomy of finite automata construction algorithms
| PB95-139234 | p 1758 N95-23606
The exchange algebra for Liouville field on Riemann surfaces with h greater than 1 genus
| DE94-635446 | p 1792 N95-23971

ALGORITHMS

An adaptive projection method for the incompressible Navier-Stokes equations
| DE94-019049 | p 1665 N95-22491
Experience with CANDID: Comparison algorithm for navigating digital image databases
| DE95-000869 | p 1855 N95-22515
Treewidth and pathwidth of cocomparability graphs of bounded dimension
| PB95-127239 | p 1785 N95-22535
A worst-case example using linesearch methods for numerical optimization with inexact gradient evaluations
| DE95-002917 | p 1754 N95-22570
A Newton-type neural network learning algorithm
| DE94-628371 | p 1766 N95-22614
A certainty grid to object boundary algorithm
| PB94-203510 | p 1755 N95-22637
Software for the generalized eigenproblem on distributed memory architectures
| DE95-002999 | p 1755 N95-22690
Ocean observations with EOS/MODIS: Algorithm development and post launch studies
| NASA-CR-197402 | p 1717 N95-22916
Global electric field determination in the Earth's outer magnetosphere using energetic charged particles
| NASA-CR-197392 | p 1737 N95-22945
An algorithm for the basis of the finite Fourier transform p 1760 N95-22985
Kravchuk functions for the finite oscillator approximation p 1798 N95-23006
Algorithms for parallel and vector computations
| NASA-CR-197394 | p 1756 N95-23017
Ghost images and feasibility of reconstructions with the Richardson-Lucy algorithm
| DE95-002351 | p 1756 N95-23079
Hierarchical membership protocol for synchronous distributed systems
| PB95-138947 | p 1763 N95-23129
Taxonomy of finite automata minimization algorithms
| PB95-139226 | p 1756 N95-23131
Automatic verification of regular protocols in P/T nets
| PB95-138921 | p 1789 N95-23146
Performance of single-keyword and multiple-keyword pattern matching algorithms
| PB95-138954 | p 1756 N95-23150
Infrared algorithm development for ocean observations with EOS/MODIS
| NASA-CR-197851 | p 1743 N95-23212
Aerodynamic design optimization with sensitivity analysis and computational fluid dynamics
| NASA-CR-197419 | p 1608 N95-23218
Characterization of non-negative greedy matrices
| PB95-139366 | p 1757 N95-23232
Some recent results in the analysis of greedy algorithms for assignment problems
| PB95-140620 | p 1757 N95-23238
Two portable parallel tridiagonal solvers
| DE94-019044 | p 1763 N95-23243
Accelerated panel methods using the fast multipole method p 1687 N95-23307
On-line, adaptive state estimator for active noise control p 1784 N95-23308
A new look at the simultaneous analysis and design of structures p 1700 N95-23327
Verification and validation of decision support software: Expert Choice(trademark) and PCM(trademark)
| DE95-004469 | p 1757 N95-23346
Numerical simulation of steady and unsteady viscous flow in turbomachinery using pressure based algorithm p 1671 N95-23426
Liquid propellant rocket engine combustion simulation with a time-accurate CFD method p 1676 N95-23445
A controlled variation scheme for convection treatment in pressure-based algorithm p 1677 N95-23448
Ocean observations with EOS/MODIS: Algorithm development and post launch studies
| NASA-CR-197894 | p 1718 N95-23473
Technical report series on global modeling and data assimilation. Volume 4: Documentation of the Goddard Earth Observing System (GEOS) data assimilation system, version 1
| NASA-TM-104606-VOL-4 | p 1740 N95-23529
Modelling and analysis of a high speed data bus with predicate/transition nets
| PB95-140695 | p 1764 N95-23538
On adaptive weighted polynomial preconditioning for Hermitian positive definite matrices
| NASA-CR-197946 | p 1791 N95-23547
Taylor series expansion and modified extended Prony analysis for localization
| DE95-003671 | p 1758 N95-23567
Block LU factorization
| NASA-CR-197949 | p 1791 N95-23592
Quasi-kernel polynomials and convergence results for quasi-minimal residual iterations
| NASA-CR-197948 | p 1791 N95-23593
Microarchitecture support for dynamic scheduling of acyclic task graphs
| CSRD-1207 | p 1791 N95-23600
Taxonomy of finite automata construction algorithms
| PB95-139234 | p 1758 N95-23606
Submodular linear programs on forests
| PB95-139820 | p 1758 N95-23608
Recent advances in Lanczos-based iterative methods for nonsymmetric linear systems
| NASA-CR-197950 | p 1791 N95-23611
An implementation of the QMR method based on coupled two-term recurrences
| NASA-CR-197956 | p 1791 N95-23612
Spray combustion experiments and numerical predictions p 1637 N95-23643
Path planning for planetary rover using extended elevation map p 1771 N95-23689
Empirical results on scheduling and dynamic backtracking p 1618 N95-23761
Comparison of three methods for materials identification and mapping with imaging spectroscopy p 1702 N95-23853
Algorithms for categorizing multiprocessor communication under invalidate and update-based coherence protocols
| TR-533-REV | p 1759 N95-23928
An improved algorithm for retrieval of snow wetness using C-band AIRSAR p 1715 N95-23954
Reducibility classes of P-selective sets
| TR-524 | p 1792 N95-24002
Chemical recognition software
| DE95-003346 | p 1636 N95-24007
A modal test design strategy for model correlation
| DE95-003631 | p 1759 N95-24020
An efficient algorithm for concurrent priority queue heaps
| TR-560 | p 1759 N95-24033
Unsupervised classification learning from cross-modal environmental structure
| TR-536 | p 1784 N95-24040
Using simulation-based projection to plan in an uncertain and temporally complex world
| TR-531 | p 1853 N95-24043
Unifying data and control transformations for distributed shared-memory machines
| TR-542 | p 1765 N95-24061
Semi-membership algorithms: Some recent advances
| TR-526 | p 1760 N95-24092
Scheduler-conscious synchronization
| TR-550 | p 1765 N95-24183

ALKALI HALIDES

A model for the metal-nonmetal transition in metal-molten salt solutions
| DE94-628490 | p 1640 N95-23057

ALKALI METALS

Electrical resistivity of liquid alkali metals and non-local pseudopotential
| DE94-627417 | p 1639 N95-22608
A model for the metal-nonmetal transition in metal-molten salt solutions
| DE94-628490 | p 1640 N95-23057

ALLOCATIONS

Some recent results in the analysis of greedy algorithms for assignment problems
| PB95-140620 | p 1757 N95-23238

ALLOYS

Calculations of alloy phases with a direct Monte-Carlo method
| DE94-018963 | p 1640 N95-23121

ALPHA PARTICLES

Status of helium-production reaction studies with a spallation neutron source
| DE95-002816 | p 1806 N95-23137
Alpha spectral analysis via artificial neural networks
| DE95-004567 | p 1767 N95-23578
MHD-Vlasov simulation of the toroidal Alfven eigenmode
| NIFS-319 | p 1836 N95-23591
Pauli-blocking effects in neutron-alpha reactions
| DE94-016358 | p 1813 N95-24046

ALTERNATING CURRENT

An investigation of AC losses in two sub-size conductors for the ITER
| DE94-765449 | p 1831 N95-22849

ALTERNATING DIRECTION IMPLICIT METHODS

Two portable parallel tridiagonal solvers
| DE94-019044 | p 1763 N95-23243
Convergence acceleration of implicit schemes in the presence of high aspect ratio grid cells
p 1676 N95-23446

ALTERNATIVES

Consistency and Monte Carlo simulation of a data driven version of smooth goodness-of-fit tests
| PB95-141255 | p 1794 N95-23559

ALTIMETERS

Assimilation of altimeter data in a quasi-geostrophic model of the Gulf Stream system: A dynamical perspective
| NASA-CR-196313 | p 1744 N95-23766

ALTITUDE

Energetic particle observations at geosynchronous orbit
| DE95-000873 | p 1867 N95-22516

ALUMINUM

CO2 and waste policy: Monitoring results 1991/1992 and main problems
| PB95-133799 | p 1733 N95-23126
The corrosion protection of 2219-T87 aluminum by organic and inorganic zinc-rich primers
| NASA-TP-3543 | p 1641 N95-23186
Corrosion protection measures for CFC/metal joints of fuel integral tank structures of advanced military aircraft
p 1644 N95-23510
Recent results from Long Duration Exposure Facility materials testing p 1638 N95-23898
Durability of reflector materials in the space environment p 1651 N95-23912

ALUMINUM ALLOYS

Technology maturation project on optimization of sheet metal forming of aluminum for use in transportation systems
| DE95-003005 | p 1654 N95-22692
Three-dimensional CTOA and constraint effects during stable tearing in a thin-sheet material
| NASA-TM-109183 | p 1627 N95-22928
Nondestructive evaluation of fatigue damage in aluminum 2024 by x-ray diffraction p 1698 N95-23293
Test method and test results for environmental assessment of aircraft materials p 1643 N95-23509
Penetration rates over 30 years in the space age
p 1624 N95-23827

ALUMINUM COATINGS

Atomic oxygen interactions with protected organic materials on the Long Duration Exposure Facility (LDEF)
p 1627 N95-23909

ALUMINUM GALLIUM ARSENIDES

Resonant shallow donor magnetopolaron effect in a GaAs/AlGaAs quantum dot in high magnetic fields
| DE94-629039 | p 1798 N95-22497
Subband quantum scattering times for AlGaAs/GaAs obtained using digital filtering
| NASA-TM-106873 | p 1846 N95-24188

ALUMINUM ISOTOPES

NMR study of nanophase Al/Al-oxide powder and consolidated composites
| DE95-004655 | p 1843 N95-23586

ALUMINUM OXIDES

Infrared study of carbon deposits on bimetallic catalysts
| DE95-000902 | p 1631 N95-22517
Dislocation decomposition, dissociation, and deformation in MoSi2 and (alpha)-Al2O3 single crystals
| DE95-002715 | p 1839 N95-22653
Micro-sensor thin-film anemometer
| NASA-CASE-LAR-15112-1-CU | p 1666 N95-22906
Surface structural dependence of cesium adsorption on the (alpha)-Al2O3(0001) surface
| DE95-002610 | p 1842 N95-23135
Explosive bonding and its application in the Advanced Photon Source front-end and beamline components design
| DE95-004132 | p 1696 N95-23397
Temperature effects on ion irradiation damage in MgAl2O4 spinel single crystals
| DE95-003679 | p 1844 N95-24073
Modified molecular sieves: Stationary phase for the gas chromatographic separation of hydrogen isotopes
| DE94-627282 | p 1814 N95-24175

ALUMINUM-LITHIUM ALLOYS

The corrosion and protection of advanced aluminium - lithium airframe alloys p 1641 N95-23497
Exfoliation corrosion and stress corrosion cracking behaviour of Al-Li alloys p 1641 N95-23498
Effect of loading direction and long-term aging on fatigue-crack growth in Al-Li alloy 2090
p 1641 N95-23499

The use of electrochemical impedance spectroscopy to predict the corrosion of aluminum-lithium alloys in marine environments p 1637 N95-23504
AMINES
Transmethylation reactions during methanogenesis from acetate in Methanosarcina barkeri
| DE94-016222 | p 1745 N95-22873
AMINO ACIDS
Protein folding and protein metallocluster studies using synchrotron small angler x ray scattering
| DE95-003339 | p 1746 N95-22897
The origin of chirality in protein amino acids
| DE94-628491 | p 1747 N95-23058
AMORPHOUS MATERIALS
Polyazomethines containing trifluoromethylbenzene units
| NASA-CASE-LAR-14896-1 | p 1649 N95-23253
Temperature effects on ion irradiation damage in MgAl2O4 spinel single crystals
| DE95-003679 | p 1844 N95-24073
A phenomenological model for the effect of nanocrystalline microstructure on irradiation-induced amorphization in U3Si
| DE95-004631 | p 1846 N95-24169
AMORPHOUS SILICON
Southeast Regional Experiment Station
| DE95-000903 | p 1726 N95-22518
Large-area triple-junction a-Si alloy production scaleup
| DE95-000245 | p 1726 N95-22546
Research on defects and transport in amorphous-silicon-based semiconductors
| DE94-011888 | p 1660 N95-22586
Continuous roll-to-roll amorphous-silicon photovoltaic manufacturing technology
| DE95-000243 | p 1728 N95-23061
Amorphous silicon photovoltaic manufacturing technology, phase 2A
| DE95-000298 | p 1729 N95-23478
ANAEROBES
Resource recovery and epidemiology of anaerobic wastewater treatment process in a controlled ecological life support system
| NASA-CR-197930 | p 1751 N95-23474
ANALOG TO DIGITAL CONVERTERS
D(O) upgrade muon electronics design
| DE95-003744 | p 1817 N95-23369
Operation and tests of a DDC101 A/D
| DE95-003747 | p 1663 N95-23405
Video frame processor
| DE94-635414 | p 1753 N95-23962
A high speed digitizing photomultiplier tube base for the KTeV CsI calorimeter
| DE95-003739 | p 1664 N95-24081
ANALYTIC FUNCTIONS
Q-analytic functions on quantum spaces
| DE94-628412 | p 1847 N95-22621
ANDES MOUNTAINS (SOUTH AMERICA)
Glaciological studies in the central Andes using AIRSAR/TOPSAR p 1713 N95-23942
ANEMOMETERS
Micro-sensor thin-film anemometer
| NASA-CASE-LAR-15112-1-CU | p 1666 N95-22906
ANGIOSPERMS
Molecular relics from chemical evolution and the origin of life
| DE94-628493 | p 1747 N95-23060
ANGLE OF ATTACK
Wing pressure distributions from subsonic tests of a high-wing transport model --- in the Langley 14- by 22-Foot Subsonic Wind Tunnel
| NASA-TM-4583 | p 1607 N95-22802
Flight test of the X-29A at high angle of attack: Flight dynamics and controls
| NASA-TP-3537 | p 1612 N95-22806
An assessment of viscous effects in computational simulation of benign and burst vortex flows on generic fighter wind-tunnel models using TEAM code
| NASA-CR-4650 | p 1608 N95-23185
Aerodynamic surface distension system for high angle of attack forebody vortex control
| NASA-CASE-ARC-11979-1 | p 1612 N95-23390
ANGLES (GEOMETRY)
Prediction of incidence and surface roughness effects on turbine performance p 1671 N95-23424
ANGULAR ACCELERATION
Effects of age and low doses of alcohol on compensatory tracking during angular acceleration
| DOT/FAA/AM-95/3 | p 1750 N95-23934
ANGULAR MOMENTUM
Exact, E = 0, classical and quantum solutions for general power-law oscillators p 1820 N95-22959
Coherent state constructions of bases for some physically relevant group chains p 1814 N95-22966
The Duffin-Kemmer-Petiau oscillator p 1825 N95-22998
ANHYDRIDES
Process for preparing an assembly of an article and a polyimide which resists dimensional change, delamination and debonding when exposed to changes in temperature
| NASA-CASE-LAR-14538-2 | p 1649 N95-23254
ANIONS
Test procedure for anion exchange chromatography
| DE95-003767 | p 1809 N95-23407
ANISOTROPIC MEDIA
Phase space analysis in anisotropic optical systems p 1826 N95-23007
ANISOTROPY
An upper bound for the proton temperature anisotrophy
| DE95-002752 | p 1737 N95-22903
Dynamical properties of critical and paramagnetic spin fluctuations in anisotropic heisenberg magnets
| PB95-134623 | p 1798 N95-23127
Deflections of anisotropic sandwich beams with variable face sheets and core thicknesses p 1700 N95-23310
Generation of fast electrons in reversed field pinches by the equilibrium grad (vert bar)B(vert bar) force
| DE95-004467 | p 1809 N95-23363
ANNEALING
Superconducting Tl2Ba2CaCu2O8 thin films prepared by post-annealing in a flow-through multiple-zone furnace
| DE95-002745 | p 1838 N95-22520
X-ray diffraction characterization of defect behavior in nanocrystalline nickel during annealing
| DE95-002992 | p 1639 N95-22594
Rapid thermal processing of high-efficiency silicon solar cells with controlled in-situ annealing
| DE95-004729 | p 1730 N95-23489
Annealing of nitrogen-doped ZnSe at high pressures: Toward suppression of native defect formation
| DE95-003420 | p 1844 N95-24010
ANNIHILATION REACTIONS
Commensurate scale relations: Precise tests of quantum chromodynamics without scale or scheme ambiguity
| DE95-002785 | p 1847 N95-22566
Searches for the H-dibaryon at the AGS
| DE95-003091 | p 1802 N95-22727
Coherent states for a generalization of the harmonic oscillator p 1823 N95-22982
Coherent states for the relativistic harmonic oscillator p 1825 N95-22993
Oscillator-like coherent states for the Jaynes-Cummings Model p 1826 N95-23003
Search for top quark at CDF
| DE95-003748 | p 1809 N95-23406
ANNUAL VARIATIONS
A comparison of ionospheric F2-layer IRI model with experimental data for Ibadan Geog. Lat. 7.4 deg N
| DE94-627710 | p 1736 N95-22613
The atmosphere below
| NASA-TM-110538 | p 1740 N95-23663
Determination of semi-arid landscape endmembers and seasonal trends using convex geometry spectral unmixing techniques p 1711 N95-23895
ANODES
Corrosion control acceptance criteria for sacrificial anode type, cathodic protection systems (user guide)
| AD-A285275 | p 1662 N95-23117
ANODIZING
Effect of different ions on the anodic behaviour of alloy 800 chloride solutions at high temperature
| DE94-634944 | p 1645 N95-23983
ANOMALIES
An automated computer misuse detection system for UNICOS
| DE95-000929 | p 1762 N95-22680
Determinants of elliptic pseudo-differential operators
| PB95-109062 | p 1786 N95-22711
The U(3) x U(3) Nambu - Jona-Lasinio model with the gluon condensate and axial anomaly at finite temperature
| DE94-628588 | p 1804 N95-22787
STS-61 Space Shuttle mission report
| NASA-TM-110545 | p 1619 N95-23187
Phonon-induced anomalous specific heat of a model nanocrystal by computer simulation
| DE95-004653 | p 1843 N95-23585
An expert system for diagnosing anomalies of spacecraft p 1770 N95-23684
ANTENNA ARRAYS
Adaptive beamforming in a CDMA mobile satellite communications system p 1655 N95-22815
Synthesis of a large communications aperture using small antennas
| NASA-CR-197330 | p 1656 N95-22852
ANTENNA DESIGN
Passive intermodulation generation in wire mesh deployable reflector antennas p 1656 N95-22816
Observation model and parameter partials for the JPL VLBI parameter estimation software MODEST, 19 94
| NASA-CR-197328 | p 1756 N95-22853
Improved small satellite access of the space network
| NASA-CR-197863 | p 1657 N95-22944
ANTIBIOTICS
Effect of hyperbaric carbon dioxide on spores and vegetative cells of bacillus stearothermophilus
| AD-A280115 | p 1747 N95-23251
ANTIFERROELECTRICITY
Superconductivity devices: Commercial use of space
| NASA-CR-197885 | p 1648 N95-22883
ANTIFERROMAGNETISM
Spin polarized photoemission studies of magnetic quantum well states
| DE95-004218 | p 1851 N95-23335
ANTIMATTER
Traps for antimatter and antihydrogen production
| DE95-002814 | p 1805 N95-22927
A brief history in time of ion traps and their achievements in science
| DE95-002815 | p 1805 N95-22936
ANTIMONY COMPOUNDS
Test procedure for cation exchange chromatography
| DE95-003770 | p 1808 N95-23350
ANTIPROTONS
Traps for antimatter and antihydrogen production
| DE95-002814 | p 1805 N95-22927
ANTIREFLECTION COATINGS
Rapid thermal processing of high-efficiency silicon solar cells with controlled in-situ annealing
| DE95-004729 | p 1730 N95-23489
Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides
| DE95-004531 | p 1731 N95-24090
Reflectance control for multicrystalline-silicon photovoltaic modules using textured-dielectric coatings
| DE95-004532 | p 1731 N95-24155
APERTURES
Synthesis of a large communications aperture using small antennas
| NASA-CR-197330 | p 1656 N95-22852
Stellar Interferometer Technology Experiment (SITE)
| NASA-CR-197856 | p 1827 N95-23089
APEXES
A preliminary measurement of the average B hadron lifetime
| DE95-003138 | p 1808 N95-23226
Trees are graceful if and only if trees with a perfect matching are strongly graceful
| PB95-139853 | p 1790 N95-23236
APPLICATION SPECIFIC INTEGRATED CIRCUITS
A high speed digitizing photomultiplier tube base for the KTeV CsI calorimeter
| DE95-003739 | p 1664 N95-24081
APPLICATIONS OF MATHEMATICS
Preparation of course materials: Elementary mathematics of powered flight p 1853 N95-23320
Ploxoma: Testbed for uncertain inference
| TR-537 | p 1794 N95-23927
APPLICATIONS PROGRAMS (COMPUTERS)
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 1: HARP introduction and user's guide
| NASA-TP-3452-VOL-1 | p 1754 N95-22603
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 2: HARP tutorial
| NASA-TP-3452-VOL-2 | p 1755 N95-22604
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 4: HARP Output (HARPO) graphics display user's guide
| NASA-TP-3452-VOL-4 | p 1755 N95-22605
PRISMA GENIE data analysis manual
| PB95-130464 | p 1755 N95-22769
Development of an adaptive hp-version finite element method for computational optimal control
| NASA-CR-197898 | p 1766 N95-22831
Photon and electron interaction databases and their use in medical applications
| DE94-015558 | p 1855 N95-22871
The torsion space nucleic acids molecular mechanics program DUPLEX: Surveying conformation space by potential energy minimization
| DE94-017707 | p 1805 N95-22889
An improved system for exon recognition and gene modeling in human DNA sequences
| DE94-017863 | p 1746 N95-22890
COYOTE 2: A Finite Element Computer Program for nonlinear heat conduction problems
| DE95-002848 | p 1666 N95-22914
Conjugate gradient MATHEW
| DE95-003479 | p 1738 N95-23143
VLUGR2: A vectorizable adaptive grid solver for PDes in 2D
| PB95-136008 | p 1789 N95-23167

A hybrid vehicle evaluation code and its application to vehicle design
| DE95-004205 | p 1662 N95-23334
Measurement of correlated b quark cross sections at CDF
| DE95-004240 | p 1808 N95-23336
GPP: A General-Purpose Post Processor for wind turbine data analysis
| DE95-000223 | p 1729 N95-23383
Long range targeting for space based rendezvous
| NASA-CR-197890 | p 1757 N95-23388
EXTRA.M: A computing code system for analysis of the Purex process with mixer settlers for reprocessing
| DE94-785273 | p 1635 N95-23476
An interactive tool for discrete phase analysis in two-phase flows p 1683 N95-23641
Toward an automated signature recognition toolkit for mission operations p 1659 N95-23682
Learning time series for intelligent monitoring p 1770 N95-23686
Benefits of advanced software techniques for mission planning systems p 1618 N95-23752
Design and implementation of an experiment scheduling system for the ACTS satellite p 1620 N95-23756
ESTAR, PSTAR, ASTAR: A PC package for calculating stopping powers and ranges of electrons, protons and helium ions, version 2
| DE94-634435 | p 1811 N95-23773
GPP user's guide: A general-purpose postprocessor for wind turbine data analysis
| DE95-000293 | p 1730 N95-23776
An RL10A-3-3A rocket engine model using the rocket engine transient simulator (ROCETS) software
| NASA-CR-190786 | p 1625 N95-23790
A proposed update to the solar irradiance spectrum used in LOWTRAN and MODTRAN p 1705 N95-23865
SAR terrain classifier and mapper of biophysical attributes p 1715 N95-23957
TRACKER: A three-dimensional raytracing program for ionospheric radio propagation
| DE95-003510 | p 1658 N95-24015
Fracture mechanics life analytical methods verification testing
| NASA-CR-196555 | p 1697 N95-24106

APPROPRIATIONS
Director's discretionary fund report for fiscal year 1994
| NASA-TM-108848 | p 1872 N95-22920

APPROXIMATION
A certainty grid to object boundary algorithm
| PB94-203510 | p 1755 N95-22637
Kravchuk functions for the finite oscillator approximation p 1798 N95-23006
Adaptive control of linear systems based on approximate models
| PB95-139333 | p 1767 N95-23199
Aeroacoustic computation of gust-blade interaction p 1800 N95-23313

AQUEOUS SOLUTIONS
Hydrogen vibrational density of states of adsorbed water on rare-earth modified zirconia
| DE95-001127 | p 1632 N95-22681
On the formation of iron(3) oxides via oxidation of iron(2)
| DE94-018392 | p 1632 N95-22857
Aqueous alternatives for metal and composite cleaning p 1630 N95-23039
Effect of different ions on the anodic behaviour of alloy 800 chloride solutions at high temperature
| DE94-634944 | p 1645 N95-23983

ARAMID FIBER COMPOSITES
Method for forming a glove attachment
| NASA-CASE-MSC-21632-1 | p 1750 N95-22766

ARCHAEBACTERIA
Transmethylation reactions during methanogenesis from acetate in Methanosarcina barkeri
| DE94-016222 | p 1745 N95-22873

ARCHITECTURE (COMPUTERS)
Parallel digital modem using multirate digital filter banks
| NASA-CR-197331 | p 1761 N95-22478
Adaptive beamforming in a CDMA mobile satellite communications system p 1655 N95-22815
Task scheduling in dataflow computer architectures p 1753 N95-23301
MPI implementation of CFD program PHOENICS
| DE95-003896 | p 1668 N95-23372
Parallel computation of automatic differentiation applied to magnetic field calculations
| DE95-004689 | p 1763 N95-23486
Towards the Teraflop CFD
| NASA-CR-197947 | p 1764 N95-23594
Microarchitecture support for dynamic scheduling of acyclic task graphs
| CSRD-1207 | p 1791 N95-23600
Unstructured grids on SIMD torus machines
| NASA-CR-197954 | p 1758 N95-23610
An expert system for diagnosing anomalies of spacecraft p 1770 N95-23684
Distributed intelligence for ground/space systems p 1770 N95-23685
Performance results of cooperating expert systems in a distributed real-time monitoring system p 1761 N95-23688
Path planning for planetary rover using extended elevation map p 1771 N95-23689
Subsumption-based architecture for autonomous movement planning for planetary rovers p 1771 N95-23690
Control technique for planetary rover p 1771 N95-23692
Autonomous navigation system for the Marsokhod rover project p 1771 N95-23693
Algorithms for categorizing multiprocessor communication under invalidate and update-based coherence protocols
| TR-533-REV | p 1759 N95-23928
Scalability of atomic primitives on distributed shared memory multiprocessors
| TR-528 | p 1764 N95-23930
A distributed parallel storage architecture and its potential application within EOSDIS p 1858 N95-24111
The architecture of the High Performance Storage System (HPSS) p 1858 N95-24113
New architectural paradigms for multi-petabyte distributed storage systems p 1858 N95-24115

ARGON
Electron drift velocities of Ar-CO2-CF4 gas mixtures
| DE95-004353 | p 1809 N95-23359

ARID LANDS
The red edge in arid region vegetation: 340-1060 nm spectra p 1708 N95-23881
Determination of semi-arid landscape endmembers and seasonal trends using convex geometry spectral unmixing techniques p 1711 N95-23895

ARMOR
Projectile penetration into representative targets
| DE95-003089 | p 1698 N95-22726

AROMATIC COMPOUNDS
Tough, soluble, aromatic, thermoplastic copolyimides
| NASA-CASE-LAR-15205-1 | p 1648 N95-22882
Polyazomethines containing trifluoromethylbenzene units
| NASA-CASE-LAR-14896-1 | p 1649 N95-23253

ARTIFICIAL HEART VALVES
A constraint-logic based implementation of the coarse-grained approach to data acquisition scheduling of the International Ultraviolet Explorer orbiting observatory p 1779 N95-23741

ARTIFICIAL INTELLIGENCE
Towards method-independent knowledge acquisition
| AD-A285823 | p 1766 N95-22512
Roles and dynamic subclasses: A modal logic approach
| PB95-127320 | p 1754 N95-22522
Temporal model theory for default logic
| PB95-127346 | p 1766 N95-22524
A certainty grid to object boundary algorithm
| PB94-203510 | p 1755 N95-22637
An improved system for exon recognition and gene modeling in human DNA sequences
| DE94-017863 | p 1746 N95-22890
Knowledge-based guidance and control functions
| AGARD-AR-325 | p 1751 N95-23601
Third International Symposium on Artificial Intelligence, Robotics, and Automation for Space 1994
| NASA-CR-197340 | p 1767 N95-23672
The next decade of space robotics p 1768 N95-23673
Utilizing inheritance in requirements engineering p 1768 N95-23677
AMPHION: Specification-based programming for scientific subroutine libraries p 1761 N95-23680
An intelligent ground operator support system p 1769 N95-23681
Attention focusing and anomaly detection in systems monitoring p 1769 N95-23683
An expert system for diagnosing anomalies of spacecraft p 1770 N95-23684
Distributed intelligence for ground/space systems p 1770 N95-23685
Learning time series for intelligent monitoring p 1770 N95-23686
An operations and command systems for the extreme ultraviolet explorer p 1770 N95-23687
Performance results of cooperating expert systems in a distributed real-time monitoring system p 1761 N95-23688
Subsumption-based architecture for autonomous movement planning for planetary rovers p 1771 N95-23690
Very fast motion planning for highly dexterous-articulated robots p 1771 N95-23691
Lunar rover technology demonstrations with Dante and Ratler p 1697 N95-23694
POINTER: Portable Intelligent Trainer for External Robotics p 1752 N95-23714
A new generation of intelligent trainable tools for analyzing large scientific image databases p 1775 N95-23717
Intelligent monitoring system applied to super long distance telerobotic tasks p 1777 N95-23728
Planning and scheduling the Hubble Space Telescope: Practical application of advanced techniques p 1779 N95-23740
Automated synthesis of image processing procedures using AI planning techniques p 1779 N95-23745
Benefits of advanced software techniques for mission planning systems p 1618 N95-23752
A scheduling and diagnostic system for scientific satellite GEOTAIL using expert system p 1781 N95-23753
Artificial intelligence techniques for scheduling Space Shuttle missions p 1781 N95-23755
High performance techniques for space mission scheduling p 1618 N95-23758
Applications of dynamic scheduling technique to space related problems: Some case studies p 1618 N95-23759
Knowledge representation and reasoning for mixed-initiative planning
| TR-562 | p 1783 N95-24031
Robot skill learning through intelligent experimentation
| TR-567 | p 1784 N95-24038
OPUS: A new generation Knowledge Engineering Environment p 1760 N95-24176

ARTIFICIAL SATELLITES
Civilian satellite remote sensing: A strategic approach
| PB95-109633 | p 1717 N95-22713
On-orbit science in a small package: Managing the ALEXIS satellite and experiments
| DE94-014426 | p 1621 N95-22868
Design and development status of ETS-7, an RVD and space robot experiment satellite p 1623 N95-23700
Concept verification of three dimensional free motion simulator for space robot p 1618 N95-23702
Calculation of satellite drag coefficients
| AD-A285118 | p 1622 N95-23781

ASHES
Tritium transport, influx, and helium ash measurements on TFTR during DT operation
| DE95-003708 | p 1833 N95-23269

ASPECT RATIO
On the accuracy of CFD-based pressure drop predictions for right-angle ducts p 1682 N95-23634
CFD modeling of turbulent duct flows for coolant channel analysis p 1682 N95-23635

ASSAYING
Light emission-or-absorbance-based binding assays for polynucleic acids
| AD-D016557 | p 1632 N95-22710

ASSEMBLING
Coherent state constructions of bases for some physically relevant group chains p 1814 N95-22966

ASSESSMENTS
Criteria for evaluation of grid generation systems p 1669 N95-23416

ASSIMILATION
Technical report series on global modeling and data assimilation. Volume 4: Documentation of the Goddard Earth Observing System (GEOS) data assimilation system, version 1
| NASA-TM-104606-VOL-4 | p 1740 N95-23529
Assimilation of altimeter data in a quasi-geostrophic model of the Gulf Stream system: A dynamical perspective
| NASA-CR-196313 | p 1744 N95-23766

ASTHENOSPHERE
Axial focusing of energy from a hypervelocity impact on earth
| DE95-003347 | p 1740 N95-24008
Axial focusing of impact energy in the earth's interior: A possible link to flood basalts and hotspots
| DE95-003357 | p 1741 N95-24009

ASTRONAUT TRAINING
POINTER: Portable Intelligent Trainer for External Robotics p 1752 N95-23714
Formalizing procedures for operations automation, operator training and spacecraft autonomy p 1752 N95-23720

ASTRONOMICAL INTERFEROMETRY
Stellar Interferometer Technology Experiment (SITE)
| NASA-CR-197856 | p 1827 N95-23089

ASTRONOMICAL MODELS
Finite-temperature scalar field theory in static de Sitter space
| DE94-628522 | p 1848 N95-22743

Solar mass loss, solar lithium, and solar oscillations
|DE94-018262| p 1870 N95-22938
Galactic oscillator symmetry p 1822 N95-22973
Origins of interstellar and solar system: Carbonaceous materials
|NASA-CR-197436| p 1867 N95-23013
ROSAT observation program
|NASA-CR-197683| p 1866 N95-23595

ASTRONOMICAL OBSERVATORIES
Planning and scheduling the Hubble Space Telescope: Practical application of advanced techniques p 1779 N95-23740

ASTRONOMY
Origins of interstellar and solar system: Carbonaceous materials
|NASA-CR-197436| p 1867 N95-23013
Planning and scheduling the Hubble Space Telescope: Practical application of advanced techniques p 1779 N95-23740
Telescope loading: A problem reduction approach p 1781 N95-23757

ASTROPHYSICS
IRAS sky survey atlas: Explanatory supplement
|NASA-CR-197335| p 1865 N95-22539
Neutrino overview
|DE95-003201| p 1802 N95-22729
Ninth topical conference on atomic processes in plasmas
|DE95-002810| p 1833 N95-23246

ASYMMETRY
New preliminary results on the physics of charm hadroproduction subprocesses
|DE95-002530| p 1801 N95-22646
The first measurement of the left-right cross section asymmetry in Z(sup 0) boson production
|DE95-003335| p 1802 N95-22697
Measurement of the left-right asymmetry in Z boson production by electron-positron collisions
|DE95-003337| p 1802 N95-22699
Measurement of the left-right charge asymmetry in hadronic Z decays and A(sub e) determination
|DE95-003467| p 1806 N95-23140
Measuring the left-right cross section asymmetry in Z boson production by e(+)e(-) collisions at the SLC
|DE95-003468| p 1807 N95-23141

ASYMPTOTIC METHODS
Stress intensity factors and crack mouth openings for bridged cracks emanating from circular holes
|AR-008-408| p 1699 N95-22952
Influence of porosity and two-phase flow on diffusional/thermal instability of a deflagrating energetic material
|DE95-002592| p 1634 N95-23122
A uniform geometrical optics and an extended uniform geometrical theory of diffraction for evaluating high frequency EM fields near smooth caustics and composite shadow boundaries
|NASA-CR-197934| p 1657 N95-23391

ASYMPTOTIC SERIES
Asymptotically exact solution of the multi-channel resonant-level model
|DE94-629040| p 1801 N95-22498
Strong-coupling behaviour of two t-J chains with interchain single-electron hopping
|DE94-629041| p 1838 N95-22499
Asymptotically exact solution of a local copper-oxide model
|DE94-628492| p 1842 N95-23059

ATLANTIC OCEAN
Oceanic operations: An authoritative guide to oceanic operations
|FAA-AFS-550| p 1610 N95-24065

ATMOSPHERIC BOUNDARY LAYER
Dimethylsulfide oxidation over the tropical South Atlantic: OH and other oxidants
|NASA-CR-197417| p 1732 N95-22930
Observations of the magnetopause current layer: Cases with no boundary layer and tests of recent models
|NASA-CR-197391| p 1738 N95-23184
Physics of magnetospheric boundary layers
|NASA-CR-197920| p 1739 N95-23271
Bursting in the near-surface boundary layer: Comparisons between realistic models and observations
|DE95-003714| p 1741 N95-24078

ATMOSPHERIC CHEMISTRY
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer
|NASA-CR-197368| p 1735 N95-22482
The Atmospheric Lifetime Experiment and the Global Atmospheric Gas Experiment (ALE/GAGE)
|NASA-CR-197400| p 1731 N95-22673
Dimethylsulfide oxidation over the tropical South Atlantic: OH and other oxidants
|NASA-CR-197417| p 1732 N95-22930
The high latitude ionosphere-magnetosphere transition region: Simulation and data comparison
|NASA-CR-197404| p 1737 N95-22956
Compendium of NASA data base for the Global Tropospheric Experiment's Pacific Exploratory Mission West-A (PEM West-A)
|NASA-TM-109177| p 1733 N95-23009
RAS Division model evaluation database description
|DE95-003481| p 1733 N95-23124
Atmospheric peroxides
|DE95-004435| p 1733 N95-23362
Oxidants and oxidation in the Earth's atmosphere
|NASA-CR-197945| p 1734 N95-23460
Laboratory studies of the sensitivity of tropospheric ozone to the chemistry of sea salt aerosol
|DE95-003607| p 1735 N95-24147

ATMOSPHERIC CIRCULATION
Development of an advanced finite difference atmospheric general circulation model
|DE95-003187| p 1736 N95-22879
Format( )MEDIC( )Input
|DE95-003482| p 1737 N95-23063
Conjugate gradient MATHEW
|DE95-003479| p 1738 N95-23143
Bursting in the near-surface boundary layer: Comparisons between realistic models and observations
|DE95-003714| p 1741 N95-24078

ATMOSPHERIC COMPOSITION
The Atmospheric Lifetime Experiment and the Global Atmospheric Gas Experiment (ALE/GAGE)
|NASA-CR-197400| p 1731 N95-22673
Direct effects of atmospheric CO2 enrichment on plants and ecosystems: An updated bibliographic data base
|DE95-003060| p 1731 N95-22725
Compendium of NASA data base for the Global Tropospheric Experiment's Pacific Exploratory Mission West-A (PEM West-A)
|NASA-TM-109177| p 1733 N95-23009
IUE observing programs: NSOSS, VEOEB, and PCOEB
|NASA-CR-197424| p 1866 N95-23560

ATMOSPHERIC CORRECTION
Ocean observations with EOS/MODIS: Algorithm development and post launch studies
|NASA-CR-197402| p 1717 N95-22916
Ocean observations with EOS/MODIS: Algorithm development and post launch studies
|NASA-CR-197894| p 1718 N95-23473
AVIRIS calibration using the cloud-shadow method p 1702 N95-23849
Atmospheric correction of AVIRIS data of Monterey Bay contaminated by thin cirrus clouds p 1710 N95-23890
Laboratory spectra of field samples as a check on two atmospheric correction methods p 1711 N95-23894
Determination of semi-arid landscape endmembers and seasonal trends using convex geometry spectral unmixing techniques p 1711 N95-23895

ATMOSPHERIC EFFECTS
Ocean observations with EOS/MODIS: Algorithm development and post launch studies
|NASA-CR-197402| p 1717 N95-22916
Low Earth orbit thermal control coatings exposure flight tests: A comparison of U.S. and Russian results
|NASA-CR-4647| p 1626 N95-22919
Test method and test results for environmental assessment of aircraft materials p 1643 N95-23509
AVIRIS calibration using the cloud-shadow method p 1702 N95-23849
Estimation of crown closure from AVIRIS data using regression analysis p 1709 N95-23886

ATMOSPHERIC ELECTRICITY
A model for ball lightning
|DE95-003366| p 1742 N95-22701

ATMOSPHERIC GENERAL CIRCULATION MODELS
Development of an advanced finite difference atmospheric general circulation model
|DE95-003187| p 1736 N95-22879
Continued studies of polar cap thermospheric dynamics
|PL-TR-94-2076| p 1737 N95-22951
Technical report series on global modeling and data assimilation. Volume 4: Documentation of the Goddard Earth Observing System (GEOS) data assimilation system, version 1
|NASA-TM-104606-VOL-4| p 1740 N95-23529
Implementation of a soil-canopy scheme into the CSIRO GCM: Regional aspects of the model response
|CSIRO-TR-32| p 1721 N95-24192

ATMOSPHERIC IONIZATION
Magnetospheric space plasma investigations
|NASA-CR-197405| p 1831 N95-22955

ATMOSPHERIC MODELS
A comparison of ionospheric F2-layer IRI model with experimental data for Ibadan Geog. Lat. 7.4 deg N
|DE94-627710| p 1736 N95-22613
Observation model and parameter partials for the JPL VLBI parameter estimation software MODEST, 19 94
|NASA-CR-197328| p 1756 N95-22853
Magnetospheric space plasma investigations
|NASA-CR-197405| p 1831 N95-22955
The high latitude ionosphere-magnetosphere transition region: Simulation and data comparison
|NASA-CR-197404| p 1737 N95-22956
Semikinetic modeling and observations of high-latitude plasma outflow
|NASA-CR-197403| p 1831 N95-23008
Modeling of the coupled magnetospheric and neutral wind dynamos
|NASA-CR-197861| p 1738 N95-23090
RAS Division model evaluation database description
|DE95-003481| p 1733 N95-23124
Physics of magnetospheric boundary layers
|NASA-CR-197920| p 1739 N95-23271
Assimilation of altimeter data in a quasi-geostrophic model of the Gulf Stream system: A dynamical perspective
|NASA-CR-196313| p 1744 N95-23766
Comparison of methods for calibrating AVIRIS data to ground reflectance p 1703 N95-23854
Laboratory spectra of field samples as a check on two atmospheric correction methods p 1711 N95-23894

ATMOSPHERIC MOISTURE
Computer modeling of the sensitivity of a laser water vapor sensor to variations in temperature and air speed p 1692 N95-23330
Temporal changes in endmember abundances, liquid water and water vapor over vegetation at Jasper Ridge p 1708 N95-23882
Implementation of a soil-canopy scheme into the CSIRO GCM: Regional aspects of the model response
|CSIRO-TR-32| p 1721 N95-24192

ATMOSPHERIC PHYSICS
RAS Division model evaluation database description
|DE95-003481| p 1733 N95-23124
Physics of magnetospheric boundary layers
|NASA-CR-197920| p 1739 N95-23271

ATMOSPHERIC RADIATION
Design of a differential radiometer for atmospheric radiative flux measurements
|DE95-002701| p 1739 N95-23244
Theoretical studies of spectroscopic problems of importance for atmospheric radiation measurements p 1741 N95-23329
Implementation of a soil-canopy scheme into the CSIRO GCM: Regional aspects of the model response
|CSIRO-TR-32| p 1721 N95-24192

ATMOSPHERIC SCATTERING
Spectral decomposition of AVIRIS data p 1704 N95-23859
The red edge in arid region vegetation: 340-1060 nm spectra p 1708 N95-23881

ATMOSPHERIC TEMPERATURE
Land surface temperature measurements for EOS MODIS data
|NASA-CR-197443| p 1717 N95-23191

ATMOSPHERIC TURBULENCE
Bursting in the near-surface boundary layer: Comparisons between realistic models and observations
|DE95-003714| p 1741 N95-24078

ATOMIC CLUSTERS
Structure, melting, and reactivity of nickel clusters from numerical simulations
|DE95-002911| p 1638 N95-22531
Ionic core effects on the Mie resonance in lithium clusters
|DE94-014974| p 1805 N95-22870
An algebraic cluster model based on the harmonic oscillator basis p 1814 N95-22971
Calculations of alloy phases with a direct Monte-Carlo method
|DE94-018963| p 1640 N95-23121
Symmetry breaking in O4(+): An application of the Brueckner coupled-cluster method
|NASA-CR-197981| p 1810 N95-23459
Thermochemistry of transition metal clusters
|DE95-003144| p 1646 N95-24144

ATOMIC COLLISIONS
Studies of photon and electron interactions with atoms and ions
|DE95-003340| p 1802 N95-22700
Algebraic description of atom-molecule interactions p 1814 N95-22961
Molecular vibrational states during a collision p 1814 N95-22964
Studies of autoionizing states relevant to dielectronic recombination
|DE94-014162| p 1812 N95-23978

ATOMIC ENERGY LEVELS
The role of triplet correlation function in dense fluids
|DE94-628476| p 1849 N95-22775

ATOMIC EXCITATIONS
Optogalvanic monitoring of collisional transfer of laser excitation energy in a neon RF plasma
| DE95-003103 | p 1691 N95-22748
Slightly anharmonic systems in quantum optics
p 1826 N95-23004
Studies of autoionizing states relevant to dielectronic recombination
| DE94-014162 | p 1812 N95-23978
ATOMIC FORCE MICROSCOPY
Aspects of surface generation in orthogonal ultraprecision machining
| DE95-000922 | p 1654 N95-22678
ATOMIC PHYSICS
Geometrical interpretation for the outer SU(3) outer multiplicity label p 1814 N95-22968
Ninth topical conference on atomic processes in plasmas
| DE95-002810 | p 1833 N95-23246
Atomic physics at high brilliance synchrotron sources: Proceedings
| DE95-006077 | p 1813 N95-24174
ATOMIC STRUCTURE
Photoemission study of quantum confinement by a finite barrier: Cu/Co(wedge)/Cu(100)
| DE95-002913 | p 1840 N95-22762
Correlation effects in high-Tc superconductors and heavy fermion compounds
| DE94-629057 | p 1840 N95-22846
Ligand K-edge x-ray adsorption spectroscopic studies of the electronic structure of inorganic model complexes and metalloprotein active sites
| DE95-003338 | p 1840 N95-22851
Strongly interacting fermion systems
| DE95-003405 | p 1806 N95-23054
The electronic structure of heavy element complexes
| DE95-003407 | p 1806 N95-23082
Calculations of alloy phases with a direct Monte-Carlo method
| DE94-018963 | p 1640 N95-23121
Computational studies of metal-metal and metal-ligand interactions
| NASA-CR-197862 | p 1641 N95-23215
Experimental and theoretical studies on the C15 intermetallic compounds MV2 (M = Zr, Hf and Ta): Elasticity and phase stability
| DE95-003723 | p 1845 N95-24079
ATOMIC WEIGHTS
Precise determinations of the isotopic compositions and atomic weights of molybdenum, tellurium, tin and tungsten using ICP source magnetic sector multiple collector mass spectrometry
| DE95-003003 | p 1632 N95-22795
ATOMIZING
Development of an atomization methodology for spray combustion p 1637 N95-23646
ATOMS
Bose condensation, macroscopic quantum phenomena and atomic spatial correlations in superfluid He-4
| PB95-139085 | p 1850 N95-23154
Atoms as many-body systems
| DE95-004609 | p 1813 N95-24151
ATTACHMENT
Method for forming a glove attachment
| NASA-CASE-MSC-21632-1 | p 1750 N95-22766
ATTENTION
Method of encouraging attention by correlating video game difficulty with attention level
| NASA-CASE-LAR-15022-1 | p 1749 N95-22579
Attention focusing and anomaly detection in systems monitoring p 1769 N95-23683
ATTITUDE (INCLINATION)
Dynamic response tests of inertial and optical wind-tunnel model attitude measurement devices
| NASA-TM-109182 | p 1616 N95-23011
ATTITUDE CONTROL
Moving mass trim control for aerospace vehicles
| DE95-002602 | p 1622 N95-23532
ATTITUDE INDICATORS
Dynamic response tests of inertial and optical wind-tunnel model attitude measurement devices
| NASA-TM-109182 | p 1616 N95-23011
AUDIO SIGNALS
DRACULA: Dynamic range control for broadcasting and other applications
| BBC-RD-1994/13 | p 1658 N95-24044
AUDITORY PERCEPTION
A self-organizing neural network architecture for auditory and speech perception with applications to acoustic and other temporal prediction problems
| AD-A285640 | p 1800 N95-23782
AUDITORY SIGNALS
A self-organizing neural network architecture for auditory and speech perception with applications to acoustic and other temporal prediction problems
| AD-A285640 | p 1800 N95-23782
AUGER SPECTROSCOPY
On core level electron diffraction
| DE94-628484 | p 1842 N95-23048
AUGMENTATION
Design and implementation of two two-week Teacher Enhancement Institutes p 1853 N95-23306
Teacher Enhancement Institute p 1853 N95-23324
AUSTENITIC STAINLESS STEELS
Temperature effects on hydrogen-induced cracking in an iron-based superalloy
| DE95-003037 | p 1639 N95-22724
AUSTRALIA
AIRSAR deployment in Australia, September 1993: Management and objectives p 1714 N95-23948
AUTOCORRELATION
Optical image correlator using orthogonal data storage
| AD-A285795 | p 1819 N95-22508
AUTOIONIZATION
Photoionization of O(6+) below the n=3 threshold of the reduced ion
| DE94-634436 | p 1844 N95-23774
Studies of autoionizing states relevant to dielectronic recombination
| DE94-014162 | p 1812 N95-23978
AUTOMATA THEORY
Taxonomy of finite automata minimization algorithms
| PB95-139226 | p 1756 N95-23131
Automatic verification of regular protocols in P/T nets
| PB95-138921 | p 1789 N95-23146
Taxonomy of finite automata construction algorithms
| PB95-139234 | p 1758 N95-23606
Properties of probabilistic pushdown automata
| TR-554 | p 1760 N95-24056
AUTOMATED GUIDEWAY TRANSIT VEHICLES
Computation of magnetic forces on moving conductors by using ELEKTRA and other 3-D computer codes
| DE95-003308 | p 1798 N95-22895
AUTOMATED PILOT ADVISORY SYSTEM
Differential GPS and system integration of the Low Visibility Landing and Surface Operations (LVLASO) demonstration p 1611 N95-23318
AUTOMATIC CONTROL
Nonlinear system guidance in the presence of transmission zero dynamics
| NASA-TM-4661 | p 1654 N95-22804
Effective management of classified documents using the library document system
| AD-A286021 | p 1855 N95-23024
Material characterization system
| AD-D016536 | p 1800 N95-23073
Performance of the 0.3-meter transonic cryogenic tunnel with air, nitrogen, and sulfur hexafluoride media under closed loop automatic control
| NASA-CR-195052 | p 1668 N95-23257
Low-cost packaging of high-performance optoelectronic components
| DE95-003645 | p 1827 N95-23449
Knowledge-based guidance and control functions
| AGARD-AR-325 | p 1751 N95-23601
Distributed intelligence for ground/space systems
p 1770 N95-23685
Path planning for planetary rover using extended elevation map p 1771 N95-23689
Subsumption-based architecture for autonomous movement planning for planetary rovers
p 1771 N95-23690
Control technique for planetary rover
p 1771 N95-23692
Autonomous navigation system for the Marsokhod rover project p 1771 N95-23693
Design and development status of ETS-7, an RVD and space robot experiment satellite p 1623 N95-23700
The Charlotte (TM) intra-vehicular robot
p 1697 N95-23703
Robot arm system for automatic satellite capture and berthing p 1752 N95-23709
Robust control of multi-jointed arm with a decentralized autonomous control mechanism p 1659 N95-23710
Automatic satellite capture and berthing with robot arm (ASCABRA) p 1623 N95-23713
Automation and crew time saving in the space experiment p 1752 N95-23715
Space science experimentation automation and support p 1775 N95-23718
Robotics and telepresence for moon missions
p 1776 N95-23725
AUTOMATION
The role of flight progress strips in en route air traffic control: A time-series analysis
| DOT/FAA/AM-95/4 | p 1611 N95-23565
Knowledge-based guidance and control functions
| AGARD-AR-325 | p 1751 N95-23601
Network Event Recording Device: An automated system for network anomaly detection, and notification
| DE94-018274 | p 1658 N95-23772
Automated solar cell assembly teamed process research
| DE95-000299 | p 1730 N95-23777
Functions of external cues in prospective memory
| DOT/FAA/AM-95/9 | p 1750 N95-24088
AUTOMOBILE ENGINES
Advanced Turbine Technology Applications Project (ATTAP) 1993 annual report
| DE95-003198 | p 1693 N95-22880
AUTOMOBILES
Technology maturation project on optimization of sheet metal forming of aluminum for use in transportation systems
| DE95-003005 | p 1654 N95-22692
AUTONOMOUS NAVIGATION
Third International Symposium on Artificial Intelligence, Robotics, and Automation for Space 1994
| NASA-CR-197340 | p 1767 N95-23672
Subsumption-based architecture for autonomous movement planning for planetary rovers
p 1771 N95-23690
Very fast motion planning for highly dexterous-articulated robots p 1771 N95-23691
Control technique for planetary rover
p 1771 N95-23692
Autonomous navigation system for the Marsokhod rover project p 1771 N95-23693
Lunar rover technology demonstrations with Dante and Ratler p 1697 N95-23694
A perspective on space robotics in Japan

Autonomous spacecraft executive and its application to rendezvous and docking p 1623 N95-23719
Terrain modelling and motion planning for an autonomous exploration rover p 1721 N95-23765
AUTONOMY
JPL space robotics: Present accomplishments and future thrusts p 1697 N95-23697
Robust control of multi-jointed arm with a decentralized autonomous control mechanism p 1659 N95-23710
Formalizing procedures for operations automation, operator training and spacecraft autonomy
p 1752 N95-23720
Interactive autonomy and robotic skills
p 1777 N95-23730
Active vision in satellite scene analysis
p 1778 N95-23738
CRI planning and scheduling for space
p 1617 N95-23751
A self-organizing neural network architecture for auditory and speech perception with applications to acoustic and other temporal prediction problems
| AD-A285640 | p 1800 N95-23782
AUXILIARY POWER SOURCES
Motor drive technologies for the power-by-wire (PBW) program: Options, trends and tradeoffs
| NASA-TM-106885 | p 1616 N95-23671
AXIAL FLOW
CFD modeling of turbulent duct flows for coolant channel analysis p 1682 N95-23635
AXIAL LOADS
The development of shell imperfection measurement techniques
| TAE-712 | p 1699 N95-23923
AXIOMS
Temporal operators viewed as predicate transformers
| PB95-138996 | p 1757 N95-23152
Bose condensation, macroscopic quantum phenomena and atomic spatial correlations in superfluid He-4
| PB95-139085 | p 1850 N95-23154
Marginalistic value for monotonic set games
| PB95-140646 | p 1794 N95-23239
Set games
| PB95-140786 | p 1794 N95-23539
AXISYMMETRIC BODIES
Status of axisymmetric CFD of an eleven inch diameter hybrid rocket motor p 1686 N95-23651
AXISYMMETRIC FLOW
BEM solution to simulate the curvature driven deformation of a profile that is pressed into a plate of hot glass
| PB95-138913 | p 1648 N95-23145
Supersonic jet noise reductions predicted with increased jet spreading rate
| NASA-TM-106872 | p 1800 N95-23178
A generic efficient adaptive grid scheme for rocket propulsion modeling p 1670 N95-23418
TIGER: A user-friendly interactive grid generation system for complicated turbomachinery and axis-symmetric configurations p 1670 N95-23419
Computational Fluid Dynamic (CFD) analysis of axisymmetric plume and base flow of film/dump cooled rocket nozzle p 1673 N95-23431
Validation of a Computational Fluid Dynamics (CFD) code for supersonic axisymmetric base flow
p 1686 N95-23652

B

B STARS
Long term variability of B supergiant winds
|NASA-CR-197925| p 1865 N95-23401
A study of EUV emission from the O4f star Zeta Puppis
|NASA-CR-197350| p 1871 N95-23472

BACILLUS
Biotransformation of an uncured composite material
p 1629 N95-23033

BACKGROUND NOISE
Motion-sensitive optical correlator using a VanderLugt correlator
|NASA-CASE-NPO-18769-1-CU| p 1827 N95-23045

BACKSCATTERING
Theoretical estimates of high frequency acoustic attenuation and backscattering from suspended sand particles in the ocean and in an estuary
|DSTO-TR-0078| p 1743 N95-23667
Interferometric synthetic aperture radar imagery of the Gulf Stream p 1712 N95-23939
AIRSAR views of aerolian terrain
p 1713 N95-23941
Estimation of biophysical properties of upland Sitka spruce (Picea sitchensis) plantations
p 1713 N95-23943
Polarimetric radar data decomposition and interpretation p 1715 N95-23955
Synergy between optical and microwave remote sensing to derive soil and vegetation parameters from MAC Europe 1991 Experiment p 1715 N95-23956
Relating P-band AIRSAR backscatter to forest stand parameters p 1716 N95-23959
Soil moisture retrieval in the Oberpfaffenhofen testsite using MAC Europe AIRSAR data p 1716 N95-23960
Microwave dielectric properties of boreal forest trees
p 1716 N95-23961

BACKWARD DIFFERENCING
BEm-BDF scheme for curvature driven moving stokes flows
|PB95-138905| p 1667 N95-23144
BEM solution to simulate the curvature driven deformation of a profile that is pressed into a plate of hot glass
|PB95-138913| p 1648 N95-23145
Numerical simulation of axisymmetric viscous sintering
|PB95-138889| p 1667 N95-23175

BACTERIA
Continuous production of cellulase in a fluidized-bed reactor by Pseudonomas fluorescens immobilized in hydrogel beads
|DE94-014105| p 1744 N95-22588

BALANCING
Normalized coprime factorizations and balancing for unstable nonlinear systems
|PB95-141222| p 1767 N95-23557

BALL BEARINGS
Finite-difference solutions of the alternate turbopump development high-pressure oxidizer turbopump pump-end ball-bearing cavity flows p 1678 N95-23617

BALL LIGHTNING
A model for ball lightning
|DE95-003366| p 1742 N95-22701

BALLISTIC MISSILES
Ballistic Missile Defense: Current status of strategic target system. Report to Congressional requesters
|GAO/NSIAD-95-78| p 1903 N95-24080

BALLISTIC VEHICLES
Moving mass trim control for aerospace vehicles
|DE95-002602| p 1622 N95-23532

BALLOON FLIGHT
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer
|NASA-CR-197368| p 1735 N95-22482

BALLOONING MODES
Experimental achievement of toroidal beta beyond that predicted by 'Troyon' scaling
|DE95-003880| p 1837 N95-24087

BANACH SPACE
Spectral application of the theorem for the essential quasi-Fredholm spectrum
|DE94-628430| p 1795 N95-22632
Iterative solutions of nonlinear equations with strongly accretive or strongly pseudocontractive maps
|DE94-628432| p 1786 N95-22634
Idempotents in Banach algebra
|DE94-628429| p 1787 N95-22794
Analytic sets and games in Banach spaces
|PB95-108080| p 1787 N95-22837
Iterative solutions of nonlinear equations in smooth Banach spaces
|DE94-634287| p 1790 N95-23455
Ishikawa iteration process for nonlinear Lipschitz strongly accretive mappings
|DE94-634284| p 1792 N95-23658

BAND RATIOING
Optimal band selection for dimensionality reduction of hyperspectral imagery p 1709 N95-23887

BAND STRUCTURE OF SOLIDS
Correlation effects in high-Tc superconductors and heavy fermion compounds
|DE94-629057| p 1840 N95-22846

BANDWIDTH
Limited bandwidth microwave filter
|AD-D016553| p 1660 N95-22708
Effects of modulation index on telecommunications
|AD-A286018| p 1657 N95-23023

BARIUM
Studies of autoionizing states relevant to dielectronic recombination
|DE94-014162| p 1812 N95-23978

BARIUM COMPOUNDS
Effect on c-axis transport properties of a critical state in Bi2Sr2CaCu2O8
|DE95-003695| p 1843 N95-23366
Transport properties of Tl2Ba2CaCu2O8 meander lines
|DE95-003715| p 1843 N95-23367

BARIUM OXIDES
Superconducting Tl2Ba2CaCu2O8 thin films prepared by post-annealing in a flow-through multiple-zone furnace
|DE95-002745| p 1838 N95-22520
Preparation of high quality YBa2Cu3O(7-delta) thick films on flexible Ni-based alloy substrates with textured buffer layers
|DE95-003686| p 1645 N95-23571
Phonon characteristics of high (T sub c) superconductors from neutron Doppler broadening measurements
|DE95-003703| p 1844 N95-24076

BARIUM TITANATES
A study of ceramic composite of ferroelectric BaTiO3 ceramic and superconductor YBa2Cu3O(6+delta) ceramic
|DE94-627563| p 1647 N95-22610
A special percolation problem in ceramic composites
|DE94-627641| p 1647 N95-22611

BARYON RESONANCE
Theoretical aspects of electroweak and other interactions in medium energy nuclear physics
|DE95-004341| p 1808 N95-23357

BARYONS
Searches for the H-dibaryon at the AGS
|DE95-003091| p 1802 N95-22727
Do narrow Sigma hypernuclear states exist?
|DE95-002930| p 1803 N95-22763
Baryon number fluctuations in a quark-hadron phase transition
|DE94-628585| p 1804 N95-22786
Charm-conserving strangeness-changing two body hadronic decays of charmed baryons
|DE94-628621| p 1811 N95-23770

BASALT
Axial focusing of impact energy in the earth's interior: A possible link to flood basalts and hotspots
|DE95-003357| p 1741 N95-24009

BASE FLOW
Axisymmetric computational fluid dynamics analysis of Saturn V/S1-C/F1 nozzle and plume
p 1672 N95-23430
Computational Fluid Dynamic (CFD) analysis of axisymmetric plume and base flow of film/dump cooled rocket nozzle p 1673 N95-23431
NLS base heating CFD analysis p 1673 N95-23432
Validation of a Computational Fluid Dynamics (CFD) code for supersonic axisymmetric base flow
p 1686 N95-23652
Code validation study for base flows
p 1686 N95-23653
Four-nozzle benchmark wind tunnel model USA code solutions for simulation of multiple rocket base flow recirculation at 145,000 feet altitude
p 1686 N95-23654
Numerical study of base pressure characteristic curve for a four-engine clustered nozzle configuration
p 1625 N95-23655

BASE HEATING
NLS base heating CFD analysis p 1673 N95-23432
Code validation study for base flows
p 1686 N95-23653
Four-nozzle benchmark wind tunnel model USA code solutions for simulation of multiple rocket base flow recirculation at 145,000 feet altitude
p 1686 N95-23654
Numerical study of base pressure characteristic curve for a four-engine clustered nozzle configuration
p 1625 N95-23655

BASE PRESSURE
CFD flowfield simulation of Delta Launch Vehicles in a power-on configuration p 1673 N95-23433
Numerical study of base pressure characteristic curve for a four-engine clustered nozzle configuration
p 1625 N95-23655

BAUXITE
Be-10 in terrestrial bauxite and industrial aluminum: An LDEF fallout p 1646 N95-23820

BAYES THEOREM
Learning time series for intelligent monitoring
p 1770 N95-23686
Optimal band selection for dimensionality reduction of hyperspectral imagery p 1709 N95-23887

BEACONS
Cueing light configuration for aircraft navigation
|NASA-CASE-ARC-11982-1| p 1611 N95-23393

BEAM CURRENTS
D3-D program overview
|DE95-003879| p 1837 N95-24086

BEAM INTERACTIONS
Multipole contribution from an off-axis orbit in an IR quadrupole and the consequences on the dynamic aperture
|DE95-002874| p 1816 N95-22567
Atomic physics at high brilliance synchrotron sources: Proceedings
|DE95-006077| p 1813 N95-24174

BEAMFORMING
Electron beam acceleration and compression for short wavelength FELs
|DE95-003371| p 1691 N95-22704
Adaptive beamforming in a CDMA mobile satellite communications system p 1655 N95-22815

BEAMS
Standardization of CDF and D(O) reported luminosities
|DE95-003388| p 1818 N95-24077

BEAMS (SUPPORTS)
A coupled layerwise analysis of the thermopiezoelectric response of smart composite beams beams
|NASA-TM-106889| p 1630 N95-23463

BENZENE
Pressure shifts and electron scattering in atomic and molecular gases
|DE95-003102| p 1803 N95-22747

BERGMAN OPERATOR
Noisy bases in Hilbert space: A new class of thermal coherent states and their properties
p 1823 N95-22980

BERYLLIUM
Solar mass loss, solar lithium, and solar oscillations
|DE94-018262| p 1870 N95-22938
Beryllium in the ITER blanket
|DE95-004620| p 1837 N95-24165

BERYLLIUM ISOTOPES
Be-10 in terrestrial bauxite and industrial aluminum: An LDEF fallout p 1646 N95-23820

BERYLLIUM OXIDES
Beryllium in the ITER blanket
|DE95-004620| p 1837 N95-24165

BETA FACTOR
Non-Taylor magnetohydrodynamic self-organization
|NIFS-314| p 1834 N95-23524
Theory of pressure-induced islands and self-healing in three-dimensional toroidal magnetohydrodynamic equilibria
|NIFS-321| p 1836 N95-23589

BETA PARTICLES
The q profile evolution and enhanced core confinement of high (beta)(sub p) plasmas in D3-D
|DE95-003878| p 1834 N95-23371
MHD-Vlasov simulation of the toroidal Alfven eigenmode
|NIFS-319| p 1836 N95-23591
Neutrinoless double beta decay and the solar neutrino problem
|DE94-628633| p 1812 N95-23785

BETHE-SALPETER EQUATION
Hadrons of arbitrary spin and heavy quark symmetry
|DE94-628597| p 1804 N95-22789
Scale-invariant Lipatov kernels from t-channel unitarity
|DE95-004625| p 1813 N95-24166

BIAS
High power Josephson effect sources
|AD-A285808| p 1838 N95-22511
VLPC characterization for the Dzero upgrade
|DE95-003742| p 1818 N95-24084

BIBLIOGRAPHIES
Direct effects of atmospheric CO2 enrichment on plants and ecosystems: An updated bibliographic data base
|DE95-003060| p 1731 N95-22725
FY 1994 scientific and technical reports, articles, papers, and presentations
|NASA-TM-108480| p 1856 N95-23225

Oak Ridge National Laboratory Energy Efficiency and Renewable Energy Program Bibliography: 1994 Edition
[DE95-002296] p 1730 N95-23605

BIHARMONIC EQUATIONS
Effects of long-range coupling on aggregation
[DE94-628483] p 1842 N95-23047

BIMETALS
Infrared study of carbon deposits on bimetallic catalysts
[DE95-000902] p 1631 N95-22517
Organometallic chemistry of bimetallic compounds
[DE95-004436] p 1634 N95-23345

BINARY FLUIDS
Small angle x ray scattering studies of aggregation in supercritical fluid solutions
[DE95-004576] p 1843 N95-23579

BINARY MIXTURES
Pressure shifts and electron scattering in atomic and molecular gases
[DE95-003102] p 1803 N95-22747

BINARY PHASE SHIFT KEYING
Effects of modulation index on telecommunications
[AD-A286018] p 1657 N95-23023

BINARY STARS
Long term variability of B supergiant winds
[NASA-CR-197925] p 1865 N95-23401

BIOASSAY
The development and applications of biomarkers
[DE94-014249] p 1744 N95-22589

BIOCHEMISTRY
The development and applications of biomarkers
[DE94-014249] p 1744 N95-22589
General crystal in prebiotic context
[DE94-628475] p 1840 N95-22774
Transmethylation reactions during methanogenesis from acetate in Methanosarcina barkeri
[DE94-016222] p 1745 N95-22873
Analysis of structural domains required for phytochrome function by in vitro mutagenesis
[DE94-016230] p 1745 N95-22884
Membrane phase separations, asymmetry and implications in the origin of life
[DE94-628486] p 1747 N95-23050
The origin of chirality in protein amino acids
[DE94-628491] p 1747 N95-23058
A comparative study of the effects of clofibrate, ciprofibrate, WY-14,643, and di-(2-ethylhexyl)-phthalate on liver protein expression in mice
[DE94-016587] p 1748 N95-23771
Use of spectral analogy to evaluate canopy reflectance sensitivity to leaf optical property p 1701 N95-23845
AVIRIS spectra correlated with the chlorophyll concentration of a forest canopy p 1705 N95-23871
The effect of signal noise on the remote sensing of Foliar biochemical concentration p 1708 N95-23884
Relationships between pigment composition variation and reflectance for plant species from a coastal savannah in California p 1709 N95-23889
Investigations on the 1.7 micron residual absorption feature in the vegetation reflection spectrum p 1710 N95-23891
The 1993 Gordon Research Conference on Chronobiology
[NASA-CR-197990] p 1748 N95-24047

BIOCONVERSION
Design and demonstration of an immobilized-cell fluidized-bed reactor for the efficient production of ethanol
[DE94-014023] p 1652 N95-22587

BIODEGRADATION
Biotransformation of an uncured composite material p 1629 N95-23033
Monitoring land use and degradation using satellite and airborne data p 1707 N95-23880

BIOLOGICAL EFFECTS
Activation of the jun-D gene in human myeloid cells by 1-(beta)-D-arabinofuranosylcytosine
[DE94-016591] p 1746 N95-22912
All systems go!
[NASA-TM-110542] p 1620 N95-23665
A comparative study of the effects of clofibrate, ciprofibrate, WY-14,643, and di-(2-ethylhexyl)-phthalate on liver protein expression in mice
[DE94-016587] p 1748 N95-23771
Biological interactions and human health effects of static magnetic fields
[DE95-003147] p 1749 N95-24145

BIOLOGICAL EVOLUTION
Membrane phase separations, asymmetry and implications in the origin of life
[DE94-628486] p 1747 N95-23050
Molecular relics from chemical evolution and the origin of life
[DE94-628493] p 1747 N95-23060

BIOLOGICAL MODELS (MATHEMATICS)
Design of a cervical spine gross motion simulator for standard size human and anthropomorphic dummy adult and child
[NIAR-94-16] p 1751 N95-24021

BIOMASS
Development of a multi-sensor in situ fiber optic fluorometer
[DE95-003105] p 1819 N95-22780
Renewable Energy Sources Brno 1993
[DE94-633975] p 1727 N95-22855
Development of the IGT RENUGAS(reg sign) process
[DE94-017652] p 1727 N95-22888
Estimating dry grass residues using landscape integration analysis p 1705 N95-23867
The red edge in arid region vegetation: 340-1060 nm spectra p 1708 N95-23881
Synergy between optical and microwave remote sensing to derive soil and vegetation parameters from MAC Europe 1991 Experiment p 1715 N95-23956
Relating P-band AIRSAR backscatter to forest stand parameters p 1716 N95-23959

BIOMASS ENERGY PRODUCTION
Design and demonstration of an immobilized-cell fluidized-bed reactor for the efficient production of ethanol
[DE94-014023] p 1652 N95-22587

BIOMETRICS
The development and applications of biomarkers
[DE94-014249] p 1744 N95-22589

BIOPHYSICS
Protein folding and protein metallocluster studies using synchrotron small angler x ray scattering
[DE95-003339] p 1746 N95-22897
Membrane phase separations, asymmetry and implications in the origin of life
[DE94-628486] p 1747 N95-23050
Estimation of biophysical properties of upland Sitka spruce (Picea sitchensis) plantations p 1713 N95-23943

BIOPROCESSING
Development of novel separation techniques for biological samples in capillary electrophoresis
[DE95-001672] p 1744 N95-22493
Continuous production of cellulase in a fluidized-bed reactor by Pseudonomas fluorescens immobilized in hydrogel beads
[DE94-014105] p 1744 N95-22588

BIOREACTORS
Design and demonstration of an immobilized-cell fluidized-bed reactor for the efficient production of ethanol
[DE94-014023] p 1652 N95-22587
Continuous production of cellulase in a fluidized-bed reactor by Pseudonomas fluorescens immobilized in hydrogel beads
[DE94-014105] p 1744 N95-22588
Biological determinants of photobioreactor design
[DE94-016032] p 1745 N95-22872

BIOSPHERE
Assessing the relative contribution of biogenic and fossil processes to visibility scattering aerosols found in remote areas: Near-term Organic Research Program
[DE95-003149] p 1735 N95-24146

BIOSYNTHESIS
A comparative study of the effects of clofibrate, ciprofibrate, WY-14,643, and di-(2-ethylhexyl)-phthalate on liver protein expression in mice
[DE94-016587] p 1748 N95-23771

BIOTECHNOLOGY
Biological determinants of photobioreactor design
[DE94-016032] p 1745 N95-22872

BIRDS
Old-growth and mature forests near spotted owl nests in western Oregon p 1719 N95-24098

BISMALEIMIDE
Biotransformation of an uncured composite material p 1629 N95-23033
The detection and analysis of galvanic damage in BMI/graphite fiber composites p 1631 N95-23502

BISMUTH OXIDES
Some aspects of critical currents in Ag sheathed Bi2Sr2Ca2Cu3O10 composite tapes: A summary
[DE95-003952] p 1842 N95-23354
Cooling rate effects on the microstructure, critical current density, and (T(sub c)) transition of one- and two-powder BSCCO-2223 Ag sheathed tapes
[DE95-004639] p 1846 N95-24171

BISPHENOLS
Biotransformation of an uncured composite material p 1629 N95-23033

BLACK BODY RADIATION
ROSAT observation program
[NASA-CR-197683] p 1866 N95-23595

BLACK HOLES (ASTRONOMY)
Black hole formation and space-time fluctuations in two dimensional dilaton gravity and complementarity
[DE94-628514] p 1867 N95-22739
Shannon-Wehrl entropy for cosmological and black-hole squeezing p 1826 N95-23000

BLADE TIPS
GGOT total pressure loss control concept evaluation p 1672 N95-23427
Navier-Stokes analysis of an oxidizer turbine blade with tip clearance with and without a mini-shroud p 1672 N95-23428
Supersonic flow and shock formation in turbine tip gaps p 1672 N95-23429

BLANKETS (FUSION REACTORS)
Beryllium in the ITER blanket
[DE95-004620] p 1837 N95-24165

BLOCK COPOLYMERS
Reflectivity studies on adsorbed block copolymers under shear
[DE95-003676] p 1649 N95-23568

BOATS
SWIFT BOAT 1994: Using a fast chase boat to investigate offshore weather features in conjunction with WSR-88D observations
[PB94-195146] p 1742 N95-22651

BODY CENTERED CUBIC LATTICES
Epitaxial growth of bcc transition metal films and superlattices onto MgO (111), (011) and (001) substrates
[DE95-004629] p 1846 N95-24168

BOEING 737 AIRCRAFT
Differential GPS and system integration of the Low Visibility Landing and Surface Operations (LVLASO) demonstration p 1611 N95-23318

BOLOMETERS
High Tc superconducting bolometric and nonbolometric infrared (IR) detectors
[NASA-CR-197868] p 1827 N95-23224

BONDED JOINTS
Support research for solid oxide fuel cells
[DE95-002910] p 1726 N95-22568
Explosive bonding and its application in the Advanced Photon Source front-end and beamline components design
[DE95-004132] p 1696 N95-23397

BONDING
Explosive bonding and its application in the Advanced Photon Source front-end and beamline components design
[DE95-004132] p 1696 N95-23397

BORON 10
Continuation of BNCT Research Program at NEMC and MIT
[DE94-016228] p 1748 N95-22875

BOSONS
Fermion-spin transformation to implement the charge-spin separation
[DE94-629035] p 1800 N95-22495
The first measurement of the left-right cross section asymmetry in Z(sup 0) boson production
[DE95-003335] p 1802 N95-22697
Measurement of the left-right asymmetry in Z boson production by electron-positron collisions
[DE95-003337] p 1802 N95-22699
Geometrical interpretation for the outer SU(3) outer multiplicity label p 1814 N95-22968
Boson mapping techniques applied to constant gauge fields in QCD p 1814 N95-22969
Shapes and stability of algebraic nuclear models p 1814 N95-22974
q-bosons and the q-analogue quantized field p 1814 N95-22984
The Duffin-Kemmer-Petiau oscillator p 1825 N95-22998
Heavy quark physics at SLD: Preliminary results
[DE95-003372] p 1806 N95-23138
Measuring the left-right cross section asymmetry in Z boson production by e(+)e(-) collisions at the SLC
[DE95-003468] p 1807 N95-23141
Properties of jets in Z events from 1.8 TeV (bar p)p collisions
[DE94-018982] p 1808 N95-23197
Search for Z' and W' at CDF
[DE94-018987] p 1808 N95-23203
Search for new gauge bosons at D(O)
[DE95-003745] p 1809 N95-23404
Measurement of W and Z boson production and extraction of the W width and branching ratios at CDF
[DE94-018989] p 1810 N95-23522
Electroweak physics from the Tevatron
[DE95-002213] p 1810 N95-23530
W mass measurements from D(circle slash) and CDF experiments at TeVatron
[DE95-003497] p 1813 N95-24000

A measurement of the mass of the W vector boson at CDF
|DE95-003498| p 1813 N95-24016
BOUNDARIES
Neural network for detection and correction of local boundary misalignments between images
|AD-D016539| p 1766 N95-22705
A uniform geometrical optics and an extended uniform geometrical theory of diffraction for evaluating high frequency EM fields near smooth caustics and composite shadow boundaries
|NASA-CR-197934| p 1657 N95-23391
BOUNDARY CONDITIONS
Treewidth and pathwidth of cocomparability graphs of bounded dimension
|PB95-127239| p 1785 N95-22535
Black hole formation and space-time fluctuations in two dimensional dilaton gravity and complementarity
|DE94-628514| p 1867 N95-22739
Sullivan model for wetting transition in closed system
|DE94-628472| p 1665 N95-22771
Quantum field between moving mirrors: A three dimensional example p 1821 N95-22965
Effect of critical field on screened dielectric breakdown growth
|DE94-628482| p 1661 N95-23046
Conjugate gradient MATHEW
|DE95-003479| p 1738 N95-23143
Observations of the magnetopause current layer: Cases with no boundary layer and tests of recent models
|NASA-CR-197391| p 1738 N95-23184
Three-dimensional viscous flow analysis inside a turbine volute p 1674 N95-23437
Advanced turbulence models for turbomachinery p 1675 N95-23443
Fourth order difference methods for hyperbolic IBVP's
|NASA-CR-197955| p 1791 N95-23548
Sensitivity of combustion-acoustic instabilities to boundary conditions for premixed gas turbine combustors
|NASA-TM-106890| p 1614 N95-23550
CFD parametric study of consortium impeller p 1680 N95-23626
BOUNDARY ELEMENT METHOD
BEm-BDF scheme for curvature driven moving stokes flows
|PB95-138905| p 1667 N95-23144
BEM solution to simulate the curvature driven deformation of a profile that is pressed into a plate of hot glass
|PB95-138913| p 1648 N95-23145
Numerical simulation of axisymmetric viscous sintering
|PB95-138889| p 1667 N95-23175
BOUNDARY LAYER COMBUSTION
Fundamental phenomena on fuel decomposition and boundary layer combustion processes with applications to hybrid rocket motors
|NASA-CR-197919| p 1625 N95-23261
BOUNDARY LAYER CONTROL
Supersonic laminar flow control research
|NASA-CR-197938| p 1609 N95-23669
BOUNDARY LAYER EQUATIONS
An approximate theoretical method for modeling the static thrust performance of non-axisymmetric two-dimensional convergent-divergent nozzles
|NASA-CR-195050| p 1608 N95-23193
BOUNDARY LAYER FLOW
Active control of panel vibrations induced by a boundary layer flow
|NASA-CR-197867| p 1608 N95-23182
BOUNDARY LAYER SEPARATION
Control of flow separation in airfoil/wing design applications p 1609 N95-23294
BOUNDARY LAYER STABILITY
Supersonic laminar flow control research
|NASA-CR-197938| p 1609 N95-23669
BOUNDARY LAYER TRANSITION
Crossflow instability control on a swept-wing: Preliminary studies p 1609 N95-23283
High-lift flow-physics flight experiments on a subsonic civil transport aircraft (B737-100) p 1609 N95-23333
Supersonic laminar flow control research
|NASA-CR-197938| p 1609 N95-23669
BOUNDARY LAYERS
Optimized design of a hypersonic nozzle p 1617 N95-23304
BOUNDARY VALUE PROBLEMS
Remarks on multiple solutions for asymptotically linear elliptic boundary value problems
|DE94-628416| p 1785 N95-22624
A prescribing geodesic curvature problem
|DE94-628503| p 1787 N95-22750
Quasistatic model for the motion of a viscous capillary liquid drop
|PB95-138848| p 1667 N95-23172
Stoermer-Cowell: Straight, summed and split. An overview
|PB95-139341| p 1789 N95-23200
The initial-value problem for viscous channel flows
|NASA-CR-195034| p 1667 N95-23207
Orders of predictor-corrector pairs for second-order ODE's
|PB95-140612| p 1790 N95-23237
Dynamic response of a transducer mounted at one end of an acoustical cavity which is subjected to a specified pressure at the open end of the cavity
|DE95-004192| p 1799 N95-23379
Fourth order difference methods for hyperbolic IBVP's
|NASA-CR-197955| p 1791 N95-23548
The point interactions in the quantum problem of three particles with internal structure
|DE94-635423| p 1851 N95-23967
BOW WAVES
Investigation of infra-red and nonequilibrium air radiation
|NASA-CR-197977| p 1741 N95-24041
BOX BEAMS
Flutter analysis of composite box beams
|NASA-CR-197931| p 1615 N95-23392
BRAGG ANGLE
Photoinduced Bragg grating formation in optical fibres as a consequence of convective instability
|DE94-628479| p 1841 N95-23020
BRAIN
Unsupervised classification learning from cross-modal environmental structure
|TR-536| p 1784 N95-24040
BRANCHING (MATHEMATICS)
Dynamics of L to H bifurcation
|DE94-019126| p 1832 N95-23163
Degenerate Hamiltonian Hopf bifurcations
|PB95-138871| p 1789 N95-23174
New determination of V(sub us) from K(sub e3)(+) decay
|DE94-628616| p 1811 N95-23769
BRAZING
Sensor-based control of rocket thrust chamber feature location for automated braze paste dispensing
|DE94-016559| p 1624 N95-22885
BREEDER REACTORS
Beryllium in the ITER blanket
|DE95-004620| p 1837 N95-24165
BREMSSTRAHLUNG
Hard e(+)e(-)-pair Bremsstrahlung as a lepton polarimeter
|DE94-635615| p 1812 N95-23984
BRIDGMAN METHOD
USML-1 Glovebox experiments
|NASA-CR-196574| p 1653 N95-24028
BRIGHTNESS
Preserving the high source brightness with x ray beam line optics
|DE95-003172| p 1820 N95-22877
BRITTLE MATERIALS
Determining orbital particle parameters of impacts into germanium using morphology analysis and calibration data from hypervelocity impact experiments in the laboratory p 1700 N95-23841
BRITTLENESS
Morphology of extinguished monolithic JA2 grains fired in a 30-mm Solid Propellant Electrothermal Chemical (SPETC) gun
|AD-A285792| p 1652 N95-22506
BROADCASTING
Addendum to the Proceedings of the Third International Mobile Satellite Conference (IMSC 1993)
|NASA-CR-197343| p 1655 N95-22813
Utilizing a TDRS satellite for direct broadcast satellite-radio propagation experiments and demonstrations p 1622 N95-22814
The possibilities for mobile and fixed services up to the 20/30 GHz frequency bands p 1656 N95-22817
DRACULA: Dynamic range control for broadcasting and other applications
|BBC-RD-1994/13| p 1658 N95-24044
The sound insulations of studio doors. Part 2: Door seals
|BBC-RD-1994/15| p 1654 N95-24045
The sound insulations of studio doors. Part 1: Door blanks
|BBC-RD-1994/14| p 1654 N95-24093
BROKEN SYMMETRY
A model of mesons based on chi SB in the light-front frame
|DE95-003203| p 1802 N95-22731
Chiral symmetry breaking in QCD with linearly rising confinement potential
|DE94-628559| p 1848 N95-22744
Spontaneous breaking of chiral symmetry as a consequence of confinement
|DE94-628560| p 1849 N95-22745
Supersymmetric singlet majorons and cosmology
|DE94-628571| p 1850 N95-22783
The origin of chirality in protein amino acids
|DE94-628491| p 1747 N95-23058
Higgs searches and WW scattering
|PB95-139143| p 1807 N95-23160
Symmetry breaking in O4(+): An application of the Brueckner coupled-cluster method
|NASA-CR-197981| p 1810 N95-23459
BSCCO SUPERCONDUCTORS
High-temperature ultrasonic characterization of Ag-clad superconductor tapes
|DE95-002909| p 1838 N95-22530
Design and production of efficient current leads for 1500-A, 50-Hz service in a 77-4 K temperature gradient
|DE95-004121| p 1662 N95-23355
Effects of Bi and Bi2O3 additions on the microstructure and superconducting properties of powder-in-tube BSCCO (2212) tapes
|DE95-004605| p 1845 N95-24150
BUBBLES
Investigation of the role of gravity waves in the generation of equatorial bubbles
|NASA-CR-197962| p 1739 N95-23272
A generalized Eulerian-Lagrangian analysis, with application to liquid flows with vapor bubbles p 1682 N95-23633
BUCKLING
The development of shell imperfection measurement techniques
|TAE-712| p 1699 N95-23923
BUFFETING
Preliminary identification of buffet problems in high speed civil transport p 1616 N95-23319
BUILDINGS
Mercury detection with thermal neutrons
|DE95-002061| p 1806 N95-23055
Locating buildings in aerial photos p 1721 N95-23295
BUMPERS
Micro-abrasion package capture cell experiment on the trailing edge of LDEF: Impactor chemistry and whipple bumper shield efficiencies p 1624 N95-23835
BUNDLES
Method for making fiber-optic bundle collimator assembly
|AD-D016491| p 1819 N95-22492
Grassman and hyperKaehler structures on some spaces of sections of holomorphic bundles
|PB95-109104| p 1795 N95-22712
Trisecant curve associated to a smooth curve in P(sub 3) of degree d greater than g+2
|DE94-628425| p 1787 N95-22809
A fiber-optic bundle and collimator assembly
|AD-D016500| p 1820 N95-22864
Collisionless magnetic reconnection associated with coalescence of flux bundles
|NIFS-315| p 1834 N95-23525
Universal Hodge bundle and Mumford isomorphisms on the abelian inductive limit of Teichmueller spaces
|DE94-634325| p 1796 N95-23660
BUOYANCY
Modeling NO(x) emissions in turbulent jet flames: Effects of buoyancy and radiation
|DE94-016621| p 1633 N95-22886
BURGER EQUATION
Fourth order difference methods for hyperbolic IBVP's
|NASA-CR-197955| p 1791 N95-23548
BURSTS
Bursting in the near-surface boundary layer: Comparisons between realistic models and observations
|DE95-003714| p 1741 N95-24078

C

C (PROGRAMMING LANGUAGE)
An expert system for diagnosing anomalies of spacecraft p 1770 N95-23684
CADMIUM
Corrosion prevention with environmentally compliant materials: A design challenge p 1644 N95-23511
CADMIUM ISOTOPES
Large-sized and highly radioactive H-3 and Cd-109 Langmuir-Blodgett films
|DE94-785270| p 1811 N95-23775
CADMIUM TELLURIDES
Study of photorefractive non-linearities in the 3-5 and 2-4 semi-insulator compounds: The effect of electron irradiation
|PB94-189057| p 1839 N95-22584
Polycrystalline CuInSe2 and CdTePV solar cells
|DE95-000244| p 1727 N95-22842

CALCIUM
MOCVD of gallium and calcium sulfides for improved phosphor processing
[DE95-000918] p 1631 N95-22677
CALCIUM COMPOUNDS
MHD seed recovery and regeneration, phase 2
[DE95-004308] p 1833 N95-23338
Effect on c-axis transport properties of a critical state in Bi2Sr2CaCu2O8
[DE95-003695] p 1843 N95-23366
Transport properties of Tl2Ba2CaCu2O8 meander lines
[DE95-003715] p 1843 N95-23367
CALCIUM ISOTOPES
Rate coefficients for the electron-impact excitation, ionization and recombination of He-like ions, S XV, Ca XIX and Fe XXV, and related processes
[ISAS-R-657] p 1811 N95-23604
CALCIUM OXIDES
Superconducting Tl2Ba2CaCu2O8 thin films prepared by post-annealing in a flow-through multiple-zone furnace
[DE95-002745] p 1838 N95-22520
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
[DE95-000362] p 1634 N95-23164
Some aspects of critical currents in Ag sheathed Bi2Sr2Ca2Cu3O10 composite tapes: A summary
[DE95-003952] p 1842 N95-23354
Microstructure and composition of a SNS Josephson junction using CaRuO3 as the metallic barrier
[DE95-004611] p 1845 N95-24152
Cooling rate effects on the microstructure, critical current density, and (T(sub c)) transition of one- and two-powder BSCCO-2223 Ag sheathed tapes
[DE95-004639] p 1846 N95-24171
CALCIUM SULFIDES
MOCVD of gallium and calcium sulfides for improved phosphor processing
[DE95-000918] p 1631 N95-22677
CALCULUS
Idempotents in Banach algebra
[DE94-628429] p 1787 N95-22794
Canonical typing and pi-conversion
[PB95-139218] p 1788 N95-23130
Temporal operators viewed as predicate transformers
[PB95-138996] p 1757 N95-23152
CALIBRATING
IRAS sky survey atlas: Explanatory supplement
[NASA-CR-197335] p 1865 N95-22539
SeaWiFS technical report series. Volume 25: Ocean optics protocols for SeaWiFS validation, revision 1
[NASA-TM-104566-VOL-25-REV-] p 1743 N95-22671
Investigation of depth-area relationships associated with nanoindentations
[DE95-001353] p 1639 N95-22686
TOGA/COARE AMMR 1992 data processing
[NASA-CR-197289] p 1736 N95-22867
Summary of OARE flight calibration measurements
[NASA-TM-109159] p 1688 N95-23012
Simultaneous inference in multivariate calibration
[DE95-003592] p 1794 N95-23066
Upgrade of the 92 GHz airborne multi-channel meteorological radiometer (AMMR)
[NASA-CR-197875] p 1742 N95-23208
Design of a variable area diffuser for a 15-inch Mach 6 open-jet tunnel p 1617 N95-23309
On the accuracy of CFD-based pressure drop predictions for right-angle ducts p 1682 N95-23634
Commercialization of JPL Virtual Reality calibration and redundant manipulator control technologies p 1768 N95-23676
AVIRIS calibration using the cloud-shadow method p 1702 N95-23849
Airborne Visible/Infrared Imaging Spectrometer (AVIRIS): Recent improvements to the sensor p 1690 N95-23852
Comparison of methods for calibrating AVIRIS data to ground reflectance p 1703 N95-23854
Use of data from the AVIRIS onboard calibrator p 1704 N95-23861
Inflight calibration of AVIRIS in 1992 and 1993 p 1690 N95-23862
Use of the Airborne Visible/Infrared Imaging Spectrometer to calibrate the optical sensor on board the Japanese Earth Resources Satellite-1 p 1624 N95-23864
A role for AVIRIS in the Landsat and Advanced Land Remote Sensing Systems program p 1705 N95-23866
The effects of AVIRIS atmospheric calibration methodology on identification and quantitative mapping of surface mineralogy, Drum Mountains, Utah p 1705 N95-23870
Extraction of auxiliary data from AVIRIS distribution tape for spectral, radiometric, and geometric quality assessment p 1706 N95-23875
The data facility of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1707 N95-23877
Using AVIRIS for in-flight calibration of the spectral shifts of SPOT-HRV and of AVHRR? p 1710 N95-23893
CALIFORNIA
Streamflow and selected precipitation data for Yucca Mountain Region, southern Nevada and eastern California, water years 1986-90
[DE95-001893] p 1742 N95-23385
CALORIMETERS
Calorimetric measurement of energy of ultrasonic cleaners
[DE95-003938] p 1800 N95-23375
Thermal effects on the STAR electromagnetic calorimeter
[DE95-004663] p 1688 N95-23492
The STAR EM calorimeter design and small prototype test results
[DE95-004592] p 1689 N95-23583
A high speed digitizing photomultiplier tube base for the KTeV CsI calorimeter
[DE95-003739] p 1664 N95-24081
CAMBER
The use of cowl camber and taper to reduce rotor/stator interaction noise
[NASA-CR-195421] p 1799 N95-22675
CAMERAS
Intelligent monitoring system applied to super long distance telerobotic tasks p 1777 N95-23728
Automatic commanding of the Mars Observer Camera p 1620 N95-23754
PRISM Spectrograph Optical Design
[NASA-CR-197965] p 1828 N95-24035
CANADIAN SPACE PROGRAM
Robotics research at Canadian Space Agency p 1772 N95-23699
CANARD CONFIGURATIONS
Inner loop flight control for the High-Speed Civil Transport p 1616 N95-23314
CANONICAL FORMS
Turbulent transport across invariant canonical flux surfaces
[DE95-000710] p 1832 N95-23072
Canonical typing and pi-conversion
[PB95-139218] p 1788 N95-23130
CANOPIES (VEGETATION)
Combining optical and microwave remote sensing data of forest vegetation: MAC Europe 1991
[PB95-127312] p 1717 N95-22538
Use of spectral analogy to evaluate canopy reflectance sensitivity to leaf optical property p 1701 N95-23845
Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 1 p 1703 N95-23856
AVIRIS spectra correlated with the chlorophyll concentration of a forest canopy p 1705 N95-23871
Measurements of canopy chemistry with 1992 AVIRIS data at Blackhawk Island and Harvard Forest p 1706 N95-23873
The effect of signal noise on the remote sensing of Foliar biochemical concentration p 1708 N95-23884
Investigations on the 1.7 micron residual absorption feature in the vegetation reflection spectrum p 1710 N95-23891
Thermal radiant exitance model performance: Soils and forests
[DE95-003619] p 1721 N95-24148
CANTILEVER BEAMS
Effects of delaminations on the damped dynamic characteristics of composite laminates: Mechanics and experiments
[NASA-TM-106862] p 1630 N95-23258
Method and apparatus for measuring the strain developed in a coated surface
[NASA-CASE-ARC-11938-1-C] p 1688 N95-23263
CAPACITANCE
Capacitive acoustic wave detector and method of using same
[NASA-CASE-LAR-13890-1] p 1799 N95-22921
CAPACITORS
Capacitive acoustic wave detector and method of using same
[NASA-CASE-LAR-13890-1] p 1799 N95-22921
CAPILLARY FLOW
Development of novel separation techniques for biological samples in capillary electrophoresis
[DE95-001672] p 1744 N95-22493
CAPILLARY TUBES
Development of novel separation techniques for biological samples in capillary electrophoresis
[DE95-001672] p 1744 N95-22493
CAPILLARY WAVES
Profiling and light scattering studies of Si surfaces
[DE95-002931] p 1828 N95-24005
CARBIDES
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
[DE95-000362] p 1634 N95-23164
CARBON
Infrared study of carbon deposits on bimetallic catalysts
[DE95-000902] p 1631 N95-22517
Neutron scattering analysis of rubber carbon black composite structure
[DE95-002735] p 1646 N95-22553
Regulation of photosynthetic carbon fixation on the ocean margins
[DE95-003185] p 1743 N95-22878
Origins of interstellar and solar system: Carbonaceous materials
[NASA-CR-197436] p 1867 N95-23013
Transmission electron microscope studies of extraterrestrial materials
[NASA-CR-188363] p 1633 N95-23092
High surface area, high permeability carbon monoliths
[DE95-004555] p 1650 N95-23577
Carbon doping of III-V compound semiconductors
[DE95-003431] p 1844 N95-24013
Assessing the relative contribution of biogenic and fossil processes to visibility scattering aerosols found in remote areas: Near-term Organic Research Program
[DE95-003149] p 1735 N95-24146
CARBON CYCLE
Regulation of photosynthetic carbon fixation on the ocean margins
[DE95-003185] p 1743 N95-22878
CARBON DIOXIDE
Emissions of greenhouse gases in the United States, 1987-1992
[DE95-003001] p 1731 N95-22691
Direct effects of atmospheric CO2 enrichment on plants and ecosystems: An updated bibliographic data base
[DE95-003060] p 1731 N95-22725
CO2 and waste policy: Monitoring results 1991/1992 and main problems
[PB95-133799] p 1733 N95-23126
Effect of hyperbaric carbon dioxide on spores and vegetative cells of bacillus stearothermophilus
[AD-A280115] p 1747 N95-23251
Electron drift velocities of Ar-CO2-CF4 gas mixtures
[DE95-004353] p 1809 N95-23359
Ethylene oxidation chemistry in a well-stirred reactor
[DE95-004823] p 1635 N95-23381
Extraction and detection of pesticide residues from air filter inserts using supercritical carbon dioxide
[DE95-004579] p 1735 N95-23580
The atmosphere below
[NASA-TM-110538] p 1740 N95-23663
CARBON DIOXIDE CONCENTRATION
Direct effects of atmospheric CO2 enrichment on plants and ecosystems: An updated bibliographic data base
[DE95-003060] p 1731 N95-22725
CARBON DIOXIDE LASERS
Edge fluctuation measurements by phase contrast imaging on DIII-D
[DE94-016681] p 1836 N95-23768
CARBON FIBER REINFORCED PLASTICS
Mishap risk control for advanced aerospace/composite materials p 1628 N95-23031
CARBON FIBERS
Corrosion protection measures for CFC/metal joints of fuel integral tank structures of advanced military aircraft p 1644 N95-23510
Surface characterization of LDEF carbon fiber/polymer matrix composites p 1631 N95-23900
CARBON MONOXIDE
Ethylene oxidation chemistry in a well-stirred reactor
[DE95-004823] p 1635 N95-23381
Carbon monoxide oxidation over three different states of copper: Development of a model metal oxide catalyst
[DE95-004682] p 1636 N95-23495
CARBON STEELS
In-situ detection of surface passivation or activation and of localized corrosion: Experiences and prospectives in aircraft p 1643 N95-23508
CARBONACEOUS CHONDRITES
Hypervelocity impact survivability experiments for carbonaceous impactors, part 2 p 1700 N95-23831
CARBONACEOUS MATERIALS
Origins of interstellar and solar system: Carbonaceous materials
[NASA-CR-197436] p 1867 N95-23013
CARBONATES
The US molten carbonate fuel-cell development and commercialization effort
[DE94-019096] p 1728 N95-23162

CARBOXYLATES
Regulation of photosynthetic carbon fixation on the ocean margins
[DE95-003185] p 1743 N95-22878
CARBOXYLIC ACIDS
Membrane phase separations, asymmetry and implications in the origin of life
[DE94-628486] p 1747 N95-23050
CARGO
Evaluation of neutron techniques for illicit substance detection
[DE95-002988] p 1632 N95-22764
CARIBBEAN REGION
Oceanic operations: An authoritative guide to oceanic operations
[FAA-AFS-550] p 1610 N95-24065
CARTESIAN COORDINATES
Boson mapping techniques applied to constant gauge fields in QCD p 1814 N95-22969
Unification of some advection schemes in two dimensions
[NASA-CR-195044] p 1790 N95-23465
CASCADE FLOW
Numerical computation of aerodynamics and heat transfer in a turbine cascade and a turn-around duct using advanced turbulence models p 1675 N95-23444
User's guide for ECAP2D: An Euler unsteady aerodynamic and aeroelastic analysis program for two dimensional oscillating cascades, version 1.0
[NASA-CR-189146] p 1699 N95-24189
CASCADE RANGE (CA-OR-WA)
Measuring forest landscape patterns in the Cascade Range of Oregon, USA p 1719 N95-24096
Old-growth and mature forests near spotted owl nests in western Oregon p 1719 N95-24098
Forest and wildlife habitat analysis using remote sensing and geographic information systems p 1720 N95-24100
Analysis of conifer forest regeneration using Landsat Thematic Mapper data p 1720 N95-24101
Determining coniferous forest cover and forest fragmentation with NOAA-9 advanced very high resolution radiometer data p 1720 N95-24103
CASES (CONTAINERS)
NASA low-speed axial compressor for fundamental research
[NASA-TM-4635] p 1616 N95-23192
CASTING
Method of producing a silicon carbide fiber reinforced strontium aluminosilicate glass-ceramic matrix composite
[NASA-CASE-LEW-15263-2] p 1627 N95-22563
CATABOLISM
Transmethylation reactions during methanogenesis from acetate in Methanosarcina barkeri
[DE94-016222] p 1745 N95-22873
CATALYSIS
Chemical recycling of scrap composites p 1629 N95-23034
Organometallic chemistry of bimetallic compounds
[DE95-004436] p 1634 N95-23345
CATALYSTS
Infrared study of carbon deposits on bimetallic catalysts
[DE95-000902] p 1631 N95-22517
Hydrogen vibrational density of states of adsorbed water on rare-earth modified zirconia
[DE95-001127] p 1632 N95-22681
Nanophase materials: Synthesis, properties, applications
[AD-A286013] p 1627 N95-22940
Charge distribution analysis of catalysts under simulated reaction conditions
[DE95-003526] p 1633 N95-23064
Ethanol synthesis and water gas shift over bifunctional sulfide catalysts
[DE94-017376] p 1634 N95-23202
Supported transition metal catalysts for para- to ortho-hydrogen conversion
[NASA-CR-197907] p 1634 N95-23252
Carbon monoxide oxidation over three different states of copper: Development of a model metal oxide catalyst
[DE95-004682] p 1636 N95-23495
AVIRIS spectra correlated with the chlorophyll concentration of a forest canopy p 1705 N95-23871
Processing of single- and multi-domain YBa2Cu3O(x) bulk materials for levitation applications by Nd(1+x)Ba(2-x)Cu3O(y) seeding
[DE95-004615] p 1845 N95-24154
CATALYTIC ACTIVITY
Particle size dependence in Fischer-Tropsch synthesis
[DE95-003124] p 1633 N95-22876
Ethanol synthesis and water gas shift over bifunctional sulfide catalysts
[DE94-017376] p 1634 N95-23202
Review of research results for the photocatalytic oxidation of hazardous wastes in air
[DE95-004004] p 1734 N95-23480
CATASTROPHE THEORY
Shapes and stability of algebraic nuclear models p 1814 N95-22974
CATHODIC COATINGS
Corrosion control acceptance criteria for sacrificial anode type, cathodic protection systems (user guide)
[AD-A285275] p 1662 N95-23117
CATIONS
Magnetic resonance and optical spectroscopic studies of carotenoids
[DE95-003729] p 1631 N95-22575
Cation disorder determined by MAS Al-27 NMR in high dose neutron irradiated spinel
[DE95-003681] p 1842 N95-23266
NO decomposition in non-reducing atmospheres
[DE95-004324] p 1634 N95-23339
Test procedure for cation exchange chromatography
[DE95-003770] p 1808 N95-23350
CAUCHY PROBLEM
Galactic oscillator symmetry p 1822 N95-22973
CAVITATION FLOW
Adaptation of the advanced spray combustion code to cavitating flow problems p 1681 N95-23629
Cavitation modeling in Euler and Navier-Stokes codes p 1681 N95-23630
An inducer CFD solution and effects associated with cavitation p 1681 N95-23631
Current status in cavitation modeling p 1681 N95-23632
A generalized Eulerian-Lagrangian analysis, with application to liquid flows with vapor bubbles p 1682 N95-23633
CAVITIES
Dynamic response of a transducer mounted at one end of an acoustical cavity which is subjected to a specified pressure at the open end of the cavity
[DE95-004192] p 1799 N95-23379
Finite-difference solutions of the alternate turbopump development high-pressure oxidizer turbopump pump-end ball-bearing cavity flows p 1678 N95-23617
Cavitation modeling in Euler and Navier-Stokes codes p 1681 N95-23630
CAVITY FLOW
A time-accurate finite volume method valid at all flow velocities p 1676 N95-23447
CELL MEMBRANES (BIOLOGY)
Plant metabolism and cell wall formation in space (microgravity) and on Earth
[NASA-CR-197618] p 1745 N95-22801
Membrane phase separations, asymmetry and implications in the origin of life
[DE94-628486] p 1747 N95-23050
Enhancement of biomembrane functions under phase-separated conditions: A self-organized criticality phenomenon?
[DE94-628489] p 1747 N95-23053
CELLS (BIOLOGY)
Structural studies of complex carbohydrates of plant cell walls
[DE95-003099] p 1748 N95-24075
CELLULOSE
Continuous production of cellulase in a fluidized-bed reactor by Pseudonomas fluorescens immobilized in hydrogel beads
[DE94-014105] p 1744 N95-22588
Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 1 p 1703 N95-23856
Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 2 p 1703 N95-23857
Relationships between pigment composition variation and reflectance for plant species from a coastal savannah in California p 1709 N95-23889
CELLULOSE NITRATE
Decomposition mechanisms in thermally-aged thin-film explosives
[DE95-000741] p 1652 N95-22838
CENTRAL NERVOUS SYSTEM
Rearrangement of RAG-1 recombinase gene in radiation-sensitive wasted mice
[DE94-017083] p 1746 N95-22913
CENTRAL PROCESSING UNITS
GPP user's guide: A general-purpose postprocessor for wind turbine data analysis
[DE95-000293] p 1730 N95-23776
Algorithms for categorizing multiprocessor communication under invalidate and update-based coherence protocols
[TR-533-REV] p 1759 N95-23928
Scalability of atomic primitives on distributed shared memory multiprocessors
[TR-528] p 1764 N95-23930
CENTRIFUGAL FORCE
Optimization of a centrifugal impeller design through CFD analysis p 1680 N95-23624
Use of blade lean in turbomachinery redesign p 1680 N95-23625
Incompressible Navier-Stokes calculations in pump flows p 1680 N95-23627
CENTRIFUGAL PUMPS
The influence of swirl brakes and a tip discharge orifice on the rotordynamic forces generated by discharge-to-suction leakage flows in shrouded centrifugal pumps p 1680 N95-23628
CERAMIC COATINGS
Performance of thin-ceramic-coated combustion chamber with gasoline and methanol as fuels in a two-stroke SI engine
[DE95-002903] p 1693 N95-22557
Durability of reflector materials in the space environment p 1651 N95-23912
CERAMIC MATRIX COMPOSITES
Method of producing a silicon carbide fiber reinforced strontium aluminosilicate glass-ceramic matrix composite
[NASA-CASE-LEW-15263-2] p 1627 N95-22563
A study of ceramic composite of ferroelectric BaTiO3 ceramic and superconductor YBa2Cu3O(6+delta) ceramic
[DE94-627563] p 1647 N95-22610
A special percolation problem in ceramic composites
[DE94-627641] p 1647 N95-22611
CERAMICS
A study of ceramic composite of ferroelectric BaTiO3 ceramic and superconductor YBa2Cu3O(6+delta) ceramic
[DE94-627563] p 1647 N95-22610
Transformation behavior in Al2O3-ZrO2 ceraamic composites
[DE95-001359] p 1647 N95-22688
Advanced Turbine Technology Applications Project (ATTAP) 1993 annual report
[DE95-003198] p 1693 N95-22880
Superconductivity devices: Commercial use of space
[NASA-CR-197885] p 1648 N95-22883
Plinius intermediate report
[PB95-135216] p 1648 N95-23128
Protective coating for ceramic materials
[NASA-CASE-ARC-11969-1-CU] p 1649 N95-23394
Advances in research for solid oxide fuel cells
[DE95-004590] p 1730 N95-23582
Development of sensors for ceramic components in advanced propulsion systems
[NASA-CR-195324] p 1689 N95-23795
A 4 MW fast wave current drive upgrade for D3-D
[DE95-003741] p 1837 N95-24083
Modeling of tritium recovery from lithium ceramics
[DE95-004626] p 1838 N95-24167
CESIUM
Surface structural dependence of cesium adsorption on the (alpha)-Al2O3(0001) surface
[DE95-002610] p 1842 N95-23135
CESIUM COMPOUNDS
Ethanol synthesis and water gas shift over bifunctional sulfide catalysts
[DE94-017376] p 1634 N95-23202
CESIUM IODIDES
A high speed digitizing photomultiplier tube base for the KTeV CsI calorimeter
[DE95-003739] p 1664 N95-24081
CHANGE DETECTION
A comparison of spectral mixture analysis an NDVI for ascertaining ecological variables p 1710 N95-23892
Glaciological studies in the central Andes using AIRSAR/TOPSAR p 1713 N95-23942
CHANNEL FLOW
The initial-value problem for viscous channel flows
[NASA-CR-195034] p 1667 N95-23207
CFD modeling of turbulent duct flows for coolant channel analysis p 1682 N95-23635
CHANNELS
MHD seed recovery and regeneration, phase 2
[DE95-004308] p 1833 N95-23338
CHANNELS (DATA TRANSMISSION)
Description of a MIL-STD-1553B data bus Ada driver for the LeRC EPS Testbed
[NASA-TM-106866] p 1762 N95-22668
Modelling and analysis of a high speed data bus with predicate/transition nets
[PB95-140695] p 1764 N95-23538
CHAOS
Lyapunov exponents from CHUA's circuit time series using artificial neural networks p 1784 N95-22988
Static parametric fluctuations give nonstatistical behaviour in uncoupled chaotic systems
[DE94-628478] p 1794 N95-23019
Dynamical behaviour of the coupled diffusion map lattice
[DE94-628481] p 1841 N95-23022

CHARACTERIZATION
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
| DE95-001135 | p 1687 N95-22682
Investigation of arc length versus flange thickness while using an arc voltage controller
| DE95-003937 | p 1695 N95-23374
Flowfield characterization in a LOX/GH2 propellant rocket p 1684 N95-23642
VLPC characterization for the Dzero upgrade
| DE95-003742 | p 1818 N95-24084
CHARGE COUPLED DEVICES
A perspective on space robotics in Japan p 1697 N95-23695
CHARGE DISTRIBUTION
Charge distribution analysis of catalysts under simulated reaction conditions
| DE95-003526 | p 1633 N95-23064
Measurement of the left-right charge asymmetry in hadronic Z decays and A(sub e) determination
| DE95-003467 | p 1806 N95-23140
CHARGE TRANSFER
Collaborative research on aircraft icing and charging processes in ice
| AD-A285102 | p 1609 N95-23201
CHARGED PARTICLES
Relativistic particle with torsion and charged particle in a constant electromagnetic field: Identity of evolution
| DE94-628506 | p 1803 N95-22778
Inclusive rapidity correlations of (pi)(-) mesons in pp-interactions
| DE94-635654 | p 1812 N95-23974
CHARM (PARTICLE PHYSICS)
New preliminary results on the physics of charm hadroproduction subprocesses
| DE95-002530 | p 1801 N95-22646
The charm physics potential of a Tau-Charm Factory
| DE95-003369 | p 1802 N95-22703
J/psi, psi' yields mu(+)mu(-) and B yields J/psi, psi' cross sections
| DE94-018996 | p 1808 N95-23242
Recent results from Fermilab E-687, charm particle decays, lifetimes and photoproduction dynamics: A compilation results presented at DPF 1994
| DE95-004580 | p 1808 N95-23347
Charm-conserving strangeness-changing two body hadronic decays of charmed baryons
| DE94-628621 | p 1811 N95-23770
CHARON
IUE observing programs: NSOSS, VEOEB, and PCOEB
| NASA-CR-197424 | p 1866 N95-23560
CHARTS
Algebraic semantics of basic message sequence charts
| PB95-138970 | p 1657 N95-23151
CHEBYSHEV APPROXIMATION
Note on the computational complexity of j-radii of polytopes in (R sup n)
| PB95-139358 | p 1790 N95-23231
On adaptive weighted polynomial preconditioning for Hermitian positive definite matrices
| NASA-CR-197946 | p 1791 N95-23547
CHEMICAL ANALYSIS
Transmission electron microscope studies of extraterrestrial materials
| NASA-CR-188363 | p 1633 N95-23092
Ethanol synthesis and water gas shift over bifunctional sulfide catalysts
| DE94-017376 | p 1634 N95-23202
Simulation of absorption edge densitometry
| DE95-004393 | p 1635 N95-23360
Four space application material coatings on the Long-Duration Exposure Facility (LDEF) p 1651 N95-23913
CHEMICAL BONDS
Ligand K-edge x-ray adsorption spectroscopic studies of the electronic structure of inorganic model complexes and metalloprotein active sites
| DE95-003338 | p 1840 N95-22851
Computational studies of metal-metal and metal-ligand interactions
| NASA-CR-197862 | p 1641 N95-23215
Investigations on the 1.7 micron residual absorption feature in the vegetation reflection spectrum p 1710 N95-23891
CHEMICAL COMPOSITION
Glass science tutorial: Lecture 2, operating electric glass melters
| DE95-002965 | p 1647 N95-22648
EXTRA.M: A computing code system for analysis of the Purex process with mixer settlers for reprocessing
| DE94-785273 | p 1635 N95-23476
SIMS chemical and isotopic analysis of impact features from LDEF experiments AO187-1 and AO187-2 p 1637 N95-23837
Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 1 p 1703 N95-23856
Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 2 p 1703 N95-23857
Measurements of canopy chemistry with 1992 AVIRIS data at Blackhawk Island and Harvard Forest p 1706 N95-23873
Changes in chemical and optical properties of thin film metal mirrors on LDEF p 1651 N95-23907
CHEMICAL ENERGY
The effect of a non-zero shock width on wave propagation in multi-dimensions
| DE95-002748 | p 1666 N95-22902
AVIRIS spectra correlated with the chlorophyll concentration of a forest canopy p 1705 N95-23871
CHEMICAL ENGINEERING
Chemical recycling of scrap composites p 1629 N95-23034
Proceedings of the fuel cells 1994 contractors review meeting
| DE94-012285 | p 1730 N95-23977
CHEMICAL EQUILIBRIUM
Numerical study of the SSME nozzle flow fields during transient operations: A comparison of the animated results with test p 1673 N95-23434
CHEMICAL EVOLUTION
Origins of interstellar and solar system: Carbonaceous materials
| NASA-CR-197436 | p 1867 N95-23013
Molecular relics from chemical evolution and the origin of life
| DE94-628493 | p 1747 N95-23060
CHEMICAL EXPLOSIONS
Evaluation of neutron techniques for illicit substance detection
| DE95-002988 | p 1632 N95-22764
Decomposition mechanisms in thermally-aged thin-film explosives
| DE95-000741 | p 1652 N95-22838
CHEMICAL PROPERTIES
Glass science tutorial: Lecture 1, Chemistry and properties of oxide glasses
| DE95-002963 | p 1647 N95-22647
Aqueous alternatives for metal and composite cleaning p 1630 N95-23039
CHEMICAL REACTIONS
Energy Conversion and Storage Program
| DE95-003796 | p 1725 N95-22501
Particle size dependence in Fischer-Tropsch synthesis
| DE95-003124 | p 1633 N95-22876
Process for preparing an assembly of an article and a polyimide which resists dimensional change, delamination and debonding when exposed to changes in temperature
| NASA-CASE-LAR-14538-2 | p 1649 N95-23254
NO decomposition in non-reducing atmospheres
| DE95-004324 | p 1634 N95-23339
EXTRA.M: A computing code system for analysis of the Purex process with mixer settlers for reprocessing
| DE94-785273 | p 1635 N95-23476
Advanced multi-phase flow CFD model development for solid rocket motor flowfield analysis p 1683 N95-23638
The atmosphere below
| NASA-TM-110538 | p 1740 N95-23663
All systems go!
| NASA-TM-110542 | p 1620 N95-23665
Chemical Sciences Division
| DE95-002655 | p 1626 N95-24142
CHEMICAL REACTORS
Chemical vapor deposition in low pressure batch furnaces
| DE95-003035 | p 1632 N95-22722
CHEMISORPTION
Surface structural dependence of cesium adsorption on the (alpha)-Al2O3(0001) surface
| DE95-002610 | p 1842 N95-23135
CHIPS
Aspects of surface generation in orthogonal ultraprecision machining
| DE95-000922 | p 1654 N95-22678
CHIPS (ELECTRONICS)
A high speed digitizing photomultiplier tube base for the KTeV CsI calorimeter
| DE95-003739 | p 1664 N95-24081
CHIRAL DYNAMICS
The convergence radius of the chiral expansion in the Dyson-Schwinger approach
| DE94-012852 | p 1805 N95-22925
Theoretical aspects of electroweak and other interactions in medium energy nuclear physics
| DE95-004341 | p 1808 N95-23357
CHIRALITY
The chirality operators for Heisenberg spin systems
| DE94-629043 | p 1847 N95-22545
A model of mesons based on chi SB in the light-front frame
| DE95-003203 | p 1802 N95-22731
Chiral symmetry breaking in QCD with linearly rising confinement potential
| DE94-628559 | p 1848 N95-22744
Spontaneous breaking of chiral symmetry as a consequence of confinement
| DE94-628560 | p 1849 N95-22745
Block spins and chirality in Heisenberg model on Kagome and triangular lattices
| DE94-629044 | p 1840 N95-22845
The origin of chirality in protein amino acids
| DE94-628491 | p 1747 N95-23058
CHLORELLA
Biological determinants of photobioreactor design
| DE94-016032 | p 1745 N95-22872
CHLORIDES
Ligand K-edge x-ray adsorption spectroscopic studies of the electronic structure of inorganic model complexes and metalloprotein active sites
| DE95-003338 | p 1840 N95-22851
Effect of different ions on the anodic behaviour of alloy 800 chloride solutions at high temperature
| DE94-634944 | p 1645 N95-23983
CHLORINE
Laboratory studies of the sensitivity of tropospheric ozone to the chemistry of sea salt aerosol
| DE95-003607 | p 1735 N95-24147
CHLOROFLUOROCARBONS
The Atmospheric Lifetime Experiment and the Global Atmospheric Gas Experiment (ALE/GAGE)
| NASA-CR-197400 | p 1731 N95-22673
The atmosphere below
| NASA-TM-110538 | p 1740 N95-23663
CHLOROPHYLLS
SeaWiFS technical report series. Volume 25: Ocean optics protocols for SeaWiFS validation, revision 1
| NASA-TM-104566-VOL-25-REV- | p 1743 N95-22671
Development of a multi-sensor in situ fiber optic fluorometer
| DE95-003105 | p 1819 N95-22780
Photochemical energy conversion by membrane-bound photoredox systems
| DE95-004405 | p 1729 N95-23361
AVIRIS spectra correlated with the chlorophyll concentration of a forest canopy p 1705 N95-23871
The red edge in arid region vegetation: 340-1060 nm spectra p 1708 N95-23881
The effect of signal noise on the remote sensing of Foliar biochemical concentration p 1708 N95-23884
Relationships between pigment composition variation and reflectance for plant species from a coastal savannah in California p 1709 N95-23889
CHROMATES
Corrosion prevention with environmentally compliant materials: A design challenge p 1644 N95-23511
CHROMATOGRAPHY
Test procedure for cation exchange chromatography
| DE95-003770 | p 1808 N95-23350
Test procedure for anion exchange chromatography
| DE95-003767 | p 1809 N95-23407
CHROMIUM CARBIDES
The hydrogen embrittlement of alloy X-750
| DE95-003207 | p 1640 N95-22893
CHROMOPHORES
Comparison of the rate constants for energy transfer in the light-harvesting protein, C-phycocyanin, calculated from Foerster's theory and experimentally measured by time-resolved fluorescence spectroscopy
| DE94-014961 | p 1745 N95-22590
Analysis of structural domains required for phytochrome function by in vitro mutagenesis
| DE94-016230 | p 1745 N95-22884
CHROMOSOMES
Rearrangement of RAG-1 recombinase gene in radiation-sensitive wasted mice
| DE94-017083 | p 1746 N95-22913
CHRONOLOGY
Glaciological studies in the central Andes using AIRSAR/TOPSAR p 1713 N95-23942
CIRCADIAN RHYTHMS
Cellular interactions in the suprachiasmatic nucleus
| AD-A285639 | p 1749 N95-23780
The 1993 Gordon Research Conference on Chronobiology
| NASA-CR-197990 | p 1748 N95-24047
CIRCLES (GEOMETRY)
Light-traffic analysis for queues with spatially distributed arrivals
| PB95-140802 | p 1767 N95-23556

CIRCUIT BOARDS
Planar magnetic component development
[DE95-003311] p 1661 N95-22896
CIRCUITS
Current estimation for electromigration, hot carriers, and voltage drop
[AD-A285794] p 1659 N95-22507
Method and system for electron beam lithography
[AD-D016554] p 1660 N95-22709
Planar magnetic component development
[DE95-003311] p 1661 N95-22896
User's guide and physics manual for the ScatPlus circuit code
[DE95-003755] p 1663 N95-23479
High-performance GaAs/AlGaAs optical modulators: Their performance and packaging for microwave photonic integrated circuits
[DE95-004533] p 1828 N95-23575
CIRCULAR CYLINDERS
Flexural vibration of thin piezoelectric laminate circular cylinder of hexagonal symmetry
[DE94-628474] p 1698 N95-22773
Characterization of Type 304L stainless steel solid-state closure welds for radioactive waste containment
[DE94-016539] p 1645 N95-23980
Circular electrode geometry metal-semiconductor-metal photodetectors
[NASA-CASE-LAR-15172-1-CU] p 1663 N95-24048
CIRRUS CLOUDS
Atmospheric correction of AVIRIS data of Monterey Bay contaminated by thin cirrus clouds p 1710 N95-23890
CIVIL AVIATION
Inner loop flight control for the High-Speed Civil Transport p 1616 N95-23314
Handling qualities of the High Speed Civil Transport p 1616 N95-23325
The airline quality report, 1994
[NIAR-94-11] p 1610 N95-24012
Oceanic operations: An authoritative guide to oceanic operations
[FAA-AFS-550] p 1610 N95-24065
A review of civil aviation fatal accidents in which lost/disoriented was a cause/factor: 1981-1990
[DOT/FAA/AM-95/1] p 1611 N95-24071
CLASSICAL MECHANICS
Exact, E = 0, classical and quantum solutions for general power-law oscillators p 1820 N95-22959
Non-Noetherian symmetries for oscillators in classical mechanics and in field theory p 1823 N95-22977
Study of frustrated systems via dissipative maps
[PB95-139093] p 1799 N95-23155
CLASSIFICATIONS
Classification of SU(3) modular invariants revisited
[PB95-110771] p 1787 N95-22715
Classification of (2,2) compactifications by free fermions 2
[PB95-139119] p 1807 N95-23157
Classification of the LCVF AVIRIS test site with a Kohonen artificial neural network p 1706 N95-23874
MAC Europe 1991 campaign: AIRSAR/AVIRIS data integration for agricultural test site classification p 1715 N95-23952
SAR terrain classifier and mapper of biophysical attributes p 1715 N95-23957
Classification and soil moisture determination of agricultural fields p 1716 N95-23958
CLEAN FUELS
Diesel fuel component contributions to engine emissions and performance: Clean fuel study
[DE94-011868] p 1732 N95-22834
CLEANERS
Aqueous alternatives for metal and composite cleaning p 1630 N95-23039
Calorimetric measurement of energy of ultrasonic cleaners
[DE95-003938] p 1800 N95-23375
CLEANING
Innovative technology for contamination control in plasma processing
[DE95-000913] p 1829 N95-22519
Aqueous alternatives for metal and composite cleaning p 1630 N95-23039
Military bases: Environmental impact at closing installations. Report to Congressional requesters
[GAO/NSIAD-95-70] p 1735 N95-24057
CLEARANCES
Security clearances: Consideration of sexual orientation in the clearance process. Report to Congressional requesters
[GAO/NSIAD-95-21] p 1853 N95-23588
CLEBSCH-GORDAN COEFFICIENTS
The role of SU(2) 3n-j coefficients in SU(3)
[DE95-002726] p 1796 N95-22900
CLIMATE CHANGE
Direct effects of atmospheric CO2 enrichment on plants and ecosystems: An updated bibliographic data base
[DE95-003060] p 1731 N95-22725
Development of an advanced finite difference atmospheric general circulation model
[DE95-003187] p 1736 N95-22879
Format( )MEDIC( )Input
[DE95-003482] p 1737 N95-23063
RAS Division model evaluation database tools
[DE95-003480] p 1733 N95-23123
The atmosphere below
[NASA-TM-110538] p 1740 N95-23663
Glaciological studies in the central Andes using AIRSAR/TOPSAR p 1713 N95-23942
Laboratory studies of the sensitivity of tropospheric ozone to the chemistry of sea salt aerosol
[DE95-003607] p 1735 N95-24147
CLIMATE MODELS
RAS Division model evaluation database tools
[DE95-003480] p 1733 N95-23123
CLIMATOLOGY
A numerical study of interannual wind forcing effects on the California current system, 1980-1983
[AD-A286023] p 1743 N95-23074
Basic data sets description and preliminary results of EFEDA-Spain
[PB95-139291] p 1740 N95-23470
A comparison of spectral mixture analysis an NDVI for ascertaining ecological variables p 1710 N95-23892
CLOCKS
Precise clock synchronization protocol
[PB95-127247] p 1687 N95-22536
CLOSURE LAW
Study of the pressure field in rotating homogeneous turbulent flows
[PB94-189107] p 1665 N95-22585
Relating multifunctions and predicate transformers through closure operators
[PB95-135646] p 1757 N95-23467
CLOUD COVER
Atmospheric correction of AVIRIS data of Monterey Bay contaminated by thin cirrus clouds p 1710 N95-23890
CLOUDS (METEOROLOGY)
Dimethylsulfide oxidation over the tropical South Atlantic: OH and other oxidants
[NASA-CR-197417] p 1732 N95-22930
Remote sensing of smoke, clouds, and fire using AVIRIS data p 1704 N95-23860
CLUTTER
Maximum-likelihood spectral estimation and adaptive filtering techniques with application to airborne Doppler weather radar
[NASA-CR-197699] p 1658 N95-23670
CMOS
Current estimation for electromigration, hot carriers, and voltage drop
[AD-A285794] p 1659 N95-22507
Adaptive beamforming in a CDMA mobile satellite communications system p 1655 N95-22815
COALESCING
The hydrogen embrittlement of alloy X-750
[DE95-003207] p 1640 N95-22893
COASTAL PLAINS
Remote identification of a gravel laden Pleistocene river bed p 1712 N95-23921
COATING
Corrosivity sensor
[AD-D016549] p 1687 N95-22706
Organic coating technology for the protection of aircraft against corrosion p 1644 N95-23513
Corrosion in service experience with aircraft in France p 1645 N95-23518
COATINGS
Method and system for electron beam lithography
[AD-D016554] p 1660 N95-22709
EUV metrology of multilayer optics
[DE95-003036] p 1819 N95-22723
Method and apparatus for measuring the strain developed in a coated surface
[NASA-CASE-ARC-11938-1-C] p 1688 N95-23263
Method development for compensating temperature effects in pressure sensitive paint measurements p 1650 N95-23291
COBALT
Photoemission study of quantum confinement by a finite barrier: Cu/Co(wedge)/Cu(100)
[DE95-002913] p 1840 N95-22762
NO decomposition in non-reducing atmospheres
[DE95-004324] p 1634 N95-23339
COCKPITS
Differential GPS and system integration of the Low Visibility Landing and Surface Operations (LVLASO) demonstration p 1611 N95-23318
CODING
Method and system for pattern analysis using a coarse-coded neural network
[NASA-CASE-ARC-11961-1] p 1767 N95-23387
Reevaluation of the significance of sequence information for speech recognition
[TR-555] p 1658 N95-23794
COEFFICIENT OF FRICTION
On the accuracy of CFD-based pressure drop predictions for right-angle ducts p 1682 N95-23634
COEFFICIENTS
Characterization of non-negative greedy matrices
[PB95-139366] p 1757 N95-23232
Process for preparing an assembly of an article and a polyimide which resists dimensional change, delamination and debonding when exposed to changes in temperature
[NASA-CASE-LAR-14538-2] p 1649 N95-23254
Rate coefficients for the electron-impact excitation, ionization and recombination of He-like ions, S XV, Ca XIX and Fe XXV, and related processes
[ISAS-R-657] p 1811 N95-23604
COGNITION
Active vision in satellite scene analysis p 1778 N95-23738
Knowledge representation and reasoning for mixed-initiative planning
[TR-562] p 1783 N95-24031
COGNITIVE PSYCHOLOGY
Functions of external cues in prospective memory
[DOT/FAA/AM-95/9] p 1750 N95-24088
COHERENCE
Oscillator-like coherent states for the Jaynes-Cummings Model p 1826 N95-23003
COHERENT LIGHT
Nonclassical light in interferometric measurements p 1822 N95-22976
Undulators for short wavelength FEL amplifiers
[DE95-004690] p 1692 N95-23487
COHERENT RADIATION
q-bosons and the q-analogue quantized field p 1814 N95-22984
COKE
Infrared study of carbon deposits on bimetallic catalysts
[DE95-000902] p 1631 N95-22517
COLD FLOW TESTS
Non-intrusive measurements in a rocket engine combustor p 1625 N95-23439
COLD PLASMAS
Dynamics and variability of the plasmasphere observed from synchronous orbit
[DE95-002733] p 1829 N95-22665
COLLECTION
PUZZLES 4: Sperner collections and the keys puzzle
[PB95-139374] p 1790 N95-23233
COLLIMATION
High energy collimating fine grids
[NASA-CR-197688] p 1871 N95-24191
COLLIMATORS
Method for making fiber-optic bundle collimator assembly
[AD-D016491] p 1819 N95-22492
A fiber-optic bundle and collimator assembly
[AD-D016500] p 1820 N95-22864
High energy collimating fine grids
[NASA-CR-197688] p 1871 N95-24191
COLLISIONAL PLASMAS
The high latitude ionosphere-magnetosphere transition region: Simulation and data comparison
[NASA-CR-197404] p 1737 N95-22956
COLLISIONLESS PLASMAS
The high latitude ionosphere-magnetosphere transition region: Simulation and data comparison
[NASA-CR-197404] p 1737 N95-22956
Collisionless magnetic reconnection associated with coalescence of flux bundles
[NIFS-315] p 1834 N95-23525
Macro-EM particle simulation method and a study of collisionless magnetic reconnection
[NIFS-316] p 1834 N95-23526
COLLISIONS
Strong collision approach to calculation of depolarization function for neutron beam passing through ferromagnetic bulk domains
[DE94-628847] p 1803 N95-22758
COLOR
Supersymmetric oscillator in optics p 1826 N95-23002
Color orthophotography: To scan or not
[DE95-002749] p 1689 N95-24069
COMBINATORIAL ANALYSIS
Capacitated facility location: Valid inequalities and facets (revised)
[PB95-130225] p 1786 N95-22641

Combinatorial semantics
| TR-563 | p 1792 N95-23793
Ploxoma: Testbed for uncertain inference
| TR-537 | p 1794 N95-23927

COMBUSTIBLE FLOW
Adaptation of the advanced spray combustion code to cavitating flow problems p 1681 N95-23629

COMBUSTION
The influence of high-octane fuel blends on the performance of a two-stroke SI engine with knock-limited-compression ratio
| DE95-002902 | p 1692 N95-22556
Performance of thin-ceramic-coated combustion chamber with gasoline and methanol as fuels in a two-stroke SI engine
| DE95-002903 | p 1693 N95-22557
Modeling aerosol emissions from the combustion of composite materials p 1629 N95-23038
Influence of porosity and two-phase flow on diffusional/thermal instability of a deflagrating energetic material
| DE95-002592 | p 1634 N95-23122
Non-intrusive measurements in a rocket engine combustor p 1625 N95-23439
Liquid propellant rocket engine combustion simulation with a time-accurate CFD method p 1676 N95-23445
Oxygen enriched combustion system performance study. Phase 2: 100 percent oxygen enriched combustion in regenerative glass melters
| DE95-004212 | p 1635 N95-23481
Adaptation of the advanced spray combustion code to cavitating flow problems p 1681 N95-23629
Microgravity combustion science: 1995 program update
| NASA-TM-106858 | p 1626 N95-24004
Flow diagnostics, chemically reacting turbulent flow modeling and turbulent mixing: A summary of project studies in combustion
| NASA-CR-197348 | p 1687 N95-24022

COMBUSTION CHAMBERS
Performance of thin-ceramic-coated combustion chamber with gasoline and methanol as fuels in a two-stroke SI engine
| DE95-002903 | p 1693 N95-22557
Heat transfer in rocket engine combustion chambers and nozzles p 1668 N95-23413
Non-intrusive measurements in a rocket engine combustor p 1625 N95-23439
Sensitivity of combustion-acoustic instabilities to boundary conditions for premixed gas turbine combustors
| NASA-TM-106890 | p 1614 N95-23550
Spray combustion experiments and numerical predictions p 1637 N95-23643
CFD analysis of spray combustion and radiation in OMV thrust chamber p 1637 N95-23645
Modeling of non-spherical droplet dynamics p 1685 N95-23647
Flow diagnostics, chemically reacting turbulent flow modeling and turbulent mixing: A summary of project studies in combustion
| NASA-CR-197348 | p 1687 N95-24022
A computer model in general 3-D curvilinear coordinates for the prediction of the turbulent flow field in a jet induced ram combustor
| NAL-TR-1240T | p 1687 N95-24051
Effects of jet strength on NOx formation in premixed impinging jet combustion with minimum heat losses
| NAL-TR-1237T | p 1637 N95-24181

COMBUSTION CHEMISTRY
Ethylene oxidation chemistry in a well-stirred reactor
| DE95-004823 | p 1635 N95-23381
CFD analysis of spray combustion and radiation in OMV thrust chamber p 1637 N95-23645
Time-accurate unsteady flow simulations supporting the SRM T+68-second pressure spike anomaly investigation (STS-54B) p 1685 N95-23650

COMBUSTION EFFICIENCY
Sensitivity of combustion-acoustic instabilities to boundary conditions for premixed gas turbine combustors
| NASA-TM-106890 | p 1614 N95-23550

COMBUSTION PHYSICS
Fundamental phenomena on fuel decomposition and boundary layer combustion processes with applications to hybrid rocket motors
| NASA-CR-197919 | p 1625 N95-23261
Ethylene oxidation chemistry in a well-stirred reactor
| DE95-004823 | p 1635 N95-23381
Liquid propellant rocket engine combustion simulation with a time-accurate CFD method p 1676 N95-23445
Spray combustion experiments and numerical predictions p 1637 N95-23643
Progress in advanced spray combustion code integration p 1637 N95-23644
Development of an atomization methodology for spray combustion p 1637 N95-23646
Microgravity combustion science: 1995 program update
| NASA-TM-106858 | p 1626 N95-24004
Chemical Sciences Division
| DE95-002655 | p 1626 N95-24142

COMBUSTION PRODUCTS
Diesel fuel component contributions to engine emissions and performance: Clean fuel study
| DE94-011868 | p 1732 N95-22834
Analytical Boltzmann moments for electrons in N2-O2-H2O gas mixtures
| DE95-003474 | p 1732 N95-22898
Aircraft fires, smoke toxicity, and survival: An overview
| DOT/FAA/AM-95/8 | p 1610 N95-24024

COMBUSTION STABILITY
Sensitivity of combustion-acoustic instabilities to boundary conditions for premixed gas turbine combustors
| NASA-TM-106890 | p 1614 N95-23550
Flow diagnostics, chemically reacting turbulent flow modeling and turbulent mixing: A summary of project studies in combustion
| NASA-CR-197348 | p 1687 N95-24022

COMMAND GUIDANCE
An operations and command systems for the extreme ultraviolet explorer p 1770 N95-23687
Formalizing procedures for operations automation, operator training and spacecraft autonomy p 1752 N95-23720

COMMERCIAL AIRCRAFT
Preparation of course materials: Elementary mathematics of powered flight p 1853 N95-23320
Aircraft accident report. Runway overrun following rejected takeoff. Continental airlines flight 795, McDonnell Douglas MD-82, N18835, LaGuardia Airport, Flushing, NY, 2 March 1994
| PB95-910401 | p 1610 N95-23609

COMMUNICATING
Graph isomorphism models for non interleaving process algebra
| PB95-110490 | p 1786 N95-22714

COMMUNICATION
Project: Internal communications p 1854 N95-23282

COMMUNICATION NETWORKS
Non-blocking crossbar permutation engine with constant routing latency
| NASA-CASE-NPO-18864-1-CU | p 1762 N95-22564
Addendum to the Proceedings of the Third International Mobile Satellite Conference (IMSC 1993)
| NASA-CR-197343 | p 1655 N95-22813
Geolocation applications of the Gonets LEO messaging satellites p 1656 N95-22818
Low Earth Orbit satellite/terrestrial mobile service compatibility p 1656 N95-22819
Environmental Systems Management Analysis and Reporting Network (E-SMART)
| AD-A279766 | p 1732 N95-22856
Loop scheduling for heterogeneity
| TR-540 | p 1764 N95-23936

COMMUNICATION SATELLITES
Addendum to the Proceedings of the Third International Mobile Satellite Conference (IMSC 1993)
| NASA-CR-197343 | p 1655 N95-22813
Geolocation applications of the Gonets LEO messaging satellites p 1656 N95-22818
Low Earth Orbit satellite/terrestrial mobile service compatibility p 1656 N95-22819
Dynamical model and numerical simulations for Engineering Test Satellite-6
| NAL-TR-1239 | p 1622 N95-24049

COMMUNICATION THEORY
Second International Workshop on Harmonic Oscillators
| NASA-CP-3286 | p 1820 N95-22957

COMMUTATION
Finite-element time evolution operator for the anharmonic oscillator p 1823 N95-22983
Cumulant approach to dynamical correlation functions at finite temperatures
| DE94-628487 | p 1788 N95-23051

COMMUTATORS
The chirality operators for Heisenberg spin systems
| DE94-629043 | p 1847 N95-22545

COMPACTING
Investigation of mechanical properties and their relation to the internal structure of nanocrystalline metals and composites
| DE95-001151 | p 1627 N95-22683
Classification of (2,2) compactifications by free fermions 2
| PB95-139119 | p 1807 N95-23157

COMPENSATORY TRACKING
Effects of age and low doses of alcohol on compensatory tracking during angular acceleration
| DOT/FAA/AM-95/3 | p 1750 N95-23934

COMPETITION
The effect of a non-zero shock width on wave propagation in multi-dimensions
| DE95-002748 | p 1666 N95-22902

COMPILERS
Realizing parallel reduction operation in Sisal 1.2
| DE94-017524 | p 1763 N95-22858
Realizing parallel reduction operations in Sisal 1.2
| DE94-017525 | p 1763 N95-22859

COMPLEX NUMBERS
The satanic notations: Counting classes beyond #P and other definitional adventures
| TR-561 | p 1793 N95-24194

COMPLEX SYSTEMS
Long range potentials and multiple scattering theory in complex systems
| DE94-628881 | p 1804 N95-22791
Attention focusing and anomaly detection in systems monitoring p 1769 N95-23683
Optimizing raid performance with cache p 1761 N95-24116

COMPLEXITY
Effective category and measure in abstract complexity theory
| TR-529 | p 1792 N95-23929
Reducibility classes of P-selective sets
| TR-524 | p 1792 N95-24002
Witness-isomorphic reductions and the local search problem
| TR-522 | p 1793 N95-24003
Large sets in AC(exp 0): A Kolmogorov complexity related property and some applications
| TR-556 | p 1797 N95-24029
Teaching computational complexity: Resources to treasure
| TR-543 | p 1784 N95-24060

COMPONENT RELIABILITY
Integrating O/S models during conceptual design, part 3
| NASA-CR-197905 | p 1622 N95-23400

COMPOSITE MATERIALS
Environmental, Safety, and Health Considerations: Composite Materials in the Aerospace Industry
| NASA-CP-3289 | p 1628 N95-23025
Health, safety and environmental requirements for composite materials p 1628 N95-23028
Aerospace Industries Association (AIA) work practices report for composites p 1628 N95-23029
Biotransformation of an uncured composite material p 1629 N95-23033
Offgassing test methodology for composite materials p 1629 N95-23035
Outgassing considerations for composites in space applications p 1629 N95-23037
Modeling aerosol emissions from the combustion of composite materials p 1629 N95-23038
Aqueous alternatives for metal and composite cleaning p 1630 N95-23039
Review of aeronautical fatigue investigation in the Netherlands during the period March 1991-March 1993
| PB95-139184 | p 1612 N95-23161
Effects of delaminations on the damped dynamic characteristics of composite laminates: Mechanics and experiments
| NASA-TM-106862 | p 1630 N95-23258
A manufacturing database of advanced materials used in spacecraft structures p 1623 N95-23279
Separation of crack extension modes in composite delamination problems p 1700 N95-23281
Spin polarized photoemission studies of magnetic quantum well states
| DE95-004218 | p 1851 N95-23335
Permeability testing of composite material and adhesive bonds for the DC-XA composite feedline program
| NASA-TM-108483 | p 1630 N95-23551
The sound insulations of studio doors. Part 1: Door blanks
| BBC-RD-1994/14 | p 1654 N95-24093

COMPOSITE STRUCTURES
Neutron scattering analysis of rubber carbon black composite structure
| DE95-002735 | p 1646 N95-22553
Corrosivity sensor
| AD-D016549 | p 1687 N95-22706
Method for forming a glove attachment
| NASA-CASE-MSC-21632-1 | p 1750 N95-22766
Mishap risk control for advanced aerospace/composite materials p 1628 N95-23031
Development and verification of a resin film infusion/resin transfer molding simulation model for fabrication of advanced textile composites
| NASA-CR-197439 | p 1648 N95-23179

Structural Arrangement Trade Study. Volume 1: Reusable Hydrogen Composite Tank System (RHCTS) and Graphite Composite Primary Structures (GCPS). Executive summary
| NASA-CR-197685 | p 1621 N95-23188
Structural arrangement trade study. Volume 3: Reusable Hydrogen Composite Tank System (RHCTS) and Graphite Composite Primary Structures (GCPS). Addendum
| NASA-CR-197687 | p 1621 N95-23189
Thin tailored composite wing for civil tiltrotor p 1613 N95-23317
A coupled layerwise analysis of the thermopiezoelectric response of smart composite beams beams
| NASA-TM-106889 | p 1630 N95-23463
US Navy operating experience with new aircraft construction materials p 1645 N95-23517

COMPOSITION (PROPERTY)
Precise determinations of the isotopic compositions and atomic weights of molybdenum, tellurium, tin and tungsten using ICP source magnetic sector multiple collector mass spectrometry
| DE95-003003 | p 1632 N95-22795

COMPRESSIBILITY
Turbidity of a near critical ionic fluid
| DE94-014916 | p 1633 N95-22869
Incompressible Navier-Stokes calculations in pump flows p 1680 N95-23627

COMPRESSIBILITY EFFECTS
Evaluating the effect of online data compression on the disk cache of a mass storage system p 1862 N95-24138

COMPRESSIBLE BOUNDARY LAYER
Development of an algebraic stress/two-layer model for calculating thrust chamber flow fields p 1675 N95-23442

COMPRESSIBLE FLOW
An approximate theoretical method for modeling the static thrust performance of non-axisymmetric two-dimensional convergent-divergent nozzles
| NASA-CR-195050 | p 1608 N95-23193
Towards a generalized computational fluid dynamics technique for all Mach numbers p 1670 N95-23420
A controlled variation scheme for convection treatment in pressure-based algorithm p 1677 N95-23448
Unification of some advection schemes in two dimensions
| NASA-CR-195044 | p 1790 N95-23465
Navier-Stokes flow field analysis of compressible flow in a pressure relief valve p 1679 N95-23618

COMPRESSIBLE FLUIDS
Dynamic response of a transducer mounted at one end of an acoustical cavity which is subjected to a specified pressure at the open end of the cavity
| DE95-004192 | p 1799 N95-23379

COMPRESSING
Non-zero temperature two-mode squeezing for time-dependent two-level systems
| DE94-628427 | p 1850 N95-22782
Real lasers and other deformed objects p 1692 N95-23001

COMPRESSIVE STRENGTH
Fabric geometry distortion during composites processing p 1631 N95-23288

COMPRESSOR BLADES
NASA low-speed axial compressor for fundamental research
| NASA-TM-4635 | p 1616 N95-23192

COMPTON EFFECT
Neutron compton scattering
| PB95-139135 | p 1807 N95-23159

COMPUTATION
Electrical resistivity of liquid alkali metals and non-local pseudopotential
| DE94-627417 | p 1639 N95-22608
Realizing parallel reduction operation in Sisal 1.2
| DE94-017524 | p 1763 N95-22858
Realizing parallel reduction operations in Sisal 1.2
| DE94-017525 | p 1763 N95-22859
The fundamental group of complex hyperplanes arrangements
| DE94-628426 | p 1796 N95-22933
Accelerated panel methods using the fast multipole method p 1687 N95-23307
Institute for Computational Mechanics in Propulsion (ICOMP)
| NASA-TM-106884 | p 1677 N95-23464
Properties of probabilistic pushdown automata
| TR-554 | p 1760 N95-24056
Logspace reducibility and self-reducibility: Models and equivalences
| TR-544 | p 1760 N95-24059
Teaching computational complexity: Resources to treasure
| TR-543 | p 1784 N95-24060
The satanic notations: Counting classes beyond #P and other definitional adventures
| TR-561 | p 1793 N95-24194

COMPUTATIONAL ASTROPHYSICS
Origins of interstellar and solar system: Carbonaceous materials
| NASA-CR-197436 | p 1867 N95-23013

COMPUTATIONAL CHEMISTRY
Computational studies of metal-metal and metal-ligand interactions
| NASA-CR-197862 | p 1641 N95-23215
Diffusion behavior of lysozyme in aqueous ammonium sulfate solutions under varying solution conditions as determined by dynamic light scattering
| DE95-004821 | p 1635 N95-23380
A multi-region radial integration scheme
| NASA-CR-197982 | p 1809 N95-23408
Symmetry breaking in O4(+): An application of the Brueckner coupled-cluster method
| NASA-CR-197981 | p 1810 N95-23459

COMPUTATIONAL FLUID DYNAMICS
Particle kinetic simulation of high altitude hypervelocity flight
| NASA-CR-197383 | p 1664 N95-22481
An adaptive projection method for the incompressible Navier-Stokes equations
| DE94-019049 | p 1665 N95-22491
Nonlinear generalized functions and nonconservative shock simulations
| DE95-003307 | p 1795 N95-22734
Euler Technology Assessment program for preliminary aircraft design employing SPLITFLOW code with Cartesian unstructured grid method
| NASA-CR-4649 | p 1608 N95-22917
A perspective on unstructured grid flow solvers
| NASA-CR-195025 | p 1788 N95-22931
A CFD study of complex missile and store configurations in relative motion
| NASA-CR-197912 | p 1612 N95-22949
Mach 10 computational study of a three-dimensional scramjet inlet flow field
| NASA-TM-4602 | p 1666 N95-23015
Euler technology assessment for preliminary aircraft design employing OVERFLOW code with multiblock structured-grid method
| NASA-CR-4651 | p 1608 N95-23095
An assessment of viscous effects in computational simulation of benign and burst vortex flows on generic fighter wind-tunnel models using TEAM code
| NASA-CR-4650 | p 1608 N95-23185
The initial-value problem for viscous channel flows
| NASA-CR-195034 | p 1667 N95-23207
Mach 10 computational study of a three-dimensional scramjet inlet flow field
| NASA-TM-4602 | p 1667 N95-23210
Aerodynamic design optimization with sensitivity analysis and computational fluid dynamics
| NASA-CR-197419 | p 1608 N95-23218
Three-dimensional structure in a supersonic jet: Behavior near centerline
| NASA-TM-106869 | p 1668 N95-23220
Direct numerical simulations and modeling of a spatially-evolving turbulent wake p 1687 N95-23289
Direct numerical simulation of sheared turbulent flow p 1687 N95-23296
MPI implementation of CFD program PHOENICS
| DE95-003896 | p 1668 N95-23372
Eleventh Workshop for Computational Fluid Dynamic Applications in Rocket Propulsion
| NASA-CP-3221-PT-2 | p 1668 N95-23412
Criteria for evaluation of grid generation systems p 1669 N95-23416
TIGER: A user-friendly interactive grid generation system for complicated turbomachinery and axis-symmetric configurations p 1670 N95-23419
Towards a generalized computational fluid dynamics technique for all Mach numbers p 1670 N95-23420
Preconditioning for the Navier-Stokes equations with finite-rate chemistry p 1670 N95-23421
A numerical procedure for analysis of finite rate reacting flows p 1671 N95-23422
Three-dimensional Navier-Stokes analysis and redesign of an imbedded bellmouth nozzle in a turbine cascade inlet section p 1671 N95-23423
Numerical simulation of steady and unsteady viscous flow in turbomachinery using pressure based algorithm p 1671 N95-23426
GGOT total pressure loss control concept evaluation p 1672 N95-23427
Supersonic flow and shock formation in turbine tip gaps p 1672 N95-23429
Axisymmetric computational fluid dynamics analysis of Saturn V/S1-C/F1 nozzle and plume p 1672 N95-23430
Computational Fluid Dynamic (CFD) analysis of axisymmetric plume and base flow of film/dump cooled rocket nozzle p 1673 N95-23431
NLS base heating CFD analysis p 1673 N95-23432
CFD flowfield simulation of Delta Launch Vehicles in a power-on configuration p 1673 N95-23433
CFD analysis of turbopump volutes p 1674 N95-23436
Three-dimensional viscous flow analysis inside a turbine volute p 1674 N95-23437
Development of an algebraic stress/two-layer model for calculating thrust chamber flow fields p 1675 N95-23442
Advanced turbulence models for turbomachinery p 1675 N95-23443
Liquid propellant rocket engine combustion simulation with a time-accurate CFD method p 1676 N95-23445
Convergence acceleration of implicit schemes in the presence of high aspect ratio grid cells p 1676 N95-23446
A time-accurate finite volume method valid at all flow velocities p 1676 N95-23447
A controlled variation scheme for convection treatment in pressure-based algorithm p 1677 N95-23448
On the conservative interface treatment for multi-block viscous flow computations
| NASA-CR-195442 | p 1677 N95-23451
Institute for Computational Mechanics in Propulsion (ICOMP)
| NASA-TM-106884 | p 1677 N95-23464
A study of the vortex flow over 76/40-deg double-delta wing
| NASA-CR-195032 | p 1677 N95-23466
On the breakup of viscous liquid threads
| NASA-CR-195023 | p 1678 N95-23544
Combining comparison functions and finite element approximations in CFD
| NASA-TM-106851 | p 1792 N95-23614
Eleventh Workshop for Computational Fluid Dynamic Applications in Rocket Propulsion, part 1
| NASA-CP-3221-PT-1 | p 1678 N95-23615
Computational Fluid Dynamics (CFD) analyses in support of Space Shuttle Main Engine (SSME) heat exchanger (HX) vane cracking investigation p 1679 N95-23619
Unsteady flow simulations in support of the SSME HEX turning vane cracking investigation with the ATD HPOTP p 1679 N95-23621
Comparison between predicted and experimentally measured flow fields at the exit of the SSME HPFTP impeller p 1679 N95-23622
CFD parametric study of consortium impeller p 1680 N95-23626
An inducer CFD solution and effects associated with cavitation p 1681 N95-23631
On the accuracy of CFD-based pressure drop predictions for right-angle ducts p 1682 N95-23634
CFD modeling of turbulent duct flows for coolant channel analysis p 1682 N95-23635
Flow and heat transfer in 180-degree turn square ducts: Effects of turning configuration and system rotation p 1682 N95-23636
Methodology for CFD design analysis of National Launch System nozzle manifold p 1683 N95-23637
Advanced multi-phase flow CFD model development for solid rocket motor flowfield analysis p 1683 N95-23638
ASRM multi-port igniter flow field analysis p 1683 N95-23639
Ignition transient calculations in the Space Shuttle solid rocket motor p 1625 N95-23640
An interactive tool for discrete phase analysis in two-phase flows p 1683 N95-23641
Flowfield characterization in a LOX/GH2 propellant rocket p 1684 N95-23642
Spray combustion experiments and numerical predictions p 1637 N95-23643
CFD analysis of spray combustion and radiation in OMV thrust chamber p 1637 N95-23645
Development of an atomization methodology for spray combustion p 1637 N95-23646
A fine-grid model for the ASRM aft segment with gimballed nozzle p 1685 N95-23648
Application of CFD analysis to design support and problem resolution for ASRM and RSRM p 1685 N95-23649
Time-accurate unsteady flow simulations supporting the SRM T+68-second pressure spike anomaly investigation (STS-54B) p 1685 N95-23650
Status of axisymmetric CFD of an eleven inch diameter hybrid rocket motor p 1686 N95-23651
Validation of a Computational Fluid Dynamics (CFD) code for supersonic axisymmetric base flow p 1686 N95-23652
Code validation study for base flows p 1686 N95-23653

Four-nozzle benchmark wind tunnel model USA code solutions for simulation of multiple rocket base flow recirculation at 145,000 feet altitude
p 1686 N95-23654
Numerical study of base pressure characteristic curve for a four-engine clustered nozzle configuration
p 1625 N95-23655
Supersonic laminar flow control research
| NASA-CR-197938 | p 1609 N95-23669
Using high-performance networks to enable computational aerosciences applications
| NASA-CR-197951 | p 1764 N95-24023
A computer model in general 3-D curvilinear coordinates for the prediction of the turbulent flow field in a jet induced ram combustor
| NAL-TR-1240T | p 1687 N95-24051

COMPUTATIONAL GRIDS

An adaptive projection method for the incompressible Navier-Stokes equations
| DE94-019049 | p 1665 N95-22491
Partitioning methods for unstructured finite element meshes
| PB95-130555 | p 1785 N95-22544
A certainty grid to object boundary algorithm
| PB94-203510 | p 1755 N95-22637
Extensible PDE Solvers package users manual
| DE95-003333 | p 1786 N95-22696
Development of an adaptive hp-version finite element method for computational optimal control
| NASA-CR-197898 | p 1766 N95-22831
A perspective on unstructured grid flow solvers
| NASA-CR-195025 | p 1788 N95-22931
A CFD study of complex missile and store configurations in relative motion
| NASA-CR-197912 | p 1612 N95-22949
VLUGR2: A vectorizable adaptive grid solver for PDes in 2D
| PB95-136008 | p 1789 N95-23167
New robust multigrid method for 2D convection-diffusion problems
| PB95-138897 | p 1789 N95-23176
Mach 10 computational study of a three-dimensional scramjet inlet flow field
| NASA-TM-4602 | p 1667 N95-23210
IGES transformer and NURBS in grid generation
p 1669 N95-23415
Structured adaptive grid generation using algebraic methods p 1669 N95-23417
A generic efficient adaptive grid scheme for rocket propulsion modeling p 1670 N95-23418
TIGER: A user-friendly interactive grid generation system for complicated turbomachinery and axis-symmetric configurations p 1670 N95-23419
Towards a generalized computational fluid dynamics technique for all Mach numbers p 1670 N95-23420
CFD analysis of turbopump volutes
p 1674 N95-23436
Three-dimensional viscous flow analysis inside a turbine volute p 1674 N95-23437
Advanced turbulence models for turbomachinery
p 1675 N95-23443
Convergence acceleration of implicit schemes in the presence of high aspect ratio grid cells
p 1676 N95-23446
A controlled variation scheme for convection treatment in pressure-based algorithm p 1677 N95-23448
On the conservative interface treatment for multi-block viscous flow computations
| NASA-CR-195442 | p 1677 N95-23451
Unification of some advection schemes in two dimensions
| NASA-CR-195044 | p 1790 N95-23465
Unstructured grids on SIMD torus machines
| NASA-CR-197954 | p 1758 N95-23610
A fine-grid model for the ASRM aft segment with gimballed nozzle p 1685 N95-23648

COMPUTER AIDED DESIGN

HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 3: HARP Graphics Oriented (GO) input user's guide

Search Hanford accessible reports electronically system configuration management plan
| DE95-004493 | p 1857 N95-24089
Modeling of tritium recovery from lithium ceramics
| DE95-004626 | p 1838 N95-24167
User's guide for ECAP2D: An Euler unsteady aerodynamic and aeroelastic analysis program for two dimensional oscillating cascades, version 1.0
| NASA-CR-189146 | p 1699 N95-24189

COMPUTER STORAGE DEVICES

Fourth NASA Goddard Conference on Mass Storage Systems and Technologies
| NASA-CP-3295 | p 1857 N95-24108
A distributed parallel storage architecture and its potential application within EOSDIS
p 1858 N95-24111
New architectural paradigms for multi-petabyte distributed storage systems p 1858 N95-24115
Approaches to 100 Gbit/sq. in. recording density
p 1690 N95-24128
Optimizing tertiary storage organization and access for spatio-temporal datasets p 1861 N95-24131

COMPUTER SYSTEMS DESIGN

Parallel digital modem using multirate digital filter banks
| NASA-CR-197331 | p 1761 N95-22478
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 3: HARP Graphics Oriented (GO) input user's guide
| NASA-TP-3452-VOL-3 | p 1753 N95-22479
DIstributed VIRtual System (DIVIRS) project
| NASA-CR-197855 | p 1757 N95-23180
On-line, adaptive state estimator for active noise control p 1784 N95-23308
Integrating O/S models during conceptual design, part 3
| NASA-CR-197905 | p 1622 N95-23400
Software agents for the dissemination of remote terrestrial sensing data p 1721 N95-23675
Commercialization of JPL Virtual Reality calibration and redundant manipulator control technologies
p 1768 N95-23676
Utilizing inheritance in requirements engineering
p 1768 N95-23677
Operator procedure verification with a rapidly reconfigurable simulator p 1618 N95-23679
Toward an automated signature recognition toolkit for mission operations p 1659 N95-23682
An expert system for diagnosing anomalies of spacecraft p 1770 N95-23684
Distributed intelligence for ground/space systems
p 1770 N95-23685
Learning time series for intelligent monitoring
p 1770 N95-23686
Subsumption-based architecture for autonomous movement planning for planetary rovers
p 1771 N95-23690
Algorithms for categorizing multiprocessor communication under invalidate and update-based coherence protocols
| TR-533-REV | p 1759 N95-23928
Scalability of atomic primitives on distributed shared memory multiprocessors
| TR-528 | p 1764 N95-23930
The design of a petabyte archive and distribution system for the NASA ECS project p 1858 N95-24110
A distributed parallel storage architecture and its potential application within EOSDIS
p 1858 N95-24111
Robotic tape library system level testing at NSA: Present and planned p 1858 N95-24112
The architecture of the High Performance Storage System (HPSS) p 1858 N95-24113
A 500 megabyte/second disk array
p 1753 N95-24114
New architectural paradigms for multi-petabyte distributed storage systems p 1858 N95-24115
Optimizing raid performance with cache
p 1761 N95-24116
Document image archive transfer from DOS to UNIX
p 1761 N95-24117
Integrating UniTree with the data migration API
p 1761 N95-24120
Client/Server data serving for high performance computing p 1761 N95-24123

COMPUTER SYSTEMS PERFORMANCE

Integrating O/S models during conceptual design, part 3
| NASA-CR-197905 | p 1622 N95-23400
Institute for Computational Mechanics in Propulsion (ICOMP)
| NASA-TM-106884 | p 1677 N95-23464
Microarchitecture support for dynamic scheduling of acyclic task graphs
| CSRD-1207 | p 1791 N95-23600
Attention focusing and anomaly detection in systems monitoring p 1769 N95-23683
Performance results of cooperating expert systems in a distributed real-time monitoring system
p 1761 N95-23688
Eliminating useless messages in write-update protocols on scalable multiprocessors
| TR-539 | p 1764 N95-24037
The architecture of the High Performance Storage System (HPSS) p 1858 N95-24113
A 500 megabyte/second disk array
p 1753 N95-24114
Integrating UniTree with the data migration API
p 1761 N95-24120

COMPUTER SYSTEMS PROGRAMS

Description of a MIL-STD-1553B data bus Ada driver for the LeRC EPS Testbed
| NASA-TM-106866 | p 1762 N95-22668
Integrating UniTree with the data migration API
p 1761 N95-24120

COMPUTER SYSTEMS SIMULATION

Evaluation of a Multiple Instruction/Multiple Data (MIMD) parallel computer for CFD applications
| AD-A285796 | p 1762 N95-22509
Simulation and off-line programming systems comparison
| DE95-002267 | p 1766 N95-23078

COMPUTER TECHNIQUES

RAS Division model evaluation database tools
| DE95-003480 | p 1733 N95-23123
Infinite possibilities: Computational structures technology p 1700 N95-23280
Electronic photography at NASA Langley Research Center p 1690 N95-23298
Teacher Enhancement Institute p 1853 N95-23324
IGES transformer and NURBS in grid generation
p 1669 N95-23415
Criteria for evaluation of grid generation systems
p 1669 N95-23416
Computer software design description for the Treated Effluent Disposal Facility (TEDF), Project L-045H, Operator Training Station (OTS)
| DE95-003065 | p 1759 N95-24006
Optimizing raid performance with cache
p 1761 N95-24116

COMPUTER VISION

Progress report on a fully automatic Gas Tungsten Arc Welding (GTAW) system development
| DE95-004397 | p 1695 N95-23343
The next decade of space robotics
p 1768 N95-23673
Autonomous navigation system for the Marsokhod rover project p 1771 N95-23693
Lunar rover technology demonstrations with Dante and Ratler p 1697 N95-23694
A perspective on space robotics in Japan
p 1697 N95-23695
A fuzzy structural matching scheme for space robotics vision p 1778 N95-23737
Active vision in satellite scene analysis
p 1778 N95-23738
Real-time tracking using stereo and motion: Visual perception for space robotics p 1778 N95-23739
Terrain modelling and motion planning for an autonomous exploration rover p 1721 N95-23765
Vision-based planning and execution of precision grasps
| TR-546 | p 1784 N95-24185

COMPUTERIZED SIMULATION

Parallel digital modem using multirate digital filter banks
| NASA-CR-197331 | p 1761 N95-22478
The viability of establishing collaborative, reconfigurable research environments for the Human Performance Research Laboratory at NASA Ames
| NASA-CR-197384 | p 1753 N95-22480
Particle kinetic simulation of high altitude hypervelocity flight
| NASA-CR-197383 | p 1664 N95-22481
Effects of wind on rainfall simulation. Spatial distribution of water application, kinetic energy, and overland flow under single full-cone nozzle sprays
| PB95-127304 | p 1717 N95-22537
A parallel molecular dynamics simulation of crystal growth at a cluster of workstations
| DE94-628382 | p 1839 N95-22615
Computer simulation of the structure of ionic surfaces and interfaces
| DE95-002991 | p 1804 N95-22792
Hot proton anisotropies and cool proton temperatures in the outer magnetosphere
| DE95-002719 | p 1736 N95-22850
The 1993 Annual Conference of the Israeli Association for Crystal Growth. Program and abstracts
| DE94-633510 | p 1841 N95-22854
The torsion space nucleic acids molecular mechanics program DUPLEX: Surveying conformation space by potential energy minimization
| DE94-017707 | p 1805 N95-22889
Overview of Ph.D. theses and memoranda, 1993
| PB95-135190 | p 1756 N95-23071

Simulation and off-line programming systems comparison
[DE95-002267] p 1766 N95-23078
High-performance parallel analysis of coupled problems for aircraft propulsion
[NASA-CR-197440] p 1614 N95-23088
Development and verification of a resin film infusion/resin transfer molding simulation model for fabrication of advanced textile composites
[NASA-CR-197439] p 1648 N95-23179
A wall interference assessment/correction system
[NASA-CR-197421] p 1667 N95-23183
Life support systems analysis and technical trades for a lunar outpost
[NASA-TM-109927] p 1751 N95-23194
Three-dimensional structure in a supersonic jet: Behavior near centerline
[NASA-TM-106869] p 1668 N95-23220
Infinite possibilities: Computational structures technology p 1700 N95-23280
Direct numerical simulations and modeling of a spatially-evolving turbulent wake p 1687 N95-23289
Design of a variable area diffuser for a 15-inch Mach 6 open-jet tunnel p 1617 N95-23309
Computational modelling of Er(3+): Garnet laser materials p 1692 N95-23326
Computer modeling of the sensitivity of a laser water vapor sensor to variations in temperature and air speed p 1692 N95-23330
A hybrid vehicle evaluation code and its application to vehicle design
[DE95-004205] p 1662 N95-23334
Measurement of correlated b quark cross sections at CDF
[DE95-004240] p 1808 N95-23336
Simulation of absorption edge densitometry
[DE95-004393] p 1635 N95-23360
MPI implementation of CFD program PHOENICS
[DE95-003896] p 1668 N95-23372
Integrating O/S models during conceptual design, part 1
[NASA-CR-197903] p 1622 N95-23398
Numerical simulation of steady and unsteady viscous flow in turbomachinery using pressure based algorithm p 1671 N95-23426
Navier-Stokes analysis of an oxidizer turbine blade with tip clearance with and without a mini-shroud p 1672 N95-23428
CFD flowfield simulation of Delta Launch Vehicles in a power-on configuration p 1673 N95-23433
Numerical study of the SSME nozzle flow fields during transient operations: A comparison of the animated results with test p 1673 N95-23434
Three-dimensional viscous flow analysis inside a turbine volute p 1674 N95-23437
Liquid propellant rocket engine combustion simulation with a time-accurate CFD method p 1676 N95-23445
Institute for Computational Mechanics in Propulsion (ICOMP)
[NASA-TM-106884] p 1677 N95-23464
EXTRA.M: A computing code system for analysis of the Purex process with mixer settlers for reprocessing
[DE94-785273] p 1635 N95-23476
A wavenumber-partitioning scheme for two-dimensional statistical closures
[DE95-004514] p 1677 N95-23483
On inertial range scaling laws
[DE95-004515] p 1677 N95-23484
Parallel computation of automatic differentiation applied to magnetic field calculations
[DE95-004689] p 1763 N95-23486
Squeezing out all the performance: Using Ingres for a C(sup 3)I reporting system
[DE95-004591] p 1857 N95-23490
Macro-EM particle simulation method and a study of collisionless magnetic reconnection
[NIFS-316] p 1834 N95-23526
Complexity in plasma: A grand view of self-organization
[NIFS-318] p 1835 N95-23528
Current-profile flattening and hot core shift due to the nonlinear development of resistive kink mode
[NIFS-311] p 1835 N95-23564
Phonon-induced anomalous specific heat of a model nanocrystal by computer simulation
[DE95-004653] p 1843 N95-23585
Computer simulation of a magnetohydrodynamic dynamo 2
[NIFS-320] p 1836 N95-23590
MHD-Vlasov simulation of the toroidal Alfven eigenmode
[NIFS-319] p 1836 N95-23591
Development of qualification guidelines for personal computer-based aviation training devices
[DOT/FAA/AM-95/6] p 1758 N95-23603
Time-accurate unsteady flow simulations supporting the SRM T+68-second pressure spike anomaly investigation (STS-54B) p 1685 N95-23650
Four-nozzle benchmark wind tunnel model USA code solutions for simulation of multiple rocket base flow recirculation at 145,000 feet altitude p 1686 N95-23654
A toolbox and record for scientific models p 1775 N95-23716
Modeling actions and operations to support mission preparation p 1617 N95-23750
New determination of V(sub us) from K(sub e3)(+) decay
[DE94-628616] p 1811 N95-23769
An RL10A-3-3A rocket engine model using the rocket engine transient simulator (ROCETS) software
[NASA-CR-190786] p 1625 N95-23790
Experimental investigation of the relationship between impact crater morphology and impacting particle velocity and direction p 1700 N95-23840
Axial focusing of energy from a hypervelocity impact on earth
[DE95-003347] p 1740 N95-24008
Axial focusing of impact energy in the earth's interior: A possible link to flood basalts and hotspots
[DE95-003357] p 1741 N95-24009
Increasing the retained dose by plasma immersion ion implantation and deposition
[DE95-003423] p 1844 N95-24011
Gyrokinetic and global fluid simulations of tokamak microturbulence and transport
[DE95-003628] p 1837 N95-24017
Design of a cervical spine gross motion simulator for standard size human and anthropomorphic dummy adult and child
[NIAR-94-16] p 1751 N95-24021
Unsupervised classification learning from cross-modal environmental structure
[TR-536] p 1784 N95-24040
Using simulation-based projection to plan in an uncertain and temporally complex world
[TR-531] p 1853 N95-24043
Dynamical model and numerical simulations for Engineering Test Satellite-6
[NAL-TR-1239] p 1622 N95-24049
A computer model in general 3-D curvilinear coordinates for the prediction of the turbulent flow field in a jet induced ram combustor
[NAL-TR-1240T] p 1687 N95-24051
Transferring ecosystem simulation codes to supercomputers
[NASA-TM-4662] p 1759 N95-24052
Optimizing tertiary storage organization and access for spatio-temporal datasets p 1861 N95-24131

COMPUTERS

Evaluation of a Multiple Instruction/Multiple Data (MIMD) parallel computer for CFD applications
[AD-A285796] p 1762 N95-22509
Real-world shepherding: Combining vision, manipulation, and planning in real time
[TR-530] p 1783 N95-24001
Eliminating useless messages in write-update protocols on scalable multiprocessors
[TR-539] p 1764 N95-24037

CONCENTRATION (COMPOSITION)

Chemical recognition software
[DE95-003346] p 1636 N95-24007

CONCORDE AIRCRAFT

Preliminary identification of buffet problems in high speed civil transport p 1616 N95-23319

CONCURRENT PROCESSING

Automatic verification of regular protocols in P/T nets
[PB95-138921] p 1789 N95-23146
Performance results of cooperating expert systems in a distributed real-time monitoring system p 1761 N95-23688
An efficient algorithm for concurrent priority queue heaps
[TR-560] p 1759 N95-24033

CONDENSATES

The U(3) x U(3) Nambu - Jona-Lasinio model with the gluon condensate and axial anomaly at finite temperature
[DE94-628588] p 1804 N95-22787
Bose condensation, macroscopic quantum phenomena and atomic spatial correlations in superfluid He-4
[PB95-139085] p 1850 N95-23154

CONDENSED MATTER PHYSICS

Aspects of sigma models
[DE94-628511] p 1795 N95-22736
Magnetic multilayer physics
[DE95-003408] p 1798 N95-23083

CONDUCTIVE HEAT TRANSFER

COYOTE 2: A Finite Element Computer Program for nonlinear heat conduction problems
[DE95-002848] p 1666 N95-22914

CONDUCTORS

Computation of magnetic forces on moving conductors by using ELEKTRA and other 3-D computer codes
[DE95-003308] p 1798 N95-22895
Electrochemical studies of perovskite mixed conductors
[DE95-003704] p 1636 N95-23573

CONFERENCES

Proceedings of NATO Advanced Research Workshop on the Formation, Transport and Consequences of Particles in Plasmas
[AD-A285850] p 1829 N95-22514
The development and applications of biomarkers
[DE94-014249] p 1744 N95-22589
Addendum to the Proceedings of the Third International Mobile Satellite Conference (IMSC 1993)
[NASA-CR-197343] p 1655 N95-22813
The 1993 Annual Conference of the Israeli Association for Crystal Growth. Program and abstracts
[DE94-633510] p 1841 N95-22854
Renewable Energy Sources Brno 1993
[DE94-633975] p 1727 N95-22855
Open problems of computational molecular biology
[DE95-000895] p 1745 N95-22866
Second International Workshop on Harmonic Oscillators
[NASA-CP-3286] p 1820 N95-22957
Environmental, Safety, and Health Considerations: Composite Materials in the Aerospace Industry
[NASA-CP-3289] p 1628 N95-23025
7th International Symposium on Applications of Laser Techniques to Fluid Mechanics, volume 1
[AD-A285647] p 1691 N95-23118
Ninth topical conference on atomic processes in plasmas
[DE95-002810] p 1833 N95-23246
Hydrogen and fuel cells for energy storage
[DE95-723907] p 1729 N95-23382
Eleventh Workshop for Computational Fluid Dynamic Applications in Rocket Propulsion
[NASA-CP-3221-PT-2] p 1668 N95-23412
Oxidants and oxidation in the Earth's atmosphere
[NASA-CR-197945] p 1734 N95-23460
Corrosion detection and management of advanced airframe materials
[AGARD-CP-565] p 1641 N95-23496
LDEF materials results for spacecraft applications: Executive summary
[NASA-CP-3261] p 1617 N95-23549
Proceedings of the workshop on deductive databases and logic programming
[PB95-139382] p 1758 N95-23553
Scandinavian symposium on surface chemistry
[PB95-140687] p 1636 N95-23554
Report of proceedings: Aviation Accident Investigation Symposium. Volume 2: Participant presentations
[PB94-917007] p 1610 N95-23598
Eleventh Workshop for Computational Fluid Dynamic Applications in Rocket Propulsion, part 1
[NASA-CP-3221-PT-1] p 1678 N95-23615
Third International Symposium on Artificial Intelligence, Robotics, and Automation for Space 1994
[NASA-CR-197340] p 1767 N95-23672
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 1
[NASA-CP-3275-PT-1] p 1889 N95-23796
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 1: AVIRIS Workshop
[NASA-CR-197877-VOL-1] p 1701 N95-23844
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 2
[NASA-CP-3275-PT-2] p 1899 N95-23896
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 3: AIRSAR Workshop
[NASA-CR-197354-VOL-3] p 1712 N95-23938
Proceedings of the fuel cells 1994 contractors review meeting
[DE94-012285] p 1730 N95-23977
The 1993 Gordon Research Conference on Chronobiology
[NASA-CR-197990] p 1748 N95-24047
Aviation Accident Investigation Symposium. Volume 1: Industry recommendations and Safety Board responses
[PB94-917005] p 1611 N95-24105
Fourth NASA Goddard Conference on Mass Storage Systems and Technologies
[NASA-CP-3295] p 1857 N95-24108
Atomic physics at high brilliance synchrotron sources: Proceedings
[DE95-006077] p 1813 N95-24174

CONFIGURATION INTERACTION

Symmetry breaking in O4(+): An application of the Brueckner coupled-cluster method
[NASA-CR-197981] p 1810 N95-23459

CONFIGURATION MANAGEMENT
CDMS: CAD data set system design description
|DE95-003218| p 1756 N95-22894
Search Hanford accessible reports electronically system configuration management plan
|DE95-004493| p 1857 N95-24089
CONFIGURATIONS
Results from neutrino experiments
|DE94-628604| p 1804 N95-22790
CONFINEMENT
Spontaneous breaking of chiral symmetry as a consequence of confinement
|DE94-628560| p 1849 N95-22745
The q profile evolution and enhanced core confinement of high (beta)(sub p) plasmas in D3-D
|DE95-003878| p 1834 N95-23371
CONFORMAL MAPPING
On diagonalization in map (M,G)
|DE94-628515| p 1796 N95-22740
Schwarz-Christoffel methods for multiply-elongated regions
|DE94-019048| p 1790 N95-23536
CONGRESSIONAL REPORTS
NASA procurement: Contract and management improvements at the Jet Propulsion Laboratory. Report to Congressional requesters
|GAO/NSIAD-95-40| p 1854 N95-24054
DOD budget: Selected categories of planned funding for fiscal years 1995-99. Report to Congressional requesters
|GAO/NSIAD-95-92| p 1864 N95-24062
Inspector General: Alleged misconduct by NASA Inspector General. Report to Congressional requesters
|GAO/OSI-95-9| p 1854 N95-24085
Report to the Secretary of Defense. Unmanned aerial vehicles: No more Hunter systems should be bought until problems are fixed
|GAO/NSIAD-95-52| p 1613 N95-24091
CONGRUENCES
Coherent states for a generalization of the harmonic oscillator p 1823 N95-22982
CONIFERS
Estimation of crown closure from AVIRIS data using regression analysis p 1709 N95-23886
Estimation of biophysical properties of upland Sitka spruce (Picea sitchensis) plantations p 1713 N95-23943
Hierarchical analysis of spatial pattern and processes of Douglas-fir forests p 1719 N95-24099
Analysis of conifer forest regeneration using Landsat Thematic Mapper data p 1720 N95-24101
Determining successional stage of temperate coniferous forests with Landsat satellite data p 1720 N95-24102
Determining coniferous forest cover and forest fragmentation with NOAA-9 advanced very high resolution radiometer data p 1720 N95-24103
Dynamics and pattern of a managed coniferous forest landscape in Oregon p 1720 N95-24104
CONJUGATE GRADIENT METHOD
Algorithms for parallel and vector computations
|NASA-CR-197394| p 1756 N95-23017
Conjugate gradient MATHEW
|DE95-003479| p 1738 N95-23143
On adaptive weighted polynomial preconditioning for Hermitian positive definite matrices
|NASA-CR-197946| p 1791 N95-23547
CONJUGATES
On diagonalization in map (M,G)
|DE94-628515| p 1796 N95-22740
CONSERVATION EQUATIONS
A generalized Eulerian-Lagrangian analysis, with application to liquid flows with vapor bubbles p 1682 N95-23633
CONSERVATION LAWS
The effect of a non-zero shock width on wave propagation in multi-dimensions
|DE95-002748| p 1666 N95-22902
Exact, E = 0, classical and quantum solutions for general power-law oscillators p 1820 N95-22959
Non-Noetherian symmetries for oscillators in classical mechanics and in field theory p 1823 N95-22977
A time-accurate finite volume method valid at all flow velocities p 1676 N95-23447
CONSISTENCY
Verifying sequentially consistent memory using interface refinement
|PB95-139002| p 1752 N95-23153
Consistency and Monte Carlo simulation of a data driven version of smooth goodness-of-fit tests
|PB95-141255| p 1794 N95-23559
CONSOLIDATION
Investigation of mechanical properties and their relation to the internal structure of nanocrystalline metals and composites
|DE95-001151| p 1627 N95-22683
NMR study of nanophase Al/Al-oxide powder and consolidated composites
|DE95-004655| p 1843 N95-23586
Optimizing raid performance with cache p 1761 N95-24116
CONSTRAINTS
Solution and reasoning reuse in space planning and scheduling applications p 1618 N95-23760
Empirical results on scheduling and dynamic backtracking p 1618 N95-23761
CONSTRUCTION
Grassman and hyperKaehler structures on some spaces of sections of holomorphic bundles
|PB95-109104| p 1795 N95-22712
Parallal Arnoldi method for the construction of a Krylov subspace basis: An application in magnetohydrodynamics
|PB95-135786| p 1787 N95-22717
Hadrons of arbitrary spin and heavy quark symmetry
|DE94-628597| p 1804 N95-22789
Taxonomy of finite automata construction algorithms
|PB95-139234| p 1758 N95-23606
CONSTRUCTION MATERIALS
Fire hazard considerations for composites in vehicle design p 1628 N95-23032
CONTACT RESISTANCE
Advances in research for solid oxide fuel cells
|DE95-004590| p 1730 N95-23582
CONTACTORS
Functional testing of the space station plasma contactor
|NASA-TM-106841| p 1624 N95-23240
CONTAINERLESS MELTS
A new containerless image furnace with electro-static positioning device p 1690 N95-23674
CONTAINMENT
Characterization of Type 304L stainless steel solid-state closure welds for radioactive waste containment
|DE94-016539| p 1645 N95-23980
CONTAMINANTS
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
|DE95-001135| p 1687 N95-22682
Analytical Boltzmann moments for electrons in N2-O2-H2O gas mixtures
|DE95-003474| p 1732 N95-22898
The significance of hair mineral analysis as a means for assessing internal body burdens of environmental pollutants
|DE94-633512| p 1734 N95-23541
Reproducible direct exposure environmental testing of metal-based magnetic media p 1690 N95-24129
CONTAMINATION
Innovative technology for contamination control in plasma processing
|DE95-000913| p 1829 N95-22519
Be-10 in terrestrial bauxite and industrial aluminum: An LDEF fallout p 1646 N95-23820
Secondary ion mass spectrometry (SIMS) analysis of hypervelocity microparticle impact sites on LDEF surfaces p 1637 N95-23836
Atmospheric correction of AVIRIS data of Monterey Bay contaminated by thin cirrus clouds p 1710 N95-23890
CONTINUOUS WAVE LASERS
Reduced dimer production in solar-simulator-pumped continuous wave iodine lasers based on model simulations and scaling and pumping studies
|NASA-TP-3486| p 1691 N95-23411
CONTINUUMS
Is omega* - (mu) absolutely countably compact?
|PB95-127981| p 1785 N95-22528
Harmonic oscillator representation in the theory of scattering and nuclear reactions p 1814 N95-22967
Discrimination of poorly exposed lithologies in AVIRIS data p 1703 N95-23858
CONTRACT MANAGEMENT
NASA procurement: Contract and management improvements at the Jet Propulsion Laboratory. Report to Congressional requesters
|GAO/NSIAD-95-40| p 1854 N95-24054
CONTRACTORS
Information technology standards process guide
|DE95-003967| p 1857 N95-23574
Proceedings of the fuel cells 1994 contractors review meeting
|DE94-012285| p 1730 N95-23977
NASA procurement: Contract and management improvements at the Jet Propulsion Laboratory. Report to Congressional requesters
|GAO/NSIAD-95-40| p 1854 N95-24054
CONTROL
Robotic all-terrain lunar exploration rover (RATLER) FY93 program status report
|DE95-003589| p 1694 N95-23065
CONTROL EQUIPMENT
Flow measuring structures
|PB95-127254| p 1665 N95-22638
Engines-only flight control system
|NASA-CASE-ARC-11944-1| p 1615 N95-23389
DRACULA: Dynamic range control for broadcasting and other applications
|BBC-RD-1994/13| p 1658 N95-24044
CONTROL SIMULATION
Computational control of flexible aerospace systems
|NASA-CR-197902| p 1621 N95-23260
CONTROL STABILITY
Stable H(infinity) controller design for the longitudinal dynamics of an aircraft
|NASA-TM-106847| p 1615 N95-22954
Using AVIRIS for in-flight calibration of the spectral shifts of SPOT-HRV and of AVHRR? p 1710 N95-23893
CONTROL SURFACES
Aerodynamic surface distension system for high angle of attack forebody vortex control
|NASA-CASE-ARC-11979-1| p 1612 N95-23390
CONTROL SYSTEMS DESIGN
Description of a MIL-STD-1553B data bus Ada driver for the LeRC EPS Testbed
|NASA-TM-106866| p 1762 N95-22668
Environmental Systems Management Analysis and Reporting Network (E-SMART)
|AD-A279766| p 1732 N95-22856
Design of high performance multivariable control systems for supermaneuverable aircraft at high angle of attack
|NASA-CR-197661| p 1615 N95-22908
Stable H(infinity) controller design for the longitudinal dynamics of an aircraft
|NASA-TM-106847| p 1615 N95-22954
System identification of the Large-Angle Magnetic Suspension Test Fixture (LAMSTF) p 1617 N95-23299
Engines-only flight control system
|NASA-CASE-ARC-11944-1| p 1615 N95-23389
Integrating O/S models during conceptual design, part 1
|NASA-CR-197903| p 1622 N95-23398
Integrating O/S models during conceptual design, part 2
|NASA-CR-197904| p 1622 N95-23399
Integrating O/S models during conceptual design, part 3
|NASA-CR-197905| p 1622 N95-23400
A microcontroller-based three degree-of-freedom manipulator testbed
|NASA-CR-197423| p 1696 N95-23409
Feedback control laws for highly maneuverable aircraft
|NASA-CR-197944| p 1615 N95-23410
Knowledge-based guidance and control functions
|AGARD-AR-325| p 1751 N95-23601
Development of Advanced Robotic Hand System for space application p 1752 N95-23704
Hardware interface unit for control of shuttle RMS vibrations p 1697 N95-23706
Robotic experiment with a force reflecting handcontroller onboard MIR space station p 1752 N95-23707
Development of Japanese experiment module remote manipulator system p 1752 N95-23708
Robot arm system for automatic satellite capture and berthing p 1752 N95-23709
Robust control of multi-jointed arm with a decentralized autonomous control mechanism p 1659 N95-23710
CONTROL THEORY
Stable H(infinity) controller design for the longitudinal dynamics of an aircraft
|NASA-TM-106847| p 1615 N95-22954
Integrating planning and reactive control p 1618 N95-23763
Unifying data and control transformations for distributed shared-memory machines
|TR-542| p 1765 N95-24061
CONTROLLABILITY
Flight test of the X-29A at high angle of attack: Flight dynamics and controls
|NASA-TP-3537| p 1612 N95-22806
Analysis of the longitudinal handling qualities and pilot-induced-oscillation tendencies of the High-Angle-of-Attack Research Vehicle (HARV) p 1616 N95-23297
CONTROLLED FUSION
Ion rings for magnetic fusion
|DE94-017606| p 1832 N95-23120
CONTROLLERS
Controlling under-actuated robot arms using a high speed dynamics process
|NASA-CASE-NPO-18498-1-CU| p 1692 N95-22543
Description of a MIL-STD-1553B data bus Ada driver for the LeRC EPS Testbed
|NASA-TM-106866| p 1762 N95-22668

Programmable hyperspectral image mapper with on-array processing
| NASA-CASE-NPO-17794-1-CU | p 1819 N95-22765
Design and application of electromechanical actuators for deep space missions
| NASA-CR-197957 | p 1694 N95-22909
Stable H(infinity) controller design for the longitudinal dynamics of an aircraft
| NASA-TM-106847 | p 1615 N95-22954
Investigation of arc length versus flange thickness while using an arc voltage controller
| DE95-003937 | p 1695 N95-23374
Robotic experiment with a force reflecting handcontroller onboard MIR space station p 1752 N95-23707
Robust control of multi-jointed arm with a decentralized autonomous control mechanism p 1659 N95-23710

CONVECTION
New robust multigrid method for 2D convection-diffusion problems
| PB95-138897 | p 1789 N95-23176
Radiation/convection coupling in rocket motors and plumes p 1669 N95-23414
Computer simulation of a magnetohydrodynamic dynamo 2
| NIFS-320 | p 1836 N95-23590

CONVECTION-DIFFUSION EQUATION
An adaptive projection method for the incompressible Navier-Stokes equations
| DE94-019049 | p 1665 N95-22491
New robust multigrid method for 2D convection-diffusion problems
| PB95-138897 | p 1789 N95-23176

CONVECTIVE FLOW
A controlled variation scheme for convection treatment in pressure-based algorithm p 1677 N95-23448
Modeling of non-spherical droplet dynamics p 1685 N95-23647
USML-1 Glovebox experiments
| NASA-CR-196574 | p 1653 N95-24028

CONVECTIVE HEAT TRANSFER
The high latitude ionosphere-magnetosphere transition region: Simulation and data comparison
| NASA-CR-197404 | p 1737 N95-22956
Experimental technique and assessment for measuring the convective heat transfer coefficient from natural ice accretions
| NASA-TM-106864 | p 1668 N95-23248

CONVERGENCE
Precise clock synchronization protocol
| PB95-127247 | p 1687 N95-22536
The convergence radius of the chiral expansion in the Dyson-Schwinger approach
| DE94-012852 | p 1805 N95-22925
Stability and efficiency of waveform relaxation methods
| PB95-138863 | p 1789 N95-23173
Convergence acceleration of implicit schemes in the presence of high aspect ratio grid cells p 1676 N95-23446
Quasi-kernel polynomials and convergence results for quasi-minimal residual iterations
| NASA-CR-197948 | p 1791 N95-23593
Ishikawa iteration process for nonlinear Lipschitz strongly accretive mappings
| DE94-634284 | p 1792 N95-23658
Martin-Lof tests can help too
| TR-541 | p 1797 N95-24063

CONVERGENT-DIVERGENT NOZZLES
An approximate theoretical method for modeling the static thrust performance of non-axisymmetric two-dimensional convergent-divergent nozzles
| NASA-CR-195050 | p 1608 N95-23193

CONVERSATION
Spoken dialogue understanding and local context
| TR-523 | p 1658 N95-23937
A computational theory of grounding in natural language conversation
| TR-545 | p 1760 N95-24058
The TRAINS project: A case study in building a conversational planning agent
| TR-532 | p 1659 N95-24193

CONVEXITY
Capacitated facility location: Valid inequalities and facets (revised)
| PB95-130225 | p 1786 N95-22641

CONVOLUTION INTEGRALS
AR-descriptions in translatable Frechet spaces
| PB95-138855 | p 1789 N95-23149

COOLANTS
Quick connect coupling
| NASA-CASE-ARC-11921-2 | p 1695 N95-23376
CFD modeling of turbulent duct flows for coolant channel analysis p 1682 N95-23635

COOLING
Gas cooled leads. Part 1: Theoretical Study. Part 2: Frost free lead optimized for a specific current. Part 3: Frost free lead optimized for a large current range
| DE95-002657 | p 1660 N95-22716
Traps for antimatter and antihydrogen production
| DE95-002814 | p 1805 N95-22927
Load calculation and system evaluation for electric vehicle climate control
| DE95-004350 | p 1695 N95-23358
Quick connect coupling
| NASA-CASE-ARC-11921-2 | p 1695 N95-23376
Thermal effects on the STAR electromagnetic calorimeter
| DE95-004663 | p 1688 N95-23492
Cooling rate effects on the microstructure, critical current density, and (T(sub c)) transition of one- and two-powder BSCCO-2223 Ag sheathed tapes
| DE95-004639 | p 1846 N95-24171

COOLING SYSTEMS
NASA advanced refrigerator/freezer technology development project overview
| NASA-TM-106309 | p 1747 N95-23177

COORDINATE TRANSFORMATIONS
Possibility of extending space-time coordinates
| DE94-628512 | p 1796 N95-22737

COORDINATES
Possibility of extending space-time coordinates
| DE94-628512 | p 1796 N95-22737
Gravitational field of the isolated mass in Yordan-Brans-Dicke theory
| DE94-635441 | p 1851 N95-23970

COPOLYMERS
Tough, soluble, aromatic, thermoplastic copolyimides
| NASA-CASE-LAR-15205-1 | p 1648 N95-22882
Polyazomethines containing trifluoromethylbenzene units
| NASA-CASE-LAR-14896-1 | p 1649 N95-23253
Reflectivity studies on adsorbed block copolymers under shear
| DE95-003676 | p 1649 N95-23568

COPPER
Thermal activation of steady-state creep in polycrystalline copper
| DE94-627394 | p 1839 N95-22607
Photoemission study of quantum confinement by a finite barrier: Cu/Co(wedge)/Cu(100)
| DE95-002913 | p 1840 N95-22762
Explosive bonding and its application in the Advanced Photon Source front-end and beamline components design
| DE95-004132 | p 1696 N95-23397
Carbon monoxide oxidation over three different states of copper: Development of a model metal oxide catalyst
| DE95-004682 | p 1636 N95-23495
Changes in chemical and optical properties of thin film metal mirrors on LDEF p 1651 N95-23907
Cu deposition using a permanent magnet electron cyclotron resonance microwave plasma source
| DE94-017768 | p 1650 N95-23981

COPPER ALLOYS
Explosive bonding and its application in the Advanced Photon Source front-end and beamline components design
| DE95-004132 | p 1696 N95-23397

COPPER COMPOUNDS
Ligand K-edge x-ray adsorption spectroscopic studies of the electronic structure of inorganic model complexes and metalloprotein active sites
| DE95-003338 | p 1840 N95-22851
Effect on c-axis transport properties of a critical state in Bi2Sr2CaCu2O8
| DE95-003695 | p 1843 N95-23366
Transport properties of Tl2Ba2CaCu2O8 meander lines
| DE95-003715 | p 1843 N95-23367

COPPER OXIDES
Superconducting Tl2Ba2CaCu2O8 thin films prepared by post-annealing in a flow-through multiple-zone furnace
| DE95-002745 | p 1838 N95-22520
Asymptotically exact solution of a local copper-oxide model
| DE94-628492 | p 1842 N95-23059
Some aspects of critical currents in Ag sheathed Bi2Sr2Ca2Cu3O10 composite tapes: A summary
| DE95-003952 | p 1842 N95-23354
Carbon monoxide oxidation over three different states of copper: Development of a model metal oxide catalyst
| DE95-004682 | p 1636 N95-23495
Preparation of high quality YBa2Cu3O(7-delta) thick films on flexible Ni-based alloy substrates with textured buffer layers
| DE95-003686 | p 1645 N95-23571
Phonon characteristics of high (T sub c) superconductors from neutron Doppler broadening measurements
| DE95-003703 | p 1844 N95-24076
Cooling rate effects on the microstructure, critical current density, and (T(sub c)) transition of one- and two-powder BSCCO-2223 Ag sheathed tapes
| DE95-004639 | p 1846 N95-24171

COPPER SELENIDES
Polycrystalline CuInSe2 and CdTePV solar cells
| DE95-000244 | p 1727 N95-22842

CORE SAMPLING
OU3 sediment dating and sedimentation rates
| DE95-001891 | p 1734 N95-23384

CORIOLIS EFFECT
Incompressible Navier-Stokes calculations in pump flows p 1680 N95-23627

COROTATION
Structure and evolution of long-lived spiral patterns in galaxies
| PB95-139242 | p 1868 N95-23228

CORRECTION
Baryon number fluctuations in a quark-hadron phase transition
| DE94-628585 | p 1804 N95-22786

CORRELATION
Fermion-spin transformation to implement the charge-spin separation
| DE94-629035 | p 1800 N95-22495
Strong-coupling behaviour of two t-J chains with interchain single-electron hopping
| DE94-629041 | p 1838 N95-22499
Lectures on 2D gauge theories. Topological aspects and path integral techniques
| DE94-628509 | p 1849 N95-22752
The role of triplet correlation function in dense fluids
| DE94-628476 | p 1849 N95-22775
Cumulant approach to dynamical correlation functions at finite temperatures
| DE94-628487 | p 1788 N95-23051
Bose condensation, macroscopic quantum phenomena and atomic spatial correlations in superfluid He-4
| PB95-139085 | p 1850 N95-23154
Estimation of crown closure from AVIRIS data using regression analysis p 1709 N95-23886
Inclusive rapidity correlations of (pi)(-) mesons in pp-interactions
| DE94-635654 | p 1812 N95-23974
Determining successional stage of temperate coniferous forests with Landsat satellite data p 1720 N95-24102

CORROSION
Corrosivity sensor
| AD-D016549 | p 1687 N95-22706
Corrosion control acceptance criteria for sacrificial anode type, cathodic protection systems (user guide)
| AD-A285275 | p 1662 N95-23117
Corrosion detection and management of advanced airframe materials
| AGARD-CP-565 | p 1641 N95-23496
The corrosion and protection of advanced aluminium - lithium airframe alloys p 1641 N95-23497
Corrosion of landing gear steels p 1642 N95-23500
Specific features of corrosion behavior of stainless maraging steels for aerospace application p 1642 N95-23501
Double pass retroreflection for corrosion detection in aircraft structures p 1642 N95-23503
The use of electrochemical impedance spectroscopy to predict the corrosion of aluminum-lithium alloys in marine environments p 1637 N95-23504
Non-destructive detection of corrosion for life management p 1643 N95-23505
Health and usage monitoring systems: Corrosion surveillance p 1607 N95-23506
Eddy current detection of pitting corrosion around fastener holes p 1643 N95-23507
In-situ detection of surface passivation or activation and of localized corrosion: Experiences and prospectives in aircraft p 1643 N95-23508
Test method and test results for environmental assessment of aircraft materials p 1643 N95-23509
New nondestructive techniques for the detection and quantification of corrosion in aircraft structures p 1644 N95-23512
Corrosion detection and monitoring of aircraft structures: An overview p 1644 N95-23515
Experience of in-service corrosion on military aircraft p 1644 N95-23516
US Navy operating experience with new aircraft construction materials p 1645 N95-23517
Corrosion in service experience with aircraft in France p 1645 N95-23518
Oklahoma City air logistics center (USAF) aging aircraft corrosion program p 1607 N95-23519

CORROSION PREVENTION
Pulsed Ion Beam Surface Treatment for preparing rapidly solidified corrosion resistant alloy surfaces
| DE94-012072 | p 1640 N95-22835
Corrosion control acceptance criteria for sacrificial anode type, cathodic protection systems (user guide)
| AD-A285275 | p 1662 N95-23117
The corrosion protection of 2219-T87 aluminum by organic and inorganic zinc-rich primers
| NASA-TP-3543 | p 1641 N95-23186
Corrosion detection and management of advanced airframe materials
| AGARD-CP-565 | p 1641 N95-23496
The corrosion and protection of advanced aluminium - lithium airframe alloys p 1641 N95-23497
Corrosion protection measures for CFC/metal joints of fuel integral tank structures of advanced military aircraft p 1644 N95-23510
Corrosion prevention with environmentally compliant materials: A design challenge p 1644 N95-23511
Organic coating technology for the protection of aircraft against corrosion p 1644 N95-23513
Corrosion detection and monitoring of aircraft structures: An overview p 1644 N95-23515
Experience of in-service corrosion on military aircraft p 1644 N95-23516
US Navy operating experience with new aircraft construction materials p 1645 N95-23517
Corrosion in service experience with aircraft in France p 1645 N95-23518
Robotic weld overlay coatings for erosion control
| DE95-002624 | p 1696 N95-24141
Solderability preservation through the use of organic inhibitors
| DE95-003633 | p 1664 N95-24149

CORROSION RESISTANCE
Pulsed Ion Beam Surface Treatment for preparing rapidly solidified corrosion resistant alloy surfaces
| DE94-012072 | p 1640 N95-22835
In-situ detection of surface passivation or activation and of localized corrosion: Experiences and prospectives in aircraft p 1643 N95-23508
Robotic weld overlay coatings for erosion control
| DE95-002624 | p 1696 N95-24141

CORROSION TESTS
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
| DE95-002941 | p 1638 N95-22532
Corrosion detection and management of advanced airframe materials
| AGARD-CP-565 | p 1641 N95-23496
Corrosion of landing gear steels p 1642 N95-23500
Specific features of corrosion behavior of stainless maraging steels for aerospace application p 1642 N95-23501
The use of electrochemical impedance spectroscopy to predict the corrosion of aluminum-lithium alloys in marine environments p 1637 N95-23504
Eddy current detection of pitting corrosion around fastener holes p 1643 N95-23507
Test method and test results for environmental assessment of aircraft materials p 1643 N95-23509
Corrosion protection measures for CFC/metal joints of fuel integral tank structures of advanced military aircraft p 1644 N95-23510
New nondestructive techniques for the detection and quantification of corrosion in aircraft structures p 1644 N95-23512
US Navy operating experience with new aircraft construction materials p 1645 N95-23517

COSMIC DUST
Modification and damping of Alfven waves in a magnetized dusty plasma
| NIFS-312 | p 1834 N95-23523

COSMIC RAYS
Performance of a large scale scintillating fiber tracker using VLPC readout
| DE95-003746 | p 1871 N95-23370
LDEF contributions to cosmic ray and radiation environments research p 1872 N95-23805
Early results from the ultra heavy cosmic ray experiment p 1872 N95-23809
Absorbed dose and LET spectra measurements on LDEF p 1815 N95-23810
Germination, growth rates, and electron microscope analysis of tomato seeds flown on the LDEF p 1748 N95-23821

COSMOCHEMISTRY
Origins of interstellar and solar system: Carbonaceous materials
| NASA-CR-197436 | p 1867 N95-23013

COSMOLOGY
Neutrino overview
| DE95-003201 | p 1802 N95-22729
Topologically stable Z - strings in the supersymmetric standard model
| DE94-628517 | p 1848 N95-22742
Finite-temperature scalar field theory in static de Sitter space
| DE94-628522 | p 1848 N95-22743
Supersymmetric singlet majorons and cosmology
| DE94-628571 | p 1850 N95-22783
Shannon-Wehrl entropy for cosmological and black-hole squeezing p 1826 N95-23000
High Energy Theory: Task B and Task L
| DE95-003453 | p 1817 N95-23148

COST ANALYSIS
Cost and schedule analytical techniques development
| NASA-CR-196548 | p 1853 N95-22891
NASAwide electronic publishing system: Electronic printing and duplicating, stage-2 evaluation report (GSFC)
| NASA-TM-104615 | p 1856 N95-23209
A manufacturing database of advanced materials used in spacecraft structures p 1623 N95-23279

COST EFFECTIVENESS
Evaluating photovoltaic applications: A guide for utilities
| DE95-003807 | p 1726 N95-22502
Southeast Regional Experiment Station
| DE95-000903 | p 1726 N95-22518

COST ESTIMATES
Synthesis of a large communications aperture using small antennas
| NASA-CR-197330 | p 1656 N95-22852

COST REDUCTION
Planar magnetic component development
| DE95-003311 | p 1661 N95-22896
Low-cost packaging of high-performance optoelectronic components
| DE95-003645 | p 1827 N95-23449
Advanced technologies for a compact RF linac FEL
| DE95-003674 | p 1692 N95-24072
Using simple page placement policies to reduce the cost of cache fills in coherent shared-memory systems
| TR-535 | p 1753 N95-24177

COSTS
Plinius intermediate report
| PB95-135216 | p 1648 N95-23128
Submodular linear programs on forests
| PB95-139820 | p 1758 N95-23608

COULOMB POTENTIAL
Computer simulation of the structure of ionic surfaces and interfaces
| DE95-002991 | p 1804 N95-22792
A possible generalization of the harmonic oscillator potential p 1822 N95-22970

COUNTERS
Investigation of physical parameters in stellar flares observed by GINGA
| NASA-CR-196547 | p 1868 N95-23205

COUNTING
Collecting operational event data for statistical analysis
| DE95-002020 | p 1793 N95-22550
Real lasers and other deformed objects p 1692 N95-23001
The satanic notations: Counting classes beyond #P and other definitional adventures
| TR-561 | p 1793 N95-24194

COUPLED MODES
Dynamical properties of critical and paramagnetic spin fluctuations in anisotropic heisenberg magnets
| PB95-134623 | p 1798 N95-23127
Synchronous dynamics of a coupled shaft/bearing/housing system with auxiliary support from a clearance bearing: Analysis and experiment
| NASA-CR-197858 | p 1695 N95-23214

COUPLING
Effects of long-range coupling on aggregation
| DE94-628483 | p 1842 N95-23047
Magnetic multilayer physics
| DE95-003408 | p 1798 N95-23083
TFTR Ion Cyclotron Range of Frequencies (ICRF) experimental data analysis collaboration
| DE95-003409 | p 1832 N95-23084
Quick connect coupling
| NASA-CASE-ARC-11921-2 | p 1695 N95-23376

COVARIANCE
Second derivative of the likelihood of an exact ARMA model
| PB95-135158 | p 1788 N95-23069
Asymptotic justification for a modified GLS procedure to estimate ARMA parameters
| PB95-135166 | p 1788 N95-23070
Taylor series expansion and modified extended Prony analysis for localization
| DE95-003671 | p 1758 N95-23567
Polarimetric radar data decomposition and interpretation p 1715 N95-23955

COVERINGS
On certain N-sheeted coverings of curves and symmetric numerical semigroups which cannot be realized as Weierstrass semigroups
| DE94-634328 | p 1797 N95-23661

COWLINGS
The use of cowl camber and taper to reduce rotor/stator interaction noise
| NASA-CR-195421 | p 1799 N95-22675

CRACK CLOSURE
Separation of crack extension modes in composite delamination problems p 1700 N95-23281

CRACK OPENING DISPLACEMENT
Separation of crack extension modes in composite delamination problems p 1700 N95-23281

CRACK PROPAGATION
Temperature effects on hydrogen-induced cracking in an iron-based superalloy
| DE95-003037 | p 1639 N95-22724
Notch-tip damage and translaminar fracture toughness measurements from carbon/epoxy laminates
| AD-A280101 | p 1627 N95-22833
Three-dimensional CTOA and constraint effects during stable tearing in a thin-sheet material
| NASA-TM-109183 | p 1627 N95-22928
Stress intensity factors and crack mouth openings for bridged cracks emanating from circular holes
| AR-008-408 | p 1699 N95-22952
Effects of delaminations on the damped dynamic characteristics of composite laminates: Mechanics and experiments
| NASA-TM-106862 | p 1630 N95-23258
Separation of crack extension modes in composite delamination problems p 1700 N95-23281
Residual strength of thin panels with cracks p 1700 N95-23311
Effect of loading direction and long-term aging on fatigue-crack growth in Al-Li alloy 2090 p 1641 N95-23499
Microstructural behavior of nonequilibrium systems
| DE95-004450 | p 1630 N95-23924
Fracture mechanics life analytical methods verification testing
| NASA-CR-196555 | p 1697 N95-24106

CRACK TIPS
Three-dimensional CTOA and constraint effects during stable tearing in a thin-sheet material
| NASA-TM-109183 | p 1627 N95-22928
Stress intensity factors and crack mouth openings for bridged cracks emanating from circular holes
| AR-008-408 | p 1699 N95-22952

CRACKING (FRACTURING)
Temperature effects on hydrogen-induced cracking in an iron-based superalloy
| DE95-003037 | p 1639 N95-22724
Separation of crack extension modes in composite delamination problems p 1700 N95-23281
Fracture mechanics life analytical methods verification testing
| NASA-CR-196555 | p 1697 N95-24106

CRACKS
Residual strength of thin panels with cracks p 1700 N95-23311

CRASH INJURIES
Design of a cervical spine gross motion simulator for standard size human and anthropomorphic dummy adult and child
| NIAR-94-16 | p 1751 N95-24021

CRASHES
Design of a cervical spine gross motion simulator for standard size human and anthropomorphic dummy adult and child
| NIAR-94-16 | p 1751 N95-24021
Aircraft fires, smoke toxicity, and survival: An overview
| DOT/FAA/AM-95/8 | p 1610 N95-24024
A multibody/finite element analysis approach for modeling of crash dynamic responses
| NIAR-94-3 | p 1610 N95-24050

CRASHWORTHINESS
A multibody/finite element analysis approach for modeling of crash dynamic responses
| NIAR-94-3 | p 1610 N95-24050

CRATERING
Penetration rates over 30 years in the space age p 1624 N95-23827
Dimensional scaling for impact cratering and perforation p 1624 N95-23843

CRATERS
Long term microparticle impact fluxes on LDEF determined from optical survey of Interplanetary Dust Experiment (IDE) sensors p 1623 N95-23826
Hypervelocity impact survivability experiments for carbonaceous impactors, part 2 p 1700 N95-23831
Image and compositional characteristics of the LDEF Big Guy impact crater p 1700 N95-23838

The effect of impact angle on craters formed by hypervelocity particles p 1700 N95-23839
Experimental investigation of the relationship between impact crater morphology and impacting particle velocity and direction p 1700 N95-23840
Determining orbital particle parameters of impacts into germanium using morphology analysis and calibration data from hypervelocity impact experiments in the laboratory p 1700 N95-23841

CRAY COMPUTERS
Accepting the T3D
|DE95-000924| p 1762 N95-22679
An automated computer misuse detection system for UNICOS
|DE95-000929| p 1762 N95-22680
WHAMS3D Project: Parallel implementations of WHAMS3D on two shared-memory multiprocessors
|CSRD-1248| p 1764 N95-23599
Transferring ecosystem simulation codes to supercomputers
|NASA-TM-4662| p 1759 N95-24052

CREEP ANALYSIS
Damage-mitigating control of a reusable rocket engine for high performance and extended life
|NASA-CR-4640| p 1654 N95-23195

CREEP PROPERTIES
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
|DE95-002941| p 1638 N95-22532
Evolution of oxidation and creep damage mechanisms in HIPed silicon nitride materials
|DE95-001360| p 1647 N95-22689
Microstructural behavior of nonequilibrium systems
|DE95-004450| p 1630 N95-23924

CREEP TESTS
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
|DE95-002941| p 1638 N95-22532
Thermal activation of steady-state creep in polycrystalline copper
|DE94-627394| p 1839 N95-22607
Study of radiation damages in AISI 316 and 347 steels
|DE94-627480| p 1639 N95-22609
Evolution of oxidation and creep damage mechanisms in HIPed silicon nitride materials
|DE95-001360| p 1647 N95-22689

CREW PROCEDURES (INFLIGHT)
Formalizing procedures for operations automation, operator training and spacecraft autonomy p 1752 N95-23720

CREW WORKSTATIONS
Living in space
|NASA-TM-110536| p 1751 N95-23274

CRITERIA
Security clearances: Consideration of sexual orientation in the clearance process. Report to Congressional requesters
|GAO/NSIAD-95-21| p 1853 N95-23588

CRITICAL EXPERIMENTS
Dry critical experiments and analyses performed in support of the Topaz-2 Safety Program
|DE95-002724| p 1817 N95-23245

CRITICAL PATH METHOD
A format for the interchange of scheduling models p 1780 N95-23747

CROSS CORRELATION
Optical image correlator using orthogonal data storage
|AD-A285795| p 1819 N95-22508
Using AVIRIS for in-flight calibration of the spectral shifts of SPOT-HRV and of AVHRR? p 1710 N95-23893

CROSS FLOW
Crossflow instability control on a swept-wing: Preliminary studies p 1609 N95-23283

CROSS POLARIZATION
AIRSAR views of aerolian terrain p 1713 N95-23941

CROSS SECTIONS
Measuring the left-right cross section asymmetry in Z boson production by e(+)e(-) collisions at the SLC
|DE95-003468| p 1807 N95-23141
Testing QCD with jet physics at CDF
|DE94-018980| p 1807 N95-23196
J/psi, psi' yields mu(+)mu(-) and B yields J/psi, psi' cross sections
|DE94-018996| p 1808 N95-23242
Measurement of correlated b quark cross sections at CDF
|DE95-004240| p 1808 N95-23336
Measurement of W and Z boson production and extraction of the W width and branching ratios at CDF
|DE94-018989| p 1810 N95-23522
Standardization of CDF and D(O) reported luminosities
|DE95-003388| p 1818 N95-24077

CROWDING
Schwarz-Christoffel methods for multiply-elongated regions
|DE94-019048| p 1790 N95-23536

CRYOGENIC COOLING
The DIII-D divertor cryopump system: Design and operational experience
|DE95-003007| p 1693 N95-22796
HTS current lead using a composite heat pipe
|DE95-003718| p 1662 N95-23368

CRYOGENIC EQUIPMENT
NASA advanced refrigerator/freezer technology development project overview
|NASA-TM-106309| p 1747 N95-23177

CRYOGENIC FLUIDS
Some aspects of critical currents in Ag sheathed Bi2Sr2Ca2Cu3O10 composite tapes: A summary
|DE95-003952| p 1842 N95-23354
Cavitation modeling in Euler and Navier-Stokes codes p 1681 N95-23630

CRYOPUMPING
The DIII-D divertor cryopump system: Design and operational experience
|DE95-003007| p 1693 N95-22796
Engineering design of a radiative divertor for DIII-D
|DE95-003008| p 1693 N95-22798
D3-D program overview
|DE95-003879| p 1837 N95-24086

CRYOSTATS
Doing photons with MERLIN 2 at Oroville p 1815 N95-23816

CRYSTAL DEFECTS
X-ray diffraction characterization of defect behavior in nanocrystalline nickel during annealing
|DE95-002992| p 1639 N95-22594
Measurements of striae in CR+ doped YAG laser crystals p 1847 N95-23285
Annealing of nitrogen-doped ZnSe at high pressures: Toward suppression of native defect formation
|DE95-003420| p 1844 N95-24010
High resolution microstructural analysis of zirconia eutectic interfaces
|DE95-003143| p 1845 N95-24143

CRYSTAL DISLOCATIONS
Dislocation decomposition, dissociation, and deformation in MoSi2 and (alpha)-Al2O3 single crystals
|DE95-002715| p 1839 N95-22653

CRYSTAL GROWTH
X-ray diffraction characterization of defect behavior in nanocrystalline nickel during annealing
|DE95-002992| p 1639 N95-22594
A parallel molecular dynamics simulation of crystal growth at a cluster of workstations
|DE94-628382| p 1839 N95-22615
World's first 15%-efficient multicrystalline silicon modules
|DE95-002604| p 1727 N95-22650
Polycrystalline CuInSe2 and CdTePV solar cells
|DE95-000244| p 1727 N95-22842
The 1993 Annual Conference of the Israeli Association for Crystal Growth. Program and abstracts
|DE94-633510| p 1841 N95-22854
Surface growth of two kinds of particles deposition models
|DE94-628480| p 1841 N95-23021
Measurements of striae in CR+ doped YAG laser crystals p 1847 N95-23285
Growth of single crystals of organic salts with large second-order optical nonlinearities by solution processes for devices
|NASA-CR-197963| p 1843 N95-23563
Whisker/Cone growth on the thermal control surfaces experiment no. S0069 p 1651 N95-23911
USML-1 Glovebox experiments
|NASA-CR-196574| p 1653 N95-24028
Epitaxial growth of bcc transition metal films and superlattices onto MgO (111), (011) and (001) substrates
|DE95-004629| p 1846 N95-24168

CRYSTAL LATTICES
Block spins and chirality in Heisenberg model on Kagome and triangular lattices
|DE94-629044| p 1840 N95-22845
Cation disorder determined by MAS Al-27 NMR in high dose neutron irradiated spinel
|DE95-003681| p 1842 N95-23266
Internal strain measurement using pulsed neutron diffraction at LANSCE
|DE95-003677| p 1842 N95-23365

CRYSTAL STRUCTURE
High pressure neutron powder diffraction at LANSCE
|DE95-002703| p 1839 N95-22565
General crystal in prebiotic context
|DE94-628475| p 1840 N95-22774
Computer simulation of the structure of ionic surfaces and interfaces
|DE95-002991| p 1804 N95-22792
The 1993 Annual Conference of the Israeli Association for Crystal Growth. Program and abstracts
|DE94-633510| p 1841 N95-22854
Asymptotically exact solution of a local copper-oxide model
|DE94-628492| p 1842 N95-23059
Internal strain measurement using pulsed neutron diffraction at LANSCE
|DE95-003677| p 1842 N95-23365
Deformation of C15 Laves phase alloys
|DE95-003636| p 1646 N95-24067

CRYSTALLINITY
MOCVD of gallium and calcium sulfides for improved phosphor processing
|DE95-000918| p 1631 N95-22677

CRYSTALLIZATION
Initial crystallization and growth in melt processing of large-domain YBa2Cu3O(x) for magnetic levitation
|DE95-002993| p 1839 N95-22572
General crystal in prebiotic context
|DE94-628475| p 1840 N95-22774
A phenomenological model for the effect of nanocrystalline microstructure on irradiation-induced amorphization in U3Si
|DE95-004631| p 1846 N95-24169

CRYSTALS
Optical image correlator using orthogonal data storage
|AD-A285795| p 1819 N95-22508
General crystal in prebiotic context
|DE94-628475| p 1840 N95-22774
Asymptotically exact solution of a local copper-oxide model
|DE94-628492| p 1842 N95-23059
Experimental and theoretical studies on the C15 intermetallic compounds MV2 (M = Zr, Hf and Ta): Elasticity and phase stability
|DE95-003723| p 1845 N95-24079

CURIE TEMPERATURE
Microstructural behavior of nonequilibrium systems
|DE95-004450| p 1630 N95-23924

CURING
Development and verification of a resin film infusion/resin transfer molding simulation model for fabrication of advanced textile composites
|NASA-CR-197439| p 1648 N95-23179

CURRENT ALGEBRA
(pi)- and a(sub 1)-meson physics in current algebra at the quark level
|DE94-628611| p 1804 N95-22811
Linearizing W-algebras
|DE94-634324| p 1790 N95-23457

CURRENT DENSITY
Some aspects of critical currents in Ag sheathed Bi2Sr2Ca2Cu3O10 composite tapes: A summary
|DE95-003952| p 1842 N95-23354
Effect on c-axis transport properties of a critical state in Bi2Sr2CaCu2O8
|DE95-003695| p 1843 N95-23366
Transport properties of Tl2Ba2CaCu2O8 meander lines
|DE95-003715| p 1843 N95-23367
A 4 MW fast wave current drive upgrade for D3-D
|DE95-003741| p 1837 N95-24083
Cooling rate effects on the microstructure, critical current density, and (T(sub c)) transition of one- and two-powder BSCCO-2223 Ag sheathed tapes
|DE95-004639| p 1846 N95-24171

CURVATURE
Energetic particle observations at geosynchronous orbit
|DE95-000873| p 1867 N95-22516
On the scalar curvature of minimal hypersurfaces
|DE94-628516| p 1796 N95-22741
A prescribing geodesic curvature problem
|DE94-628503| p 1787 N95-22750
Level set techniques applied to unsteady detonation propagation
|DE95-002741| p 1666 N95-22901
The effect of a non-zero shock width on wave propagation in multi-dimensions
|DE95-002748| p 1666 N95-22902
BEm-BDF scheme for curvature driven moving stokes flows
|PB95-138905| p 1667 N95-23144
BEM solution to simulate the curvature driven deformation of a profile that is pressed into a plate of hot glass
|PB95-138913| p 1648 N95-23145
Unsteady flow simulations in support of the SSME HEX turning vane cracking investigation with the ATD HPOTP p 1679 N95-23621

CURVE FITTING
Statistically generated weighted curve fit of residual functions for modal analysis of structures
|NASA-TM-108481| p 1699 N95-22950
CURVES
On certain N-sheeted coverings of curves and symmetric numerical semigroups which cannot be realized as Weierstrass semigroups
|DE94-634328| p 1797 N95-23661
CURVES (GEOMETRY)
Lectures on Fermat's last theorem
|DE94-628392| p 1795 N95-22617
Semi-symmetric manifolds satisfying certain curvature conditions
|DE94-628414| p 1788 N95-22922
CUTTING
Study on possible environmental effects of a WBM cutting discharge in the north sea, one year after termination of drilling
|PB95-133740| p 1733 N95-23125
CYCLIC LOADS
The spectral content of the torque loads on a turbine gear tooth
|DE95-002188| p 1694 N95-23056
CYCLONES
Annual tropical cyclone report, 1993
|AD-A285097| p 1742 N95-23255
CYCLOTRON FREQUENCY
Resonant shallow donor magnetopolaron effect in a GaAs/AlGaAs quantum dot in high magnetic fields
|DE94-629039| p 1798 N95-22497
TFTR Ion Cyclotron Range of Frequencies (ICRF) experimental data analysis collaboration
|DE95-003409| p 1832 N95-23084
A 4 MW fast wave current drive upgrade for D3-D
|DE95-003741| p 1837 N95-24083
CYCLOTRON RESONANCE
Cu deposition using a permanent magnet electron cyclotron resonance microwave plasma source
|DE94-017768| p 1650 N95-23981
CYCLOTRONS
Hot proton anisotropies and cool proton temperatures in the outer magnetosphere
|DE95-002719| p 1736 N95-22850
An upper bound for the proton temperature anisotrophy
|DE95-002752| p 1737 N95-22903
CYLINDRICAL BODIES
Method for making fiber-optic bundle collimator assembly
|AD-D016491| p 1819 N95-22492
Second order focusing property of 210 deg cylindrical energy analyzer
|NIFS-317| p 1834 N95-23527
CYLINDRICAL SHELLS
The development of shell imperfection measurement techniques
|TAE-712| p 1699 N95-23923
CZOCHRALSKI METHOD
Measurements of striae in CR+ doped YAG laser crystals p 1847 N95-23285

D

DAMAGE
Rationale for the Modular Air-system Vulnerability Estimation Network (MAVEN) methodology
|AD-A285797| p 1611 N95-22510
Damage-mitigating control of a reusable rocket engine for high performance and extended life
|NASA-CR-4640| p 1654 N95-23195
Residual strength of thin panels with cracks p 1700 N95-23311
The detection and analysis of galvanic damage in BMI/graphite fiber composites p 1631 N95-23502
Double pass retroreflection for corrosion detection in aircraft structures p 1642 N95-23503
POD assessment of NDI procedures using a round robin test
|AGARD-R-809| p 1697 N95-23602
DAMAGE ASSESSMENT
A ruggedness evaluation of procedures for damage threshold testing optical materials
|NASA-TM-4639| p 1840 N95-22803
Laser irradiation effects: A functional assessment
|AD-A285100| p 1691 N95-22937
The spectral content of the torque loads on a turbine gear tooth
|DE95-002188| p 1694 N95-23056
Nondestructive evaluation of fatigue damage in aluminum 2024 by x-ray diffraction p 1698 N95-23293
POD assessment of NDI procedures using a round robin test
|AGARD-R-809| p 1697 N95-23602
Aircraft accident report. Runway overrun following rejected takeoff. Continental airlines flight 795, McDonnell Douglas MD-82, N18835, LaGuardia Airport, Flushing, NY, 2 March 1994
|PB95-910401| p 1610 N95-23609
Atomic oxygen interactions with protected organic materials on the Long Duration Exposure Facility (LDEF) p 1627 N95-23909
Organic matrix composite protective coatings for space applications p 1627 N95-23914
DAMPING
Modification and damping of Alfven waves in a magnetized dusty plasma
|NIFS-312| p 1834 N95-23523
Three-D CFD analysis of hydrostatic bearings p 1678 N95-23616
DARK MATTER
CDM and Omega in the local neighborhood
|DE95-003683| p 1868 N95-23570
DATA ACQUISITION
Towards method-independent knowledge acquisition
|AD-A285823| p 1766 N95-22512
Collecting operational event data for statistical analysis
|DE95-002020| p 1793 N95-22550
GPS survey of the western Tien Shan
|NASA-CR-197901| p 1717 N95-22832
TOGA/COARE AMMR 1992 data processing
|NASA-CR-197289| p 1736 N95-22867
Summary of solar cell data from the Long Duration Exposure Facility (LDEF)
|NASA-CR-196539| p 1727 N95-22904
Material characterization system
|AD-D016536| p 1800 N95-23073
Investigation of physical parameters in stellar flares observed by GINGA
|NASA-CR-196547| p 1868 N95-23205
Langley Research Center Strategic Plan for Education p 1853 N95-23316
Progress report on a fully automatic Gas Tungsten Arc Welding (GTAW) system development
|DE95-004397| p 1695 N95-23343
Radioisotope thermoelectric generator transportation system subsystem 143 software development plan
|DE95-003774| p 1662 N95-23351
Validation data for land surface temperature determination from satellites
|CSIRO-TR-33| p 1718 N95-23597
Software agents for the dissemination of remote terrestrial sensing data p 1721 N95-23675
The development of shell imperfection measurement techniques
|TAE-712| p 1699 N95-23923
Video frame processor
|DE94-635414| p 1753 N95-23962
Improved AVHRR data navigation using automated land feature recognition to correct a satellite orbital model
|CSIRO-TR-34| p 1718 N95-24026
Energy efficiency of electric vehicles at the 1994 American Tour de Sol
|DE95-002905| p 1664 N95-24070
DATA BASE MANAGEMENT SYSTEMS
Jackson system development, entity-relationship analysis and data flow models: A comparative study
|PB95-127338| p 1855 N95-22523
Method for building and evaluating formal specifications of object-oriented conceptual models of database systems
|PB95-127353| p 1855 N95-22525
LCM 3.0: A language for describing conceptual models. Syntax definition
|PB95-128005| p 1755 N95-22652
CDMS-CAD data set management system test plan
|DE95-003219| p 1755 N95-22718
P2Info Resource Center: Linking the DOE Pollution Prevention community
|DE95-003133| p 1732 N95-22781
Overview of Ph.D. theses and memoranda, 1993
|PB95-135190| p 1756 N95-23071
Search Hanford accessible reports electronically system requirements specification
|DE95-004367| p 1856 N95-23340
Search Hanford accessible reports electronically system design description, revision 1
|DE95-004369| p 1856 N95-23341
Online Nuclear Data Service
|DE94-634268| p 1856 N95-23452
Index of nuclear data libraries available from the IAEA nuclear data section

Proceedings of the workshop on deductive databases and logic programming
|PB95-139382| p 1758 N95-23553
A new generation of intelligent trainable tools for analyzing large scientific image databases p 1775 N95-23717
DTS: Building custom, intelligent schedulers p 1779 N95-23744
Coordinating complex decision support activities across distributed applications p 1761 N95-23749
Status of LDEF activation measurements and archive p 1815 N95-23817

The data facility of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1707 N95-23877
Overview of the LDEF MSIG databasing activities p 1864 N95-23916
The design of a petabyte archive and distribution system for the NASA ECS project p 1858 N95-24110
Robotic tape library system level testing at NSA: Present and planned p 1858 N95-24112
Building a COTS archive for satellite data p 1861 N95-24132
Architecture and evolution of Goddard Space Flight Center Distributed Active Archive Center p 1862 N95-24134

DATA COMPRESSION
Evaluating the effect of online data compression on the disk cache of a mass storage system p 1862 N95-24138

DATA CORRELATION
A modal test design strategy for model correlation | DE95-003631 | p 1759 N95-24020

DATA FLOW ANALYSIS
Jackson system development, entity-relationship analysis and data flow models: A comparative study | PB95-127338 | p 1855 N95-22523
Algebra of lines and boxes | PB95-130456 | p 1787 N95-22768
Task scheduling in dataflow computer architectures p 1753 N95-23301

DATA INTEGRATION
MAC Europe 1991 campaign: AIRSAR/AVIRIS data integration for agricultural test site classification p 1715 N95-23952

DATA LINKS
Utilizing a TDRS satellite for direct broadcast satellite-radio propagation experiments and demonstrations p 1622 N95-22814
Differential GPS and system integration of the Low Visibility Landing and Surface Operations (LVLASO) demonstration p 1611 N95-23318

DATA MANAGEMENT
CDMS-CAD data set management system test plan | DE95-003219 | p 1755 N95-22718
CDMS: CAD data set system design description | DE95-003218 | p 1756 N95-22894
Using Dedal to share and reuse distributed engineering design information p 1768 N95-23678
The design of a petabyte archive and distribution system for the NASA ECS project p 1858 N95-24110
Robotic tape library system level testing at NSA: Present and planned p 1858 N95-24112
Optimizing tertiary storage organization and access for spatio-temporal datasets p 1861 N95-24131
The growth of the UniTree mass storage system at the NASA Center for Computational Sciences: Some lessons learned p 1862 N95-24135
Analysis of the request patterns to the NSSDC on-line archive p 1862 N95-24137

DATA PROCESSING
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer | NASA-CR-197368 | p 1735 N95-22482
Twelve month performance evaluation for the rotating shadowband radiometer | DE95-002847 | p 1726 N95-22554
PRISMA GENIE data analysis manual | PB95-130464 | p 1755 N95-22769
Environmental Systems Management Analysis and Reporting Network (E-SMART) | AD-A279766 | p 1732 N95-22856
TOGA/COARE AMMR 1992 data processing | NASA-CR-197289 | p 1736 N95-22867
Summary of solar cell data from the Long Duration Exposure Facility (LDEF) | NASA-CR-196539 | p 1727 N95-22904
The effect of sensor spacing on wind measurements at the Shuttle Landing Facility | NASA-TP-3529 | p 1742 N95-23010
TFTR Ion Cyclotron Range of Frequencies (ICRF) experimental data analysis collaboration | DE95-003409 | p 1832 N95-23084
Investigation of physical parameters in stellar flares observed by GINGA | NASA-CR-196547 | p 1868 N95-23205
Analysis of data from the energetic gamma-ray experiment of the Gamma Ray Observatory | NASA-CR-197347 | p 1871 N95-23216
Measurements of striae in CR+ doped YAG laser crystals p 1847 N95-23285
Stochastic decision analysis p 1854 N95-23305
Search Hanford accessible reports electronically system design description, revision 1 | DE95-004369 | p 1856 N95-23341

GPP: A General-Purpose Post Processor for wind turbine data analysis | DE95-000223 | p 1729 N95-23383
Index of nuclear data libraries available from the IAEA nuclear data section | DE94-634271 | p 1857 N95-23453
Search for supersymmetric (tilde W)(sub 1) and (tilde Z)(sub 2) states using the D0 detector | DE95-004581 | p 1811 N95-23581
Enhancement of F/A-18 operational flight measurements: Data report for phase 1 | DSTO-TR-0049 | p 1613 N95-23666
Utilizing inheritance in requirements engineering p 1768 N95-23677
A data analysis assistant p 1761 N95-23748
Calculation of satellite drag coefficients | AD-A285118 | p 1622 N95-23781
Status of LDEF activation measurements and archive p 1815 N95-23817
Lithologic discrimination and alteration mapping from AVIRIS Data, Socorro, New Mexico p 1701 N95-23847
Automating spectral unmixing of AVIRIS data using convex geometry concepts p 1702 N95-23848
Comparison of three methods for materials identification and mapping with imaging spectroscopy p 1702 N95-23853
Discrimination of poorly exposed lithologies in AVIRIS data p 1703 N95-23858
AVIRIS and TIMS data processing and distribution at the land processes distributed active archive center p 1706 N95-23872
Extraction of auxiliary data from AVIRIS distribution tape for spectral, radiometric, and geometric quality assessment p 1706 N95-23875
Preprocessing: Geocoding of AVIRIS data using navigation, engineering, DEM, and radar tracking system data p 1707 N95-23876
The data facility of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1707 N95-23877
Objective determination of image end-members in spectral mixture analysis of AVIRIS data p 1709 N95-23888
Investigations on the 1.7 micron residual absorption feature in the vegetation reflection spectrum p 1710 N95-23891
Laboratory spectra of field samples as a check on two atmospheric correction methods p 1711 N95-23894
Comparison of inversion models using AIRSAR data for Death Valley, California p 1713 N95-23945
Using simple page placement policies to reduce the cost of cache fills in coherent shared-memory systems | TR-535 | p 1753 N95-24177

DATA RECORDING
High data rate recorder development at MIT Haystack Observatory p 1690 N95-24118
A comparison of rotary- and stationary-head tape recorders p 1690 N95-24122
A terabyte linear tape recorder p 1690 N95-24139

DATA REDUCTION
Stochastic decision analysis p 1854 N95-23305
Optimal band selection for dimensionality reduction of hyperspectral imagery p 1709 N95-23887

DATA RETRIEVAL
Experience with CANDID: Comparison algorithm for navigating digital image databases | DE95-000869 | p 1855 N95-22515
Automated synthesis of image processing procedures using AI planning techniques p 1779 N95-23745
Document image archive transfer from DOS to UNIX p 1761 N95-24117

DATA SIMULATION
Task scheduling in dataflow computer architectures p 1753 N95-23301

DATA STORAGE
Optical image correlator using orthogonal data storage | AD-A285795 | p 1819 N95-22508
Holographic interferometric tomography for reconstructing flow fields p 1690 N95-23287
AVIRIS and TIMS data processing and distribution at the land processes distributed active archive center p 1706 N95-23872
The data facility of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1707 N95-23877
Applications drivers for data parking on the Information Superhighway p 1857 N95-24109
The design of a petabyte archive and distribution system for the NASA ECS project p 1858 N95-24110
Robotic tape library system level testing at NSA: Present and planned p 1858 N95-24112
The architecture of the High Performance Storage System (HPSS) p 1858 N95-24113
A 500 megabyte/second disk array p 1753 N95-24114
New architectural paradigms for multi-petabyte distributed storage systems p 1858 N95-24115
Optimizing raid performance with cache p 1761 N95-24116
Document image archive transfer from DOS to UNIX p 1761 N95-24117
High data rate recorder development at MIT Haystack Observatory p 1690 N95-24118
Petabyte mass memory system using the Newell Opticel(TM) p 1753 N95-24119
Integrating UniTree with the data migration API p 1761 N95-24120
Constraint based scheduling for the Goddard Space Flight Center distributed Active Archive Center's data archive and distribution system p 1859 N95-24121
Client/Server data serving for high performance computing p 1761 N95-24123
A kinetic study of hydrolysis of polyester elastomer in magnetic tape p 1652 N95-24124
Digital Linear Tape (DLT) technology and product family overview p 1753 N95-24125
The MAMMOTH project p 1753 N95-24126
Influence of technology on magnetic tape storage device characteristics p 1690 N95-24127
Approaches to 100 Gbit/sq. in. recording density p 1690 N95-24128
Optical storage media data integrity studies p 1829 N95-24130
Optimizing tertiary storage organization and access for spatio-temporal datasets p 1861 N95-24131
Building a COTS archive for satellite data p 1861 N95-24132
ASF archive issues: Current status, past history, and questions for the future p 1861 N95-24133

The growth of the UniTree mass storage system at the NASA Center for Computational Sciences: Some lessons learned p 1862 N95-24135
Evaluating the effect of online data compression on the disk cache of a mass storage system p 1862 N95-24138
Using simple page placement policies to reduce the cost of cache fills in coherent shared-memory systems | TR-535 | p 1753 N95-24177

DATA STRUCTURES
Path planning for planetary rover using extended elevation map p 1771 N95-23689
A constraint-logic based implementation of the coarse-grained approach to data acquisition scheduling of the International Ultraviolet Explorer orbiting observatory p 1779 N95-23741
Unifying data and control transformations for distributed shared-memory machines | TR-542 | p 1765 N95-24061
Scalable, extensible, and portable numerical libraries | DE95-004643 | p 1765 N95-24172

DATA SYSTEMS
Technical report series on global modeling and data assimilation. Volume 4: Documentation of the Goddard Earth Observing System (GEOS) data assimilation system, version 1 | NASA-TM-104606-VOL-4 | p 1740 N95-23529
Constraint based scheduling for the Goddard Space Flight Center distributed Active Archive Center's data archive and distribution system p 1859 N95-24121

DATA TRANSFER (COMPUTERS)
AVIRIS and TIMS data processing and distribution at the land processes distributed active archive center p 1706 N95-23872
The data facility of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1707 N95-23877
A 500 megabyte/second disk array p 1753 N95-24114
Document image archive transfer from DOS to UNIX p 1761 N95-24117
Petabyte mass memory system using the Newell Opticel(TM) p 1753 N95-24119
Integrating UniTree with the data migration API p 1761 N95-24120
Constraint based scheduling for the Goddard Space Flight Center distributed Active Archive Center's data archive and distribution system p 1859 N95-24121
Client/Server data serving for high performance computing p 1761 N95-24123
Optimizing tertiary storage organization and access for spatio-temporal datasets p 1861 N95-24131
NSSDC provides network access to key data via NDADS p 1862 N95-24136
Analysis of the request patterns to the NSSDC on-line archive p 1862 N95-24137

DATA TRANSMISSION
Addendum to the Proceedings of the Third International Mobile Satellite Conference (IMSC 1993) | NASA-CR-197343 | p 1655 N95-22813

A draft standard for message passing in a distributed memory environment
|DE94-019159| p 1657 N95-23075
Squeezing out all the performance: Using Ingres for a C(sup 3)I reporting system
|DE95-004591| p 1857 N95-23490
DEATH VALLEY (CA)
Comparison of inversion models using AIRSAR data for Death Valley, California p 1713 N95-23945
DEBONDING (MATERIALS)
Process for preparing an assembly of an article and a polyimide which resists dimensional change, delamination and debonding when exposed to changes in temperature
|NASA-CASE-LAR-14538-2| p 1649 N95-23254
DECAY
Neutrino masses and mixing
|DE94-628632| p 1812 N95-23784
DECAY RATES
Dynamical properties of critical and paramagnetic spin fluctuations in anisotropic heisenberg magnets
|PB95-134623| p 1798 N95-23127
DECISION MAKING
Teams and teamwork at NASA Langley Research Center p 1854 N95-23292
Langley Research Center Strategic Plan for Education p 1853 N95-23316
DECISION THEORY
Stochastic decision analysis p 1854 N95-23305
DTS: Building custom, intelligent schedulers p 1779 N95-23744
DECOMPOSITION
Dislocation decomposition, dissociation, and deformation in MoSi2 and (alpha)-Al2O3 single crystals
|DE95-002715| p 1839 N95-22653
NO decomposition in non-reducing atmospheres
|DE95-004324| p 1634 N95-23339
Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 1 p 1703 N95-23856
High resolution microstructural analysis of zirconia eutectic interfaces
|DE95-003143| p 1845 N95-24143
Effects of Bi and Bi2O3 additions on the microstructure and superconducting properties of powder-in-tube BSCCO (2212) tapes
|DE95-004605| p 1845 N95-24150
DECONTAMINATION
Mercury detection with thermal neutrons
|DE95-002061| p 1806 N95-23055
DECOUPLING
Dynamic disturbance decoupling of nonlinear systems and linearization
|PB95-141248| p 1767 N95-23558
DEEP SPACE
Effects of modulation index on telecommunications
|AD-A286018| p 1657 N95-23023
DEFECTS
Research on defects and transport in amorphous-silicon-based semiconductors
|DE94-011888| p 1660 N95-22586
New nondestructive techniques for the detection and quantification of corrosion in aircraft structures p 1644 N95-23512
Assessment of resin transfer molding process for the XM6 discharger, ERDEC SSP 93-64
|NIAR-94-2| p 1650 N95-23932
Particle transport in plasma reactors
|DE95-004541| p 1837 N95-24158
DEFENSE PROGRAM
Report to the Secretary of Defense. Unmanned aerial vehicles: No more Hunter systems should be bought until problems are fixed
|GAO/NSIAD-95-52| p 1613 N95-24091
Defense technology plan
|AD-A285415| p 1903 N95-24178
Defense science and technology strategy
|AD-A285414| p 1903 N95-24179
DEFINITION
LCM 3.0: A language for describing conceptual models. Syntax definition
|PB95-128005| p 1755 N95-22652
DEFLAGRATION
Influence of porosity and two-phase flow on diffusional/thermal instability of a deflagrating energetic material
|DE95-002592| p 1634 N95-23122
DEFLECTION
Method and apparatus for measuring the strain developed in a coated surface
|NASA-CASE-ARC-11938-1-C| p 1688 N95-23263
Deflections of anisotropic sandwich beams with variable face sheets and core thicknesses p 1700 N95-23310
DEFORMATION
Dislocation decomposition, dissociation, and deformation in MoSi2 and (alpha)-Al2O3 single crystals
|DE95-002715| p 1839 N95-22653
Covariant deformed oscillator algebras p 1797 N95-22978
Localization in deformed quantum mechanics p 1823 N95-22979
Real lasers and other deformed objects p 1692 N95-23001
BEm-BDF scheme for curvature driven moving stokes flows
|PB95-138905| p 1667 N95-23144
BEM solution to simulate the curvature driven deformation of a profile that is pressed into a plate of hot glass
|PB95-138913| p 1648 N95-23145
Electromagnetic production of pions on the nucleon
|DE95-004658| p 1811 N95-23587
Deformation of C15 Laves phase alloys
|DE95-003636| p 1646 N95-24067
DEGENERATION
Singlet quarks beyond the top at the tevatron
|PB95-139127| p 1807 N95-23158
Degenerate Hamiltonian Hopf bifurcations
|PB95-138871| p 1789 N95-23174
DEGRADATION
Evolution of oxidation and creep damage mechanisms in HIPed silicon nitride materials
|DE95-001360| p 1647 N95-22689
The hydrogen embrittlement of alloy X-750
|DE95-003207| p 1640 N95-22893
The detection and analysis of galvanic damage in BMI/graphite fiber composites p 1631 N95-23502
Non-destructive detection of corrosion for life management p 1643 N95-23505
In-situ detection of surface passivation or activation and of localized corrosion: Experiences and prospectives in aircraft p 1643 N95-23508
Oklahoma City air logistics center (USAF) aging aircraft corrosion program p 1607 N95-23519
Space environmental effects on polymer matrix composites as a function of sample location on LDEF p 1651 N95-23901
The effect of simulated low earth orbit radiation on polyimides (UV degradation study) p 1651 N95-23903
The surface properties of fluorinated polyimides exposed to VUV and atomic oxygen p 1651 N95-23904
Remote sensor test range update
|DE95-003629| p 1735 N95-24018
A kinetic study of hydrolysis of polyester elastomer in magnetic tape p 1652 N95-24124
DEGREES OF FREEDOM
Fermion-spin transformation to implement the charge-spin separation
|DE94-629035| p 1800 N95-22495
Algebraic approach to the vibrational excitations in methane p 1814 N95-22960
Pseudoclassical description of the Dirac Oscillator p 1825 N95-22996
Morphing hands and virtual tools (or What good is an extra degree of freedom?)
|TR-551| p 1783 N95-24036
DELAMINATING
Process for preparing an assembly of an article and a polyimide which resists dimensional change, delamination and debonding when exposed to changes in temperature
|NASA-CASE-LAR-14538-2| p 1649 N95-23254
Effects of delaminations on the damped dynamic characteristics of composite laminates: Mechanics and experiments
|NASA-TM-106862| p 1630 N95-23258
Separation of crack extension modes in composite delamination problems p 1700 N95-23281
Exfoliation corrosion and stress corrosion cracking behaviour of Al-Li alloys p 1641 N95-23498
Thermoelastic theory for the response of materials functionally graded in two directions with applications to the free-edge problem
|NASA-TM-106882| p 1699 N95-24055
DELAY
Automatic generation of efficient orderings of events for scheduling applications p 1618 N95-23764
DELTA FUNCTION
Bethe ansatz and quantum Davey-Stewartson 1 system with multicomponent in two dimensions
|DE94-628423| p 1786 N95-22631
DELTA LAUNCH VEHICLE
CFD flowfield simulation of Delta Launch Vehicles in a power-on configuration p 1673 N95-23433
DELTA WINGS
A study of the vortex flow over 76/40-deg double-delta wing
|NASA-CR-195032| p 1677 N95-23466
DENSE PLASMAS
Ninth topical conference on atomic processes in plasmas
|DE95-002810| p 1833 N95-23246
DENSITY MEASUREMENT
The TEXT neutral lithium beam edge density diagnostic
|DE95-003256| p 1830 N95-22719
Simulation of absorption edge densitometry
|DE95-004393| p 1635 N95-23360
Contribution of proton-induced short range secondaries to the LET spectra on LDEF p 1815 N95-23813
DEOXYRIBONUCLEIC ACID
Development of novel separation techniques for biological samples in capillary electrophoresis
|DE95-001672| p 1744 N95-22493
Open problems of computational molecular biology
|DE95-000895| p 1745 N95-22866
The torsion space nucleic acids molecular mechanics program DUPLEX: Surveying conformation space by potential energy minimization
|DE94-017707| p 1805 N95-22889
An improved system for exon recognition and gene modeling in human DNA sequences
|DE94-017863| p 1746 N95-22890
Activation of the jun-D gene in human myeloid cells by 1-(beta)-D-arabinofuranosylcytosine
|DE94-016591| p 1746 N95-22912
Rearrangement of RAG-1 recombinase gene in radiation-sensitive wasted mice
|DE94-017083| p 1746 N95-22913
A supersymmetric family of harmonic oscillators simulating H-bonds in DNA p 1748 N95-22963
Molecular relics from chemical evolution and the origin of life
|DE94-628493| p 1747 N95-23060
DEPLETION
Solar mass loss, solar lithium, and solar oscillations
|DE94-018262| p 1870 N95-22938
Krypton isotope analysis using near-resonant stimulated Raman spectroscopy
|DE95-005061| p 1635 N95-23348
DEPOLARIZATION
Strong collision approach to calculation of depolarization function for neutron beam passing through ferromagnetic bulk domains
|DE94-628847| p 1803 N95-22758
DEPOSITION
Infrared study of carbon deposits on bimetallic catalysts
|DE95-000902| p 1631 N95-22517
Surface growth of two kinds of particles deposition models
|DE94-628480| p 1841 N95-23021
Method of making a semiconductor device using a nanochannel glass matrix
|AD-D016383| p 1662 N95-23241
Cu deposition using a permanent magnet electron cyclotron resonance microwave plasma source
|DE94-017768| p 1650 N95-23981
Increasing the retained dose by plasma immersion ion implantation and deposition
|DE95-003423| p 1844 N95-24011
DEPOSITS
Infrared study of carbon deposits on bimetallic catalysts
|DE95-000902| p 1631 N95-22517
DEPTH
Aspects of surface generation in orthogonal ultraprecision machining
|DE95-000922| p 1654 N95-22678
Investigation of depth-area relationships associated with nanoindentations
|DE95-001353| p 1639 N95-22686
DERIVATION
Boson mapping techniques applied to constant gauge fields in QCD p 1814 N95-22969
Second derivative of the likelihood of an exact ARMA model
|PB95-135158| p 1788 N95-23069
Singular moduli and Arakelov intersection
|DE94-634286| p 1792 N95-23659
DERMATITIS
Skin exposure: Assessing the hazard in the workplace p 1628 N95-23030
DESIGN ANALYSIS
A high-power switch-mode DC power supply for dynamic loads
|DE94-016714| p 1659 N95-22504
Conceptual design of a 20-kA current lead using forced-flow cooling and Ag-alloy-sheathed Bi-2223 high-temperature superconductors
|DE95-002916| p 1660 N95-22569
Electromechanical Battery Program at the Lawrence Livermore National Laboratory
|DE95-003657| p 1727 N95-22574

Interdigital-H linac for unstable nuclei at INS
| DE94-765448 | p 1816 N95-22644
Using the shield for thermal energy storage in PULSAR
| DE95-002457 | p 1829 N95-22645
Advanced liquid oxygen (LO2) propellant conditioning concept testing
| NASA-TM-108477 | p 1652 N95-22672
Passive intermodulation generation in wire mesh deployable reflector antennas p 1656 N95-22816
Application requirements for wind turbine gearboxes
| DE94-011883 | p 1694 N95-22923
Euler technology assessment for preliminary aircraft design employing OVERFLOW code with multiblock structured-grid method
| NASA-CR-4651 | p 1608 N95-23095
The US molten carbonate fuel-cell development and commercialization effort
| DE94-019096 | p 1728 N95-23162
Aerodynamic design optimization with sensitivity analysis and computational fluid dynamics
| NASA-CR-197419 | p 1608 N95-23218
NASA 30 cm ion thruster development status
| NASA TM-106842 | p 1624 N95-23221
Functional testing of the space station plasma contactor
| NASA-TM-106841 | p 1624 N95-23240
Design of a differential radiometer for atmospheric radiative flux measurements
| DE95-002701 | p 1739 N95-23244
Design of a GaAs/Ge solar array for unmanned aerial vehicles
| NASA-TM-106870 | p 1728 N95-23259
Infinite possibilities: Computational structures technology p 1700 N95-23280
Inner loop flight control for the High-Speed Civil Transport p 1616 N95-23314
Multidisciplinary design optimization using genetic algorithms p 1619 N95-23332
Search Hanford accessible reports electronically system design description, revision 1
| DE95-004369 | p 1856 N95-23341
Design and production of efficient current leads for 1500-A, 50-Hz service in a 77-4 K temperature gradient
| DE95-004121 | p 1662 N95-23355
HTS current lead using a composite heat pipe
| DE95-003718 | p 1662 N95-23368
D(O) upgrade muon electronics design
| DE95-003744 | p 1817 N95-23369
Enhanced analysis and users manual for radial-inflow turbine conceptual design code RTD
| NASA-CR-195454 | p 1609 N95-23462
Mechanical design of the CDF SVX 2 silicon vertex detector
| DE94-018985 | p 1689 N95-23520
The next Large Helical Devices
| NIFS-323 | p 1835 N95-23535
Recent studies of the Large Helical Device
| NIFS-322 | p 1835 N95-23543
The STAR EM calorimeter design and small prototype test results
| DE95-004592 | p 1689 N95-23583
Methodology for CFD design analysis of National Launch System nozzle manifold p 1683 N95-23637
ASRM multi-port igniter flow field analysis p 1683 N95-23639
Application of CFD analysis to design support and problem resolution for ASRM and RSRM p 1685 N95-23649
Concept verification of three dimensional free motion simulator for space robot p 1618 N95-23702
A three-finger multisensory hand for dexterous space robotic tasks p 1752 N95-23705
Development of Japanese experiment module remote manipulator system p 1752 N95-23708
Automated solar cell assembly teamed process research
| DE95-000299 | p 1730 N95-23777
Micro heat spreader enhanced heat transfer in MCM's
| DE95-004520 | p 1663 N95-23779
PRISM Spectrograph Optical Design
| NASA-CR-197965 | p 1828 N95-24035
Design of a high-temperature superconductor current lead for electric utility SMES
| DE95-004604 | p 1664 N95-24163
Ultrafast, high precision gated integrator
| DE95-004616 | p 1664 N95-24164
Beryllium in the ITER blanket
| DE95-004620 | p 1837 N95-24165

DESIGN TO COST
A manufacturing database of advanced materials used in spacecraft structures p 1623 N95-23279

DESTABILIZATION
On the (DE-) stabilization of quantum mechanical binding by potential barriers
| DE94-628433 | p 1847 N95-22635

DETECTION
An automated computer misuse detection system for UNICOS
| DE95-000929 | p 1762 N95-22680
Light emission-or-absorbance-based binding assays for polynucleic acids
| AD-D016557 | p 1632 N95-22710
Evaluation of neutron techniques for illicit substance detection
| DE95-002988 | p 1632 N95-22764
Mercury detection with thermal neutrons
| DE95-002061 | p 1806 N95-23055
Health and usage monitoring systems: Corrosion surveillance p 1607 N95-23506
In-situ detection of surface passivation or activation and of localized corrosion: Experiences and prospectives in aircraft p 1643 N95-23508
New nondestructive techniques for the detection and quantification of corrosion in aircraft structures p 1644 N95-23512
Corrosion detection and monitoring of aircraft structures: An overview p 1644 N95-23515
Experience of in-service corrosion on military aircraft p 1644 N95-23516
The significance of hair mineral analysis as a means for assessing internal body burdens of environmental pollutants
| DE94-633512 | p 1734 N95-23541

DETERIORATION
Non-destructive detection of corrosion for life management p 1643 N95-23505
Reproducible direct exposure environmental testing of metal-based magnetic media p 1690 N95-24129

DETERMINANTS
Determinants of elliptic pseudo-differential operators
| PB95-109062 | p 1786 N95-22711
The U(3) x U(3) Nambu - Jona-Lasinio model with the gluon condensate and axial anomaly at finite temperature
| DE94-628588 | p 1804 N95-22787
Second derivative of the likelihood of an exact ARMA model
| PB95-135158 | p 1788 N95-23069

DETONATION
Level set techniques applied to unsteady detonation propagation
| DE95-002741 | p 1666 N95-22901

DETONATION WAVES
The effect of a non-zero shock width on wave propagation in multi-dimensions
| DE95-002748 | p 1666 N95-22902

DETONATORS
Computer modeling of detonators
| DE95-003031 | p 1652 N95-22721

DEUTERIUM
Structure, melting, and reactivity of nickel clusters from numerical simulations
| DE95-002911 | p 1638 N95-22531
The DIII-D divertor cryopump system: Design and operational experience
| DE95-003007 | p 1693 N95-22796
Engineering design of a radiative divertor for DIII-D
| DE95-003008 | p 1693 N95-22798
Exotic atoms
| DE95-003199 | p 1805 N95-22881

DIAGNOSIS
An intelligent ground operator support system p 1769 N95-23681
An expert system for diagnosing anomalies of spacecraft p 1770 N95-23684
Distributed intelligence for ground/space systems p 1770 N95-23685
Performance results of cooperating expert systems in a distributed real-time monitoring system p 1761 N95-23688
Ploxoma: Testbed for uncertain inference
| TR-537 | p 1794 N95-23927

DIAMINES
Polyazomethines containing trifluoromethylbenzene units
| NASA-CASE-LAR-14896-1 | p 1649 N95-23253
Process for preparing an assembly of an article and a polyimide which resists dimensional change, delamination and debonding when exposed to changes in temperature
| NASA-CASE-LAR-14538-2 | p 1649 N95-23254

DIAMONDS
Hypervelocity impact survivability experiments for carbonaceous impactors, part 2 p 1700 N95-23831

DIATOMIC MOLECULES
Fibonacci chain polynomials: Identities from self-similarity p 1814 N95-22962

DIELECTRIC PROPERTIES
Effect of critical field on screened dielectric breakdown growth
| DE94-628482 | p 1661 N95-23046
Microwave dielectric properties of boreal forest trees p 1716 N95-23961

DIELECTRICS
Turbidity of a near critical ionic fluid
| DE94-014916 | p 1633 N95-22869
Capacitive acoustic wave detector and method of using same
| NASA-CASE-LAR-13890-1 | p 1799 N95-22921
A new containerless image furnace with electro-static positioning device p 1690 N95-23674
Studies of autoionizing states relevant to dielectronic recombination
| DE94-014162 | p 1812 N95-23978
Reflectance control for multicrystalline-silicon photovoltaic modules using textured-dielectric coatings
| DE95-004532 | p 1731 N95-24155
Microporous polyimide films for reduced dielectric applications
| DE95-004543 | p 1650 N95-24159

DIESEL ENGINES
Diesel fuel component contributions to engine emissions and performance: Clean fuel study
| DE94-011868 | p 1732 N95-22834

DIESEL FUELS
Diesel fuel component contributions to engine emissions and performance: Clean fuel study
| DE94-011868 | p 1732 N95-22834

DIETHYL HYDROGEN PHOSPHITE (DEHP)
A comparative study of the effects of clofibrate, ciprofibrate, WY-14,643, and di-(2-ethylhexyl)-phthalate on liver protein expression in mice
| DE94-016587 | p 1748 N95-23771

DIFFERENCE EQUATIONS
Fourth order difference methods for hyperbolic IBVP's
| NASA-CR-197955 | p 1791 N95-23548

DIFFERENTIAL CALCULUS
On the theory of smooth structures 3
| DE94-628411 | p 1786 N95-22642

DIFFERENTIAL EQUATIONS
Diffusion terms in systems of reaction diffusion equations can lead to blow up
| DE94-628408 | p 1785 N95-22618
On oscillations of higher order neutral differential equations
| DE94-628421 | p 1786 N95-22629
Iterative solutions of nonlinear equations with strongly accretive or strongly pseudocontractive maps
| DE94-628432 | p 1786 N95-22634
Determinants of elliptic pseudo-differential operators
| PB95-109062 | p 1786 N95-22711
Deformed Heisenberg algebra and fractional spin field in 2+1 dimensions
| DE94-628507 | p 1850 N95-22779
Stoermer-Cowell: Straight, summed and split. An overview
| PB95-139341 | p 1789 N95-23200
A preliminary measurement of the average B hadron lifetime
| DE95-003138 | p 1808 N95-23226
Orders of predictor-corrector pairs for second-order ODE's
| PB95-140612 | p 1790 N95-23237
Aeroacoustic computation of gust-blade interaction p 1800 N95-23313
Iterative solutions of nonlinear equations in smooth Banach spaces
| DE94-634287 | p 1790 N95-23455

DIFFRACTION
Optical image correlator using orthogonal data storage
| AD-A285795 | p 1819 N95-22508
Long range potentials and multiple scattering theory in complex systems
| DE94-628881 | p 1804 N95-22791
A uniform geometrical optics and an extended uniform geometrical theory of diffraction for evaluating high frequency EM fields near smooth caustics and composite shadow boundaries
| NASA-CR-197934 | p 1657 N95-23391

DIFFRACTION PATTERNS
Nondestructive evaluation of fatigue damage in aluminum 2024 by x-ray diffraction p 1698 N95-23293

DIFFUSE RADIATION
Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 2 p 1703 N95-23857

DIFFUSION
Energetic particle observations at geosynchronous orbit
| DE95-000873 | p 1867 N95-22516
Modeling NO(x) emissions in turbulent jet flames: Effects of buoyancy and radiation
| DE94-016621 | p 1633 N95-22886
Dynamical behaviour of the coupled diffusion map lattice
| DE94-628481 | p 1841 N95-23022

Influence of porosity and two-phase flow on diffusional/thermal instability of a deflagrating energetic material
|DE95-002592| p 1634 N95-23122
New robust multigrid method for 2D convection-diffusion problems
|PB95-138897| p 1789 N95-23176

DIFFUSION COEFFICIENT
Analysis of physiochemical processes during solder aging
|DE95-003811| p 1638 N95-22576
Carbon doping of III-V compound semiconductors
|DE95-003431| p 1844 N95-24013

DIFFUSION FLAMES
Microgravity combustion science: 1995 program update
|NASA-TM-106858| p 1626 N95-24004

DIGITAL COMMAND SYSTEMS
DRACULA: Dynamic range control for broadcasting and other applications
|BBC-RD-1994/13| p 1658 N95-24044

DIGITAL DATA
Simulation of landsat thematic mapper imagery using AVIRIS hyperspectral imagery p 1705 N95-23869
Current and future use of TOPSAR digital topographic data for volcanological research p 1714 N95-23949
Comparison of 7.5-minute and 1-degree digital elevation models p 1719 N95-24095

DIGITAL ELECTRONICS
The MAMMOTH project p 1753 N95-24126

DIGITAL FILTERS
Parallel digital modem using multirate digital filter banks
|NASA-CR-197331| p 1761 N95-22478
VLSI for high-speed digital signal processing
|AD-A285643| p 1663 N95-23783
Subband quantum scattering times for AlGaAs/GaAs obtained using digital filtering
|NASA-TM-106873| p 1846 N95-24188

DIGITAL SIMULATION
Simulation of landsat thematic mapper imagery using AVIRIS hyperspectral imagery p 1705 N95-23869
Mapping and monitoring changes in vegetation communities of Jasper Ridge, CA, using spectral fractions derived from AVIRIS images p 1708 N95-23883
Using simple page placement policies to reduce the cost of cache fills in coherent shared-memory systems
|TR-535| p 1753 N95-24177

DIGITAL SYSTEMS
Parallel digital modem using multirate digital filter banks
|NASA-CR-197331| p 1761 N95-22478
Electronic photography at NASA Langley Research Center p 1690 N95-23298
DRACULA: Dynamic range control for broadcasting and other applications
|BBC-RD-1994/13| p 1658 N95-24044
Color orthophotography: To scan or not
|DE95-002749| p 1689 N95-24069
High data rate recorder development at MIT Haystack Observatory p 1690 N95-24118

DIGITAL TECHNIQUES
Adaptive beamforming in a CDMA mobile satellite communications system p 1655 N95-22815
Document image archive transfer from DOS to UNIX p 1761 N95-24117
Petabyte mass memory system using the Newell Opticel(TM) p 1753 N95-24119
The MAMMOTH project p 1753 N95-24126

DIMENSIONAL ANALYSIS
Assessment of resin transfer molding process for the XM6 discharger, ERDEC SSP 93-64
|NIAR-94-2| p 1650 N95-23932

DIMENSIONAL MEASUREMENT
Optimal band selection for dimensionality reduction of hyperspectral imagery p 1709 N95-23887

DIMENSIONLESS NUMBERS
A method of solving simple harmonic oscillator Schroedinger equation p 1797 N95-22989

DIMERS
Reduced dimer production in solar-simulator-pumped continuous wave iodine lasers based on model simulations and scaling and pumping studies
|NASA-TP-3486| p 1691 N95-23411

DIMETHYL COMPOUNDS
Dimethylsulfide oxidation over the tropical South Atlantic: OH and other oxidants
|NASA-CR-197417| p 1732 N95-22930

DIODES
Computational modelling of Er(3+): Garnet laser materials p 1692 N95-23326

DIPOLE MOMENTS
Harmonic oscillator representation in the theory of scattering and nuclear reactions p 1814 N95-22967
Computational studies of metal-metal and metal-ligand interactions
|NASA-CR-197862| p 1641 N95-23215

DIRAC EQUATION
Continuous local symmetry in Ising-type models
|DE94-629045| p 1839 N95-22649
Dirac canonical quantization and Faddeev-Jackiw symplectic quantization of higher order Lagrangians
|DE9?-628428| p 1796 N95-22788
Generalized phase transformations of spinor fields
|DE94-628505| p 1656 N95-22841
Pseudoclassical description of the Dirac Oscillator p 1825 N95-22996

DIRECTIONAL CONTROL
Flow measuring structures
|PB95-127254| p 1665 N95-22638
Feedback control laws for highly maneuverable aircraft
|NASA-CR-197944| p 1615 N95-23410

DIRICHLET PROBLEM
Quantum field between moving mirrors: A three dimensional example p 1821 N95-22965
Optimally scaled systems for second order scalar singularity perturbed problems
|PB95-138814| p 1789 N95-23169

DISCHARGERS
Assessment of resin transfer molding process for the XM6 discharger, ERDEC SSP 93-64
|NIAR-94-2| p 1650 N95-23932

DISCONTINUITY
Aeroacoustic computation of gust-blade interaction p 1800 N95-23313

DISCRETE FUNCTIONS
An interactive tool for discrete phase analysis in two-phase flows p 1683 N95-23641

DISEASES
Ploxoma: Testbed for uncertain inference
|TR-537| p 1794 N95-23927

DISK OPERATING SYSTEM (DOS)
Document image archive transfer from DOS to UNIX p 1761 N95-24117

DISLOCATIONS (MATERIALS)
Microstructural behavior of nonequilibrium systems
|DE95-004450| p 1630 N95-23924

DISORIENTATION
A review of civil aviation fatal accidents in which lost/disoriented was a cause/factor: 1981-1990
|DOT/FAA/AM-95/1| p 1611 N95-24071

DISPENSERS
Sensor-based control of rocket thrust chamber feature location for automated braze paste dispensing
|DE94-016559| p 1624 N95-22885

DISPLAY DEVICES
Virtual reality flight control display with six-degree-of-freedom controller and spherical orientation overlay
|NASA-CASE-NPO-18733-1-CU| p 1613 N95-22578
Automation technology using Geographic Information System (GIS) p 1863 N95-23284
Differential GPS and system integration of the Low Visibility Landing and Surface Operations (LVLASO) demonstration p 1611 N95-23318
Computational modelling of Er(3+): Garnet laser materials p 1692 N95-23326
An intelligent ground operator support system p 1769 N95-23681
Toward an automated signature recognition toolkit for mission operations p 1659 N95-23682
Full resolution hologram-like autostereoscopic display
|NASA-CR-197913| p 1689 N95-23789

DISRUPTING
Neural net prediction of tokamak plasma disruptions
|DE95-002616| p 1832 N95-23136

DISSIPATION
Study of frustrated systems via dissipative maps
|PB95-139093| p 1799 N95-23155

DISSOCIATION
Dislocation decomposition, dissociation, and deformation in MoSi2 and (alpha)-Al2O3 single crystals
|DE95-002715| p 1839 N95-22653
Thermochemistry of transition metal clusters
|DE95-003144| p 1646 N95-24144
Some thoughts of future experiments with the new generation of storage rings
|DE95-004602| p 1818 N95-24162

DISTILLATION
Airborne rotary air separator study
|NASA-CR-189099| p 1614 N95-24053

DISTORTION
Fabric geometry distortion during composites processing p 1631 N95-23288

DISTRIBUTED PARAMETER SYSTEMS
Utilizing inheritance in requirements engineering p 1768 N95-23677

DISTRIBUTED PROCESSING
Comparing data synchronization in Ada 9X and Orca
|PB95-127999| p 1754 N95-22529
Precise clock synchronization protocol
|PB95-127247| p 1687 N95-22536
Software for the generalized eigenproblem on distributed memory architectures
|DE95-002999| p 1755 N95-22690
A draft standard for message passing in a distributed memory environment
|DE94-019159| p 1657 N95-23075
Distributed VIRtual System (DIVIRS) project
|NASA-CR-197855| p 1757 N95-23180
Towards the Teraflop CFD
|NASA-CR-197947| p 1764 N95-23594
Using Dedal to share and reuse distributed engineering design information p 1768 N95-23678
Performance results of cooperating expert systems in a distributed real-time monitoring system p 1761 N95-23688
AVIRIS and TIMS data processing and distribution at the land processes distributed active archive center p 1706 N95-23872
The data facility of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1707 N95-23877
Scalability of atomic primitives on distributed shared memory multiprocessors
|TR-528| p 1764 N95-23930
Using high-performance networks to enable computational aerosciences applications
|NASA-CR-197951| p 1764 N95-24023
Unifying data and control transformations for distributed shared-memory machines
|TR-542| p 1765 N95-24061
A network-based distributed, media-rich computing and information environment
|DE95-003696| p 1765 N95-24074
Client/Server data serving for high performance computing p 1761 N95-24123

DISTRIBUTING
Description of a MIL-STD-1553B data bus Ada driver for the LeRC EPS Testbed
|NASA-TM-106866| p 1762 N95-22668

DISTRIBUTION FUNCTIONS
Nonparametric measure of spatial interaction in point patterns
|PB95-127965| p 1793 N95-22527
Wigner distribution function and entropy of the damped harmonic oscillator within the theory of the open quantum systems p 1798 N95-22990
(Phi)(sup 4) kinks: Statistical mechanics
|DE95-003693| p 1794 N95-23349
Gluon distribution as function of F(sub 2) and dF(sub 2)/dlnQ(exp 2) at small x
|DE94-635677| p 1812 N95-23975

DIVERTERS
The DIII-D divertor cryopump system: Design and operational experience
|DE95-003007| p 1693 N95-22796
Engineering design of a radiative divertor for DIII-D
|DE95-003008| p 1693 N95-22798
Divertor heat and particle control experiments on the DIII-D tokamak
|DE94-017518| p 1832 N95-23119
The next Large Helical Devices
|NIFS-323| p 1835 N95-23535
Recent studies of the Large Helical Device
|NIFS-322| p 1835 N95-23543

DIVERTORS (FUSION REACTORS)
D3-D program overview
|DE95-003879| p 1837 N95-24086

DOCUMENT STORAGE
Cost and schedule analytical techniques development
|NASA-CR-196548| p 1853 N95-22891

DOCUMENTS
NASAwide electronic publishing system: Electronic printing and duplicating, stage-2 evaluation report (GSFC)
|NASA-TM-104615| p 1856 N95-23209
Analysis of data from the energetic gamma-ray experiment of the Gamma Ray Observatory
|NASA-CR-197347| p 1871 N95-23216

DOMAINS
Coordinating complex decision support activities across distributed applications p 1761 N95-23749
Scheduling with genetic algorithms p 1761 N95-23762

DOORS
The sound insulations of studio doors. Part 2: Door seals
|BBC-RD-1994/15| p 1654 N95-24045
The sound insulations of studio doors. Part 1: Door blanks
|BBC-RD-1994/14| p 1654 N95-24093

DOPED CRYSTALS
MOCVD of gallium and calcium sulfides for improved phosphor processing
| DE95-000918 | p 1631 N95-22677
Hydrogen vibrational density of states of adsorbed water on rare-earth modified zirconia
| DE95-001127 | p 1632 N95-22681
Computational modelling of Er(3+): Garnet laser materials p 1692 N95-23326
Annealing of nitrogen-doped ZnSe at high pressures: Toward suppression of native defect formation
| DE95-003420 | p 1844 N95-24010
Carbon doping of III-V compound semiconductors
| DE95-003431 | p 1844 N95-24013
Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides
| DE95-004531 | p 1731 N95-24090
Extraction of the surface recombination velocity of passivated phosphorus-doped silicon emitters
| DE95-004539 | p 1845 N95-24156

DOPPLER RADAR
SWIFT BOAT 1994: Using a fast chase boat to investigate offshore weather features in conjunction with WSR-88D observations
| PB94-195146 | p 1742 N95-22651
Maximum-likelihood spectral estimation and adaptive filtering techniques with application to airborne Doppler weather radar
| NASA-CR-197699 | p 1658 N95-23670

DOSIMETERS
Annual report of the Osaka Laboratory for Radiation Chemistry Japan Atomic Energy Research Institute, (No. 26)
| DE94-785277 | p 1626 N95-23477
Dosimetric results on EURECA p 1872 N95-23800

DOWNLINKING
Design and production of efficient current leads for 1500-A, 50-Hz service in a 77-4 K temperature gradient
| DE95-004121 | p 1662 N95-23355

DRAINAGE
Streamflow and selected precipitation data for Yucca Mountain Region, southern Nevada and eastern California, water years 1986-90
| DE95-001893 | p 1742 N95-23385

DRIFT RATE
Electron drift velocities of Ar-CO2-CF4 gas mixtures
| DE95-004353 | p 1809 N95-23359
Laser light induced drift for atoms of radioactive isotopes Na-22 and Na-24
| DE94-635759 | p 1812 N95-23976

DRILLING
Study on possible environmental effects of a WBM cutting discharge in the north sea, one year after termination of drilling
| PB95-133740 | p 1733 N95-23125

DROP SIZE
Development of an atomization methodology for spray combustion p 1637 N95-23646

DROPS (LIQUIDS)
Quasistatic model for the motion of a viscous capillary liquid drop
| PB95-138848 | p 1667 N95-23172
Modeling of non-spherical droplet dynamics p 1685 N95-23647
A new containerless image furnace with electro-static positioning device p 1690 N95-23674

DROSOPHILA
Genetic effects on heavy ions in drosophila
| NASA-CR-197916 | p 1746 N95-22911

DRUGS
Evaluation of neutron techniques for illicit substance detection
| DE95-002988 | p 1632 N95-22764

DRYING
Innovative technology for contamination control in plasma processing
| DE95-000913 | p 1829 N95-22519

DUCTED FLOW
Computational Fluid Dynamics (CFD) analyses in support of Space Shuttle Main Engine (SSME) heat exchanger (HX) vane cracking investigation p 1679 N95-23619
Unsteady flow simulations in support of the SSME HEX turning vane cracking investigation with the ATD HPOTP p 1679 N95-23621

DUCTED ROCKET ENGINES
Fundamental phenomena on fuel decomposition and boundary layer combustion processes with applications to hybrid rocket motors
| NASA-CR-197919 | p 1625 N95-23261

DUCTILITY
The hydrogen embrittlement of alloy X-750
| DE95-003207 | p 1640 N95-22893

DUCTS
The use of cowl camber and taper to reduce rotor/stator interaction noise
| NASA-CR-195421 | p 1799 N95-22675
Three-D flow analysis of the alternate SSME HPOT TAD p 1679 N95-23620
On the accuracy of CFD-based pressure drop predictions for right-angle ducts p 1682 N95-23634
CFD modeling of turbulent duct flows for coolant channel analysis p 1682 N95-23635
Flow and heat transfer in 180-degree turn square ducts: Effects of turning configuration and system rotation p 1682 N95-23636

DUMMIES
Design of a cervical spine gross motion simulator for standard size human and anthropomorphic dummy adult and child
| NIAR-94-16 | p 1751 N95-24021

DUMPING
Study on possible environmental effects of a WBM cutting discharge in the north sea, one year after termination of drilling
| PB95-133740 | p 1733 N95-23125

DUNES
Determination of semi-arid landscape endmembers and seasonal trends using convex geometry spectral unmixing techniques p 1711 N95-23895
Mineralogic variability of the Kelso Dunes, Mojave Desert, California derived from Thermal Infrared Multispectral Scanner (TIMS) data p 1711 N95-23920
AIRSAR views of aerolian terrain p 1713 N95-23941

DURABILITY
Glass science tutorial: Lecture 1, Chemistry and properties of oxide glasses
| DE95-002963 | p 1647 N95-22647
Atomic oxygen durability evaluation of protected polymers using thermal energy plasma systems
| NASA-TM-106855 | p 1626 N95-23270
Interlaminar shear test method development for long term durability testing of composites p 1631 N95-23300
Problems of predicting material property retention during long term service p 1644 N95-23514
Durability of reflector materials in the space environment p 1651 N95-23912

DUST
Proceedings of NATO Advanced Research Workshop on the Formation, Transport and Consequences of Particles in Plasmas
| AD-A285850 | p 1829 N95-22514

DYE LASERS
Non-intrusive measurements in a rocket engine combustor p 1625 N95-23439

DYNAMIC CONTROL
Computational control of flexible aerospace systems
| NASA-CR-197902 | p 1621 N95-23260

DYNAMIC LOADS
A high-power switch-mode DC power supply for dynamic loads
| DE94-016714 | p 1659 N95-22504
Unsteady flow simulations in support of the SSME HEX turning vane cracking investigation with the ATD HPOTP p 1679 N95-23621
Enhancement of F/A-18 operational flight measurements: Data report for phase 1
| DSTO-TR-0049 | p 1613 N95-23666

DYNAMIC MODELS
Roles and dynamic subclasses: A modal logic approach
| PB95-127320 | p 1754 N95-22522
Semikinetic modeling and observations of high-latitude plasma outflow
| NASA-CR-197403 | p 1831 N95-23008
Modeling of nonequilibrium space plasma flows
| NASA-CR-197432 | p 1833 N95-23211
Flutter analysis of composite box beams
| NASA-CR-197931 | p 1615 N95-23392

DYNAMIC PRESSURE
Unsteady flow simulations in support of the SSME HEX turning vane cracking investigation with the ATD HPOTP p 1679 N95-23621

DYNAMIC PROGRAMMING
An improved system for exon recognition and gene modeling in human DNA sequences
| DE94-017863 | p 1746 N95-22890

DYNAMIC RANGE
Operation and tests of a DDC101 A/D
| DE95-003747 | p 1663 N95-23405
Multiband VLBI imaging of the jet in 3C 345
| PB95-139275 | p 1866 N95-23468
DRACULA: Dynamic range control for broadcasting and other applications
| BBC-RD-1994/13 | p 1658 N95-24044
A high speed digitizing photomultiplier tube base for the KTeV CsI calorimeter
| DE95-003739 | p 1664 N95-24081

DYNAMIC RESPONSE
A high-power switch-mode DC power supply for dynamic loads
| DE94-016714 | p 1659 N95-22504
Dynamic response tests of inertial and optical wind-tunnel model attitude measurement devices
| NASA-TM-109182 | p 1616 N95-23011
Influence of backup bearings and support structure dynamics on the behavior of rotors with active supports
| NASA-CR-197438 | p 1694 N95-23190
Dynamic modelling and response characteristics of a magnetic bearing rotor system including auxiliary bearings
| NASA-CR-197859 | p 1694 N95-23213
Effects of delaminations on the damped dynamic characteristics of composite laminates: Mechanics and experiments
| NASA-TM-106862 | p 1630 N95-23258
Dynamic response of a transducer mounted at one end of an acoustical cavity which is subjected to a specified pressure at the open end of the cavity
| DE95-004192 | p 1799 N95-23379
Nonlinear thermoviscoelastic behaviour in complex materials
| PB95-140653 | p 1630 N95-23537
Current-profile flattening and hot core shift due to the nonlinear development of resistive kink mode
| NIFS-311 | p 1835 N95-23564
Time-accurate unsteady flow simulations supporting the SRM T+68-second pressure spike anomaly investigation (STS-54B) p 1685 N95-23650
A multibody/finite element analysis approach for modeling of crash dynamic responses
| NIAR-94-3 | p 1610 N95-24050

DYNAMIC STABILITY
Handling qualities of the High Speed Civil Transport p 1616 N95-23325

DYNAMIC STRUCTURAL ANALYSIS
Integrated aerodynamic/dynamic/structural optimization of helicopter rotor blades using multilevel decomposition
| NASA-TP-3465 | p 1612 N95-22953
Geometrical interpretation for the outer SU(3) outer multiplicity label p 1814 N95-22968
Structural arrangement trade study. Volume 3: Reusable Hydrogen Composite Tank System (RHCTS) and Graphite Composite Primary Structures (GCPS). Addendum
| NASA-CR-197687 | p 1621 N95-23189
Computational control of flexible aerospace systems
| NASA-CR-197902 | p 1621 N95-23260
Thin tailored composite wing for civil tiltrotor p 1613 N95-23317
A new look at the simultaneous analysis and design of structures p 1700 N95-23327
Flutter analysis of composite box beams
| NASA-CR-197931 | p 1615 N95-23392

DYNAMIC TESTS
Nonlinear viscoelastic characterization of polymer materials using a dynamic-mechanical methodology p 1651 N95-23902

DYNAMICAL SYSTEMS
Hausdorff dimension of Julia sets of complex Henon mappings
| DE94-628420 | p 1785 N95-22628
Symplectic computation of Lyapunov exponents
| DE95-002732 | p 1795 N95-22654
Nonlinear system guidance in the presence of transmission zero dynamics
| NASA-TM-4661 | p 1654 N95-22804
Lyapunov exponents from CHUA's circuit time series using artificial neural networks p 1784 N95-22988
Static parametric fluctuations give nonstatistical behaviour in uncoupled chaotic systems
| DE94-628478 | p 1794 N95-23019
Dynamical behaviour of the coupled diffusion map lattice
| DE94-628481 | p 1841 N95-23022
Adaptive control of linear systems based on approximate models
| PB95-139333 | p 1767 N95-23199

DYSON THEORY
The convergence radius of the chiral expansion in the Dyson-Schwinger approach
| DE94-012852 | p 1805 N95-22925

E

EARTH (PLANET)
Space Science for the 21st Century. Strategic Plan for 1995-2000
| NASA-TM-110546 | p 1617 N95-22947

Physics of magnetospheric boundary layers
| NASA-CR-197920 | p 1739 N95-23271
Investigation of the role of gravity waves in the generation of equatorial bubbles
| NASA-CR-197962 | p 1739 N95-23272
Real-world shepherding: Combining vision, manipulation, and planning in real time
| TR-530 | p 1783 N95-24001
Using simulation-based projection to plan in an uncertain and temporally complex world
| TR-531 | p 1853 N95-24043

EARTH ATMOSPHERE
Magnetospheric space plasma investigations
| NASA-CR-197405 | p 1831 N95-22955
Physics of magnetospheric boundary layers
| NASA-CR-197920 | p 1739 N95-23271
Study of atmospheric parameters measurements using MM-wave radar in synergy with LITE-2
p 1741 N95-23278
Theoretical studies of spectroscopic problems of importance for atmospheric radiation measurements
p 1741 N95-23329
Oxidants and oxidation in the Earth's atmosphere
| NASA-CR-197945 | p 1734 N95-23460
The atmosphere below
| NASA-TM-110538 | p 1740 N95-23663

EARTH CRUST
Tomographic analysis of the three-dimensional variation of the seismic velocity structure of the shallow crust underlying Southern New England
| AD-A279406 | p 1739 N95-23247
Mapping of the Ronda peridotite massif (Spain) from AVIRIS spectro-imaging survey: A first attempt
p 1707 N95-23878

EARTH GRAVITATION
Newton in space
| NASA-TM-110535 | p 1799 N95-23273
Living in space
| NASA-TM-110536 | p 1751 N95-23274

EARTH IONOSPHERE
Magnetospheric space plasma investigations
| NASA-CR-197405 | p 1831 N95-22955
The high latitude ionosphere-magnetosphere transition region: Simulation and data comparison
| NASA-CR-197404 | p 1737 N95-22956
Physics of magnetospheric boundary layers
| NASA-CR-197920 | p 1739 N95-23271
TRACKER: A three-dimensional raytracing program for ionospheric radio propagation
| DE95-003510 | p 1658 N95-24015

EARTH MAGNETOSPHERE
Hot proton anisotropies and cool proton temperatures in the outer magnetosphere
| DE95-002719 | p 1736 N95-22850
Global electric field determination in the Earth's outer magnetosphere using energetic charged particles
| NASA-CR-197392 | p 1737 N95-22945
Magnetospheric space plasma investigations
| NASA-CR-197405 | p 1831 N95-22955
The high latitude ionosphere-magnetosphere transition region: Simulation and data comparison
| NASA-CR-197404 | p 1737 N95-22956
Semikinetic modeling and observations of high-latitude plasma outflow
| NASA-CR-197403 | p 1831 N95-23008
Modeling of the coupled magnetospheric and neutral wind dynamos
| NASA-CR-197861 | p 1738 N95-23090
Characteristics of low energy ions in the Heavy Ions In Space (HIIS) experiment p 1815 N95-23807

EARTH MANTLE
Axial focusing of energy from a hypervelocity impact on earth
| DE95-003347 | p 1740 N95-24008
Axial focusing of impact energy in the earth's interior: A possible link to flood basalts and hotspots
| DE95-003357 | p 1741 N95-24009

EARTH OBSERVATIONS (FROM SPACE)
Civilian satellite remote sensing: A strategic approach
| PB95-109633 | p 1717 N95-22713
Ocean observations with EOS/MODIS: Algorithm development and post launch studies
| NASA-CR-197402 | p 1717 N95-22916
Active vision in satellite scene analysis
p 1778 N95-23738

EARTH OBSERVING SYSTEM (EOS)
Land surface temperature measurements for EOS MODIS data
| NASA-CR-197443 | p 1717 N95-23191
Infrared algorithm development for ocean observations with EOS/MODIS
| NASA-CR-197851 | p 1743 N95-23212
Ocean observations with EOS/MODIS: Algorithm development and post launch studies
| NASA-CR-197894 | p 1718 N95-23473
Technical report series on global modeling and data assimilation. Volume 4: Documentation of the Goddard Earth Observing System (GEOS) data assimilation system, version 1
| NASA-TM-104606-VOL-4 | p 1740 N95-23529
Land surface temperature measurements from EOS MODIS data
| NASA-CR-197969 | p 1721 N95-24190

EARTH ORBITAL ENVIRONMENTS
Evaluation of adhesive materials used on the Long Duration Exposure Facility
| NASA-CR-4646 | p 1626 N95-22918
Electromagnetic radiation in the plasma environment around the shuttle
| NASA-TM-106891 | p 1738 N95-23116
Atomic oxygen durability evaluation of protected polymers using thermal energy plasma systems
| NASA-TM-106855 | p 1626 N95-23270
Outgassing products from orbiter TPS materials
p 1637 N95-23798
Dosimetric results on EURECA p 1872 N95-23800
Preliminary results of radiation measurements on EURECA p 1872 N95-23801
LDEF contributions to cosmic ray and radiation environments research p 1872 N95-23805
Trapped iron measured on LDEF
p 1872 N95-23806
Results from the Heavy Ions In Space (HIIS) experiment on the ionic charge state of solar energetic particles
p 1870 N95-23808
Early results from the ultra heavy cosmic ray experiment p 1872 N95-23809
Fission foil measurements of neutron and proton fluences in the A0015 experiment p 1815 N95-23811
Measurement of trapped proton fluences in main stack of P0006 experiment p 1815 N95-23812
Predictions of LET spectra measured on LDEF
p 1815 N95-23815
Predictions of LDEF radioactivity and comparison with measurements p 1815 N95-23818
Status of LDEF radiation modeling
p 1815 N95-23819
Be-10 in terrestrial bauxite and industrial aluminum: An LDEF fallout p 1646 N95-23820
Status of LDEF contributions to current knowledge of meteoroid and manmade debris environments and their effects on spacecraft in LEO p 1623 N95-23822
LDEF meteoroid and debris special investigation group investigations and activities at the Johnson Space Center p 1623 N95-23823
Micrometeoroids and debris on LDEF comparison with MIR data p 1623 N95-23824
Small craters on the meteoroid and space debris impact experiment p 1623 N95-23825
LDEF Interplanetary Dust Experiment (IDE) results
p 1869 N95-23828
The orbital characteristics of debris particle rings as derived from IDE observations of multiple orbit intersections with LDEF p 1869 N95-23829
Analytical electron microscopy of LDEF impactor residues p 1869 N95-23832
Debris and meteoroid proportions deduced from impact crater residue analysis p 1869 N95-23834
SIMS chemical and isotopic analysis of impact features from LDEF experiments AO187-1 and AO187-2
p 1637 N95-23837
The effect of impact angle on craters formed by hypervelocity particles p 1700 N95-23839
Experimental investigation of the relationship between impact crater morphology and impacting particle velocity and direction p 1700 N95-23840
Determining orbital particle parameters of impacts into germanium using morphology analysis and calibration data from hypervelocity impact experiments in the laboratory
p 1700 N95-23841
Cratering and penetration experiments in Teflon targets at velocities from 1 to 7 km/s p 1700 N95-23842
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 2
| NASA-CP-3275-PT-2 | p 1899 N95-23896
Summary and review of Materials Special Investigation Group evaluations of hardware from the Long Duration Exposure Facility p 1638 N95-23897
Recent results from Long Duration Exposure Facility materials testing p 1638 N95-23898
LDEF polymeric materials: A summary of Langley characterization p 1651 N95-23899
Surface characterization of LDEF carbon fiber/polymer matrix composites p 1631 N95-23900
Space environmental effects on polymer matrix composites as a function of sample location on LDEF
p 1651 N95-23901
The effect of simulated low earth orbit radiation on polyimides (UV degradation study) p 1651 N95-23903
The surface properties of fluorinated polyimides exposed to VUV and atomic oxygen p 1651 N95-23904
Collection and review of metals data obtained from LDEF experiment specimens and support hardware
p 1646 N95-23905
Changes in chemical and optical properties of thin film metal mirrors on LDEF p 1651 N95-23907
Further investigations of experiment A0034 atomic oxygen stimulated outgassing p 1651 N95-23908
Atomic oxygen interactions with protected organic materials on the Long Duration Exposure Facility (LDEF)
p 1627 N95-23909
Trend analysis of in-situ spectral reflectance data from the Thermal Control Surfaces Experiment (TCSE)
p 1631 N95-23910
Whisker/Cone growth on the thermal control surfaces experiment no. S0069 p 1651 N95-23911
Durability of reflector materials in the space environment p 1651 N95-23912
Four space application material coatings on the Long-Duration Exposure Facility (LDEF)
p 1651 N95-23913
Organic matrix composite protective coatings for space applications p 1627 N95-23914
Structure and properties of polymeric composite materials during 1501 days outer space exposure at Salyut-7 orbital station p 1652 N95-23915
Overview of the LDEF MSIG databasing activities
p 1864 N95-23916

EARTH ORBITAL RENDEZVOUS
Long range targeting for space based rendezvous
| NASA-CR-197890 | p 1757 N95-23388

EARTH ORBITS
Geolocation applications of the Gonets LEO messaging satellites p 1656 N95-22818
Low Earth Orbit satellite/terrestrial mobile service compatibility p 1656 N95-22819
Low Earth orbit thermal control coatings exposure flight tests: A comparison of U.S. and Russian results
| NASA-CR-4647 | p 1626 N95-22919
STS-61 Space Shuttle mission report
| NASA-TM-110545 | p 1619 N95-23187
USML-1 microgravity glovebox experiment no. 1 Passive Accelerometer System
| NASA-CR-196575 | p 1653 N95-23552

EARTH PLANETARY STRUCTURE
The effects of AVIRIS atmospheric calibration methodology on identification and quantitative mapping of surface mineralogy, Drum Mountains, Utah
p 1705 N95-23870

EARTH RESOURCES
Comparison of 7.5-minute and 1-degree digital elevation models p 1719 N95-24095

EARTH SCIENCES
The design of a petabyte archive and distribution system for the NASA ECS project p 1858 N95-24110

EARTH SURFACE
HAPEX-Sahel: Basic description of methods and data sets
| PB95-127262 | p 1701 N95-22639
Basic data sets description and preliminary results of EFEDA-Spain
| PB95-139291 | p 1740 N95-23470
Validation data for land surface temperature determination from satellites
| CSIRO-TR-33 | p 1718 N95-23597
The effects of AVIRIS atmospheric calibration methodology on identification and quantitative mapping of surface mineralogy, Drum Mountains, Utah
p 1705 N95-23870
Mapping and monitoring changes in vegetation communities of Jasper Ridge, CA, using spectral fractions derived from AVIRIS images p 1708 N95-23883
A comparison of spectral mixture analysis an NDVI for ascertaining ecological variables p 1710 N95-23892
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 3: AIRSAR Workshop
| NASA-CR-197354-VOL-3 | p 1712 N95-23938
MAX-91: Polarimetric SAR results on Montespertoli site p 1712 N95-23940

EARTHQUAKE DAMAGE
Seismic hazards at Kilauea and Mauna Loa volcanoes, Hawaii
| DE94-012109 | p 1737 N95-22924

EARTHQUAKES
Intermediate-term earthquake prediction and seismic zoning in Northern Italy
| DE94-627689 | p 1736 N95-22612
Seismic hazards at Kilauea and Mauna Loa volcanoes, Hawaii
| DE94-012109 | p 1737 N95-22924
Seismic evidence of conjugate normal faulting: The 1994 Devil Canyon earthquake sequence near Challis, Idaho
| DE95-002052 | p 1740 N95-23386

ECLIPSING BINARY STARS
Mass loss in the interacting semi-detached binary delta librae
| NASA-CR-197924 | p 1866 N95-23402

ECOLOGY
Geographic information analysis: An ecological approach for the management of wildlife on the forest landscape
|NASA-CR-197941| p 1719 N95-24094
ECONOMIC ANALYSIS
The possibilities for mobile and fixed services up to the 20/30 GHz frequency bands p 1656 N95-22817
Geolocation applications of the Gonets LEO messaging satellites p 1656 N95-22818
ECONOMIC IMPACT
Military bases: Environmental impact at closing installations. Report to Congressional requesters
|GAO/NSIAD-95-70| p 1735 N95-24057
ECONOMICS
Net energy analysis: Powerful tool for selecting electric power options
|DE95-002516| p 1728 N95-23133
DOD budget: Selected categories of planned funding for fiscal years 1995-99. Report to Congressional requesters
|GAO/NSIAD-95-92| p 1864 N95-24062
ECOSYSTEMS
Direct effects of atmospheric CO2 enrichment on plants and ecosystems: An updated bibliographic data base
|DE95-003060| p 1731 N95-22725
An extension of Freedman's results on a model of predator-prey dynamics as modified by the action of a parasite
|DE94-628488| p 1796 N95-23052
Revitalization of the Gemenc-area, Baja, Hungary. 1: A study on hydrological possibilities to revitalise the ecosystem in the Keselyues-area. 2: Towards the restoration of the Gyueruesalj floodplain
|PB95-139283| p 1718 N95-23469
Measurements of canopy chemistry with 1992 AVIRIS data at Blackhawk Island and Harvard Forest p 1706 N95-23873
Mapping and monitoring changes in vegetation communities of Jasper Ridge, CA, using spectral fractions derived from AVIRIS images p 1708 N95-23883
Transferring ecosystem simulation codes to supercomputers
|NASA-TM-4662| p 1759 N95-24052
Old-growth and mature forests near spotted owl nests in western Oregon p 1719 N95-24098
Hierarchical analysis of spatial pattern and processes of Douglas-fir forests p 1719 N95-24099
Forest and wildlife habitat analysis using remote sensing and geographic information systems p 1720 N95-24100
EDDY CURRENTS
Computation of magnetic forces on moving conductors by using ELEKTRA and other 3-D computer codes
|DE95-003308| p 1798 N95-22895
TPX magnet system status
|DE95-002389| p 1661 N95-23080
Eddy current detection of pitting corrosion around fastener holes p 1643 N95-23507
EDGE DETECTION
A certainty grid to object boundary algorithm
|PB94-203510| p 1755 N95-22637
Ligand K-edge x-ray adsorption spectroscopic studies of the electronic structure of inorganic model complexes and metalloprotein active sites
|DE95-003338| p 1840 N95-22851
EDITING
RAS Division model evaluation database tools
|DE95-003480| p 1733 N95-23123
Graphical timeline editing p 1761 N95-23746
EDUCATION
Hey! What's Space Station Freedom?
|NASA-TM-110531| p 1620 N95-22542
Simultaneous inference in multivariate calibration
|DE95-003592| p 1794 N95-23066
Living in space
|NASA-TM-110536| p 1751 N95-23274
Toys in space, 2
|NASA-TM-110541| p 1620 N95-23275
1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program
|NASA-CR-194972| p 1872 N95-23276
Formative and summative evaluation efforts for the Teacher Enhancement Institute conducted at the NASA Langley Research Center, summer 1994 p 1853 N95-23286
Design and implementation of two two-week Teacher Enhancement Institutes p 1853 N95-23306
Teacher Enhancement Institute p 1853 N95-23312
Langley Research Center Strategic Plan for Education p 1853 N95-23316
Preparation of course materials: Elementary mathematics of powered flight p 1853 N95-23320
Upward appraisal as a means for improving supervisory performance and promoting process improvement, with long-term implications for organizational change p 1854 N95-23323
Teacher Enhancement Institute p 1853 N95-23324
EFFLUENTS
Remote detection of trace effluents using resonance Raman spectroscopy
|DE94-016858| p 1633 N95-22887
EIGENVALUES
Software for the generalized eigenproblem on distributed memory architectures
|DE95-002999| p 1755 N95-22690
Parallal Arnoldi method for the construction of a Krylov subspace basis: An application in magnetohydrodynamics
|PB95-135786| p 1787 N95-22717
On pseudosupersymmetric oscillators and reality of relativistic energies for vector mesons p 1815 N95-22994
Regular graphs with four eigenvalues
|PB95-135141| p 1788 N95-23068
Partition of real symmetric matrices according to the multiplicities of their eigenvalues
|PB95-139846| p 1790 N95-23235
Set games
|PB95-140786| p 1794 N95-23539
EIGENVECTORS
An algorithm for the basis of the finite Fourier transform p 1760 N95-22985
Coherent states for the relativistic harmonic oscillator p 1825 N95-22993
The initial-value problem for viscous channel flows
|NASA-CR-195034| p 1667 N95-23207
Set games
|PB95-140786| p 1794 N95-23539
Singular moduli and Arakelov intersection
|DE94-634286| p 1792 N95-23659
EIKONAL EQUATION
Comparison of exact solution with Eikonal approximation for elastic heavy ion scattering
|NASA-TP-3498| p 1817 N95-22929
EINSTEIN EQUATIONS
Possibility of extending space-time coordinates
|DE94-628512| p 1796 N95-22737
Does the relativity principle violate?
|DE94-635420| p 1851 N95-23964
ELASTIC BENDING
Deflections of anisotropic sandwich beams with variable face sheets and core thicknesses p 1700 N95-23310
Residual strength of thin panels with cracks p 1700 N95-23311
Thin tailored composite wing for civil tiltrotor p 1613 N95-23317
ELASTIC MEDIA
Propagation of waves at the loosely bonded interface of two porous elastic half-spaces
|DE94-628477| p 1800 N95-23018
ELASTIC PROPERTIES
Vibration-damping structural component
|AD-D016550| p 1693 N95-22707
Experimental and theoretical studies on the C15 intermetallic compounds MV2 (M = Zr, Hf and Ta): Elasticity and phase stability
|DE95-003723| p 1845 N95-24079
The effect of elastic stress on Ostwald Ripening Phenomena
|DE95-002599| p 1646 N95-24140
ELASTIC SCATTERING
Comparison of exact solution with Eikonal approximation for elastic heavy ion scattering
|NASA-TP-3498| p 1817 N95-22929
ELASTOMERS
A kinetic study of hydrolysis of polyester elastomer in magnetic tape p 1652 N95-24124
ELECTRIC BATTERIES
Energy Conversion and Storage Program
|DE95-003796| p 1725 N95-22501
Electromechanical Battery Program at the Lawrence Livermore National Laboratory
|DE95-003657| p 1727 N95-22574
Chemical Sciences Division
|DE95-002655| p 1626 N95-24142
ELECTRIC CONDUCTORS
Conceptual design of a 20-kA current lead using forced-flow cooling and Ag-alloy-sheathed Bi-2223 high-temperature superconductors
|DE95-002916| p 1660 N95-22569
ELECTRIC CONTACTS
Large-area triple-junction a-Si alloy production scaleup
|DE95-000245| p 1726 N95-22546
ELECTRIC CURRENT
Potential aerospace applications of high temperature superconductors p 1664 N95-23322
Design of a high-temperature superconductor current lead for electric utility SMES
|DE95-004604| p 1664 N95-24163
ELECTRIC EQUIPMENT
Layered Electrical Product Application Protocol (AP)
|DE95-001524| p 1754 N95-22548
Application Protocol, Initial Graphics Exchange Specification (IGES), Layered Electrical Product
|DE95-004266| p 1757 N95-23337
ELECTRIC FIELDS
Superlattices in thermoelectric applications
|DE95-001356| p 1840 N95-22687
Analytical and numerical studies of ion mobility near the tokamak plasma edge
|DE95-003019| p 1830 N95-22693
Calculated coupling efficiency between an elliptical-core optical fiber and a silicon oxynitride rib waveguide
|NASA-TM-106850| p 1820 N95-22915
Global electric field determination in the Earth's outer magnetosphere using energetic charged particles
|NASA-CR-197392| p 1737 N95-22945
Dynamics of L to H bifurcation
|DE94-019126| p 1832 N95-23163
Plasmo-magnetoelastic waves in a semiconducting heterostructure. 1: Plasmo-elastic longitudinal modes. 2: Sh-magnetoelastic modes
|PB95-138822| p 1833 N95-23170
Collisionless magnetic reconnection associated with coalescence of flux bundles
|NIFS-315| p 1834 N95-23525
Physical mechanism determining the radial electric field and its radial structure in a toroidal plasma
|NIFS-313| p 1835 N95-23534
Growth of single crystals of organic salts with large second-order optical nonlinearities by solution processes for devices
|NASA-CR-197963| p 1843 N95-23563
Studies of autoionizing states relevant to dielectronic recombination
|DE94-014162| p 1812 N95-23978
ELECTRIC FURNACES
Glass science tutorial: Lecture 2, operating electric glass melters
|DE95-002965| p 1647 N95-22648
ELECTRIC GENERATORS
Electromechanical Battery Program at the Lawrence Livermore National Laboratory
|DE95-003657| p 1727 N95-22574
ELECTRIC HYBRID VEHICLES
A hybrid vehicle evaluation code and its application to vehicle design
|DE95-004205| p 1662 N95-23334
ELECTRIC MOTOR VEHICLES
Electromechanical Battery Program at the Lawrence Livermore National Laboratory
|DE95-003657| p 1727 N95-22574
Load calculation and system evaluation for electric vehicle climate control
|DE95-004350| p 1695 N95-23358
Multi-fuel reformers for fuel cells used in transportation. Phase 1: Multi-fuel reformers
|DE95-004215| p 1729 N95-23482
Energy efficiency of electric vehicles at the 1994 American Tour de Sol
|DE95-002905| p 1664 N95-24070
ELECTRIC MOTORS
Motor drive technologies for the power-by-wire (PBW) program: Options, trends and tradeoffs
|NASA-TM-106885| p 1616 N95-23671
ELECTRIC POTENTIAL
Current estimation for electromigration, hot carriers, and voltage drop
|AD-A285794| p 1659 N95-22507
Energetic particle observations at geosynchronous orbit
|DE95-000873| p 1867 N95-22516
Functional testing of the space station plasma contactor
|NASA-TM-106841| p 1624 N95-23240
Fast potential change in sawteeth in JIPP T-IIU tokamak plasmas
|NIFS-327| p 1835 N95-23533
ELECTRIC POWER PLANTS
Net energy analysis: Powerful tool for selecting electric power options
|DE95-002516| p 1728 N95-23133
ELECTRIC POWER SUPPLIES
Net energy analysis: Powerful tool for selecting electric power options
|DE95-002516| p 1728 N95-23133
ELECTRIC PROPULSION
Ground-based and space-based laser beam power applications
|NASA-TM-106744| p 1691 N95-22670

ELECTRIC SWITCHES
Liquid nitrogen temperature operation of a switching power converter
| NASA-TM-106867 | p 1662 N95-23219
ELECTRICAL ENGINEERING
Proceedings of the fuel cells 1994 contractors review meeting
| DE94-012285 | p 1730 N95-23977
ELECTRICAL IMPEDANCE
Surface impedance studies on the electrodynamical response of organic superconductors
| DE95-002986 | p 1660 N95-22593
The detection and analysis of galvanic damage in BMI/graphite fiber composites p 1631 N95-23502
The use of electrochemical impedance spectroscopy to predict the corrosion of aluminum-lithium alloys in marine environments p 1637 N95-23504
ELECTRICAL INSULATION
HTS current lead using a composite heat pipe
| DE95-003718 | p 1662 N95-23368
ELECTRICAL MEASUREMENT
Energetic particle observations at geosynchronous orbit
| DE95-000873 | p 1867 N95-22516
Second order focusing property of 210 deg cylindrical energy analyzer
| NIFS-317 | p 1834 N95-23527
ELECTRICAL PROPERTIES
Progress report on conductive paints, September 1, 1994-November 30, 1994
| DE95-004297 | p 1649 N95-23356
ELECTRICAL RESISTIVITY
Electrical resistivity of liquid alkali metals and non-local pseudopotential
| DE94-627417 | p 1639 N95-22608
A special percolation problem in ceramic composites
| DE94-627641 | p 1647 N95-22611
Superlattices in thermoelectric applications
| DE95-001356 | p 1840 N95-22687
Corrosivity sensor
| AD-D016549 | p 1687 N95-22706
Gas cooled leads. Part 1: Theoretical Study. Part 2: Frost free lead optimized for a specific current. Part 3: Frost free lead optimized for a large current range
| DE95-002657 | p 1660 N95-22716
Computer modeling of detonators
| DE95-003031 | p 1652 N95-22721
A model for the metal-nonmetal transition in metal-molten salt solutions
| DE94-628490 | p 1640 N95-23057
Transport properties of Tl2Ba2CaCu2O8 meander lines
| DE95-003715 | p 1843 N95-23367
Computer simulation of a magnetohydrodynamic dynamo 2
| NIFS-320 | p 1836 N95-23590
ELECTRIFICATION
Collaborative research on aircraft icing and charging processes in ice
| AD-A285102 | p 1609 N95-23201
ELECTRO-OPTICAL PHOTOGRAPHY
Electronic photography at NASA Langley Research Center p 1690 N95-23298
ELECTROCHEMICAL CORROSION
The corrosion protection of 2219-T87 aluminum by organic and inorganic zinc-rich primers
| NASA-TP-3543 | p 1641 N95-23186
Corrosion protection measures for CFC/metal joints of fuel integral tank structures of advanced military aircraft p 1644 N95-23510
ELECTROCHEMISTRY
Energy Conversion and Storage Program
| DE95-003796 | p 1725 N95-22501
Ligand K-edge x-ray adsorption spectroscopic studies of the electronic structure of inorganic model complexes and metalloprotein active sites
| DE95-003338 | p 1840 N95-22851
The detection and analysis of galvanic damage in BMI/graphite fiber composites p 1631 N95-23502
Health and usage monitoring systems: Corrosion surveillance p 1607 N95-23506
In-situ detection of surface passivation or activation and of localized corrosion: Experiences and prospectives in aircraft p 1643 N95-23508
Test method and test results for environmental assessment of aircraft materials p 1643 N95-23509
ELECTRODES
Vision-sensing image analysis for GTAW process control
| DE95-003936 | p 1695 N95-23373
Investigation of arc length versus flange thickness while using an arc voltage controller
| DE95-003937 | p 1695 N95-23374
Electrochemical studies of perovskite mixed conductors
| DE95-003704 | p 1636 N95-23573
Circular electrode geometry metal-semiconductor-metal photodetectors
| NASA-CASE-LAR-15172-1-CU | p 1663 N95-24048
ELECTRODYNAMICS
Surface impedance studies on the electrodynamical response of organic superconductors
| DE95-002986 | p 1660 N95-22593
A space-time lattice version of scalar electrodynamics
| DE94-628577 | p 1850 N95-22784
ELECTROLUMINESCENCE
MOCVD of gallium and calcium sulfides for improved phosphor processing
| DE95-000918 | p 1631 N95-22677
ELECTROLYTES
Electrochemical studies of perovskite mixed conductors
| DE95-003704 | p 1636 N95-23573
ELECTROMAGNETIC ABSORPTION
Optical absorption in an indirect-gap semiconductor quantum well systems
| DE94-628878 | p 1849 N95-22759
ELECTROMAGNETIC COMPATIBILITY
Thermal effects on the STAR electromagnetic calorimeter
| DE95-004663 | p 1688 N95-23492
ELECTROMAGNETIC COUPLING
Electroweak coupling measurements from polarized Bhabha scattering at SLD
| DE95-003137 | p 1807 N95-23165
ELECTROMAGNETIC FIELDS
Relativistic particle with torsion and charged particle in a constant electromagnetic field: Identity of evolution
| DE94-628506 | p 1803 N95-22778
Generalized phase transformations of spinor fields
| DE94-628505 | p 1656 N95-22841
A uniform geometrical optics and an extended uniform geometrical theory of diffraction for evaluating high frequency EM fields near smooth caustics and composite shadow boundaries
| NASA-CR-197934 | p 1657 N95-23391
ELECTROMAGNETIC INTERACTIONS
Unification of electromagnetic, strong and weak interaction
| DE94-628570 | p 1655 N95-22746
ELECTROMAGNETIC INTERFERENCE
US Navy operating experience with new aircraft construction materials p 1645 N95-23517
ELECTROMAGNETIC NOISE
Electromagnetic radiation in the plasma environment around the shuttle
| NASA-TM-106891 | p 1738 N95-23116
ELECTROMAGNETIC RADIATION
Electromagnetic radiation in the plasma environment around the shuttle
| NASA-TM-106891 | p 1738 N95-23116
Atoms as many-body systems
| DE95-004609 | p 1813 N95-24151
ELECTROMAGNETIC SPECTRA
The effects of AVIRIS atmospheric calibration methodology on identification and quantitative mapping of surface mineralogy, Drum Mountains, Utah p 1705 N95-23870
ELECTROMAGNETS
Parallel computation of automatic differentiation applied to magnetic field calculations
| DE95-004689 | p 1763 N95-23486
Cu deposition using a permanent magnet electron cyclotron resonance microwave plasma source
| DE94-017768 | p 1650 N95-23981
ELECTROMECHANICAL DEVICES
Superconductivity devices: Commercial use of space
| NASA-CR-197885 | p 1648 N95-22883
Design and application of electromechanical actuators for deep space missions
| NASA-CR-197957 | p 1694 N95-22909
Operator procedure verification with a rapidly reconfigurable simulator p 1618 N95-23679
ELECTROMECHANICS
Electromechanical Battery Program at the Lawrence Livermore National Laboratory
| DE95-003657 | p 1727 N95-22574
Using Dedal to share and reuse distributed engineering design information p 1768 N95-23678
ELECTROMIGRATION
Current estimation for electromigration, hot carriers, and voltage drop
| AD-A285794 | p 1659 N95-22507
ELECTRON ACCELERATION
Electron beam acceleration and compression for short wavelength FELs
| DE95-003371 | p 1691 N95-22704
ELECTRON ACCELERATORS
Time-resolved EPR studies of the H atom: A stable heavy isotope of muonium
| DE95-004614 | p 1810 N95-23491
Design study of beam dynamics issues for 1 TeVnext linear collider based on the relativistic-klystron two-beam accelerator
| DE95-004673 | p 1817 N95-23493
ELECTRON BEAMS
Precision standard model tests with polarized e(+)e(-) beams
| DE95-003367 | p 1816 N95-22702
Electron beam acceleration and compression for short wavelength FELs
| DE95-003371 | p 1691 N95-22704
Method and system for electron beam lithography
| AD-D016554 | p 1660 N95-22709
Measurement of the left-right charge asymmetry in hadronic Z decays and A(sub e) determination
| DE95-003467 | p 1806 N95-23140
Electron drift velocities of Ar-CO2-CF4 gas mixtures
| DE95-004353 | p 1809 N95-23359
D(O) upgrade muon electronics design
| DE95-003744 | p 1817 N95-23369
Search for scalar and vector leptoquarks in electron-proton collisions at radical S = 300 GeV
| DE94-785267 | p 1810 N95-23475
Design study of longitudinal dynamics of the drive beam in 1 TeV relativistic klystron two-beam accelerator
| DE95-004683 | p 1817 N95-23485
Undulators for short wavelength FEL amplifiers
| DE95-004690 | p 1692 N95-23487
Design study of beam dynamics issues for 1 TeVnext linear collider based on the relativistic-klystron two-beam accelerator
| DE95-004673 | p 1817 N95-23493
High current induction linacs
| DE95-003442 | p 1818 N95-24014
ELECTRON BUNCHING
Electron beam acceleration and compression for short wavelength FELs
| DE95-003371 | p 1691 N95-22704
High current induction linacs
| DE95-003442 | p 1818 N95-24014
ELECTRON DENSITY (CONCENTRATION)
Runaway electrons in TEXT-U
| DE94-019218 | p 1831 N95-22862
The q profile evolution and enhanced core confinement of high (beta)(sub p) plasmas in D3-D
| DE95-003878 | p 1834 N95-23371
ELECTRON DENSITY PROFILES
The TEXT neutral lithium beam edge density diagnostic
| DE95-003256 | p 1830 N95-22719
ELECTRON DIFFRACTION
On core level electron diffraction
| DE94-628484 | p 1842 N95-23048
ELECTRON DISTRIBUTION
Generation of fast electrons in reversed field pinches by the equilibrium grad (vert bar)B(vert bar) force
| DE95-004467 | p 1809 N95-23363
ELECTRON EMISSION
Generation of fast electrons in reversed field pinches by the equilibrium grad (vert bar)B(vert bar) force
| DE95-004467 | p 1809 N95-23363
ELECTRON ENERGY
Charging of interplanetary grains
| NASA-CR-198032 | p 1869 N95-24066
Experimental and theoretical studies on the C15 intermetallic compounds MV2 (M = Zr, Hf and Ta): Elasticity and phase stability
| DE95-003723 | p 1845 N95-24079
ELECTRON GAS
The effect of magnetic field on the edge plasmons of two-dimensional electron gas systems
| DE94-018044 | p 1837 N95-23982
ELECTRON GUNS
A high-power switch-mode DC power supply for dynamic loads
| DE94-016714 | p 1659 N95-22504
ELECTRON IMPACT
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
| DE95-001135 | p 1687 N95-22682
Rate coefficients for the electron-impact excitation, ionization and recombination of He-like ions, S XV, Ca XIX and Fe XXV, and related processes
| ISAS-R-657 | p 1811 N95-23604
Charging of interplanetary grains
| NASA-CR-198032 | p 1869 N95-24066
ELECTRON IRRADIATION
Study of photorefractive non-linearities in the 3-5 and 2-4 semi-insulator compounds: The effect of electron irradiation
| PB94-189057 | p 1839 N95-22584
Application of electron paramagnetic resonance imaging to the characterization of the Ultem(R) exposed to 1 MeV electrons. Correlation of radical density data to tiger code calculations p 1815 N95-23328

ELECTRON MICROSCOPES
Transmission electron microscope studies of extraterrestrial materials
| NASA-CR-188363 | p 1633 N95-23092
ELECTRON MICROSCOPY
Analytical electron microscopy of LDEF impactor residues p 1869 N95-23832
ELECTRON MOBILITY
Computational modeling of properties
| NAS-CR-196544 | p 1841 N95-22907
ELECTRON PARAMAGNETIC RESONANCE
Application of electron paramagnetic resonance imaging to the characterization of the Ultem(R) exposed to 1 MeV electrons. Correlation of radical density data to tiger code calculations p 1815 N95-23328
Time-resolved EPR studies of the H atom: A stable heavy isotope of muonium
| DE95-004614 | p 1810 N95-23491
ELECTRON PHONON INTERACTIONS
Magnetic field effects on strong-coupling polaron in quantum dots
| DE94-629038 | p 1847 N95-22496
Resonant shallow donor magnetopolaron effect in a GaAs/AlGaAs quantum dot in high magnetic fields
| DE94-629039 | p 1798 N95-22497
ELECTRON PLASMA
Langmuir-like waves and radiation in planetary foreshocks
| NASA-CR-197376 | p 1869 N95-22828
ELECTRON PRECIPITATION
Magnetospheric space plasma investigations
| NASA-CR-197405 | p 1831 N95-22955
The high latitude ionosphere-magnetosphere transition region: Simulation and data comparison
| NASA-CR-197404 | p 1737 N95-22956
Semikinetic modeling and observations of high-latitude plasma outflow
| NASA-CR-197403 | p 1831 N95-23008
ELECTRON SCATTERING
Studies of photon and electron interactions with atoms and ions
| DE95-003340 | p 1802 N95-22700
Pressure shifts and electron scattering in atomic and molecular gases
| DE95-003102 | p 1803 N95-22747
Neutron compton scattering
| PB95-139135 | p 1807 N95-23159
Electroweak coupling measurements from polarized Bhabha scattering at SLD
| DE95-003137 | p 1807 N95-23165
The energy broadening resulting from electron stripping process of a low energy Au(-) beam
| NIFS-325 | p 1836 N95-23569
ELECTRON SOURCES
Advanced technologies for a compact RF linac FEL
| DE95-003674 | p 1692 N95-24072
ELECTRON SPECTROSCOPY
On core level electron diffraction
| DE94-628484 | p 1842 N95-23048
ELECTRON STATES
Optogalvanic monitoring of collisional transfer of laser excitation energy in a neon RF plasma
| DE95-003103 | p 1691 N95-22748
Studies of autoionizing states relevant to dielectronic recombination
| DE94-014162 | p 1812 N95-23978
ELECTRON TRANSFER
Magnetic resonance and optical spectroscopic studies of carotenoids
| DE95-003729 | p 1631 N95-22575
ELECTRON TRANSITIONS
Optogalvanic monitoring of collisional transfer of laser excitation energy in a neon RF plasma
| DE95-003103 | p 1691 N95-22748
ELECTRON-ION RECOMBINATION
Studies of autoionizing states relevant to dielectronic recombination
| DE94-014162 | p 1812 N95-23978
ELECTRON-POSITRON PAIRS
Heavy quark physics at SLD: Preliminary results
| DE95-003372 | p 1806 N95-23138
Final result on the mass of the tau lepton from the BES collaboration
| DE95-003466 | p 1806 N95-23139
Measurement of the left-right charge asymmetry in hadronic Z decays and A(sub e) determination
| DE95-003467 | p 1806 N95-23140
Measuring the left-right cross section asymmetry in Z boson production by e(+)e(-) collisions at the SLC
| DE95-003468 | p 1807 N95-23141
Electroweak coupling measurements from polarized Bhabha scattering at SLD
| DE95-003137 | p 1807 N95-23165
Hard e(+)e(-)-pair Bremsstrahlung as a lepton polarimeter
| DE94-635615 | p 1812 N95-23984
ELECTRONIC EQUIPMENT
Layered Electrical Product Application Protocol (AP)
| DE95-001524 | p 1754 N95-22548
Differential GPS and system integration of the Low Visibility Landing and Surface Operations (LVLASO) demonstration p 1611 N95-23318
Application Protocol, Initial Graphics Exchange Specification (IGES), Layered Electrical Product
| DE95-004266 | p 1757 N95-23337
Solderability preservation through the use of organic inhibitors
| DE95-003633 | p 1664 N95-24149
ELECTRONIC FILTERS
Programmable hyperspectral image mapper with on-array processing
| NASA-CASE-NPO-17794-1-CU | p 1819 N95-22765
ELECTRONS
Fermion-spin transformation to implement the charge-spin separation
| DE94-629035 | p 1800 N95-22495
Magnetic field effects on strong-coupling polaron in quantum dots
| DE94-629038 | p 1847 N95-22496
The omega pi(sup 0)-transient form factor within effective chiral Lagrangian approach
| DE94-628612 | p 1850 N95-22812
Runaway electrons in TEXT-U
| DE94-019218 | p 1831 N95-22862
Ionic core effects on the Mie resonance in lithium clusters
| DE94-014974 | p 1805 N95-22870
Photon and electron interaction databases and their use in medical applications
| DE94-015558 | p 1855 N95-22871
Analytical Boltzmann moments for electrons in N2-O2-H2O gas mixtures
| DE95-003474 | p 1732 N95-22898
The electronic structure of heavy element complexes
| DE95-003407 | p 1806 N95-23082
Search for Z' and W' at CDF
| DE94-018987 | p 1808 N95-23203
Search for supersymmetric (tilde W)(sub 1) and (tilde Z)(sub 2) states using the D0 detector
| DE95-004581 | p 1811 N95-23581
ESTAR, PSTAR, ASTAR: A PC package for calculating stopping powers and ranges of electrons, protons and helium ions, version 2
| DE94-634435 | p 1811 N95-23773
Charging of interplanetary grains
| NASA-CR-198032 | p 1869 N95-24066
ELECTROPHORESIS
Development of novel separation techniques for biological samples in capillary electrophoresis
| DE95-001672 | p 1744 N95-22493
A comparative study of the effects of clofibrate, ciprofibrate, WY-14,643, and di-(2-ethylhexyl)-phthalate on liver protein expression in mice
| DE94-016587 | p 1748 N95-23771
ELECTROPHYSIOLOGY
Cellular interactions in the suprachiasmatic nucleus
| AD-A285639 | p 1749 N95-23780
ELECTROSTATIC PROBES
Advanced detector development, laboratory simulations, diagnostic development, and data analysis on wake physics
| PL-TR-94-2204 | p 1831 N95-22948
Electromagnetic radiation in the plasma environment around the shuttle
| NASA-TM-106891 | p 1738 N95-23116
ELECTROSTATICS
A new containerless image furnace with electro-static positioning device p 1690 N95-23674
ELECTROSTRICTION
Superconductivity devices: Commercial use of space
| NASA-CR-197885 | p 1648 N95-22883
ELECTROWEAK INTERACTIONS (FIELD THEORY)
Precision standard model tests with polarized e(+)e(-) beams
| DE95-003367 | p 1816 N95-22702
Topologically stable Z - strings in the supersymmetric standard model
| DE94-628517 | p 1848 N95-22742
Results from neutrino experiments
| DE94-628604 | p 1804 N95-22790
Higgs searches and WW scattering
| PB95-139143 | p 1807 N95-23160
Electroweak coupling measurements from polarized Bhabha scattering at SLD
| DE95-003137 | p 1807 N95-23165
Theoretical aspects of electroweak and other interactions in medium energy nuclear physics
| DE95-004341 | p 1808 N95-23357
Electroweak physics from the Tevatron
| DE95-002213 | p 1810 N95-23530
Neutrino mass
| DE94-628634 | p 1812 N95-23786
A measurement of the mass of the W vector boson at CDF
| DE95-003498 | p 1813 N95-24016
ELECTROWEAK MODEL
The first measurement of the left-right cross section asymmetry in Z(sup 0) boson production
| DE95-003335 | p 1802 N95-22697
Theoretical aspects of electroweak and other interactions in medium energy nuclear physics
| DE95-004341 | p 1808 N95-23357
ELEMENTARY PARTICLE INTERACTIONS
Dimuon production in proton-nucleus interactions
| DE95-002613 | p 1801 N95-22551
Studies of photon and electron interactions with atoms and ions
| DE95-003340 | p 1802 N95-22700
Outlook from the intersections
| DE95-003202 | p 1802 N95-22730
The omega pi(sup 0)-transient form factor within effective chiral Lagrangian approach
| DE94-628612 | p 1850 N95-22812
Search for second generation leptoquarks at CDF
| DE94-018983 | p 1805 N95-22939
Introduction to the physics of Higgs bosons
| DE95-003965 | p 1809 N95-23396
Search for scalar and vector leptoquarks in electron-proton collisions at radical S = 300 GeV
| DE94-785267 | p 1810 N95-23475
ELEMENTARY PARTICLES
Second International Workshop on Harmonic Oscillators
| NASA-CP-3286 | p 1820 N95-22957
Search for supersymmetric (tilde W)(sub 1) and (tilde Z)(sub 2) states using the D0 detector
| DE95-004581 | p 1811 N95-23581
ELEVATION
Current and future use of TOPSAR digital topographic data for volcanological research p 1714 N95-23949
Comparison of 7.5-minute and 1-degree digital elevation models p 1719 N95-24095
ELLIPSOIDS
Galactic oscillator symmetry p 1822 N95-22973
ELLIPTIC DIFFERENTIAL EQUATIONS
Extensible PDE Solvers package users manual
| DE95-003333 | p 1786 N95-22696
ELLIPTIC FUNCTIONS
Remarks on multiple solutions for asymptotically linear elliptic boundary value problems
| DE94-628416 | p 1785 N95-22624
Existence of solutions for some superlinear or sublinear elliptic systems on R(sup N)
| DE94-628417 | p 1785 N95-22625
ELONGATION
The hydrogen embrittlement of alloy X-750
| DE95-003207 | p 1640 N95-22893
EMBEDDING
Corrosivity sensor
| AD-D016549 | p 1687 N95-22706
EMBRITTLEMENT
Specific features of corrosion behavior of stainless maraging steels for aerospace application p 1642 N95-23501
EMBRYOLOGY
Open problems of computational molecular biology
| DE95-000895 | p 1745 N95-22866
EMERGENCIES
Search Hanford accessible reports electronically system requirements specification
| DE95-004367 | p 1856 N95-23340
EMISSION
Environmental, Safety, and Health Considerations: Composite Materials in the Aerospace Industry
| NASA-CP-3289 | p 1628 N95-23025
A hybrid vehicle evaluation code and its application to vehicle design
| DE95-004205 | p 1662 N95-23334
EMISSION SPECTRA
Gamma ray emission from radio pulsars
| NASA-CR-197917 | p 1871 N95-22910
ROSAT observation program
| NASA-CR-197683 | p 1866 N95-23595
A tool for manual endmember selection and spectral unmixing p 1701 N95-23846
Analysis of conifer forest regeneration using Landsat Thematic Mapper data p 1720 N95-24101
Determining coniferous forest cover and forest fragmentation with NOAA-9 advanced very high resolution radiometer data p 1720 N95-24103
EMISSIVITY
Estimation of spectral emissivity in the thermal infrared p 1711 N95-23918
The difference between laboratory and in-situ pixel-averaged emissivity: The effects on temperature-emissivity separation p 1711 N95-23919

Mineralogic variability of the Kelso Dunes, Mojave Desert, California derived from Thermal Infrared Multispectral Scanner (TIMS) data p 1711 N95-23920

EMITTANCE

Exotic atoms
| DE95-003199 | p 1805 N95-22881

Development of sensors for ceramic components in advanced propulsion systems
| NASA-CR-195324 | p 1689 N95-23795

EMITTERS

Extraction of the surface recombination velocity of passivated phosphorus-doped silicon emitters
| DE95-004539 | p 1845 N95-24156

EMPLOYEE RELATIONS

Upward appraisal as a means for improving supervisory performance and promoting process improvement, with long-term implications for organizational change p 1854 N95-23323

ENCAPSULATING

Advanced development of PV encapsulants
| DE95-000246 | p 1728 N95-23062

END EFFECTORS

Development of Advanced Robotic Hand System for space application p 1752 N95-23704

A three-finger multisensory hand for dexterous space robotic tasks p 1752 N95-23705

Robot arm system for automatic satellite capture and berthing p 1752 N95-23709

Visually guided grasping to study teleprogrammation within the BAROCO testbed p 1777 N95-23731

Morphing hands and virtual tools (or What good is an extra degree of freedom?)
| TR-551 | p 1783 N95-24036

Vision-based planning and execution of precision grasps
| TR-546 | p 1784 N95-24185

ENDEAVOUR (ORBITER)

Space Shuttle mission: STS-67
| NASA-TM-110509 | p 1620 N95-24027

ENERGETIC PARTICLES

Energetic particle observations at geosynchronous orbit
| DE95-000873 | p 1867 N95-22516

The q profile evolution and enhanced core confinement of high (beta)(sub p) plasmas in D3-D
| DE95-003878 | p 1834 N95-23371

Characteristics of low energy ions in the Heavy Ions In Space (HIIS) experiment p 1815 N95-23807

Results from the Heavy Ions In Space (HIIS) experiment on the ionic charge state of solar energetic particles p 1870 N95-23808

ENERGY ABSORPTION

Computer modeling of detonators
| DE95-003031 | p 1652 N95-22721

ENERGY BUDGETS

Thermal radiant exitance model performance: Soils and forests
| DE95-003619 | p 1721 N95-24148

ENERGY CONSERVATION

The Louisiana State University waste-to-energy incinerator
| DE95-004417 | p 1728 N95-23344

ENERGY CONSUMPTION

Geolocation applications of the Gonets LEO messaging satellites p 1656 N95-22818

Oxygen enriched combustion system performance study. Phase 2: 100 percent oxygen enriched combustion in regenerative glass melters
| DE95-004212 | p 1635 N95-23481

ENERGY CONVERSION

Energy Conversion and Storage Program
| DE95-003796 | p 1725 N95-22501

Photochemical energy conversion by membrane-bound photoredox systems
| DE95-004405 | p 1729 N95-23361

ENERGY CONVERSION EFFICIENCY

Prediction of incidence and surface roughness effects on turbine performance p 1671 N95-23424

Rapid thermal processing of high-efficiency silicon solar cells with controlled in-situ annealing
| DE95-004729 | p 1730 N95-23489

Energy efficiency of electric vehicles at the 1994 American Tour de Sol
| DE95-002905 | p 1664 N95-24070

ENERGY DISSIPATION

An investigation of AC losses in two sub-size conductors for the ITER
| DE94-785449 | p 1831 N95-22849

The q profile evolution and enhanced core confinement of high (beta)(sub p) plasmas in D3-D
| DE95-003878 | p 1834 N95-23371

The energy broadening resulting from electron stripping process of a low energy Au(-) beam
| NIFS-325 | p 1836 N95-23569

Toward an automated signature recognition toolkit for mission operations p 1659 N95-23682

ENERGY DISTRIBUTION

Charging of interplanetary grains
| NASA-CR-198032 | p 1869 N95-24066

ENERGY LEVELS

On the (DE-) stabilization of quantum mechanical binding by potential barriers
| DE94-628433 | p 1847 N95-22635

More about the q-deformed H-atom wave functions: Normal and abnormal series
| DE94-628434 | p 1801 N95-22643

Geometric phases, evolution loops and generalized oscillator potentials p 1823 N95-22981

Studies of autoionizing states relevant to dielectronic recombination
| DE94-014162 | p 1812 N95-23978

Quantum fluctuations of D(sub 5d) polarons on C(sub 60) molecules
| DE94-635787 | p 1812 N95-23985

ENERGY POLICY

Multi-fuel reformers for fuel cells used in transportation. Phase 1: Multi-fuel reformers
| DE95-004215 | p 1729 N95-23482

ENERGY REQUIREMENTS

The possibilities for mobile and fixed services up to the 20/30 GHz frequency bands p 1656 N95-22817

ENERGY SOURCES

Hydrogen and fuel cells for energy storage
| DE95-723907 | p 1729 N95-23382

ENERGY SPECTRA

Algebraic approach to the vibrational excitations in methane p 1814 N95-22960

Status of helium-production reaction studies with a spallation neutron source
| DE95-002816 | p 1806 N95-23137

A wavenumber-partitioning scheme for two-dimensional statistical closures
| DE95-004514 | p 1677 N95-23483

On inertial range scaling laws
| DE95-004515 | p 1677 N95-23484

The energy broadening resulting from electron stripping process of a low energy Au(-) beam
| NIFS-325 | p 1836 N95-23569

Alpha spectral analysis via artificial neural networks
| DE95-004567 | p 1767 N95-23578

Trapped iron measured on LDEF p 1872 N95-23806

Characteristics of low energy ions in the Heavy Ions In Space (HIIS) experiment p 1815 N95-23807

Early results from the ultra heavy cosmic ray experiment p 1872 N95-23809

Absorbed dose and LET spectra measurements on LDEF p 1815 N95-23810

Fission foil measurements of neutron and proton fluences in the A0015 experiment p 1815 N95-23811

Contribution of proton-induced short range secondaries to the LET spectra on LDEF p 1815 N95-23813

Charge, energy and LET spectra of high LET primary and secondary particles in CR-39 plastic nuclear track detectors of the P0006 experiment p 1815 N95-23814

Predictions of LET spectra measured on LDEF p 1815 N95-23815

ENERGY STORAGE

Energy Conversion and Storage Program
| DE95-003796 | p 1725 N95-22501

Electromechanical Battery Program at the Lawrence Livermore National Laboratory
| DE95-003657 | p 1727 N95-22574

Using the shield for thermal energy storage in PULSAR
| DE95-002457 | p 1829 N95-22645

Multi-fuel reformers for fuel cells used in transportation: Assessment of hydrogen storage technologies
| DE94-017655 | p 1727 N95-22861

Photochemical energy conversion by membrane-bound photoredox systems
| DE95-004405 | p 1729 N95-23361

Hydrogen and fuel cells for energy storage
| DE95-723907 | p 1729 N95-23382

Solar photochemistry: Twenty years of progress, what's been accomplished, and where does it lead?
| DE95-004007 | p 1730 N95-23778

Processing of single- and multi-domain YBa2Cu3O(x) bulk materials for levitation applications by Nd(1+x)Ba(2-x)Cu3O(y) seeding
| DE95-004615 | p 1845 N95-24154

ENERGY TECHNOLOGY

Southeast Regional Experiment Station
| DE95-000903 | p 1726 N95-22518

Renewable Energy Sources Brno 1993
| DE94-633975 | p 1727 N95-22855

Development of the IGT RENUGAS(reg sign) process
| DE94-017652 | p 1727 N95-22888

Hydrogen and fuel cells for energy storage
| DE95-723907 | p 1729 N95-23382

Information technology standards process guide
| DE95-003967 | p 1857 N95-23574

Oak Ridge National Laboratory Energy Efficiency and Renewable Energy Program Bibliography: 1994 Edition
| DE95-002296 | p 1730 N95-23605

Proceedings of the fuel cells 1994 contractors review meeting
| DE94-012285 | p 1730 N95-23977

ENERGY TRANSFER

Comparison of the rate constants for energy transfer in the light-harvesting protein, C-phycocyanin, calculated from Foerster's theory and experimentally measured by time-resolved fluorescence spectroscopy
| DE94-014961 | p 1745 N95-22590

Optogalvanic monitoring of collisional transfer of laser excitation energy in a neon RF plasma
| DE95-003103 | p 1691 N95-22748

Quantum field between moving mirrors: A three dimensional example p 1821 N95-22965

Energy transfer dynamics in isolated and in colliding highly vibrationally excited molecules
| AD-A285771 | p 1806 N95-23077

Overview of the solar dynamic ground test demonstration program at the NASA Lewis Research Center
| NASA-TM-106876 | p 1625 N95-23450

The energy broadening resulting from electron stripping process of a low energy Au(-) beam
| NIFS-325 | p 1836 N95-23569

Charge, energy and LET spectra of high LET primary and secondary particles in CR-39 plastic nuclear track detectors of the P0006 experiment p 1815 N95-23814

Progress in ion beam power coupling and ion-driven hohlraums on PBFA 2
| DE95-004544 | p 1818 N95-24160

ENGINE ANALYZERS

Gearbox vibration diagnostic analyzer
| NASA-CR-189141 | p 1696 N95-23792

ENGINE DESIGN

Aerodynamic design and analysis of a highly loaded turbine exhaust p 1673 N95-23435

Phase 2: HGM air flow tests in support of HEX vane investigation p 1674 N95-23438

ENGINE MONITORING INSTRUMENTS

Gearbox vibration diagnostic analyzer
| NASA-CR-189141 | p 1696 N95-23792

ENGINE NOISE

The use of cowl camber and taper to reduce rotor/stator interaction noise
| NASA-CR-195421 | p 1799 N95-22675

Supersonic jet noise reductions predicted with increased jet spreading rate
| NASA-TM-106872 | p 1800 N95-23178

ENGINE PARTS

Influence of backup bearings and support structure dynamics on the behavior of rotors with active supports
| NASA-CR-197438 | p 1694 N95-23190

Damage-mitigating control of a reusable rocket engine for high performance and extended life
| NASA-CR-4640 | p 1654 N95-23195

Evaluation of thermal barrier and PS-200 self-lubricating coatings in an air-cooled rotary engine
| NASA-CR-195445 | p 1614 N95-23222

ENGINE TESTS

Numerical study of the SSME nozzle flow fields during transient operations: A comparison of the animated results with test p 1673 N95-23434

Phase 2: HGM air flow tests in support of HEX vane investigation p 1674 N95-23438

Non-intrusive measurements in a rocket engine combustor p 1625 N95-23439

Impeller flow field characterization with a laser two-focus velocimeter p 1675 N95-23440

ENGINEERING

1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program
| NASA-CR-194972 | p 1872 N95-23276

ENGINEERING DRAWINGS

CDMS-CAD data set management system test plan
| DE95-003219 | p 1755 N95-22718

ENGINEERING MANAGEMENT

Reliability analysis in the Office of Safety, Environmental, and Mission Assurance (OSEMA) p 1698 N95-23302

ENTROPY

Entropy of Z(sup d) subshifts of finite type
| PB95-108072 | p 1787 N95-22836

The effect of a non-zero shock width on wave propagation in multi-dimensions
| DE95-002748 | p 1666 N95-22902

Wigner distribution function and entropy of the damped harmonic oscillator within the theory of the open quantum systems p 1798 N95-22990

Shannon-Wehrl entropy for cosmological and black-hole squeezing p 1826 N95-23000

Entropy jump across an inviscid shock wave
| NASA-CR-195046 | p 1678 N95-23596

ENUMERATION
Civilian satellite remote sensing: A strategic approach
|PB95-109633| p 1717 N95-22713
ENVIRONMENT EFFECTS
Direct effects of atmospheric CO2 enrichment on plants and ecosystems: An updated bibliographic data base
|DE95-003060| p 1731 N95-22725
Summary of solar cell data from the Long Duration Exposure Facility (LDEF)
|NASA-CR-196539| p 1727 N95-22904
Application requirements for wind turbine gearboxes
|DE94-011883| p 1694 N95-22923
Modeling aerosol emissions from the combustion of composite materials p 1629 N95-23038
Aqueous alternatives for metal and composite cleaning p 1630 N95-23039
Study on possible environmental effects of a WBM cutting discharge in the north sea, one year after termination of drilling
|PB95-133740| p 1733 N95-23125
LDEF materials results for spacecraft applications: Executive summary
|NASA-CP-3261| p 1617 N95-23549
Effect of the space environment on materials flown on the EURECA/TICCE-HVI experiment p 1623 N95-23803
ENVIRONMENT MANAGEMENT
Environmental Systems Management Analysis and Reporting Network (E-SMART)
|AD-A279766| p 1732 N95-22856
Outline for a global environmental strategic planning exercise (GESPE-project)
|PB95-133773| p 1733 N95-23067
CO2 and waste policy: Monitoring results 1991/1992 and main problems
|PB95-133799| p 1733 N95-23126
Comparison of 7.5-minute and 1-degree digital elevation models p 1719 N95-24095
Old-growth and mature forests near spotted owl nests in western Oregon p 1719 N95-24098
Forest and wildlife habitat analysis using remote sensing and geographic information systems p 1720 N95-24100
ENVIRONMENT MODELS
LDEF environment modeling updates p 1637 N95-23797
Predictions of LDEF radioactivity and comparison with measurements p 1815 N95-23818
Status of LDEF radiation modeling p 1815 N95-23819
Transferring ecosystem simulation codes to supercomputers
|NASA-TM-4662| p 1759 N95-24052
ENVIRONMENT POLLUTION
The significance of hair mineral analysis as a means for assessing internal body burdens of environmental pollutants
|DE94-633512| p 1734 N95-23541
Military bases: Environmental impact at closing installations. Report to Congressional requesters
|GAO/NSIAD-95-70| p 1735 N95-24057
ENVIRONMENT PROTECTION
Diesel fuel component contributions to engine emissions and performance: Clean fuel study
|DE94-011868| p 1732 N95-22834
Corrosion in service experience with aircraft in France p 1645 N95-23518
ENVIRONMENT SIMULATION
Effects of wind on rainfall simulation. Spatial distribution of water application, kinetic energy, and overland flow under single full-cone nozzle sprays
|PB95-127304| p 1717 N95-22537
Debris and meteoroid proportions deduced from impact crater residue analysis p 1869 N95-23834
Experimental investigation of the relationship between impact crater morphology and impacting particle velocity and direction p 1700 N95-23840
ENVIRONMENT SIMULATORS
Operator procedure verification with a rapidly reconfigurable simulator p 1618 N95-23679
ENVIRONMENTAL CONTROL
Health, safety and environmental requirements for composite materials p 1628 N95-23028
ENVIRONMENTAL MONITORING
HAPEX-Sahel: Basic description of methods and data sets
|PB95-127262| p 1701 N95-22639
Environmental Systems Management Analysis and Reporting Network (E-SMART)
|AD-A279766| p 1732 N95-22856
Environmental, Safety, and Health Considerations: Composite Materials in the Aerospace Industry
|NASA-CP-3289| p 1628 N95-23025
Aerospace Industries Association (AIA) work practices report for composites p 1628 N95-23029
Remote sensing of smoke, clouds, and fire using AVIRIS data p 1704 N95-23860
Estimating dry grass residues using landscape integration analysis p 1705 N95-23867
Monitoring land use and degradation using satellite and airborne data p 1707 N95-23880
Temporal changes in endmember abundances, liquid water and water vapor over vegetation at Jasper Ridge p 1708 N95-23882
Mapping and monitoring changes in vegetation communities of Jasper Ridge, CA, using spectral fractions derived from AVIRIS images p 1708 N95-23883
Estimation of crown closure from AVIRIS data using regression analysis p 1709 N95-23886
A comparison of spectral mixture analysis an NDVI for ascertaining ecological variables p 1710 N95-23892
Comparison of 7.5-minute and 1-degree digital elevation models p 1719 N95-24095
ENVIRONMENTAL TESTS
HAPEX-Sahel: Basic description of methods and data sets
|PB95-127262| p 1701 N95-22639
Atomic oxygen durability evaluation of protected polymers using thermal energy plasma systems
|NASA-TM-106855| p 1626 N95-23270
Problems of predicting material property retention during long term service p 1644 N95-23514
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 2
|NASA-CP-3275-PT-2| p 1899 N95-23896
Recent results from Long Duration Exposure Facility materials testing p 1638 N95-23898
LDEF polymeric materials: A summary of Langley characterization p 1651 N95-23899
Surface characterization of LDEF carbon fiber/polymer matrix composites p 1631 N95-23900
Space environmental effects on polymer matrix composites as a function of sample location on LDEF p 1651 N95-23901
Further investigations of experiment A0034 atomic oxygen stimulated outgassing p 1651 N95-23908
Trend analysis of in-situ spectral reflectance data from the Thermal Control Surfaces Experiment (TCSE) p 1631 N95-23910
Whisker/Cone growth on the thermal control surfaces experiment no. S0069 p 1651 N95-23911
Structure and properties of polymeric composite materials during 1501 days outer space exposure at Salyut-7 orbital station p 1652 N95-23915
ENZYME ACTIVITY
Transmethylation reactions during methanogenesis from acetate in Methanosarcina barkeri
|DE94-016222| p 1745 N95-22873
Regulation of photosynthetic carbon fixation on the ocean margins
|DE95-003185| p 1743 N95-22878
ENZYMES
Regulation of alcohol fermentation in Escherichia coli
|DE94-016227| p 1745 N95-22874
EOS DATA AND INFORMATION SYSTEM
The design of a petabyte archive and distribution system for the NASA ECS project p 1858 N95-24110
A distributed parallel storage architecture and its potential application within EOSDIS p 1858 N95-24111
Constraint based scheduling for the Goddard Space Flight Center distributed Active Archive Center's data archive and distribution system p 1859 N95-24121
EPIDEMIOLOGY
Resource recovery and epidemiology of anaerobic wastewater treatment process in a controlled ecological life support system
|NASA-CR-197930| p 1751 N95-23474
EPITAXY
Advanced growth and surface analysis system for in situ studies of interface formation
|DE95-002850| p 1838 N95-22555
Photoemission study of quantum confinement by a finite barrier: Cu/Co(wedge)/Cu(100)
|DE95-002913| p 1840 N95-22762
Orientation selection and microstructural evolution of epitaxial platinum films on (001) magnesium oxide
|DE95-003680| p 1842 N95-23265
Carbon doping of III-V compound semiconductors
|DE95-003431| p 1844 N95-24013
EPOXY MATRIX COMPOSITES
Notch-tip damage and translaminar fracture toughness measurements from carbon/epoxy laminates
|AD-A280101| p 1627 N95-22833
Surface characterization of LDEF carbon fiber/polymer matrix composites p 1631 N95-23900
EPOXY RESINS
Chemical recycling of scrap composites p 1629 N95-23034
Permeability testing of composite material and adhesive bonds for the DC-XA composite feedline program
|NASA-TM-108483| p 1630 N95-23551
EQUATIONS OF MOTION
Morphology of Laplacian growth processes and statistics of equivalent many-body systems
|DE95-002734| p 1847 N95-22655
Harmonic oscillator representation in the theory of scattering and nuclear reactions p 1814 N95-22967
Spinning particles in the Euclidean Taub-NUT space
|DE94-634320| p 1810 N95-23456
Moving mass trim control for aerospace vehicles
|DE95-002602| p 1622 N95-23532
Incompressible Navier-Stokes calculations in pump flows p 1680 N95-23627
A generalized Eulerian-Lagrangian analysis, with application to liquid flows with vapor bubbles p 1682 N95-23633
EQUATIONS OF STATE
Coherent state constructions of bases for some physically relevant group chains p 1814 N95-22966
On-line, adaptive state estimator for active noise control p 1784 N95-23308
EQUATORIAL REGIONS
Investigation of the role of gravity waves in the generation of equatorial bubbles
|NASA-CR-197962| p 1739 N95-23272
EQUIPMENT SPECIFICATIONS
NASA advanced refrigerator/freezer technology development project overview
|NASA-TM-106309| p 1747 N95-23177
EQUIVALENCE
Taxonomy of finite automata minimization algorithms
|PB95-139226| p 1756 N95-23131
Logspace reducibility and self-reducibility: Models and equivalences
|TR-544| p 1760 N95-24059
ERBIUM
Computational modelling of Er(3+): Garnet laser materials p 1692 N95-23326
EROSION
Low Earth orbit thermal control coatings exposure flight tests: A comparison of U.S. and Russian results
|NASA-CR-4647| p 1626 N95-22919
Atomic oxygen durability evaluation of protected polymers using thermal energy plasma systems
|NASA-TM-106855| p 1626 N95-23270
Robotic weld overlay coatings for erosion control
|DE95-002624| p 1696 N95-24141
ERROR ANALYSIS
IRAS sky survey atlas: Explanatory supplement
|NASA-CR-197335| p 1865 N95-22539
Dynamic response of a transducer mounted at one end of an acoustical cavity which is subjected to a specified pressure at the open end of the cavity
|DE95-004192| p 1799 N95-23379
Technical report series on global modeling and data assimilation. Volume 4: Documentation of the Goddard Earth Observing System (GEOS) data assimilation system, version 1
|NASA-TM-104606-VOL-4| p 1740 N95-23529
Block LU factorization
|NASA-CR-197949| p 1791 N95-23592
On the accuracy of CFD-based pressure drop predictions for right-angle ducts p 1682 N95-23634
A proposed update to the solar irradiance spectrum used in LOWTRAN and MODTRAN p 1705 N95-23865
Improved AVHRR data navigation using automated land feature recognition to correct a satellite orbital model
|CSIRO-TR-34| p 1718 N95-24026
ERROR CORRECTING CODES
Mappings between codewords of two distinct (N,K) Reed-Solomon codes over GF(2(sup J))
|NASA-CASE-NPO-18771-1-CU| p 1754 N95-22577
Ocean observations with EOS/MODIS: Algorithm development and post launch studies
|NASA-CR-197402| p 1717 N95-22916
Optical storage media data integrity studies p 1829 N95-24130
ERRORS
Bottom-quark production from muon-jet and dimuon events in p(bar p)-interactions at the square root of s = 1.8 TeV
|DE95-001286| p 1801 N95-22685
The effect of a non-zero shock width on wave propagation in multi-dimensions
|DE95-002748| p 1666 N95-22902
Simultaneous inference in multivariate calibration
|DE95-003592| p 1794 N95-23066
Second derivative of the likelihood of an exact ARMA model
|PB95-135158| p 1788 N95-23069
Heavy quark physics at SLD: Preliminary results
|DE95-003372| p 1806 N95-23138
Robust telescope scheduling p 1779 N95-23742

Comparison of methods for calibrating AVIRIS data to ground reflectance p 1703 N95-23854

ESCHERICHIA

Regulation of alcohol fermentation in Escherichia coli
|DE94-016227| p 1745 N95-22874

ESTERS

Activation of the jun-D gene in human myeloid cells by 1-(beta)-D-arabinofuranosylcytosine
|DE94-016591| p 1746 N95-22912

ESTIMATES

Accuracy of radar rainfall estimates compared to raingauge measurements and a hydrological application
|PB95-127296| p 1741 N95-22640

Emissions of greenhouse gases in the United States, 1987-1992
|DE95-003001| p 1731 N95-22691

Asymptotic justification for a modified GLS procedure to estimate ARMA parameters
|PB95-135166| p 1788 N95-23070

Using AVIRIS for in-flight calibration of the spectral shifts of SPOT-HRV and of AVHRR? p 1710 N95-23893

ESTIMATING

Rationale for the Modular Air-system Vulnerability Estimation Network (MAVEN) methodology
|AD-A285797| p 1611 N95-22510

Simultaneous inference in multivariate calibration
|DE95-003592| p 1794 N95-23066

Integrating O/S models during conceptual design, part 3
|NASA-CR-197905| p 1622 N95-23400

Estimating dry grass residues using landscape integration analysis p 1705 N95-23867

Estimation of crown closure from AVIRIS data using regression analysis p 1709 N95-23886

Estimation of spectral emissivity in the thermal infrared p 1711 N95-23918

ESTUARIES

Theoretical estimates of high frequency acoustic attenuation and backscattering from suspended sand particles in the ocean and in an estuary
|DSTO-TR-0078| p 1743 N95-23667

ETCHING

Development of microchannel plate x-ray optics
|NASA-CR-197935| p 1866 N95-23540

Microstructural behavior of nonequilibrium systems
|DE95-004450| p 1630 N95-23924

ETHANE

Ethylene oxidation chemistry in a well-stirred reactor
|DE95-004823| p 1635 N95-23381

ETHYL ALCOHOL

Design and demonstration of an immobilized-cell fluidized-bed reactor for the efficient production of ethanol
|DE94-014023| p 1652 N95-22587

Ethanol synthesis and water gas shift over bifunctional sulfide catalysts
|DE94-017376| p 1634 N95-23202

ETHYLENE

Ethylene oxidation chemistry in a well-stirred reactor
|DE95-004823| p 1635 N95-23381

EUCLIDEAN GEOMETRY

Note on the computational complexity of j-radii of polytopes in (R sup n)
|PB95-139358| p 1790 N95-23231

Spinning particles in the Euclidean Taub-NUT space
|DE94-634320| p 1810 N95-23456

EULER EQUATIONS OF MOTION

Euler Technology Assessment program for preliminary aircraft design employing SPLITFLOW code with Cartesian unstructured grid method
|NASA-CR-4649| p 1608 N95-22917

A perspective on unstructured grid flow solvers
|NASA-CR-195025| p 1788 N95-22931

Harmonic oscillator in quantum rotational spectra: Molecules and nuclei p 1814 N95-22972

Euler technology assessment for preliminary aircraft design employing OVERFLOW code with multiblock structured-grid method
|NASA-CR-4651| p 1608 N95-23095

An assessment of viscous effects in computational simulation of benign and burst vortex flows on generic fighter wind-tunnel models using TEAM code
|NASA-CR-4650| p 1608 N95-23185

Benchmark problems in computational aeroacoustics p 1800 N95-23315

Convergence acceleration of implicit schemes in the presence of high aspect ratio grid cells p 1676 N95-23446

Entropy jump across an inviscid shock wave
|NASA-CR-195046| p 1678 N95-23596

Cavitation modeling in Euler and Navier-Stokes codes p 1681 N95-23630

Modeling of non-spherical droplet dynamics p 1685 N95-23647

User's guide for ECAP2D: An Euler unsteady aerodynamic and aeroelastic analysis program for two dimensional oscillating cascades, version 1.0
|NASA-CR-189146| p 1699 N95-24189

EULER-LAGRANGE EQUATION

Conjugate gradient MATHEW
|DE95-003479| p 1738 N95-23143

Structured adaptive grid generation using algebraic methods p 1669 N95-23417

EURECA (ESA)

LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 1
|NASA-CP-3275-PT-1| p 1889 N95-23796

EURECA 11 months in orbit: Initial post flight investigation results p 1623 N95-23799

Dosimetric results on EURECA p 1872 N95-23800

Preliminary results of radiation measurements on EURECA p 1872 N95-23801

Performance characterization of EURECA retroreflectors with fluoropolymer-filled SiO(x) protective coatings p 1651 N95-23802

Effect of the space environment on materials flown on the EURECA/TICCE-HVI experiment p 1623 N95-23803

Material inspection of EURECA first findings and recommendations p 1637 N95-23804

EUROPEAN SPACE AGENCY

Third International Symposium on Artificial Intelligence, Robotics, and Automation for Space 1994
|NASA-CR-197340| p 1767 N95-23672

EUROPEAN SPACE PROGRAMS

Robotics and telepresence for moon missions p 1776 N95-23725

EUTECTICS

High resolution microstructural analysis of zirconia eutectic interfaces
|DE95-003143| p 1845 N95-24143

EVALUATION

Accuracy of radar rainfall estimates compared to raingauge measurements and a hydrological application
|PB95-127296| p 1741 N95-22640

EVENTS

Neutrino oscillation experiments with atmospheric neutrinos
|DE95-002994| p 1801 N95-22573

EXCIMER LASERS

Magnetic resonance and optical spectroscopic studies of carotenoids
|DE95-003729| p 1631 N95-22575

Raman-shifting an ArF excimer laser to generate new lines for obtaining optical diagnostic based information in flow fields p 1692 N95-23303

Annual report of the Osaka Laboratory for Radiation Chemistry Japan Atomic Energy Research Institute, (No. 26)
|DE94-785277| p 1626 N95-23477

10x reduction imaging at 13.4 nm
|DE94-016612| p 1828 N95-23767

EXCITATION

Do narrow Sigma hypernuclear states exist?
|DE95-002930| p 1803 N95-22763

Hadrons of arbitrary spin and heavy quark symmetry
|DE94-628597| p 1804 N95-22789

Dynamic response of a transducer mounted at one end of an acoustical cavity which is subjected to a specified pressure at the open end of the cavity
|DE95-004192| p 1799 N95-23379

MHD-Vlasov simulation of the toroidal Alfven eigenmode
|NIFS-319| p 1836 N95-23591

Rate coefficients for the electron-impact excitation, ionization and recombination of He-like ions, S XV, Ca XIX and Fe XXV, and related processes
|ISAS-R-657| p 1811 N95-23604

Photoionization of O(6+) below the n=3 threshold of the reduced ion
|DE94-634436| p 1844 N95-23774

EXCITONS

Optical absorption in an indirect-gap semiconductor quantum well systems
|DE94-628878| p 1849 N95-22759

Two-photon absorption in an indirect-gap semiconductor quantum well systems 2. Excitonic transitions
|DE94-628880| p 1849 N95-22761

Lattice relaxation study on self-trapped exciton and biexciton in neutral and charged fullerenes
|DE94-635788| p 1844 N95-23986

EXHAUST DIFFUSERS

Design of a variable area diffuser for a 15-inch Mach 6 open-jet tunnel p 1617 N95-23309

EXHAUST EMISSION

Diesel fuel component contributions to engine emissions and performance: Clean fuel study
|DE94-011868| p 1732 N95-22834

Preliminary assessment of air toxic emissions in the natural gas industry, phase 1
|PB95-135547| p 1732 N95-22865

EXHAUST GASES

Diesel fuel component contributions to engine emissions and performance: Clean fuel study
|DE94-011868| p 1732 N95-22834

Radiation/convection coupling in rocket motors and plumes p 1669 N95-23414

Numerical study of the SSME nozzle flow fields during transient operations: A comparison of the animated results with test p 1673 N95-23434

NTS-spill test facility wind tunnel exhaust plume characterization
|DE95-003630| p 1616 N95-24019

D3-D program overview
|DE95-003879| p 1837 N95-24086

EXHAUST NOZZLES

Numerical study of the SSME nozzle flow fields during transient operations: A comparison of the animated results with test p 1673 N95-23434

EXHAUST SYSTEMS

Aerodynamic design and analysis of a highly loaded turbine exhaust p 1673 N95-23435

EXHAUST VELOCITY

Aerodynamic design and analysis of a highly loaded turbine exhaust p 1673 N95-23435

EXHAUSTING

Study of frustrated systems via dissipative maps
|PB95-139093| p 1799 N95-23155

EXPANDABLE STRUCTURES

Self-generating oscillating pressure exercise device
|NASA-CASE-ARC-12000-1| p 1751 N95-23264

EXPECTATION

Singlet quarks beyond the top at the tevatron
|PB95-139127| p 1807 N95-23158

Light-traffic analysis for queues with spatially distributed arrivals
|PB95-140802| p 1767 N95-23556

EXPERIMENT DESIGN

Design and application of electromechanical actuators for deep space missions
|NASA-CR-197957| p 1694 N95-22909

Dynamic modelling and response characteristics of a magnetic bearing rotor system including auxiliary bearings
|NASA-CR-197859| p 1694 N95-23213

Design and implementation of two two-week Teacher Enhancement Institutes p 1853 N95-23306

USML-1 microgravity glovebox experiment no. 1 Passive Accelerometer System
|NASA-CR-196575| p 1653 N95-23552

Design and development status of ETS-7, an RVD and space robot experiment satellite p 1623 N95-23700

Robotic experiment with a force reflecting handcontroller onboard MIR space station p 1752 N95-23707

Automation and crew time saving in the space experiment p 1752 N95-23715

Space science experimentation automation and support p 1775 N95-23718

Robotic servicing system for space material experiment p 1697 N95-23722

EXPERIMENTATION

Robot skill learning through intelligent experimentation
|TR-567| p 1784 N95-24038

EXPERT SYSTEMS

Plinius intermediate report
|PB95-135216| p 1648 N95-23128

Verification and validation of decision support software: Expert Choice(trademark) and PCM(trademark)
|DE95-004469| p 1757 N95-23346

An expert system for diagnosing anomalies of spacecraft p 1770 N95-23684

Performance results of cooperating expert systems in a distributed real-time monitoring system p 1761 N95-23688

Autonomous spacecraft executive and its application to rendezvous and docking p 1623 N95-23719

The Starpicker expert system: A problem in expertise capture p 1623 N95-23721

A scheduling and diagnostic system for scientific satellite GEOTAIL using expert system p 1781 N95-23753

Knowledge representation and reasoning for mixed-initiative planning
|TR-562| p 1783 N95-24031

OPUS: A new generation Knowledge Engineering Environment p 1760 N95-24176

EXPLODING WIRES

Computer modeling of detonators
|DE95-003031| p 1652 N95-22721

EXPLORER SATELLITES

A constraint-logic based implementation of the coarse-grained approach to data acquisition scheduling of the International Ultraviolet Explorer orbiting observatory p 1779 N95-23741

EXPLOSIONS
Simulation of cookoff results in a small scale test
| DSTO-TR-0090 | p 1653 N95-23668
EXPLOSIVE WELDING
Explosive bonding and its application in the Advanced Photon Source front-end and beamline components design
| DE95-004132 | p 1696 N95-23397
EXPLOSIVES
Simulation of cookoff results in a small scale test
| DSTO-TR-0090 | p 1653 N95-23668
EXPONENTIAL FUNCTIONS
Symplectic computation of Lyapunov exponents
| DE95-002732 | p 1795 N95-22654
On the size of sets with weak membership properties
| TR-557 | p 1793 N95-24034
EXPONENTS
Lyapunov exponents from CHUA's circuit time series using artificial neural networks p 1784 N95-22988
EXPOSURE
Low Earth orbit thermal control coatings exposure flight tests: A comparison of U.S. and Russian results
| NASA-CR-4647 | p 1626 N95-22919
Skin exposure: Assessing the hazard in the workplace p 1628 N95-23030
The corrosion and protection of advanced aluminium - lithium airframe alloys p 1641 N95-23497
Effect of loading direction and long-term aging on fatigue-crack growth in Al-Li alloy 2090 p 1641 N95-23499
The detection and analysis of galvanic damage in BMI/graphite fiber composites p 1631 N95-23502
Corrosion protection measures for CFC/metal joints of fuel integral tank structures of advanced military aircraft p 1644 N95-23510
Performance characterization of EURECA retroreflectors with fluoropolymer-filled SiO(x) protective coatings p 1651 N95-23802
Reproducible direct exposure environmental testing of metal-based magnetic media p 1690 N95-24129
EXTERNAL STORE SEPARATION
A CFD study of complex missile and store configurations in relative motion
| NASA-CR-197912 | p 1612 N95-22949
EXTRACTION
On-line, adaptive state estimator for active noise control p 1784 N95-23308
Nonlinear thermoviscoelastic behaviour in complex materials
| PB95-140653 | p 1630 N95-23537
Extraction and detection of pesticide residues from air filter inserts using supercritical carbon dioxide
| DE95-004579 | p 1735 N95-23580
Extraction of auxiliary data from AVIRIS distribution tape for spectral, radiometric, and geometric quality assessment p 1706 N95-23875
Extraction of the surface recombination velocity of passivated phosphorus-doped silicon emitters
| DE95-004539 | p 1845 N95-24156
EXTRATERRESTRIAL MATTER
CDM and Omega in the local neighborhood
| DE95-003683 | p 1868 N95-23570
EXTRATERRESTRIAL RADIATION
Preliminary results of radiation measurements on EURECA p 1872 N95-23801
Predictions of LET spectra measured on LDEF p 1815 N95-23815
Status of LDEF activation measurements and archive p 1815 N95-23817
EXTRAVEHICULAR ACTIVITY
STS-61 Space Shuttle mission report
| NASA-TM-110545 | p 1619 N95-23187
Real-time tracking using stereo and motion: Visual perception for space robotics p 1778 N95-23739
EXTREME ULTRAVIOLET EXPLORER SATELLITE
An operations and command systems for the extreme ultraviolet explorer p 1770 N95-23687
EXTREME ULTRAVIOLET RADIATION
EUV metrology of multilayer optics
| DE95-003036 | p 1819 N95-22723
A study of EUV emission from the O4f star Zeta Puppis
| NASA-CR-197350 | p 1871 N95-23472
10x reduction imaging at 13.4 nm
| DE94-016612 | p 1828 N95-23767
EXTREMELY HIGH FREQUENCIES
The possibilities for mobile and fixed services up to the 20/30 GHz frequency bands p 1656 N95-22817

F

F REGION
Continued studies of polar cap thermospheric dynamics
| PL-TR-94-2076 | p 1737 N95-22951
Semikinetic modeling and observations of high-latitude plasma outflow
| NASA-CR-197403 | p 1831 N95-23008
Investigation of the role of gravity waves in the generation of equatorial bubbles
| NASA-CR-197962 | p 1739 N95-23272
F 2 REGION
A comparison of ionospheric F2-layer IRI model with experimental data for Ibadan Geog. Lat. 7.4 deg N
| DE94-627710 | p 1736 N95-22613
F-18 AIRCRAFT
Analysis of the longitudinal handling qualities and pilot-induced-oscillation tendencies of the High-Angle-of-Attack Research Vehicle (HARV) p 1616 N95-23297
Enhancement of F/A-18 operational flight measurements: Data report for phase 1
| DSTO-TR-0049 | p 1613 N95-23666
FABRICATION
Large-area triple-junction a-Si alloy production scaleup
| DE95-000245 | p 1726 N95-22546
Advanced Turbine Technology Applications Project (ATTAP) 1993 annual report
| DE95-003198 | p 1693 N95-22880
Idealized textile composites for experimental/analytical correlation p 1631 N95-23277
Infinite possibilities: Computational structures technology p 1700 N95-23280
Amorphous silicon photovoltaic manufacturing technology, phase 2A
| DE95-000298 | p 1729 N95-23478
Rapid thermal processing of high-efficiency silicon solar cells with controlled in-situ annealing
| DE95-004729 | p 1730 N95-23489
FABRICS
Fabric geometry distortion during composites processing p 1631 N95-23288
FABRY-PEROT INTERFEROMETERS
Continued studies of polar cap thermospheric dynamics
| PL-TR-94-2076 | p 1737 N95-22951
FACE CENTERED CUBIC LATTICES
A special percolation problem in ceramic composites
| DE94-627641 | p 1647 N95-22611
Photoemission study of quantum confinement by a finite barrier: Cu/Co(wedge)/Cu(100)
| DE95-002913 | p 1840 N95-22762
FACTORIZATION
A generic efficient adaptive grid scheme for rocket propulsion modeling p 1670 N95-23418
Normalized coprime factorizations and balancing for unstable nonlinear systems
| PB95-141222 | p 1767 N95-23557
Block LU factorization
| NASA-CR-197949 | p 1791 N95-23592
Singular moduli and Arakelov intersection
| DE94-634286 | p 1792 N95-23659
FADDEEV EQUATIONS
Dirac canonical quantization and Faddeev-Jackiw symplectic quantization of higher order Lagrangians
| DE94-628428 | p 1796 N95-22788
FAIL-SAFE SYSTEMS
Residual strength of thin panels with cracks p 1700 N95-23311
FAILURE
Robotic weld overlay coatings for erosion control
| DE95-002624 | p 1696 N95-24141
FAILURE ANALYSIS
Application requirements for wind turbine gearboxes
| DE94-011883 | p 1694 N95-22923
Handling qualities of the High Speed Civil Transport p 1616 N95-23325
Integrating O/S models during conceptual design, part 3
| NASA-CR-197905 | p 1622 N95-23400
FAILURE MODES
Precise clock synchronization protocol
| PB95-127247 | p 1687 N95-22536
The hydrogen embrittlement of alloy X-750
| DE95-003207 | p 1640 N95-22893
Residual strength of thin panels with cracks p 1700 N95-23311
FALLOUT
OU3 sediment dating and sedimentation rates
| DE95-001891 | p 1734 N95-23384
FAR ULTRAVIOLET RADIATION
Raman-shifting an ArF excimer laser to generate new lines for obtaining optical diagnostic based information in flow fields p 1692 N95-23303
Some thoughts of future experiments with the new generation of storage rings
| DE95-004602 | p 1818 N95-24162
FARM CROPS
Synergy between optical and microwave remote sensing to derive soil and vegetation parameters from MAC Europe 1991 Experiment p 1715 N95-23956
Classification and soil moisture determination of agricultural fields p 1716 N95-23958
FAST NEUTRONS
Evaluation of neutron techniques for illicit substance detection
| DE95-002988 | p 1632 N95-22764
Status of helium-production reaction studies with a spallation neutron source
| DE95-002816 | p 1806 N95-23137
FASTENERS
Eddy current detection of pitting corrosion around fastener holes p 1643 N95-23507
FATIGUE (MATERIALS)
Review of aeronautical fatigue investigation in the Netherlands during the period March 1991-March 1993
| PB95-139184 | p 1612 N95-23161
Review of some results of the author's fatigue investigations with applications in engineering and material science
| TAE-698 | p 1699 N95-23662
FATIGUE LIFE
Review of some results of the author's fatigue investigations with applications in engineering and material science
| TAE-698 | p 1699 N95-23662
Fracture mechanics life analytical methods verification testing
| NASA-CR-196555 | p 1697 N95-24106
FAULT DETECTION
STS-61 Space Shuttle mission report
| NASA-TM-110545 | p 1619 N95-23187
An intelligent ground operator support system p 1769 N95-23681
Attention focusing and anomaly detection in systems monitoring p 1769 N95-23683
An expert system for diagnosing anomalies of spacecraft p 1770 N95-23684
Distributed intelligence for ground/space systems p 1770 N95-23685
FAULT TOLERANCE
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 3: HARP Graphics Oriented (GO) input user's guide
| NASA-TP-3452-VOL-3 | p 1753 N95-22479
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 1: HARP introduction and user's guide
| NASA-TP-3452-VOL-1 | p 1754 N95-22603
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 2: HARP tutorial
| NASA-TP-3452-VOL-2 | p 1755 N95-22604
Predicted performance of an integrated modular engine system
| NASA-CR-190787 | p 1625 N95-23791
FAULT TREES
Rationale for the Modular Air-system Vulnerability Estimation Network (MAVEN) methodology
| AD-A285797 | p 1611 N95-22510
FEASIBILITY
FAME: A forest assessment and monitoring environment scenario
| PB95-139309 | p 1718 N95-23471
FEASIBILITY ANALYSIS
The possibilities for mobile and fixed services up to the 20/30 GHz frequency bands p 1656 N95-22817
Geolocation applications of the Gonets LEO messaging satellites p 1656 N95-22818
Damage-mitigating control of a reusable rocket engine for high performance and extended life
| NASA-CR-4640 | p 1654 N95-23195
Inner loop flight control for the High-Speed Civil Transport p 1616 N95-23314
An intelligent ground operator support system p 1769 N95-23681
Distributed intelligence for ground/space systems p 1770 N95-23685
Autonomous navigation system for the Marsokhod rover project p 1771 N95-23693
Measurements of canopy chemistry with 1992 AVIRIS data at Blackhawk Island and Harvard Forest p 1706 N95-23873
FEDERAL BUDGETS
Director's discretionary fund report for fiscal year 1994
| NASA-TM-108848 | p 1872 N95-22920
Defense technology plan
| AD-A285415 | p 1903 N95-24178
FEED SYSTEMS
Advanced liquid oxygen (LO2) propellant conditioning concept testing
| NASA-TM-108477 | p 1652 N95-22672
FEEDBACK CONTROL
Performance of the 0.3-meter transonic cryogenic tunnel with air, nitrogen, and sulfur hexafluoride media under closed loop automatic control
| NASA-CR-195052 | p 1668 N95-23257

System identification of the Large-Angle Magnetic Suspension Test Fixture (LAMSTF)
p 1617 N95-23299
On-line, adaptive state estimator for active noise control p 1784 N95-23308
Progress report on a fully automatic Gas Tungsten Arc Welding (GTAW) system development
|DE95-004397| p 1695 N95-23343
Feedback control laws for highly maneuverable aircraft
|NASA-CR-197944| p 1615 N95-23410
Lunar rover technology demonstrations with Dante and Ratler p 1697 N95-23694
Mark Tracking: Position/orientation measurements using 4-circle mark and its tracking experiments
p 1778 N95-23736

FERMENTATION
Design and demonstration of an immobilized-cell fluidized-bed reactor for the efficient production of ethanol
|DE94-014023| p 1652 N95-22587
Regulation of alcohol fermentation in Escherichia coli
|DE94-016227| p 1745 N95-22874

FERMI LIQUIDS
Asymptotically exact solution of the multi-channel resonant-level model
|DE94-629040| p 1801 N95-22498

FERMI SURFACES
KKR-CPA calculations of density of states and soft X ray emission from disordered Li-Mg alloys
|DE94-628882| p 1640 N95-22934
Spin polarized photoemission studies of magnetic quantum well states
|DE95-004218| p 1851 N95-23335

FERMIONS
Fermion-spin transformation to implement the charge-spin separation
|DE94-629035| p 1800 N95-22495
Strong-coupling behaviour of two t-J chains with interchain single-electron hopping
|DE94-629041| p 1838 N95-22499
Continuous local symmetry in Ising-type models
|DE94-629045| p 1839 N95-22649
Correlation effects in high-Tc superconductors and heavy fermion compounds
|DE94-629057| p 1840 N95-22846
Strongly interacting fermion systems
|DE95-003405| p 1806 N95-23054
Classification of (2,2) compactifications by free fermions 2
|PB95-139119| p 1807 N95-23157

FERROELECTRICITY
A study of ceramic composite of ferroelectric BaTiO3 ceramic and superconductor YBa2Cu3O(6 + delta) ceramic
|DE94-627563| p 1647 N95-22610

FERROMAGNETIC MATERIALS
Strong collision approach to calculation of depolarization function for neutron beam passing through ferromagnetic bulk domains
|DE94-628847| p 1803 N95-22758
Dynamical properties of critical and paramagnetic spin fluctuations in anisotropic heisenberg magnets
|PB95-134623| p 1798 N95-23127

FERROMAGNETISM
Spin polarized photoemission studies of magnetic quantum well states
|DE95-004218| p 1851 N95-23335

FEYNMAN DIAGRAMS
The omega pi(sup 0)-transient form factor within effective chiral Lagrangian approach
|DE94-628612| p 1850 N95-22812

FIBER COMPOSITES
Method of producing a silicon carbide fiber reinforced strontium aluminosilicate glass-ceramic matrix composite
|NASA-CASE-LEW-15263-2| p 1627 N95-22563
Deflections of anisotropic sandwich beams with variable face sheets and core thicknesses p 1700 N95-23310
The detection and analysis of galvanic damage in BMI/graphite fiber composites p 1631 N95-23502
Corrosion protection measures for CFC/metal joints of fuel integral tank structures of advanced military aircraft
p 1644 N95-23510
Surface characterization of LDEF carbon fiber/polymer matrix composites p 1631 N95-23900
Assessment of resin transfer molding process for the XM6 discharger, ERDEC SSP 93-64
|NIAR-94-2| p 1650 N95-23932
Thermoelastic theory for the response of materials functionally graded in two directions with applications to the free-edge problem
|NASA-TM-106882| p 1699 N95-24055

FIBER OPTICS
Method for making fiber-optic bundle collimator assembly
|AD-D016491| p 1819 N95-22492
Development of a multi-sensor in situ fiber optic fluorometer
|DE95-003105| p 1819 N95-22780
Optical fiber strain sensor with improved linearity range
|NASA-CASE-LAR-14857-1-SB| p 1819 N95-22807
The possibilities for mobile and fixed services up to the 20/30 GHz frequency bands p 1656 N95-22817
A fiber-optic bundle and collimator assembly
|AD-D016500| p 1820 N95-22864
Photoinduced Bragg grating formation in optical fibres as a consequence of convective instability
|DE94-628479| p 1841 N95-23020
Low-cost packaging of high-performance optoelectronic components
|DE95-003645| p 1827 N95-23449
The STAR EM calorimeter design and small prototype test results
|DE95-004592| p 1689 N95-23583

FIBER PULLOUT
USML-1 Glovebox experiments
|NASA-CR-196574| p 1653 N95-24028

FIBERS (MATHEMATICS)
Berry phase by description of the quantum systems in the Kustaanheimo-Stiefel bundle
|DE94-628410| p 1847 N95-22620

FIBONACCI NUMBERS
Fibonacci chain polynomials: Identities from self-similarity p 1814 N95-22962

FIELD OF VIEW
SeaWiFS technical report series. Volume 25: Ocean optics protocols for SeaWiFS validation, revision 1
|NASA-TM-104566-VOL-25-REV-| p 1743 N95-22671
Instantaneous field of view and spatial sampling of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS)
p 1702 N95-23851

FIELD THEORY (PHYSICS)
Fermion-spin transformation to implement the charge-spin separation
|DE94-629035| p 1800 N95-22495
Problems in particle theory
|DE95-003106| p 1803 N95-22749
Nahm's product and W-algebra
|DE94-628504| p 1787 N95-22777
Non-Noetherian symmetries for oscillators in classical mechanics and in field theory p 1823 N95-22977
(Phi)(sup 4) kinks: Statistical mechanics
|DE95-003693| p 1794 N95-23349
Effective (mu)-term in superstring theory
|DE94-634326| p 1851 N95-23922
The exchange algebra for Liouville field on Riemann surfaces with h greater than 1 genus
|DE94-635446| p 1792 N95-23971

FIGHTER AIRCRAFT
An assessment of viscous effects in computational simulation of benign and burst vortex flows on generic fighter wind-tunnel models using TEAM code
|NASA-CR-4650| p 1608 N95-23185

FILAMENTS
High gain GaAs photoconductive semiconductor switches: Measurement of filament velocity and reduced trigger energy
|DE95-001884| p 1661 N95-22844

FILLERS
Chemical recycling of scrap composites
p 1629 N95-23034

FILM COOLING
Computational Fluid Dynamic (CFD) analysis of axisymmetric plume and base flow of film/dump cooled rocket nozzle p 1673 N95-23431
Methodology for CFD design analysis of National Launch System nozzle manifold p 1683 N95-23637

FILMS
Microporous polyimide films for reduced dielectric applications
|DE95-004543| p 1650 N95-24159

FINANCIAL MANAGEMENT
DOD budget: Selected categories of planned funding for fiscal years 1995-99. Report to Congressional requesters
|GAO/NSIAD-95-92| p 1864 N95-24062

FINITE DIFFERENCE THEORY
Evaluation of a Multiple Instruction/Multiple Data (MIMD) parallel computer for CFD applications
|AD-A285796| p 1762 N95-22509
Development of an advanced finite difference atmospheric general circulation model
|DE95-003187| p 1736 N95-22879
Harmonic oscillator representation in the theory of scattering and nuclear reactions p 1814 N95-22967
Conjugate gradient MATHEW
|DE95-003479| p 1738 N95-23143
VLUGR2: A vectorizable adaptive grid solver for PDes in 2D
|PB95-136008| p 1789 N95-23167
Finite-difference solutions of the alternate turbopump development high-pressure oxidizer turbopump pump-end ball-bearing cavity flows p 1678 N95-23617
Incompressible Navier-Stokes calculations in pump flows p 1680 N95-23627
Simulation of cookoff results in a small scale test
|DSTO-TR-0090| p 1653 N95-23668

FINITE ELEMENT METHOD
Partitioning methods for unstructured finite element meshes
|PB95-130555| p 1785 N95-22544
Development of an adaptive hp-version finite element method for computational optimal control
|NASA-CR-197898| p 1766 N95-22831
Computation of magnetic forces on moving conductors by using ELEKTRA and other 3-D computer codes
|DE95-003308| p 1798 N95-22895
COYOTE 2: A Finite Element Computer Program for nonlinear heat conduction problems
|DE95-002848| p 1666 N95-22914
Three-dimensional CTOA and constraint effects during stable tearing in a thin-sheet material
|NASA-TM-109183| p 1627 N95-22928
Finite-element time evolution operator for the anharmonic oscillator p 1823 N95-22983
Structural arrangement trade study. Volume 3: Reusable Hydrogen Composite Tank System (RHCTS) and Graphite Composite Primary Structures (GCPS). Addendum
|NASA-CR-197687| p 1621 N95-23189
Idealized textile composites for experimental/analytical correlation p 1631 N95-23277
Infinite possibilities: Computational structures technology p 1700 N95-23280
Residual strength of thin panels with cracks
p 1700 N95-23311
A new look at the simultaneous analysis and design of structures p 1700 N95-23327
Combining comparison functions and finite element approximations in CFD
|NASA-TM-106851| p 1792 N95-23614
A modal test design strategy for model correlation
|DE95-003631| p 1759 N95-24020
A multibody/finite element analysis approach for modeling of crash dynamic responses
|NIAR-94-3| p 1610 N95-24050

FINITE VOLUME METHOD
A time-accurate finite volume method valid at all flow velocities p 1676 N95-23447

FINNED BODIES
ASRM multi-port igniter flow field analysis
p 1683 N95-23639

FIRE FIGHTING
Fire hazard considerations for composites in vehicle design p 1628 N95-23032

FIRE PREVENTION
Fire hazard considerations for composites in vehicle design p 1628 N95-23032

FIRES
Rationale for the Modular Air-system Vulnerability Estimation Network (MAVEN) methodology
|AD-A285797| p 1611 N95-22510
Fire hazard considerations for composites in vehicle design p 1628 N95-23032
Remote sensing of smoke, clouds, and fire using AVIRIS data p 1704 N95-23860
Aircraft fires, smoke toxicity, and survival: An overview
|DOT/FAA/AM-95/8| p 1610 N95-24024

FISCHER-TROPSCH PROCESS
Particle size dependence in Fischer-Tropsch synthesis
|DE95-003124| p 1633 N95-22876

FISSION
Fission foil measurements of neutron and proton fluences in the A0015 experiment p 1815 N95-23811

FIXED POINTS (MATHEMATICS)
Relating multifunctions and predicate transformers through closure operators
|PB95-135646| p 1757 N95-23467

FIXED WINGS
Aviator's night vision imaging system preflight adjustment/assessment procedures
|AD-A285829| p 1750 N95-22513

FLAME PROPAGATION
Microgravity combustion science: 1995 program update
|NASA-TM-106858| p 1626 N95-24004

FLAMES
Modeling NO(x) emissions in turbulent jet flames: Effects of buoyancy and radiation
|DE94-016621| p 1633 N95-22886

FLAMMABILITY
The influence of high-octane fuel blends on the performance of a two-stroke SI engine with knock-limited-compression ratio
|DE95-002902| p 1692 N95-22556

FLANGES
Investigation of arc length versus flange thickness while using an arc voltage controller
| DE95-003937 | p 1695 N95-23374
FLAT PANEL DISPLAYS
MOCVD of gallium and calcium sulfides for improved phosphor processing
| DE95-000918 | p 1631 N95-22677
FLAT PLATES
Crossflow instability control on a swept-wing: Preliminary studies p 1609 N95-23283
Aeroacoustic computation of gust-blade interaction p 1800 N95-23313
FLAVOR (PARTICLE PHYSICS)
Dimuon production in proton-nucleus interactions
| DE95-002613 | p 1801 N95-22551
Mechanical design of the CDF SVX 2 silicon vertex detector
| DE94-018985 | p 1689 N95-23520
FLEXIBLE BODIES
Statistically generated weighted curve fit of residual functions for modal analysis of structures
| NASA-TM-108481 | p 1699 N95-22950
Segregated rigid and structural control for a photolithography positioning system
| DE95-002603 | p 1766 N95-23134
Manipulating flexible parts using a teleoperated system with time delay: An experiment p 1777 N95-23729
FLEXIBLE SPACECRAFT
Computational control of flexible aerospace systems
| NASA-CR-197902 | p 1621 N95-23260
FLEXIBLE WINGS
Flutter analysis of composite box beams
| NASA-CR-197931 | p 1615 N95-23392
FLEXING
Flexural vibration of thin piezoelectric laminate circular cylinder of hexagonal symmetry
| DE94-628474 | p 1698 N95-22773
FLIGHT CHARACTERISTICS
Flight test of the X-29A at high angle of attack: Flight dynamics and controls
| NASA-TP-3537 | p 1612 N95-22806
Analysis of the longitudinal handling qualities and pilot-induced-oscillation tendencies of the High-Angle-of-Attack Research Vehicle (HARV) p 1616 N95-23297
Preparation of course materials: Elementary mathematics of powered flight p 1853 N95-23320
Handling qualities of the High Speed Civil Transport p 1616 N95-23325
FLIGHT CONDITIONS
Direct adaptive performance optimization of subsonic transports: A periodic perturbation technique
| NASA-TM-4676 | p 1612 N95-22829
Control of flow separation in airfoil/wing design applications p 1609 N95-23294
FLIGHT CONTROL
Virtual reality flight control display with six-degree-of-freedom controller and spherical orientation overlay
| NASA-CASE-NPO-18733-1-CU | p 1613 N95-22578
Flight test of the X-29A at high angle of attack: Flight dynamics and controls
| NASA-TP-3537 | p 1612 N95-22806
Analysis of the longitudinal handling qualities and pilot-induced-oscillation tendencies of the High-Angle-of-Attack Research Vehicle (HARV) p 1616 N95-23297
Inner loop flight control for the High-Speed Civil Transport p 1616 N95-23314
Differential GPS and system integration of the Low Visibility Landing and Surface Operations (LVLASO) demonstration p 1611 N95-23318
Engines-only flight control system
| NASA-CASE-ARC-11944-1 | p 1615 N95-23389
Aerodynamic surface distension system for high angle of attack forebody vortex control
| NASA-CASE-ARC-11979-1 | p 1612 N95-23390
Feedback control laws for highly maneuverable aircraft
| NASA-CR-197944 | p 1615 N95-23410
Aerodynamic flight control to increase payload capability of future launch vehicles
| NASA-CR-197704 | p 1619 N95-24032
FLIGHT CREWS
Aviator's night vision imaging system preflight adjustment/assessment procedures
| AD-A285829 | p 1750 N95-22513
Aircraft accident report. Runway overrun following rejected takeoff. Continental airlines flight 795, McDonnell Douglas MD-82, N18835, LaGuardia Airport, Flushing, NY, 2 March 1994
| PB95-910401 | p 1610 N95-23609
FLIGHT INSTRUMENTS
Summary of OARE flight calibration measurements
| NASA-TM-109159 | p 1688 N95-23012
TRISTAR 1: Evaluation methods for testing head-up display (HUD) flight symbology
| NASA-TM-4665 | p 1613 N95-24030
FLIGHT OPERATIONS
Guidance and control requirements for high-speed Rollout and Turnoff (ROTO)
| NASA-CR-195026 | p 1614 N95-22674
Oceanic operations: An authoritative guide to oceanic operations
| FAA-AFS-550 | p 1610 N95-24065
FLIGHT PATHS
Nonlinear system guidance in the presence of transmission zero dynamics
| NASA-TM-4661 | p 1654 N95-22804
Engines-only flight control system
| NASA-CASE-ARC-11944-1 | p 1615 N95-23389
FLIGHT RECORDERS
The role of flight progress strips in en route air traffic control: A time-series analysis
| DOT/FAA/AM-95/4 | p 1611 N95-23565
FLIGHT SAFETY
Additional improvements to the NASA Lewis ice accretion code LEWICE
| NASA-TM-106849 | p 1665 N95-22669
Oklahoma City air logistics center (USAF) aging aircraft corrosion program p 1607 N95-23519
A multibody/finite element analysis approach for modeling of crash dynamic responses
| NIAR-94-3 | p 1610 N95-24050
FLIGHT SIMULATION
Virtual reality flight control display with six-degree-of-freedom controller and spherical orientation overlay
| NASA-CASE-NPO-18733-1-CU | p 1613 N95-22578
Direct adaptive performance optimization of subsonic transports: A periodic perturbation technique
| NASA-TM-4676 | p 1612 N95-22829
Review of aeronautical fatigue investigation in the Netherlands during the period March 1991-March 1993
| PB95-139184 | p 1612 N95-23161
Development of qualification guidelines for personal computer-based aviation training devices
| DOT/FAA/AM-95/6 | p 1758 N95-23603
FLIGHT STRESS (BIOLOGY)
All systems go!
| NASA-TM-110542 | p 1620 N95-23665
FLIGHT TESTS
Flight test of the X-29A at high angle of attack: Flight dynamics and controls
| NASA-TP-3537 | p 1612 N95-22806
Low Earth orbit thermal control coatings exposure flight tests: A comparison of U.S. and Russian results
| NASA-CR-4647 | p 1626 N95-22919
High-lift flow-physics flight experiments on a subsonic civil transport aircraft (B737-100) p 1609 N95-23333
TRISTAR 1: Evaluation methods for testing head-up display (HUD) flight symbology
| NASA-TM-4665 | p 1613 N95-24030
FLIGHT TRAINING
Development of qualification guidelines for personal computer-based aviation training devices
| DOT/FAA/AM-95/6 | p 1758 N95-23603
FLOAT ZONES
USML-1 Glovebox experiments
| NASA-CR-196574 | p 1653 N95-24028
FLOCCULATING
Scandinavian symposium on surface chemistry
| PB95-140687 | p 1636 N95-23554
FLOOD PLAINS
Revitalization of the Gemenc-area, Baja, Hungary. 1: A study on hydrological possibilities to revitalise the ecosystem in the Keselyues-area. 2: Towards the restoration of the Gyueruesalj floodplain
| PB95-139283 | p 1718 N95-23469
FLOODS
Axial focusing of impact energy in the earth's interior: A possible link to flood basalts and hotspots
| DE95-003357 | p 1741 N95-24009
FLOW CHARACTERISTICS
Impeller flow field characterization with a laser two-focus velocimeter p 1675 N95-23440
FLOW DISTRIBUTION
Flow visualization studies of VTOL aircraft models during Hover in ground effect
| NASA-TM-108860 | p 1607 N95-22666
A CFD study of complex missile and store configurations in relative motion
| NASA-CR-197912 | p 1612 N95-22949
Mach 10 computational study of a three-dimensional scramjet inlet flow field
| NASA-TM-4602 | p 1666 N95-23015
Three-dimensional structure in a supersonic jet: Behavior near centerline
| NASA-TM-106869 | p 1668 N95-23220
Experimental results for a hypersonic nozzle/afterbody flow field
| NASA-TM-4638 | p 1609 N95-23250
Holographic interferometric tomography for reconstructing flow fields p 1690 N95-23287
Aeroacoustic computation of gust-blade interaction p 1800 N95-23313
Structured adaptive grid generation using algebraic methods p 1669 N95-23417
A generic efficient adaptive grid scheme for rocket propulsion modeling p 1670 N95-23418
Three-dimensional unsteady flow calculations in an advanced gas generator turbine p 1671 N95-23425
Axisymmetric computational fluid dynamics analysis of Saturn V/S1-C/F1 nozzle and plume p 1672 N95-23430
NLS base heating CFD analysis p 1673 N95-23432
CFD flowfield simulation of Delta Launch Vehicles in a power-on configuration p 1673 N95-23433
A study of the vortex flow over 76/40-deg double-delta wing
| NASA-CR-195032 | p 1677 N95-23466
Navier-Stokes flow field analysis of compressible flow in a pressure relief valve p 1679 N95-23618
Comparison between predicted and experimentally measured flow fields at the exit of the SSME HPFTP impeller p 1679 N95-23622
Three-dimensional flow analysis inside consortium impeller at design and off-design conditions p 1679 N95-23623
Use of blade lean in turbomachinery redesign p 1680 N95-23625
CFD parametric study of consortium impeller p 1680 N95-23626
A generalized Eulerian-Lagrangian analysis, with application to liquid flows with vapor bubbles p 1682 N95-23633
CFD modeling of turbulent duct flows for coolant channel analysis p 1682 N95-23635
Flow and heat transfer in 180-degree turn square ducts: Effects of turning configuration and system rotation p 1682 N95-23636
Methodology for CFD design analysis of National Launch System nozzle manifold p 1683 N95-23637
Advanced multi-phase flow CFD model development for solid rocket motor flowfield analysis p 1683 N95-23638
ASRM multi-port igniter flow field analysis p 1683 N95-23639
Ignition transient calculations in the Space Shuttle solid rocket motor p 1625 N95-23640
An interactive tool for discrete phase analysis in two-phase flows p 1683 N95-23641
Flowfield characterization in a LOX/GH2 propellant rocket p 1684 N95-23642
Spray combustion experiments and numerical predictions p 1637 N95-23643
CFD analysis of spray combustion and radiation in OMV thrust chamber p 1637 N95-23645
Development of an atomization methodology for spray combustion p 1637 N95-23646
Application of CFD analysis to design support and problem resolution for ASRM and RSRM p 1685 N95-23649
Status of axisymmetric CFD of an eleven inch diameter hybrid rocket motor p 1686 N95-23651
Validation of a Computational Fluid Dynamics (CFD) code for supersonic axisymmetric base flow p 1686 N95-23652
Code validation study for base flows p 1686 N95-23653
Four-nozzle benchmark wind tunnel model USA code solutions for simulation of multiple rocket base flow recirculation at 145,000 feet altitude p 1686 N95-23654
Numerical study of base pressure characteristic curve for a four-engine clustered nozzle configuration p 1625 N95-23655
A computer model in general 3-D curvilinear coordinates for the prediction of the turbulent flow field in a jet induced ram combustor
| NAL-TR-1240T | p 1687 N95-24051
FLOW EQUATIONS
Modeling of nonequilibrium space plasma flows
| NASA-CR-197432 | p 1833 N95-23211
Benchmark problems in computational aeroacoustics p 1800 N95-23315
On the breakup of viscous liquid threads
| NASA-CR-195023 | p 1678 N95-23544
Progress in advanced spray combustion code integration p 1637 N95-23644
FLOW GEOMETRY
The influence of swirl brakes and a tip discharge orifice on the rotordynamic forces generated by discharge-to-suction leakage flows in shrouded centrifugal pumps p 1680 N95-23628

FLOW MEASUREMENT
Flow measuring structures
| PB95-127254 | p 1665 N95-22638
7th International Symposium on Applications of Laser Techniques to Fluid Mechanics, volume 1
| AD-A285647 | p 1691 N95-23118
Raman-shifting an ArF excimer laser to generate new lines for obtaining optical diagnostic based information in flow fields p 1692 N95-23303
Impeller flow field characterization with a laser two-focus velocimeter p 1675 N95-23440

FLOW STABILITY
Influence of porosity and two-phase flow on diffusional/thermal instability of a deflagrating energetic material
| DE95-002592 | p 1634 N95-23122
A time-accurate finite volume method valid at all flow velocities p 1676 N95-23447
On the breakup of viscous liquid threads
| NASA-CR-195023 | p 1678 N95-23544

FLOW VELOCITY
Superconducting Tl2Ba2CaCu2O8 thin films prepared by post-annealing in a flow-through multiple-zone furnace
| DE95-002745 | p 1838 N95-22520
Accelerated panel methods using the fast multipole method p 1687 N95-23307
Aeroacoustic computation of gust-blade interaction p 1800 N95-23313
Three-dimensional viscous flow analysis inside a turbine volute p 1674 N95-23437
Phase 2: HGM air flow tests in support of HEX vane investigation p 1674 N95-23438
Impeller flow field characterization with a laser two-focus velocimeter p 1675 N95-23440
A time-accurate finite volume method valid at all flow velocities p 1676 N95-23447

FLOW VISUALIZATION
Flow visualization studies of VTOL aircraft models during Hover in ground effect
| NASA-TM-108860 | p 1607 N95-22666
Experimental study of vortex breakdown in a swirling water jet
| PB95-130407 | p 1665 N95-22767
Experimental results for a hypersonic nozzle/afterbody flow field
| NASA-TM-4638 | p 1609 N95-23250
Flow diagnostics, chemically reacting turbulent flow modeling and turbulent mixing: A summary of project studies in combustion
| NASA-CR-197348 | p 1687 N95-24022

FLUENCE
Results from the Heavy Ions In Space (HIIS) experiment on the ionic charge state of solar energetic particles p 1870 N95-23808
Absorbed dose and LET spectra measurements on LDEF p 1815 N95-23810
Fission foil measurements of neutron and proton fluences in the A0015 experiment p 1815 N95-23811
Measurement of trapped proton fluences in main stack of P0006 experiment p 1815 N95-23812

FLUID DYNAMICS
Experimental study of vortex breakdown in a swirling water jet
| PB95-130407 | p 1665 N95-22767
High-lift flow-physics flight experiments on a subsonic civil transport aircraft (B737-100) p 1609 N95-23333
Application of CFD analysis to design support and problem resolution for ASRM and RSRM p 1685 N95-23649

FLUID FLOW
Effects of wind on rainfall simulation. Spatial distribution of water application, kinetic energy, and overland flow under single full-cone nozzle sprays
| PB95-127304 | p 1717 N95-22537
The effect of a non-zero shock width on wave propagation in multi-dimensions
| DE95-002748 | p 1666 N95-22902
7th International Symposium on Applications of Laser Techniques to Fluid Mechanics, volume 1
| AD-A285647 | p 1691 N95-23118
Holographic interferometric tomography for reconstructing flow fields p 1690 N95-23287
Numerical study of the SSME nozzle flow fields during transient operations: A comparison of the animated results with test p 1673 N95-23434
Phase 2: HGM air flow tests in support of HEX vane investigation p 1674 N95-23438
A time-accurate finite volume method valid at all flow velocities p 1676 N95-23447
Gyrokinetic and global fluid simulations of tokamak microturbulence and transport
| DE95-003628 | p 1837 N95-24017

FLUID JETS
On the breakup of viscous liquid threads
| NASA-CR-195023 | p 1678 N95-23544

FLUID MECHANICS
7th International Symposium on Applications of Laser Techniques to Fluid Mechanics, volume 1
| AD-A285647 | p 1691 N95-23118
A wavenumber-partitioning scheme for two-dimensional statistical closures
| DE95-004514 | p 1677 N95-23483
On inertial range scaling laws
| DE95-004515 | p 1677 N95-23484

FLUIDIZED BED PROCESSORS
Design and demonstration of an immobilized-cell fluidized-bed reactor for the efficient production of ethanol
| DE94-014023 | p 1652 N95-22587
Continuous production of cellulase in a fluidized-bed reactor by Pseudonomas fluorescens immobilized in hydrogel beads
| DE94-014105 | p 1744 N95-22588
Development of the IGT RENUGAS(reg sign) process
| DE94-017652 | p 1727 N95-22888
Robotic weld overlay coatings for erosion control
| DE95-002624 | p 1696 N95-24141

FLUORESCENCE
Comparison of the rate constants for energy transfer in the light-harvesting protein, C-phycocyanin, calculated from Foerster's theory and experimentally measured by time-resolved fluorescence spectroscopy
| DE94-014961 | p 1745 N95-22590
Development of a multi-sensor in situ fiber optic fluorometer
| DE95-003105 | p 1819 N95-22780

FLUORIDES
Electron drift velocities of Ar-CO2-CF4 gas mixtures
| DE95-004353 | p 1809 N95-23359

FLUOROCARBONS
Reduced dimer production in solar-simulator-pumped continuous wave iodine lasers based on model simulations and scaling and pumping studies
| NASA-TP-3486 | p 1691 N95-23411

FLUOROPOLYMERS
Polyazomethines containing trifluoromethylbenzene units
| NASA-CASE-LAR-14896-1 | p 1649 N95-23253
The surface properties of fluorinated polyimides exposed to VUV and atomic oxygen p 1651 N95-23904

FLUTTER
Flutter analysis of composite box beams
| NASA-CR-197931 | p 1615 N95-23392

FLUTTER ANALYSIS
Flutter analysis of composite box beams
| NASA-CR-197931 | p 1615 N95-23392

FLUX DENSITY
Energy flux and hydrogeology of thermal anomalies in the Gulf of Mexico Basin - South Texas example
| DE95-003341 | p 1743 N95-22695
Design of a differential radiometer for atmospheric radiative flux measurements
| DE95-002701 | p 1739 N95-23244

FLYBY MISSIONS
Using AVIRIS for in-flight calibration of the spectral shifts of SPOT-HRV and of AVHRR? p 1710 N95-23893

FLYWHEELS
Electromechanical Battery Program at the Lawrence Livermore National Laboratory
| DE95-003657 | p 1727 N95-22574

FOAMS
Scandinavian symposium on surface chemistry
| PB95-140687 | p 1636 N95-23554

FOCAL PLANE DEVICES
Programmable hyperspectral image mapper with on-array processing
| NASA-CASE-NPO-17794-1-CU | p 1819 N95-22765

FOCUSING
Attention focusing and anomaly detection in systems monitoring p 1769 N95-23683

FOIL BEARINGS
Influence of backup bearings and support structure dynamics on the behavior of rotors with active supports
| NASA-CR-197438 | p 1694 N95-23190

FOKKER-PLANCK EQUATION
Wigner distribution function and entropy of the damped harmonic oscillator within the theory of the open quantum systems p 1798 N95-22990

FOLDING
Protein folding and protein metallocluster studies using synchrotron small angler x ray scattering
| DE95-003339 | p 1746 N95-22897

FOLIAGE
Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 1 p 1703 N95-23856
The effect of signal noise on the remote sensing of Foliar biochemical concentration p 1708 N95-23884

FOREBODIES
Aerodynamic surface distension system for high angle of attack forebody vortex control
| NASA-CASE-ARC-11979-1 | p 1612 N95-23390

FORECASTING
Intermediate-term earthquake prediction and seismic zoning in Northern Italy
| DE94-627689 | p 1736 N95-22612

FOREST MANAGEMENT
FAME: A forest assessment and monitoring environment scenario
| PB95-139309 | p 1718 N95-23471
Forest investigations by polarimetric AIRSAR data in the Harz mountains p 1713 N95-23944
Polarimetric radar data decomposition and interpretation p 1715 N95-23955
Geographic information analysis: An ecological approach for the management of wildlife on the forest landscape
| NASA-CR-197941 | p 1719 N95-24094
Measuring forest landscape patterns in the Cascade Range of Oregon, USA p 1719 N95-24096
A preliminary comparison of Landsat Thematic Mapper and SPOT-1 HRV multispectral data for estimating coniferous forest volume p 1719 N95-24097
Old-growth and mature forests near spotted owl nests in western Oregon p 1719 N95-24098
Hierarchical analysis of spatial pattern and processes of Douglas-fir forests p 1719 N95-24099
Forest and wildlife habitat analysis using remote sensing and geographic information systems p 1720 N95-24100
Analysis of conifer forest regeneration using Landsat Thematic Mapper data p 1720 N95-24101
Determining successional stage of temperate coniferous forests with Landsat satellite data p 1720 N95-24102
Determining coniferous forest cover and forest fragmentation with NOAA-9 advanced very high resolution radiometer data p 1720 N95-24103
Dynamics and pattern of a managed coniferous forest landscape in Oregon p 1720 N95-24104

FORESTS
Combining optical and microwave remote sensing data of forest vegetation: MAC Europe 1991
| PB95-127312 | p 1717 N95-22538
FAME: A forest assessment and monitoring environment scenario
| PB95-139309 | p 1718 N95-23471
Submodular linear programs on forests
| PB95-139820 | p 1758 N95-23608
AVIRIS spectra correlated with the chlorophyll concentration of a forest canopy p 1705 N95-23871
Measurements of canopy chemistry with 1992 AVIRIS data at Blackhawk Island and Harvard Forest p 1706 N95-23873
Estimation of crown closure from AVIRIS data using regression analysis p 1709 N95-23886
Forest investigations by polarimetric AIRSAR data in the Harz mountains p 1713 N95-23944
Relating P-band AIRSAR backscatter to forest stand parameters p 1716 N95-23959
Microwave dielectric properties of boreal forest trees p 1716 N95-23961
Geographic information analysis: An ecological approach for the management of wildlife on the forest landscape
| NASA-CR-197941 | p 1719 N95-24094
Measuring forest landscape patterns in the Cascade Range of Oregon, USA p 1719 N95-24096
Old-growth and mature forests near spotted owl nests in western Oregon p 1719 N95-24098
Hierarchical analysis of spatial pattern and processes of Douglas-fir forests p 1719 N95-24099
Forest and wildlife habitat analysis using remote sensing and geographic information systems p 1720 N95-24100
Analysis of conifer forest regeneration using Landsat Thematic Mapper data p 1720 N95-24101
Determining successional stage of temperate coniferous forests with Landsat satellite data p 1720 N95-24102
Determining coniferous forest cover and forest fragmentation with NOAA-9 advanced very high resolution radiometer data p 1720 N95-24103
Dynamics and pattern of a managed coniferous forest landscape in Oregon p 1720 N95-24104
Thermal radiant exitance model performance: Soils and forests
| DE95-003619 | p 1721 N95-24148

FORM FACTORS
On the D yields K-bar(sup *)e(sup +)(nu)(sub e) form factors
| DE94-628614 | p 1803 N95-22754
To the problem of D-meson leptonic and semileptonic decays
| DE94-628615 | p 1803 N95-22755

The omega pi(sup 0)-transient form factor within effective chiral Lagrangian approach
| DE94-628612 | p 1850 N95-22812
Flavour dependence of form factors in heavy meson decays
| PB95-139101 | p 1807 N95-23156

FORMALDEHYDE
Ethylene oxidation chemistry in a well-stirred reactor
| DE95-004823 | p 1635 N95-23381

FORMALISM
Roles and dynamic subclasses: A modal logic approach
| PB95-127320 | p 1754 N95-22522
Temporal model theory for default logic
| PB95-127346 | p 1766 N95-22524
Browsing semantics in the tower model
| PB95-127221 | p 1855 N95-22534
DUALITY: A simple formalism for the analysis of UNITY
| PB95-135703 | p 1763 N95-23166
Ploxoma: Testbed for uncertain inference
| TR-537 | p 1794 N95-23927

FORMAT
Utilizing inheritance in requirements engineering p 1768 N95-23677

FORMING TECHNIQUES
Technology maturation project on optimization of sheet metal forming of aluminum for use in transportation systems
| DE95-003005 | p 1654 N95-22692

FOSSIL FUELS
Assessing the relative contribution of biogenic and fossil processes to visibility scattering aerosols found in remote areas: Near-term Organic Research Program
| DE95-003149 | p 1735 N95-24146

FOSSILS
Molecular relics from chemical evolution and the origin of life
| DE94-628493 | p 1747 N95-23060

FOURIER TRANSFORMATION
Optical image correlator using orthogonal data storage
| AD-A285795 | p 1819 N95-22508
A Ramanujan-type measure for the Askey-Wilson polynomials p 1797 N95-22975
An algorithm for the basis of the finite Fourier transform p 1760 N95-22985
A note on the angular Fourier transformation p 1797 N95-22986

FRACTALS
A fractal model for intergranular fractures in nanocrystals
| DE94-627393 | p 1839 N95-22606
Hausdorff dimension of Julia sets of complex Henon mappings
| DE94-628420 | p 1785 N95-22628
Effect of critical field on screened dielectric breakdown growth
| DE94-628482 | p 1661 N95-23046
Effects of long-range coupling on aggregation
| DE94-628483 | p 1842 N95-23047

FRACTIONS
Mapping and monitoring changes in vegetation communities of Jasper Ridge, CA, using spectral fractions derived from AVIRIS images p 1708 N95-23883
Objective determination of image end-members in spectral mixture analysis of AVIRIS data p 1709 N95-23888

FRACTURE MECHANICS
A fractal model for intergranular fractures in nanocrystals
| DE94-627393 | p 1839 N95-22606
Notch-tip damage and translaminar fracture toughness measurements from carbon/epoxy laminates
| AD-A280101 | p 1627 N95-22833
Three-dimensional CTOA and constraint effects during stable tearing in a thin-sheet material
| NASA-TM-109183 | p 1627 N95-22928
Separation of crack extension modes in composite delamination problems p 1700 N95-23281
Fracture mechanics life analytical methods verification testing
| NASA-CR-196555 | p 1697 N95-24106

FRACTURE STRENGTH
A fractal model for intergranular fractures in nanocrystals
| DE94-627393 | p 1839 N95-22606
An investigation into the effects of hydrogen on the fracture and deformation of Alloy X-750
| DE95-003206 | p 1639 N95-22732
Notch-tip damage and translaminar fracture toughness measurements from carbon/epoxy laminates
| AD-A280101 | p 1627 N95-22833
The hydrogen embrittlement of alloy X-750
| DE95-003207 | p 1640 N95-22893

FRACTURES (MATERIALS)
A fractal model for intergranular fractures in nanocrystals
| DE94-627393 | p 1839 N95-22606

FRACTURING
Morphology of extinguished monolithic JA2 grains fired in a 30-mm Solid Propellant Electrothermal Chemical (SPETC) gun
| AD-A285792 | p 1652 N95-22506
The hydrogen embrittlement of alloy X-750
| DE95-003207 | p 1640 N95-22893

FRAGMENTATION
Impact shock and penetration fragmentation in porous media
| DE94-018900 | p 1868 N95-23656
Measuring forest landscape patterns in the Cascade Range of Oregon, USA p 1719 N95-24096
Determining coniferous forest cover and forest fragmentation with NOAA-9 advanced very high resolution radiometer data p 1720 N95-24103

FRAGMENTS
Rationale for the Modular Air-system Vulnerability Estimation Network (MAVEN) methodology
| AD-A285797 | p 1611 N95-22510

FRAMES (DATA PROCESSING)
Utilizing inheritance in requirements engineering p 1768 N95-23677

FREE BOUNDARIES
Flexural vibration of thin piezoelectric laminate circular cylinder of hexagonal symmetry
| DE94-628474 | p 1698 N95-22773

FREE ELECTRON LASERS
Electron beam acceleration and compression for short wavelength FELs
| DE95-003371 | p 1691 N95-22704
Undulators for short wavelength FEL amplifiers
| DE95-004690 | p 1692 N95-23487
The project of high free electron laser using race-track microtron-recuperator
| DE94-634034 | p 1692 N95-23657
Advanced technologies for a compact RF linac FEL
| DE95-003674 | p 1692 N95-24072

FREE FLOW
Direct numerical simulations and modeling of a spatially-evolving turbulent wake p 1687 N95-23289
Benchmark problems in computational aeroacoustics p 1800 N95-23315

FREE VIBRATION
Flexural vibration of thin piezoelectric laminate circular cylinder of hexagonal symmetry
| DE94-628474 | p 1698 N95-22773

FREQUENCIES
Time-periodic solutions of some forced nonlinear wave equations: Analysis, approximations and applications
| PB95-135083 | p 1788 N95-22932

FREQUENCY MODULATION
Wavelet time-frequency analysis of phase-shift-key modulated signals
| AD-A285791 | p 1655 N95-22505

FREQUENCY STABILITY
Sensitivity of combustion-acoustic instabilities to boundary conditions for premixed gas turbine combustors
| NASA-TM-106890 | p 1614 N95-23550

FROST
Gas cooled leads. Part 1: Theoretical Study. Part 2: Frost free lead optimized for a specific current. Part 3: Frost free lead optimized for a large current range
| DE95-002657 | p 1660 N95-22716

FRUSTRATION
Study of frustrated systems via dissipative maps
| PB95-139093 | p 1799 N95-23155

FUEL CELL POWER PLANTS
The US molten carbonate fuel-cell development and commercialization effort
| DE94-019096 | p 1728 N95-23162

FUEL CELLS
Energy Conversion and Storage Program
| DE95-003796 | p 1725 N95-22501
Support research for solid oxide fuel cells
| DE95-002910 | p 1726 N95-22568
Multi-fuel reformers for fuel cells used in transportation: Assessment of hydrogen storage technologies
| DE94-017655 | p 1727 N95-22861
The US molten carbonate fuel-cell development and commercialization effort
| DE94-019096 | p 1728 N95-23162
Hydrogen and fuel cells for energy storage
| DE95-723907 | p 1729 N95-23382
Multi-fuel reformers for fuel cells used in transportation. Phase 1: Multi-fuel reformers
| DE95-004215 | p 1729 N95-23482
Electrochemical studies of perovskite mixed conductors
| DE95-003704 | p 1636 N95-23573
Advances in research for solid oxide fuel cells
| DE95-004590 | p 1730 N95-23582
Proceedings of the fuel cells 1994 contractors review meeting
| DE94-012285 | p 1730 N95-23977

FUEL COMBUSTION
Fundamental phenomena on fuel decomposition and boundary layer combustion processes with applications to hybrid rocket motors
| NASA-CR-197919 | p 1625 N95-23261

FUEL CONSUMPTION
A hybrid vehicle evaluation code and its application to vehicle design
| DE95-004205 | p 1662 N95-23334

FUEL INJECTION
New pellet production and acceleration technologies for high speed pellet injection system HIPEL in Large Helical Device
| NISF-326 | p 1835 N95-23566

FUEL PRODUCTION
Development of the IGT RENUGAS(reg sign) process
| DE94-017652 | p 1727 N95-22888

FUEL PUMPS
Detailed measurements in the SSME high pressure fuel turbine with smooth rotor blades p 1675 N95-23441
Comparison between predicted and experimentally measured flow fields at the exit of the SSME HPFTP impeller p 1679 N95-23622

FUEL SPRAYS
Spray combustion experiments and numerical predictions p 1637 N95-23643
Progress in advanced spray combustion code integration p 1637 N95-23644
CFD analysis of spray combustion and radiation in OMV thrust chamber p 1637 N95-23645
Development of an atomization methodology for spray combustion p 1637 N95-23646

FUEL SYSTEMS
Multi-fuel reformers for fuel cells used in transportation: Assessment of hydrogen storage technologies
| DE94-017655 | p 1727 N95-22861

FUEL TANKS
Multi-fuel reformers for fuel cells used in transportation: Assessment of hydrogen storage technologies
| DE94-017655 | p 1727 N95-22861

FUEL TESTS
Diesel fuel component contributions to engine emissions and performance: Clean fuel study
| DE94-011868 | p 1732 N95-22834
A summary of the slush hydrogen technology program for the National Aero-Space Plane
| NASA-TM-106863 | p 1653 N95-24186

FULLERENES
Lattice relaxation study on self-trapped exciton and biexciton in neutral and charged fullerenes
| DE94-635788 | p 1844 N95-23986

FUNCTION SPACE
Is omega* - (mu) absolutely countably compact?
| PB95-127981 | p 1785 N95-22528
Algebraic description of the elliptic cohomology of classifying spaces
| PB95-110797 | p 1788 N95-23076

FUNCTIONAL ANALYSIS
Translation invariant Frechet subspaces of distributions
| PB95-138830 | p 1789 N95-23171

FUNCTIONAL DESIGN SPECIFICATIONS
Parallel digital modem using multirate digital filter banks
| NASA-CR-197331 | p 1761 N95-22478
Utilizing inheritance in requirements engineering p 1768 N95-23677
Development of Advanced Robotic Hand System for space application p 1752 N95-23704
Digital Linear Tape (DLT) technology and product family overview p 1753 N95-24125

FUSELAGES
Residual strength of thin panels with cracks p 1700 N95-23311

FUSION REACTORS
Numerical Tokamak Project code comparison
| DE95-003475 | p 1831 N95-22899
TFTR Ion Cyclotron Range of Frequencies (ICRF) experimental data analysis collaboration
| DE95-003409 | p 1832 N95-23084
Tritium transport, influx, and helium ash measurements on TFTR during DT operation
| DE95-003708 | p 1833 N95-23269
New pellet production and acceleration technologies for high speed pellet injection system HIPEL in Large Helical Device
| NISF-326 | p 1835 N95-23566
Experimental achievement of toroidal beta beyond that predicted by 'Troyon' scaling
| DE95-003880 | p 1837 N95-24087

FUZZY SYSTEMS
Fuzziness and randomness in an optimization framework
|DE94-628383| p 1755 N95-22616
A fuzzy structural matching scheme for space robotics vision p 1778 N95-23737

G

GALACTIC EVOLUTION
Space Science for the 21st Century. Strategic Plan for 1995-2000
|NASA-TM-110546| p 1617 N95-22947
Structure and evolution of long-lived spiral patterns in galaxies
|PB95-139242| p 1868 N95-23228
GALACTIC ROTATION
Structure and evolution of long-lived spiral patterns in galaxies
|PB95-139242| p 1868 N95-23228
GALACTIC STRUCTURE
Structure and evolution of long-lived spiral patterns in galaxies
|PB95-139242| p 1868 N95-23228
GALAXIES
CDM and Omega in the local neighborhood
|DE95-003683| p 1868 N95-23570
Search for millimeterwave CO emission in damped Lyman-alpha systems
|PB95-139259| p 1868 N95-23607
GALLIUM
MOCVD of gallium and calcium sulfides for improved phosphor processing
|DE95-000918| p 1631 N95-22677
GALLIUM ARSENIDES
Resonant shallow donor magnetopolaron effect in a GaAs/AlGaAs quantum dot in high magnetic fields
|DE94-629039| p 1798 N95-22497
High gain GaAs Photoconductive Semiconductor Switches for impulse sources
|DE95-001885| p 1659 N95-22549
Study of photorefractive non-linearities in the 3-5 and 2-4 semi-insulator compounds: The effect of electron irradiation
|PB94-189057| p 1839 N95-22584
High gain GaAs photoconductive semiconductor switches: Measurement of filament velocity and reduced trigger energy
|DE95-001884| p 1661 N95-22844
Design of a GaAs/Ge solar array for unmanned aerial vehicles
|NASA-TM-106870| p 1728 N95-23259
Carbon doping of III-V compound semiconductors
|DE95-003431| p 1844 N95-24013
Subband quantum scattering times for AlGaAs/GaAs obtained using digital filtering
|NASA-TM-106873| p 1846 N95-24188
GALLIUM SELENIDES
Polycrystalline CuInSe2 and CdTePV solar cells
|DE95-000244| p 1727 N95-22842
GAME THEORY
PUZZLES 4: Sperner collections and the keys puzzle
|PB95-139374| p 1790 N95-23233
Marginalistic value for monotonic set games
|PB95-140646| p 1794 N95-23239
Set games
|PB95-140786| p 1794 N95-23539
Note on the tau-value and tau-related solution concepts
|PB95-140752| p 1795 N95-23555
GAMETOCYTES
Genetic effects on heavy ions in drosophila
|NASA-CR-197916| p 1746 N95-22911
GAMMA RAY ASTRONOMY
Gamma ray emission from radio pulsars
|NASA-CR-197917| p 1871 N95-22910
Statistical properties of the time histories of cosmic gamma-ray bursts detected by the BATSE experiment of the Compton gamma-ray observatory
|NASA-CR-197425| p 1871 N95-23546
GAMMA RAY BURSTS
Statistical properties of the time histories of cosmic gamma-ray bursts detected by the BATSE experiment of the Compton gamma-ray observatory
|NASA-CR-197425| p 1871 N95-23546
GAMMA RAY OBSERVATORY
Analysis of data from the energetic gamma-ray experiment of the Gamma Ray Observatory
|NASA-CR-197347| p 1871 N95-23216
GAMMA RAY TELESCOPES
Analysis of data from the energetic gamma-ray experiment of the Gamma Ray Observatory
|NASA-CR-197347| p 1871 N95-23216
GAMMA RAYS
Gamma ray emission from radio pulsars
|NASA-CR-197917| p 1871 N95-22910
Analysis of data from the energetic gamma-ray experiment of the Gamma Ray Observatory
|NASA-CR-197347| p 1871 N95-23216
ROSAT observation program
|NASA-CR-197683| p 1866 N95-23595
GARNETS
Computational modelling of Er(3+): Garnet laser materials p 1692 N95-23326
GAS ANALYSIS
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer
|NASA-CR-197368| p 1735 N95-22482
GAS BEARINGS
Concept verification of three dimensional free motion simulator for space robot p 1618 N95-23702
GAS CHROMATOGRAPHY
Modified molecular sieves: Stationary phase for the gas chromatographic separation of hydrogen isotopes
|DE94-627282| p 1814 N95-24175
GAS COOLING
Conceptual design of a 20-kA current lead using forced-flow cooling and Ag-alloy-sheathed Bi-2223 high-temperature superconductors
|DE95-002916| p 1660 N95-22569
GAS DETECTORS
Measurements of the optical properties of thin films of silver and silver oxide p 1651 N95-23906
GAS DYNAMICS
High-performance parallel analysis of coupled problems for aircraft propulsion
|NASA-CR-197440| p 1614 N95-23088
LDEF environment modeling updates p 1637 N95-23797
Investigation of infra-red and nonequilibrium air radiation
|NASA-CR-197977| p 1741 N95-24041
GAS FLOW
High-performance parallel analysis of coupled problems for aircraft propulsion
|NASA-CR-197440| p 1614 N95-23088
Entropy jump across an inviscid shock wave
|NASA-CR-195046| p 1678 N95-23596
Advanced multi-phase flow CFD model development for solid rocket motor flowfield analysis p 1683 N95-23638
Time-accurate unsteady flow simulations supporting the SRM T+68-second pressure spike anomaly investigation (STS-54B) p 1685 N95-23650
Monte Carlo simulation of rarefied nitrogen gases contained between parallel plates using the statistical inelastic cross-section model
|NAL-TR-1229T| p 1687 N95-24082
GAS GENERATORS
Three-dimensional unsteady flow calculations in an advanced gas generator turbine p 1671 N95-23425
GAS MIXTURES
Pressure shifts and electron scattering in atomic and molecular gases
|DE95-003102| p 1803 N95-22747
Analytical Boltzmann moments for electrons in N2-O2-H2O gas mixtures
|DE95-003474| p 1732 N95-22898
Electron drift velocities of Ar-CO2-CF4 gas mixtures
|DE95-004353| p 1809 N95-23359
GAS RECOVERY
Preliminary assessment of air toxic emissions in the natural gas industry, phase 1
|PB95-135547| p 1732 N95-22865
GAS STREAMS
Experimental results for a hypersonic nozzle/afterbody flow field
|NASA-TM-4638| p 1609 N95-23250
GAS TEMPERATURE
Non-intrusive measurements in a rocket engine combustor p 1625 N95-23439
Instantaneous 2D velocity and temperature measurements in high speed flows based on spectrally resolved molecular Rayleigh scattering
|NASA-TM-106883| p 1688 N95-23461
GAS TUNGSTEN ARC WELDING
Progress report on a fully automatic Gas Tungsten Arc Welding (GTAW) system development
|DE95-004397| p 1695 N95-23343
Vision-sensing image analysis for GTAW process control
|DE95-003936| p 1695 N95-23373
Investigation of arc length versus flange thickness while using an arc voltage controller
|DE95-003937| p 1695 N95-23374
Vaccum Gas Tungsten Arc Welding, phase 1
|NASA-CR-197979| p 1696 N95-24064
GAS TURBINE ENGINES
Evolution of oxidation and creep damage mechanisms in HIPed silicon nitride materials
|DE95-001360| p 1647 N95-22689
Advanced Turbine Technology Applications Project (ATTAP) 1993 annual report
|DE95-003198| p 1693 N95-22880
GAS TURBINES
Advanced Turbine Technology Applications Project (ATTAP) 1993 annual report
|DE95-003198| p 1693 N95-22880
Sensitivity of combustion-acoustic instabilities to boundary conditions for premixed gas turbine combustors
|NASA-TM-106890| p 1614 N95-23550
GASEOUS ROCKET PROPELLANTS
Flowfield characterization in a LOX/GH2 propellant rocket p 1684 N95-23642
GASES
Review of research results for the photocatalytic oxidation of hazardous wastes in air
|DE95-004004| p 1734 N95-23480
Microgravity combustion science: 1995 program update
|NASA-TM-106858| p 1626 N95-24004
GASIFICATION
Development of the IGT RENUGAS(reg sign) process
|DE94-017652| p 1727 N95-22888
GASOLINE
The influence of high-octane fuel blends on the performance of a two-stroke SI engine with knock-limited-compression ratio
|DE95-002902| p 1692 N95-22556
Performance of thin-ceramic-coated combustion chamber with gasoline and methanol as fuels in a two-stroke SI engine
|DE95-002903| p 1693 N95-22557
GATES
Flow measuring structures
|PB95-127254| p 1665 N95-22638
GATES (CIRCUITS)
Ultrafast, high precision gated integrator
|DE95-004616| p 1664 N95-24164
GAUGE INVARIANCE
First quantized noncritical relativistic Polyakov string
|DE94-628513| p 1848 N95-22738
Topologically stable Z - strings in the supersymmetric standard model
|DE94-628517| p 1848 N95-22742
One loop renormalization of Chern-Simons field theory in operator regularization
|DE94-628508| p 1796 N95-22751
Lectures on 2D gauge theories. Topological aspects and path integral techniques
|DE94-628509| p 1849 N95-22752
Gauge dependence and new kind of two-dimensional gravity theory with trivial quantum corrections
|DE94-628502| p 1850 N95-22776
The omega pi(sup 0)-transient form factor within effective chiral Lagrangian approach
|DE94-628612| p 1850 N95-22812
Scale-invariant Lipatov kernels from t-channel unitarity
|DE95-004625| p 1813 N95-24166
GAUGE THEORY
On diagonalization in map (M,G)
|DE94-628515| p 1796 N95-22740
Lectures on 2D gauge theories. Topological aspects and path integral techniques
|DE94-628509| p 1849 N95-22752
High Energy Theory: Task B and Task L
|DE95-003453| p 1817 N95-23148
Search for new gauge bosons at D(O)
|DE95-003745| p 1809 N95-23404
GEAR TEETH
The spectral content of the torque loads on a turbine gear tooth
|DE95-002188| p 1694 N95-23056
GEARS
Pressurized fluid torque driver control and method
|NASA-CASE-MSC-22385-1| p 1694 N95-22892
Application requirements for wind turbine gearboxes
|DE94-011883| p 1694 N95-22923
Gearbox vibration diagnostic analyzer
|NASA-CR-189141| p 1696 N95-23792
GENE EXPRESSION
Regulation of alcohol fermentation in Escherichia coli
|DE94-016227| p 1745 N95-22874
Rearrangement of RAG-1 recombinase gene in radiation-sensitive wasted mice
|DE94-017083| p 1746 N95-22913
GENERAL OVERVIEWS
Neutrino overview
|DE95-003201| p 1802 N95-22729
Outlook from the intersections
|DE95-003202| p 1802 N95-22730

Summary and review of Materials Special Investigation Group evaluations of hardware from the Long Duration Exposure Facility p 1638 N95-23897
Collection and review of metals data obtained from LDEF experiment specimens and support hardware p 1646 N95-23905
Overview of the LDEF MSIG databasing activities p 1864 N95-23916
Aircraft fires, smoke toxicity, and survival: An overview | DOT/FAA/AM-95/8 | p 1610 N95-24024

GENES
Regulation of alcohol fermentation in Escherichia coli | DE94-016227 | p 1745 N95-22874
Activation of the jun-D gene in human myeloid cells by 1-(beta)-D-arabinofuranosylcytosine | DE94-016591 | p 1746 N95-22912
Rearrangement of RAG-1 recombinase gene in radiation-sensitive wasted mice | DE94-017083 | p 1746 N95-22913

GENETIC ALGORITHMS
Multidisciplinary design optimization using genetic algorithms p 1619 N95-23332
Scheduling with genetic algorithms p 1761 N95-23762

GENETIC CODE
Activation of the jun-D gene in human myeloid cells by 1-(beta)-D-arabinofuranosylcytosine | DE94-016591 | p 1746 N95-22912
Rearrangement of RAG-1 recombinase gene in radiation-sensitive wasted mice | DE94-017083 | p 1746 N95-22913

GENETICS
Genetic effects on heavy ions in drosophila | NASA-CR-197916 | p 1746 N95-22911
Activation of the jun-D gene in human myeloid cells by 1-(beta)-D-arabinofuranosylcytosine | DE94-016591 | p 1746 N95-22912
Rearrangement of RAG-1 recombinase gene in radiation-sensitive wasted mice | DE94-017083 | p 1746 N95-22913
Performance of single-keyword and multiple-keyword pattern matching algorithms | PB95-138954 | p 1756 N95-23150

GEOCHEMISTRY
Measurements of canopy chemistry with 1992 AVIRIS data at Blackhawk Island and Harvard Forest p 1706 N95-23873
Application of MAC-Europe AVIRIS data to the analysis of various alteration stages in the Landdmannalauger Hydrothermal Area (South Iceland) p 1709 N95-23885

GEOCHRONOLOGY
OU3 sediment dating and sedimentation rates | DE95-001891 | p 1734 N95-23384

GEODESIC LINES
A prescribing geodesic curvature problem | DE94-628503 | p 1787 N95-22750

GEOGRAPHIC INFORMATION SYSTEMS
Automation technology using Geographic Information System (GIS) p 1863 N95-23284
Geographic information analysis: An ecological approach for the management of wildlife on the forest landscape | NASA-CR-197941 | p 1719 N95-24094
Measuring forest landscape patterns in the Cascade Range of Oregon, USA p 1719 N95-24096
Forest and wildlife habitat analysis using remote sensing and geographic information systems p 1720 N95-24100

GEOLOGICAL FAULTS
Seismic evidence of conjugate normal faulting: The 1994 Devil Canyon earthquake sequence near Challis, Idaho | DE95-002052 | p 1740 N95-23386

GEOLOGICAL SURVEYS
GPS survey of the western Tien Shan | NASA-CR-197901 | p 1717 N95-22832
Geophysical investigations in the 100 Areas: Fiscal year 1991 through December 1993 | DE95-001573 | p 1736 N95-22843
The US Geological Survey, digital spectral reflectance library: version 1: 0.2 to 3.0 microns p 1703 N95-23855
Classification of the LCVF AVIRIS test site with a Kohonen artificial neural network p 1706 N95-23874
Mapping of the Ronda peridotite massif (Spain) from AVIRIS spectro-imaging survey: A first attempt p 1707 N95-23878
Comparison of inversion models using AIRSAR data for Death Valley, California p 1713 N95-23945
Geologic mapping using integrated AIRSAR, AVIRIS, and TIMS data p 1714 N95-23946

GEOLOGY
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 1: AVIRIS Workshop | NASA-CR-197877-VOL-1 | p 1701 N95-23844
Classification of the LCVF AVIRIS test site with a Kohonen artificial neural network p 1706 N95-23874
Mapping of the Ronda peridotite massif (Spain) from AVIRIS spectro-imaging survey: A first attempt p 1707 N95-23878

GEOMAGNETIC TAIL
Physics of magnetospheric boundary layers | NASA-CR-197920 | p 1739 N95-23271
An explanation for tailward flows with positive B(sub z) in the distant tail neutral sheet during quite times | ATR-95(7270)-1 | p 1740 N95-23933

GEOMAGNETISM
Dynamics and variability of the plasmasphere observed from synchronous orbit | DE95-002733 | p 1829 N95-22665
Physics of magnetospheric boundary layers | NASA-CR-197920 | p 1739 N95-23271
Characteristics of low energy ions in the Heavy Ions In Space (HIIS) experiment p 1815 N95-23807
Results from the Heavy Ions In Space (HIIS) experiment on the ionic charge state of solar energetic particles p 1870 N95-23808
An explanation for tailward flows with positive B(sub z) in the distant tail neutral sheet during quite times | ATR-95(7270)-1 | p 1740 N95-23933

GEOMETRIC ACCURACY
Spectral variations in a collection of AVIRIS imagery p 1707 N95-23879

GEOMETRIC RECTIFICATION (IMAGERY)
Extraction of auxiliary data from AVIRIS distribution tape for spectral, radiometric, and geometric quality assessment p 1706 N95-23875
Preprocessing: Geocoding of AVIRIS data using navigation, engineering, DEM, and radar tracking system data p 1707 N95-23876
Spectral variations in a collection of AVIRIS imagery p 1707 N95-23879

GEOMETRICAL OPTICS
A uniform geometrical optics and an extended uniform geometrical theory of diffraction for evaluating high frequency EM fields near smooth caustics and composite shadow boundaries | NASA-CR-197934 | p 1657 N95-23391

GEOMETRICAL THEORY OF DIFFRACTION
A uniform geometrical optics and an extended uniform geometrical theory of diffraction for evaluating high frequency EM fields near smooth caustics and composite shadow boundaries | NASA-CR-197934 | p 1657 N95-23391

GEOMORPHOLOGY
The effects of AVIRIS atmospheric calibration methodology on identification and quantitative mapping of surface mineralogy, Drum Mountains, Utah p 1705 N95-23870

GEOPHYSICS
Geophysical investigations in the 100 Areas: Fiscal year 1991 through December 1993 | DE95-001573 | p 1736 N95-22843
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 1: AVIRIS Workshop | NASA-CR-197877-VOL-1 | p 1701 N95-23844
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 3: AIRSAR Workshop | NASA-CR-197354-VOL-3 | p 1712 N95-23938

GEOSYNCHRONOUS ORBITS
Energetic particle observations at geosynchronous orbit | DE95-000873 | p 1867 N95-22516
Dynamics and variability of the plasmasphere observed from synchronous orbit | DE95-002733 | p 1829 N95-22665
Geolocation applications of the Gonets LEO messaging satellites p 1656 N95-22818

GEOTHERMAL TECHNOLOGY
Renewable Energy Sources Brno 1993 | DE94-633975 | p 1727 N95-22855

GERMANIDES
Research on defects and transport in amorphous-silicon-based semiconductors | DE94-011888 | p 1660 N95-22586

GERMANIUM
Advanced growth and surface analysis system for in situ studies of interface formation | DE95-002850 | p 1838 N95-22555
Metallization and incomplete melting of a semiconductor surface at high temperature | DE94-627342 | p 1660 N95-22591
Determining orbital particle parameters of impacts into germanium using morphology analysis and calibration data from hypervelocity impact experiments in the laboratory p 1700 N95-23841

GERMANIUM ALLOYS
Advanced growth and surface analysis system for in situ studies of interface formation | DE95-002850 | p 1838 N95-22555
Design of a GaAs/Ge solar array for unmanned aerial vehicles | NASA-TM-106870 | p 1728 N95-23259

GERMINATION
Effect of hyperbaric carbon dioxide on spores and vegetative cells of bacillus stearothermophilus | AD-A280115 | p 1747 N95-23251
Germination, growth rates, and electron microscope analysis of tomato seeds flown on the LDEF p 1748 N95-23821

GHOSTS
Ghost images and feasibility of reconstructions with the Richardson-Lucy algorithm | DE95-002351 | p 1756 N95-23079

GINGA SATELLITE
Investigation of physical parameters in stellar flares observed by GINGA | NASA-CR-196547 | p 1868 N95-23205

GLACIAL DRIFT
Glaciological studies in the central Andes using AIRSAR/TOPSAR p 1713 N95-23942

GLASS
Method of producing a silicon carbide fiber reinforced strontium aluminosilicate glass-ceramic matrix composite | NASA-CASE-LEW-15263-2 | p 1627 N95-22563
Glass science tutorial: Lecture 1, Chemistry and properties of oxide glasses | DE95-002963 | p 1647 N95-22647
Glass science tutorial: Lecture 2, operating electric glass melters | DE95-002965 | p 1647 N95-22648
BEM solution to simulate the curvature driven deformation of a profile that is pressed into a plate of hot glass | PB95-138913 | p 1648 N95-23145
Method of making a semiconductor device using a nanochannel glass matrix | AD-D016383 | p 1662 N95-23241
Oxygen enriched combustion system performance study. Phase 2: 100 percent oxygen enriched combustion in regenerative glass melters | DE95-004212 | p 1635 N95-23481

GLASS TRANSITION TEMPERATURE
Structure and properties of polymeric composite materials during 1501 days outer space exposure at Salyut-7 orbital station p 1652 N95-23915

GLASSWARE
Characterization of Type 304L stainless steel solid-state closure welds for radioactive waste containment | DE94-016539 | p 1645 N95-23980

GLOBAL AIR POLLUTION
Emissions of greenhouse gases in the United States, 1987-1992 | DE95-003001 | p 1731 N95-22691

GLOBAL POSITIONING SYSTEM
GPS survey of the western Tien Shan | NASA-CR-197901 | p 1717 N95-22832
Differential GPS and system integration of the Low Visibility Landing and Surface Operations (LVLASO) demonstration p 1611 N95-23318

GLOBAL WARMING
The atmosphere below | NASA-TM-110538 | p 1740 N95-23663

GLOVES
Method for forming a glove attachment | NASA-CASE-MSC-21632-1 | p 1750 N95-22766

GLUONS
New preliminary results on the physics of charm hadroproduction subprocesses | DE95-002530 | p 1801 N95-22646
The U(3) x U(3) Nambu - Jona-Lasinio model with the gluon condensate and axial anomaly at finite temperature | DE94-628588 | p 1804 N95-22787
Boson mapping techniques applied to constant gauge fields in QCD p 1814 N95-22969
Gluon distribution as function of F(sub 2) and dF(sub 2)/dlnQ(exp 2) at small x | DE94-635677 | p 1812 N95-23975

GOGGLES
Aviator's night vision imaging system preflight adjustment/assessment procedures | AD-A285829 | p 1750 N95-22513

GOLD
The energy broadening resulting from electron stripping process of a low energy Au(-) beam | NIFS-325 | p 1836 N95-23569
Changes in chemical and optical properties of thin film metal mirrors on LDEF p 1651 N95-23907

GOODNESS OF FIT
Consistency and Monte Carlo simulation of a data driven version of smooth goodness-of-fit tests | PB95-141255 | p 1794 N95-23559

GOVERNMENT PROCUREMENT
NASA procurement: Contract and management improvements at the Jet Propulsion Laboratory. Report to Congressional requesters
|GAO/NSIAD-95-40| p 1854 N95-24054
GOVERNMENT/INDUSTRY RELATIONS
NASA Technology Applications Team: Commercial applications of aerospace technology
|NASA-CR-197870| p 1865 N95-23091
Langley Research Center Strategic Plan for Education p 1853 N95-23316
Proceedings of the fuel cells 1994 contractors review meeting
|DE94-012285| p 1730 N95-23977
Defense science and technology strategy
|AD-A285414| p 1903 N95-24179
GOVERNMENTS
DOD budget: Selected categories of planned funding for fiscal years 1995-99. Report to Congressional requesters
|GAO/NSIAD-95-92| p 1864 N95-24062
GRADIENTS
Energetic particle observations at geosynchronous orbit
|DE95-000873| p 1867 N95-22516
Neural network for detection and correction of local boundary misalignments between images
|AD-D016539| p 1766 N95-22705
GRAIN BOUNDARIES
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
|DE95-002941| p 1638 N95-22532
X-ray diffraction characterization of defect behavior in nanocrystalline nickel during annealing
|DE95-002992| p 1639 N95-22594
A fractal model for intergranular fractures in nanocrystals
|DE94-627393| p 1839 N95-22606
The hydrogen embrittlement of alloy X-750
|DE95-003207| p 1640 N95-22893
Mass transport through polycrystalline microstructures
|DE95-004552| p 1811 N95-23576
Phonon-induced anomalous specific heat of a model nanocrystal by computer simulation
|DE95-004653| p 1843 N95-23585
GRAIN SIZE
X-ray diffraction characterization of defect behavior in nanocrystalline nickel during annealing
|DE95-002992| p 1639 N95-22594
A fractal model for intergranular fractures in nanocrystals
|DE94-627393| p 1839 N95-22606
Investigation of mechanical properties and their relation to the internal structure of nanocrystalline metals and composites
|DE95-001151| p 1627 N95-22683
Mass transport through polycrystalline microstructures
|DE95-004552| p 1811 N95-23576
GRAND UNIFIED THEORY
Unification of electromagnetic, strong and weak interaction
|DE94-628570| p 1655 N95-22746
High Energy Theory: Task B and Task L
|DE95-003453| p 1817 N95-23148
GRAPH THEORY
Treewidth and pathwidth of cocomparability graphs of bounded dimension
|PB95-127239| p 1785 N95-22535
Graph isomorphism models for non interleaving process algebra
|PB95-110490| p 1786 N95-22714
Entropy of Z(sup d) subshifts of finite type
|PB95-108072| p 1787 N95-22836
Regular graphs with four eigenvalues
|PB95-135141| p 1788 N95-23068
PUZZLES 4: Sperner collections and the keys puzzle
|PB95-139374| p 1790 N95-23233
GRAPHICAL USER INTERFACE
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 3: HARP Graphics Oriented (GO) input user's guide
|NASA-TP-3452-VOL-3| p 1753 N95-22479
TIGER: A user-friendly interactive grid generation system for complicated turbomachinery and axis-symmetric configurations p 1670 N95-23419
An interactive tool for discrete phase analysis in two-phase flows p 1683 N95-23641
PCLOOK: An interactive code for spectral analysis
|DE94-635415| p 1759 N95-23963
GRAPHITE
Structural Arrangement Trade Study. Volume 1: Reusable Hydrogen Composite Tank System (RHCTS) and Graphite Composite Primary Structures (GCPS). Executive summary
|NASA-CR-197685| p 1621 N95-23188
Structural arrangement trade study. Volume 3: Reusable Hydrogen Composite Tank System (RHCTS) and Graphite Composite Primary Structures (GCPS). Addendum
|NASA-CR-197687| p 1621 N95-23189
The detection and analysis of galvanic damage in BMI/graphite fiber composites p 1631 N95-23502
GRAPHITE-EPOXY COMPOSITES
LDEF polymeric materials: A summary of Langley characterization p 1651 N95-23899
Organic matrix composite protective coatings for space applications p 1627 N95-23914
GRAPHS (CHARTS)
Treewidth and pathwidth of cocomparability graphs of bounded dimension
|PB95-127239| p 1785 N95-22535
DTS: Building custom, intelligent schedulers p 1779 N95-23744
GRASSES
Estimating dry grass residues using landscape integration analysis p 1705 N95-23867
GRASSLANDS
Estimating dry grass residues using landscape integration analysis p 1705 N95-23867
A comparison of spectral mixture analysis an NDVI for ascertaining ecological variables p 1710 N95-23892
Determination of semi-arid landscape endmembers and seasonal trends using convex geometry spectral unmixing techniques p 1711 N95-23895
Transferring ecosystem simulation codes to supercomputers
|NASA-TM-4662| p 1759 N95-24052
GRATINGS (SPECTRA)
Photoinduced Bragg grating formation in optical fibres as a consequence of convective instability
|DE94-628479| p 1841 N95-23020
PRISM Spectrograph Optical Design
|NASA-CR-197965| p 1828 N95-24035
GRAVELS
Remote identification of a gravel laden Pleistocene river bed p 1712 N95-23921
GRAVITATION
Black hole formation and space-time fluctuations in two dimensional dilaton gravity and complementarity
|DE94-628514| p 1867 N95-22739
Gauge dependence and new kind of two-dimensional gravity theory with trivial quantum corrections
|DE94-628502| p 1850 N95-22776
Traps for antimatter and antihydrogen production
|DE95-002814| p 1805 N95-22927
GRAVITATIONAL EFFECTS
Plant metabolism and cell wall formation in space (microgravity) and on Earth
|NASA-CR-197618| p 1745 N95-22801
Microgravity sciences application visiting scientist program
|NASA-CR-197854| p 1653 N95-23204
Microgravity experiments safety and integration requirements document tree
|NASA-CR-195447| p 1855 N95-23206
Investigation of the role of gravity waves in the generation of equatorial bubbles
|NASA-CR-197962| p 1739 N95-23272
Newton in space
|NASA-TM-110535| p 1799 N95-23273
Living in space
|NASA-TM-110536| p 1751 N95-23274
Toys in space, 2
|NASA-TM-110541| p 1620 N95-23275
USML-1 Glovebox experiments
|NASA-CR-196574| p 1653 N95-24028
Airborne rotary air separator study
|NASA-CR-189099| p 1614 N95-24053
GRAVITATIONAL FIELDS
Non-Noetherian symmetries for oscillators in classical mechanics and in field theory p 1823 N95-22977
Gravitational field of the isolated mass in Yordan-Brans-Dicke theory
|DE94-635441| p 1851 N95-23970
GRAVITATIONAL PHYSIOLOGY
All systems go!
|NASA-TM-110542| p 1620 N95-23665
GRAVITATIONAL WAVES
Nonclassical light in interferometric measurements p 1822 N95-22976
GRAVITY WAVES
Investigation of the role of gravity waves in the generation of equatorial bubbles
|NASA-CR-197962| p 1739 N95-23272
GREEN'S FUNCTIONS
Correlation effects in high-Tc superconductors and heavy fermion compounds
|DE94-629057| p 1840 N95-22846
Computational modeling of properties
|NAS-CR-196544| p 1841 N95-22907
Singular moduli and Arakelov intersection
|DE94-634286| p 1792 N95-23659
GREENHOUSE EFFECT
Emissions of greenhouse gases in the United States, 1987-1992
|DE95-003001| p 1731 N95-22691
Outline for a global environmental strategic planning exercise (GESPE-project)
|PB95-133773| p 1733 N95-23067
GRID GENERATION (MATHEMATICS)
An adaptive projection method for the incompressible Navier-Stokes equations
|DE94-019049| p 1665 N95-22491
Euler Technology Assessment program for preliminary aircraft design employing SPLITFLOW code with Cartesian unstructured grid method
|NASA-CR-4649| p 1608 N95-22917
A perspective on unstructured grid flow solvers
|NASA-CR-195025| p 1788 N95-22931
A CFD study of complex missile and store configurations in relative motion
|NASA-CR-197912| p 1612 N95-22949
High-performance parallel analysis of coupled problems for aircraft propulsion
|NASA-CR-197440| p 1614 N95-23088
Euler technology assessment for preliminary aircraft design employing OVERFLOW code with multiblock structured-grid method
|NASA-CR-4651| p 1608 N95-23095
Eleventh Workshop for Computational Fluid Dynamic Applications in Rocket Propulsion
|NASA-CP-3221-PT-2| p 1668 N95-23412
IGES transformer and NURBS in grid generation p 1669 N95-23415
Criteria for evaluation of grid generation systems p 1669 N95-23416
Structured adaptive grid generation using algebraic methods p 1669 N95-23417
A generic efficient adaptive grid scheme for rocket propulsion modeling p 1670 N95-23418
TIGER: A user-friendly interactive grid generation system for complicated turbomachinery and axis-symmetric configurations p 1670 N95-23419
CFD analysis of turbopump volutes p 1674 N95-23436
Unification of some advection schemes in two dimensions
|NASA-CR-195044| p 1790 N95-23465
Eleventh Workshop for Computational Fluid Dynamic Applications in Rocket Propulsion, part 1
|NASA-CP-3221-PT-1| p 1678 N95-23615
A fine-grid model for the ASRM aft segment with gimballed nozzle p 1685 N95-23648
High energy collimating fine grids
|NASA-CR-197688| p 1871 N95-24191
GROUND BASED CONTROL
Low Earth Orbit satellite/terrestrial mobile service compatibility p 1656 N95-22819
Improved small satellite access of the space network
|NASA-CR-197863| p 1657 N95-22944
Distributed intelligence for ground/space systems p 1770 N95-23685
The Charlotte (TM) intra-vehicular robot p 1697 N95-23703
Truss structure tele-manipulation experiment using ETS-7 p 1623 N95-23726
Preprocessing: Geocoding of AVIRIS data using navigation, engineering, DEM, and radar tracking system data p 1707 N95-23876
Using AVIRIS for in-flight calibration of the spectral shifts of SPOT-HRV and of AVHRR? p 1710 N95-23893
GROUND EFFECT (AERODYNAMICS)
Flow visualization studies of VTOL aircraft models during Hover in ground effect
|NASA-TM-108860| p 1607 N95-22666
GROUND OPERATIONAL SUPPORT SYSTEM
An intelligent ground operator support system p 1769 N95-23681
Modeling actions and operations to support mission preparation p 1617 N95-23750
GROUND STATE
Variational calculations for He-3 impurities on He-4 droplets
|DE94-628469| p 1840 N95-22839
Study of frustrated systems via dissipative maps
|PB95-139093| p 1799 N95-23155
Neutron compton scattering
|PB95-139135| p 1807 N95-23159
GROUND SUPPORT SYSTEMS
Robotic system for the servicing of the orbiter thermal protection system p 1697 N95-23724
GROUND TESTS
Overview of the solar dynamic ground test demonstration program at the NASA Lewis Research Center
|NASA-TM-106876| p 1625 N95-23450
Automatic commanding of the Mars Observer Camera p 1620 N95-23754

GROUND TRUTH
Validation data for land surface temperature determination from satellites
| CSIRO-TR-33 | p 1718 N95-23597
GROUND-AIR-GROUND COMMUNICATION
Low Earth Orbit satellite/terrestrial mobile service compatibility p 1656 N95-22819
GROUP DYNAMICS
Teams and teamwork at NASA Langley Research Center p 1854 N95-23292
GROUP THEORY
Finite-temperature scalar field theory in static de Sitter space
| DE94-628522 | p 1848 N95-22743
Jacobson radicals in matrix near rings
| DE94-628424 | p 1796 N95-22808
The fundamental group of complex hyperplanes arrangements
| DE94-628426 | p 1796 N95-22933
Second International Workshop on Harmonic Oscillators
| NASA-CP-3286 | p 1820 N95-22957
Coherent control in simple quantum systems p 1826 N95-23005
Algebraic description of the elliptic cohomology of classifying spaces
| PB95-110797 | p 1788 N95-23076
AR-descriptions in translatable Frechet spaces
| PB95-138855 | p 1789 N95-23149
On certain N-sheeted coverings of curves and symmetric numerical semigroups which cannot be realized as Weierstrass semigroups
| DE94-634328 | p 1797 N95-23661
GROUP VELOCITY
Tomographic analysis of the three-dimensional variation of the seismic velocity structure of the shallow crust underlying Southern New England
| AD-A279406 | p 1739 N95-23247
GROWTH
Investigation of the role of gravity waves in the generation of equatorial bubbles
| NASA-CR-197962 | p 1739 N95-23272
GUIDANCE (MOTION)
Moving mass trim control for aerospace vehicles
| DE95-002602 | p 1622 N95-23532
GUIDANCE SENSORS
The Starpicker expert system: A problem in expertise capture p 1623 N95-23721
GUIDE VANES
Computational Fluid Dynamics (CFD) analyses in support of Space Shuttle Main Engine (SSME) heat exchanger (HX) vane cracking investigation p 1679 N95-23619
GULF OF MEXICO
Energy flux and hydrogeology of thermal anomalies in the Gulf of Mexico Basin - South Texas example
| DE95-003341 | p 1743 N95-22695
Oceanic operations: An authoritative guide to oceanic operations
| FAA-AFS-550 | p 1610 N95-24065
GULF STREAM
Assimilation of altimeter data in a quasi-geostrophic model of the Gulf Stream system: A dynamical perspective
| NASA-CR-196313 | p 1744 N95-23766
Interferometric synthetic aperture radar imagery of the Gulf Stream p 1712 N95-23939
GUST LOADS
Review of aeronautical fatigue investigation in the Netherlands during the period March 1991-March 1993
| PB95-139184 | p 1612 N95-23161
GUSTS
Aeroacoustic computation of gust-blade interaction p 1800 N95-23313

H

H II REGIONS
Interstellar molecules in the large magellanic cloud
| PB95-139267 | p 1868 N95-23230
H-INFINITY CONTROL
Stable H(infinity) controller design for the longitudinal dynamics of an aircraft
| NASA-TM-106847 | p 1615 N95-22954
Feedback control laws for highly maneuverable aircraft
| NASA-CR-197944 | p 1615 N95-23410
HABITATS
Old-growth and mature forests near spotted owl nests in western Oregon p 1719 N95-24098
Forest and wildlife habitat analysis using remote sensing and geographic information systems p 1720 N95-24100
Dynamics and pattern of a managed coniferous forest landscape in Oregon p 1720 N95-24104
HADRONS
New preliminary results on the physics of charm hadroproduction subprocesses
| DE95-002530 | p 1801 N95-22646
QCD test in three-jet Z(sup 0) decays at SLD and detector development for H(sup 0) yields gamma gamma searches in high energy hadron colliders
| DE95-003336 | p 1848 N95-22698
Baryon number fluctuations in a quark-hadron phase transition
| DE94-628585 | p 1804 N95-22786
Hadrons of arbitrary spin and heavy quark symmetry
| DE94-628597 | p 1804 N95-22789
Measurement of the left-right charge asymmetry in hadronic Z decays and A(sub e) determination
| DE95-003467 | p 1806 N95-23140
A preliminary measurement of the average B hadron lifetime
| DE95-003138 | p 1808 N95-23226
J/psi, psi' yields mu(+)mu(-) and B yields J/psi, psi' cross sections
| DE94-018996 | p 1808 N95-23242
A report on the Indiana University Workshop on future U.S. hadron facilities
| DE95-003951 | p 1817 N95-23353
Introduction to the physics of Higgs bosons
| DE95-003965 | p 1809 N95-23396
Study of b(anti b) production in e(+)e(-) annihilation at radical s = 29 GeV with the aid of neural networks
| DE95-004691 | p 1810 N95-23488
Search for supersymmetric (tilde W)(sub 1) and (tilde Z)(sub 2) states using the D0 detector
| DE95-004581 | p 1811 N95-23581
Charm-conserving strangeness-changing two body hadronic decays of charmed baryons
| DE94-628621 | p 1811 N95-23770
HAFNIUM ALLOYS
Deformation of C15 Laves phase alloys
| DE95-003636 | p 1646 N95-24067
Experimental and theoretical studies on the C15 intermetallic compounds MV2 (M = Zr, Hf and Ta): Elasticity and phase stability
| DE95-003723 | p 1845 N95-24079
HAIR
The significance of hair mineral analysis as a means for assessing internal body burdens of environmental pollutants
| DE94-633512 | p 1734 N95-23541
HALF PLANES
Singular moduli and Arakelov intersection
| DE94-634286 | p 1792 N95-23659
HALF SPACES
Propagation of waves at the loosely bonded interface of two porous elastic half-spaces
| DE94-628477 | p 1800 N95-23018
HALOCARBONS
Emissions of greenhouse gases in the United States, 1987-1992
| DE95-003001 | p 1731 N95-22691
HAMILTONIAN FUNCTIONS
Asymptotically exact solution of the multi-channel resonant-level model
| DE94-629040 | p 1801 N95-22498
Strong-coupling behaviour of two t-J chains with interchain single-electron hopping
| DE94-629041 | p 1838 N95-22499
Existence of solutions for some superlinear or sublinear elliptic systems on R(sup N)
| DE94-628417 | p 1785 N95-22625
Bethe ansatz and quantum Davey-Stewartson 1 system with multicomponent in two dimensions
| DE94-628423 | p 1786 N95-22631
On the (DE-) stabilization of quantum mechanical binding by potential barriers
| DE94-628433 | p 1847 N95-22635
Symplectic computation of Lyapunov exponents
| DE95-002732 | p 1795 N95-22654
Morphology of Laplacian growth processes and statistics of equivalent many-body systems
| DE95-002734 | p 1847 N95-22655
How to measure the Q(bar Q) potential in a light-front calculation
| DE95-003200 | p 1848 N95-22728
Neutrinos with Zee-mass matrix in vacuum and matter
| DE94-628635 | p 1803 N95-22756
Non-zero temperature two-mode squeezing for time-dependent two-level systems
| DE94-628427 | p 1850 N95-22782
Block spins and chirality in Heisenberg model on Kagome and triangular lattices
| DE94-629044 | p 1840 N95-22845
Correlation effects in high-Tc superconductors and heavy fermion compounds
| DE94-629057 | p 1840 N95-22846
Algebraic theory of molecules p 1814 N95-22958
Algebraic approach to the vibrational excitations in methane p 1814 N95-22960
Algebraic description of atom-molecule interactions p 1814 N95-22961
A supersymmetric family of harmonic oscillators simulating H-bonds in DNA p 1748 N95-22983
Molecular vibrational states during a collision p 1814 N95-22964
Harmonic oscillator representation in the theory of scattering and nuclear reactions p 1814 N95-22967
Boson mapping techniques applied to constant gauge fields in QCD p 1814 N95-22969
An algebraic cluster model based on the harmonic oscillator basis p 1814 N95-22971
Harmonic oscillator in quantum rotational spectra: Molecules and nuclei p 1814 N95-22972
Galactic oscillator symmetry p 1822 N95-22973
Shapes and stability of algebraic nuclear models p 1814 N95-22974
Localization in deformed quantum mechanics p 1823 N95-22979
Geometric phases, evolution loops and generalized oscillator potentials p 1823 N95-22981
Coherent states for a generalization of the harmonic oscillator p 1823 N95-22982
Finite-element time evolution operator for the anharmonic oscillator p 1823 N95-22983
Oscillator-like coherent states for the Jaynes-Cummings Model p 1826 N95-23003
Slightly anharmonic systems in quantum optics p 1826 N95-23004
Coherent control in simple quantum systems p 1826 N95-23005
Phase space analysis in anisotropic optical systems p 1826 N95-23007
Asymptotically exact solution of a local copper-oxide model
| DE94-628492 | p 1842 N95-23059
Degenerate Hamiltonian Hopf bifurcations
| PB95-138871 | p 1789 N95-23174
The impact of QCD and light-cone quantum mechanics on nuclear physics
| DE95-004293 | p 1851 N95-23352
Charm-conserving strangeness-changing two body hadronic decays of charmed baryons
| DE94-628621 | p 1811 N95-23770
Scattering problem for quantum system with time-dependent periodic Hamiltonian
| DE94-635421 | p 1797 N95-23965
The kinetics of quantum system with time-dependent periodic Hamiltonian
| DE94-635422 | p 1797 N95-23966
The point interactions in the quantum problem of three particles with internal structure
| DE94-635423 | p 1851 N95-23967
A theory for the morphology of Laplacian growth from statistics of equivalent many-body Hamiltonian systems
| DE94-014473 | p 1799 N95-23979
TRACKER: A three-dimensional raytracing program for ionospheric radio propagation
| DE95-003510 | p 1658 N95-24015
HANDBOOKS
Microgravity experiments safety and integration requirements document tree
| NASA-CR-195447 | p 1855 N95-23206
HANDEDNESS
Hard e(+)e(-)-pair Bremsstrahlung as a lepton polarimeter
| DE94-635615 | p 1812 N95-23984
HARDNESS
Investigation of depth-area relationships associated with nanoindentations
| DE95-001353 | p 1639 N95-22686
HARDWARE
Mir hardware heritage
| NASA-RP-1357 | p 1621 N95-23249
Hardware interface unit for control of shuttle RMS vibrations p 1697 N95-23706
Lazy release consistency for hardware-coherent multiprocessors
| TR-547 | p 1765 N95-24184
HARDWARE DESCRIPTION LANGUAGES
Specification and verification of gate-level VHDL models of synchronous and asynchronous circuits
| NASA-CR-191608 | p 1762 N95-22830
HARMONIC GENERATIONS
Growth of single crystals of organic salts with large second-order optical nonlinearities by solution processes for devices
| NASA-CR-197963 | p 1843 N95-23563
HARMONIC OSCILLATION
A Ramanujan-type measure for the Askey-Wilson polynomials p 1797 N95-22975

HARMONIC OSCILLATORS
Second International Workshop on Harmonic Oscillators
| NASA-CP-3286 | p 1820 N95-22957
Algebraic approach to the vibrational excitations in methane p 1814 N95-22960
A supersymmetric family of harmonic oscillators simulating H-bonds in DNA p 1748 N95-22963
Molecular vibrational states during a collision p 1814 N95-22964
Harmonic oscillator representation in the theory of scattering and nuclear reactions p 1814 N95-22967
A possible generalization of the harmonic oscillator potential p 1822 N95-22970
An algebraic cluster model based on the harmonic oscillator basis p 1814 N95-22971
Harmonic oscillator in quantum rotational spectra: Molecules and nuclei p 1814 N95-22972
Galactic oscillator symmetry p 1822 N95-22973
Noisy bases in Hilbert space: A new class of thermal coherent states and their properties p 1823 N95-22980
Geometric phases, evolution loops and generalized oscillator potentials p 1823 N95-22981
Coherent states for a generalization of the harmonic oscillator p 1823 N95-22982
Finite-element time evolution operator for the anharmonic oscillator p 1823 N95-22983
q-bosons and the q-analogue quantized field p 1814 N95-22984
A method of solving simple harmonic oscillator Schroedinger equation p 1797 N95-22989
Wigner distribution function and entropy of the damped harmonic oscillator within the theory of the open quantum systems p 1798 N95-22990
Covariant harmonic oscillators and coupled harmonic oscillators p 1825 N95-22992
Coherent states for the relativistic harmonic oscillator p 1825 N95-22993
The Duffin-Kemmer-Petiau oscillator p 1825 N95-22998
Harmonic oscillators and resonance series generated by a periodic unstable classical orbit p 1825 N95-22999
Oscillator-like coherent states for the Jaynes-Cummings Model p 1826 N95-23003
Kravchuk functions for the finite oscillator approximation p 1798 N95-23006

HARTREE APPROXIMATION
The impact of QCD and light-cone quantum mechanics on nuclear physics
| DE95-004293 | p 1851 N95-23352

HAZARDS
Mishap risk control for advanced aerospace/composite materials p 1628 N95-23031
Fire hazard considerations for composites in vehicle design p 1628 N95-23032
Corrosion prevention with environmentally compliant materials: A design challenge p 1644 N95-23511

HEAD (ANATOMY)
Design of a cervical spine gross motion simulator for standard size human and anthropomorphic dummy adult and child
| NIAR-94-16 | p 1751 N95-24021

HEAD-UP DISPLAYS
TRISTAR 1: Evaluation methods for testing head-up display (HUD) flight symbology
| NASA-TM-4665 | p 1613 N95-24030

HEALTH
Environmental, Safety, and Health Considerations: Composite Materials in the Aerospace Industry
| NASA-CP-3289 | p 1628 N95-23025
Health, safety and environmental requirements for composite materials p 1628 N95-23028
Skin exposure: Assessing the hazard in the workplace p 1628 N95-23030
The significance of hair mineral analysis as a means for assessing internal body burdens of environmental pollutants
| DE94-633512 | p 1734 N95-23541
Biological interactions and human health effects of static magnetic fields
| DE95-003147 | p 1749 N95-24145

HEAT EXCHANGERS
Phase 2: HGM air flow tests in support of HEX vane investigation p 1674 N95-23438
Unsteady flow simulations in support of the SSME HEX turning vane cracking investigation with the ATD HPOTP p 1679 N95-23621

HEAT FLUX
Engineering design of a radiative divertor for DIII-D
| DE95-003008 | p 1693 N95-22798
Measurements and modeling of impurity source distributions from the Tore Supra outboard pump limiter
| DE95-003097 | p 1831 N95-22800
Divertor heat and particle control experiments on the DIII-D tokamak
| DE94-017518 | p 1832 N95-23119
Flow and heat transfer in 180-degree turn square ducts: Effects of turning configuration and system rotation p 1682 N95-23636
Development of sensors for ceramic components in advanced propulsion systems
| NASA-CR-195324 | p 1689 N95-23795

HEAT OF COMBUSTION
Level set techniques applied to unsteady detonation propagation
| DE95-002741 | p 1666 N95-22901

HEAT PIPES
Summary of solar cell data from the Long Duration Exposure Facility (LDEF)
| NASA-CR-196539 | p 1727 N95-22904
HTS current lead using a composite heat pipe
| DE95-003718 | p 1662 N95-23368
Micro heat spreader enhanced heat transfer in MCM's
| DE95-004520 | p 1663 N95-23779

HEAT RESISTANT ALLOYS
Temperature effects on hydrogen-induced cracking in an iron-based superalloy
| DE95-003037 | p 1639 N95-22724
An investigation into the effects of hydrogen on the fracture and deformation of Alloy X-750
| DE95-003206 | p 1639 N95-22732

HEAT SHIELDING
Protective coating for ceramic materials
| NASA-CASE-ARC-11969-1-CU | p 1649 N95-23394

HEAT TRANSFER
Gas cooled leads. Part 1: Theoretical Study. Part 2: Frost free lead optimized for a specific current. Part 3: Frost free lead optimized for a large current range
| DE95-002657 | p 1660 N95-22716
Level set techniques applied to unsteady detonation propagation
| DE95-002741 | p 1666 N95-22901
Development and verification of a resin film infusion/resin transfer molding simulation model for fabrication of advanced textile composites
| NASA-CR-197439 | p 1648 N95-23179
Eleventh Workshop for Computational Fluid Dynamic Applications in Rocket Propulsion
| NASA-CP-3221-PT-2 | p 1668 N95-23412
Heat transfer in rocket engine combustion chambers and nozzles p 1668 N95-23413
Thermal modeling of the lithium/polymer battery
| DE95-004680 | p 1663 N95-23494
Eleventh Workshop for Computational Fluid Dynamic Applications in Rocket Propulsion, part 1
| NASA-CP-3221-PT-1 | p 1678 N95-23615
Computational Fluid Dynamics (CFD) analyses in support of Space Shuttle Main Engine (SSME) heat exchanger (HX) vane cracking investigation p 1679 N95-23619
CFD modeling of turbulent duct flows for coolant channel analysis p 1682 N95-23635
Flow and heat transfer in 180-degree turn square ducts: Effects of turning configuration and system rotation p 1682 N95-23636
Micro heat spreader enhanced heat transfer in MCM's
| DE95-004520 | p 1663 N95-23779
Effects of jet strength on NOx formation in premixed impinging jet combustion with minimum heat losses
| NAL-TR-1237T | p 1637 N95-24181

HEAT TRANSMISSION
Modeling of nonequilibrium space plasma flows
| NASA-CR-197432 | p 1833 N95-23211

HEAT TREATMENT
High-temperature ultrasonic characterization of Ag-clad superconductor tapes
| DE95-002909 | p 1838 N95-22530

HEATING
Load calculation and system evaluation for electric vehicle climate control
| DE95-004350 | p 1695 N95-23358

HEAVY ELEMENTS
The electronic structure of heavy element complexes
| DE95-003407 | p 1806 N95-23082
Search for millimeterwave CO emission in damped Lyman-alpha systems
| PB95-139259 | p 1868 N95-23607

HEAVY IONS
Interdigital-H linac for unstable nuclei at INS
| DE94-765448 | p 1816 N95-22644
(pi)N correlations at AGS
| DE95-002933 | p 1801 N95-22656
A heavy ion linac complex for unstable nuclei
| DE94-765443 | p 1816 N95-22848
Genetic effects on heavy ions in drosophila
| NASA-CR-197916 | p 1746 N95-22911
Comparison of exact solution with Eikonal approximation for elastic heavy ion scattering
| NASA-TP-3498 | p 1817 N95-22929
The energy broadening resulting from electron stripping process of a low energy Au(-) beam
| NIFS-325 | p 1836 N95-23569
Trapped iron measured on LDEF p 1872 N95-23806
Characteristics of low energy ions in the Heavy Ions In Space (HIIS) experiment p 1815 N95-23807
Results from the Heavy Ions In Space (HIIS) experiment on the ionic charge state of solar energetic particles p 1870 N95-23808

HEAVY LIFT LAUNCH VEHICLES
Advanced liquid oxygen (LO2) propellant conditioning concept testing
| NASA-TM-108477 | p 1652 N95-22672

HEAVY NUCLEI
Geometrical interpretation for the outer SU(3) outer multiplicity label p 1814 N95-22968
LDEF contributions to cosmic ray and radiation environments research p 1872 N95-23805
Early results from the ultra heavy cosmic ray experiment p 1872 N95-23809

HEISENBERG THEORY
Deformed Heisenberg algebra and fractional spin field in 2+1 dimensions
| DE94-628507 | p 1850 N95-22779
Block spins and chirality in Heisenberg model on Kagome and triangular lattices
| DE94-629044 | p 1840 N95-22845

HELICAL WINDINGS
The next Large Helical Devices
| NIFS-323 | p 1835 N95-23535
Recent studies of the Large Helical Device
| NIFS-322 | p 1835 N95-23543

HELICOPTER CONTROL
An investigation of helicopter dynamic coupling using an analytical model
| NASA-CR-197420 | p 1612 N95-23217

HELICOPTER PROPELLER DRIVE
Gearbox vibration diagnostic analyzer
| NASA-CR-189141 | p 1696 N95-23792

HELICOPTERS
An investigation of helicopter dynamic coupling using an analytical model
| NASA-CR-197420 | p 1612 N95-23217
Thin tailored composite wing for civil tiltrotor p 1613 N95-23317

HELIOSTATS
Advanced reflector materials for solar concentrators
| DE95-000248 | p 1726 N95-22547

HELIOTRONS
Physical mechanism determining the radial electric field and its radial structure in a toroidal plasma
| NIFS-313 | p 1835 N95-23534
The next Large Helical Devices
| NIFS-323 | p 1835 N95-23535
Recent studies of the Large Helical Device
| NIFS-322 | p 1835 N95-23543

HELIUM
Tritium transport, influx, and helium ash measurements on TFTR during DT operation
| DE95-003708 | p 1833 N95-23269
Theoretical calculations of pressure broadening coefficients for H2O perturbed by hydrogen or helium gas
| NASA-CR-197345 | p 1636 N95-23545
Effect of dynamically charged helium on mechanical properties of vanadium-base alloys
| DE95-004613 | p 1646 N95-24153

HELIUM IONS
ESTAR, PSTAR, ASTAR: A PC package for calculating stopping powers and ranges of electrons, protons and helium ions, version 2
| DE94-634435 | p 1811 N95-23773

HELIUM ISOTOPES
Variational calculations for He-3 impurities on He-4 droplets
| DE94-628469 | p 1840 N95-22839
Status of helium-production reaction studies with a spallation neutron source
| DE95-002816 | p 1806 N95-23137

HELIUM PLASMA
Divertor heat and particle control experiments on the DIII-D tokamak
| DE94-017518 | p 1832 N95-23119

HERBICIDES
Extraction and detection of pesticide residues from air filter inserts using supercritical carbon dioxide
| DE95-004579 | p 1735 N95-23580

HERMITIAN POLYNOMIAL
Coherent states for the relativistic harmonic oscillator p 1825 N95-22993
On adaptive weighted polynomial preconditioning for Hermitian positive definite matrices
| NASA-CR-197946 | p 1791 N95-23547

An implementation of the QMR method based on coupled two-term recurrences
|NASA-CR-197956| p 1791 N95-23612

HETEROGENEITY
Coordinating complex decision support activities across distributed applications p 1761 N95-23749
Loop scheduling for heterogeneity
|TR-540| p 1764 N95-23936

HETEROJUNCTIONS
Optical absorption in an indirect-gap semiconductor quantum well systems
|DE94-628878| p 1849 N95-22759
Photoemission study of quantum confinement by a finite barrier: Cu/Co(wedge)/Cu(100)
|DE95-002913| p 1840 N95-22762

HEURISTIC METHODS
Unstructured grids on SIMD torus machines
|NASA-CR-197954| p 1758 N95-23610
An efficient algorithm for concurrent priority queue heaps
|TR-560| p 1759 N95-24033

HIERARCHIES
Browsing semantics in the tower model
|PB95-127221| p 1855 N95-22534
Solutions for the vector k-constrained KP hierarchy
|DE94-628431| p 1786 N95-22633
Hierarchical membership protocol for synchronous distributed systems
|PB95-138947| p 1763 N95-23129
NASA Thesaurus, Supplement
|NASA-SP-7096-SUPPL-1| p 1856 N95-23223

HIGGS BOSONS
Neutrinos with Zee-mass matrix in vacuum and matter
|DE94-628635| p 1803 N95-22756
Introduction to the physics of Higgs bosons
|DE95-003965| p 1809 N95-23396
A measurement of the mass of the W vector boson at CDF
|DE95-003498| p 1813 N95-24016

HIGH ALTITUDE
Particle kinetic simulation of high altitude hypervelocity flight
|NASA-CR-197383| p 1664 N95-22481
Four-nozzle benchmark wind tunnel model USA code solutions for simulation of multiple rocket base flow recirculation at 145,000 feet altitude p 1686 N95-23654
Numerical study of base pressure characteristic curve for a four-engine clustered nozzle configuration p 1625 N95-23655

HIGH ALTITUDE TESTS
NLS base heating CFD analysis p 1673 N95-23432

HIGH ASPECT RATIO
Convergence acceleration of implicit schemes in the presence of high aspect ratio grid cells p 1676 N95-23446

HIGH CURRENT
Gas cooled leads. Part 1: Theoretical Study. Part 2: Frost free lead optimized for a specific current. Part 3: Frost free lead optimized for a large current range
|DE95-002657| p 1660 N95-22716
The q profile evolution and enhanced core confinement of high (beta)(sub p) plasmas in D3-D
|DE95-003878| p 1834 N95-23371
Preparation of high quality YBa2Cu3O(7-delta) thick films on flexible Ni-based alloy substrates with textured buffer layers
|DE95-003686| p 1645 N95-23571
High current induction linacs
|DE95-003442| p 1818 N95-24014

HIGH ENERGY INTERACTIONS
A brief history in time of ion traps and their achievements in science
|DE95-002815| p 1805 N95-22936
High Energy Theory: Task B and Task L
|DE95-003453| p 1817 N95-23148
A report on the Indiana University Workshop on future U.S. hadron facilities
|DE95-003951| p 1817 N95-23353

HIGH FREQUENCIES
Investigation of Federal Standard 1045 high-frequency ALE radio performance in the Southern Trans-Auroral Zone
|PB94-204831| p 1655 N95-22636

HIGH GAIN
High gain GaAs Photoconductive Semiconductor Switches for impulse sources
|DE95-001885| p 1659 N95-22549
High gain GaAs photoconductive semiconductor switches: Measurement of filament velocity and reduced trigger energy
|DE95-001884| p 1661 N95-22844

HIGH POWER LASERS
Production of high contrast ultrashort laser pulses for short scale length plasma experiments
|DE95-003640| p 1690 N95-22595

HIGH PRESSURE
High pressure neutron powder diffraction at LANSCE
|DE95-002703| p 1839 N95-22565
Progress towards the synthesis of polymeric nitrogen
|DE94-017547| p 1841 N95-22860
Finite-difference solutions of the alternate turbopump development high-pressure oxidizer turbopump pump-end ball-bearing cavity flows p 1678 N95-23617
Navier-Stokes flow field analysis of compressible flow in a pressure relief valve p 1679 N95-23618
Three-D flow analysis of the alternate SSME HPOT TAD p 1679 N95-23620
Comparison between predicted and experimentally measured flow fields at the exit of the SSME HPFTP impeller p 1679 N95-23622

HIGH PRESSURE OXYGEN
Computational Fluid Dynamics (CFD) analyses in support of Space Shuttle Main Engine (SSME) heat exchanger (HX) vane cracking investigation p 1679 N95-23619

HIGH RESOLUTION
X-ray transmission microscope development
|NASA-CR-197884| p 1826 N95-23016
MAX-91: Polarimetric SAR results on Montespertoli site p 1712 N95-23940

HIGH SPEED
High-velocity penetrators
|DE95-001886| p 1698 N95-22500
Controlling under-actuated robot arms using a high speed dynamics process
|NASA-CASE-NPO-18498-1-CU| p 1692 N95-22543
Micro-sensor thin-film anemometer
|NASA-CASE-LAR-15112-1-CU| p 1666 N95-22906
Inner loop flight control for the High-Speed Civil Transport p 1616 N95-23314
Modelling and analysis of a high speed data bus with predicate/transition nets
|PB95-140695| p 1764 N95-23538
A high speed digitizing photomultiplier tube base for the KTeV CsI calorimeter
|DE95-003739| p 1664 N95-24081

HIGH SPEED CAMERAS
Amplified MOS Imager
|NHK-LABS-NOTE-432| p 1690 N95-24107

HIGH STRENGTH
Deflections of anisotropic sandwich beams with variable face sheets and core thicknesses p 1700 N95-23310

HIGH STRENGTH ALLOYS
Exfoliation corrosion and stress corrosion cracking behaviour of Al-Li alloys p 1641 N95-23498

HIGH STRENGTH STEELS
Test method and test results for environmental assessment of aircraft materials p 1643 N95-23509

HIGH TEMPERATURE
Metallization and incomplete melting of a semiconductor surface at high temperature
|DE94-627342| p 1660 N95-22591
MOCVD of gallium and calcium sulfides for improved phosphor processing
|DE95-000918| p 1631 N95-22677
Evolution of oxidation and creep damage mechanisms in HIPed silicon nitride materials
|DE95-001360| p 1647 N95-22689
Progress towards the synthesis of polymeric nitrogen
|DE94-017547| p 1841 N95-22860
Design of a variable area diffuser for a 15-inch Mach 6 open-jet tunnel p 1617 N95-23309
Electrochemical studies of perovskite mixed conductors
|DE95-003704| p 1636 N95-23573
Advances in research for solid oxide fuel cells
|DE95-004590| p 1730 N95-23582
Effect of different ions on the anodic behaviour of alloy 800 chloride solutions at high temperature
|DE94-634944| p 1645 N95-23983

HIGH TEMPERATURE GASES
Phase 2: HGM air flow tests in support of HEX vane investigation p 1674 N95-23438
Advanced multi-phase flow CFD model development for solid rocket motor flowfield analysis p 1683 N95-23638

HIGH TEMPERATURE PLASMAS
Semikinetic modeling and observations of high-latitude plasma outflow
|NASA-CR-197403| p 1831 N95-23008

HIGH TEMPERATURE SUPERCONDUCTORS
Asymptotically exact solution of the multi-channel resonant-level model
|DE94-629040| p 1801 N95-22498
Superconducting Tl2Ba2CaCu2O8 thin films prepared by post-annealing in a flow-through multiple-zone furnace
|DE95-002745| p 1838 N95-22520
High pressure neutron powder diffraction at LANSCE
|DE95-002703| p 1839 N95-22565
Conceptual design of a 20-kA current lead using forced-flow cooling and Ag-alloy-sheathed Bi-2223 high-temperature superconductors
|DE95-002916| p 1660 N95-22569
Analyses, algorithms, and computations for models of high-temperature superconductivity
|DE95-003290| p 1661 N95-22733
Correlation effects in high-Tc superconductors and heavy fermion compounds
|DE94-629057| p 1840 N95-22846
High Tc superconducting bolometric and nonbolometric infrared (IR) detectors
|NASA-CR-197868| p 1827 N95-23224
Potential aerospace applications of high temperature superconductors p 1664 N95-23322
Some aspects of critical currents in Ag sheathed Bi2Sr2Ca2Cu3O10 composite tapes: A summary
|DE95-003952| p 1842 N95-23354
HTS current lead using a composite heat pipe
|DE95-003718| p 1662 N95-23368
Electrochemical studies of perovskite mixed conductors
|DE95-003704| p 1636 N95-23573
Phonon characteristics of high (T sub c) superconductors from neutron Doppler broadening measurements
|DE95-003703| p 1844 N95-24076
Design of a high-temperature superconductor current lead for electric utility SMES
|DE95-004604| p 1664 N95-24163
Dependence of the Josephson coupling of unconventional superconductors on the properties of the tunneling barrier
|DE95-004649| p 1846 N95-24173

HIGH VOLTAGES
Method and system for electron beam lithography
|AD-D016554| p 1660 N95-22709

HIGHLY MANEUVERABLE AIRCRAFT
Feedback control laws for highly maneuverable aircraft
|NASA-CR-197944| p 1615 N95-23410

HILBERT SPACE
Spectral application of the theorem for the essential quasi-Fredholm spectrum
|DE94-628430| p 1795 N95-22632
First quantized noncritical relativistic Polyakov string
|DE94-628513| p 1848 N95-22738
Noisy bases in Hilbert space: A new class of thermal coherent states and their properties p 1823 N95-22980

HISTORIES
IRAS sky survey atlas: Explanatory supplement
|NASA-CR-197335| p 1865 N95-22539
Mir hardware heritage
|NASA-RP-1357| p 1621 N95-23249
Endeavor: Now and then
|NASA-TM-110539| p 1620 N95-23664

HOHLRAUMS
Laser-plasma instability in hohlraums
|DE95-000914| p 1829 N95-22676
Progress in ion beam power coupling and ion-driven hohlraums on PBFA 2
|DE95-004544| p 1818 N95-24160

HOLES (MECHANICS)
Stress intensity factors and crack mouth openings for bridged cracks emanating from circular holes
|AR-008-408| p 1699 N95-22952
Eddy current detection of pitting corrosion around fastener holes p 1643 N95-23507
POD assessment of NDI procedures using a round robin test
|AGARD-R-809| p 1697 N95-23602

HOLLOW CATHODES
Functional testing of the space station plasma contactor
|NASA-TM-106841| p 1624 N95-23240

HOLOGRAPHIC INTERFEROMETRY
Holographic interferometric tomography for reconstructing flow fields p 1690 N95-23287

HOLOGRAPHY
Optical image correlator using orthogonal data storage
|AD-A285795| p 1819 N95-22508
Full resolution hologram-like autostereoscopic display
|NASA-CR-197913| p 1689 N95-23789

HOMEOSTASIS
Interrelations between nervous system and immune system in stress situations
|PB95-135521| p 1748 N95-22770

HOMOLOGY
Lectures on homology with internal symmetries
|DE94-628409| p 1785 N95-22619
Geometry of Moishezon and 1-convex spaces 2: Projectivity of Moishezon spaces and its non-compact version
|DE94-628415| p 1795 N95-22623
The Euler series of restricted Chow varieties
|DE94-628418| p 1785 N95-22626

Algebraic description of the elliptic cohomology of classifying spaces
|PB95-110797| p 1788 N95-23076

HOMOMORPHISMS
Lectures on homology with internal symmetries
|DE94-628409| p 1785 N95-22619

HONEYCOMB STRUCTURES
Deflections of anisotropic sandwich beams with variable face sheets and core thicknesses p 1700 N95-23310

HOT ELECTRONS
Semikinetic modeling and observations of high-latitude plasma outflow
|NASA-CR-197403| p 1831 N95-23008

HOT ISOSTATIC PRESSING
Evolution of oxidation and creep damage mechanisms in HIPed silicon nitride materials
|DE95-001360| p 1647 N95-22689

HOT PRESSING
BEM solution to simulate the curvature driven deformation of a profile that is pressed into a plate of hot glass
|PB95-138913| p 1648 N95-23145

HOUSINGS
Synchronous dynamics of a coupled shaft/bearing/housing system with auxiliary support from a clearance bearing: Analysis and experiment
|NASA-CR-197858| p 1695 N95-23214

HOVERING
Flow visualization studies of VTOL aircraft models during Hover in ground effect
|NASA-TM-108860| p 1607 N95-22666

HUBBLE SPACE TELESCOPE
Ghost images and feasibility of reconstructions with the Richardson-Lucy algorithm
|DE95-002351| p 1756 N95-23079
STS-61 Space Shuttle mission report
|NASA-TM-110545| p 1619 N95-23187
STS-61 mission director's post-mission report
|NASA-TM-104803| p 1617 N95-23262
Planning and scheduling the Hubble Space Telescope: Practical application of advanced techniques p 1779 N95-23740

HUBS
NASA low-speed axial compressor for fundamental research
|NASA-TM-4635| p 1616 N95-23192

HULLS (STRUCTURES)
Capacitated facility location: Valid inequalities and facets (revised)
|PB95-130225| p 1786 N95-22641

HUMAN BEHAVIOR
Method of encouraging attention by correlating video game difficulty with attention level
|NASA-CASE-LAR-15022-1| p 1749 N95-22579

HUMAN BODY
All systems go!
|NASA-TM-110542| p 1620 N95-23665
Design of a cervical spine gross motion simulator for standard size human and anthropomorphic dummy adult and child
|NIAR-94-16| p 1751 N95-24021

HUMAN FACTORS ENGINEERING
The viability of establishing collaborative, reconfigurable research environments for the Human Performance Research Laboratory at NASA Ames
|NASA-CR-197384| p 1753 N95-22480
Human-centered design of human-computer-human dialogs in aerospace systems
|NASA-CR-197379| p 1750 N95-22797
TRISTAR 1: Evaluation methods for testing head-up display (HUD) flight symbology
|NASA-TM-4665| p 1613 N95-24030
A computational theory of grounding in natural language conversation
|TR-545| p 1760 N95-24058

HUMAN PERFORMANCE
The viability of establishing collaborative, reconfigurable research environments for the Human Performance Research Laboratory at NASA Ames
|NASA-CR-197384| p 1753 N95-22480
Method of encouraging attention by correlating video game difficulty with attention level
|NASA-CASE-LAR-15022-1| p 1749 N95-22579
Some performance effects of age and low blood alcohol levels on a computerized neuropsychological test
|DOT/FAA/AM-95/7| p 1749 N95-23788
Effects of age and low doses of alcohol on compensatory tracking during angular acceleration
|DOT/FAA/AM-95/3| p 1750 N95-23934

HUMAN RELATIONS
Teams and teamwork at NASA Langley Research Center p 1854 N95-23292

HUMAN RESOURCES
The software analysis project for the Office of Human Resources p 1854 N95-23331

HUMAN-COMPUTER INTERFACE
Human-centered design of human-computer-human dialogs in aerospace systems
|NASA-CR-197379| p 1750 N95-22797
Simulation and off-line programming systems comparison
|DE95-002267| p 1766 N95-23078
Knowledge-based guidance and control functions
|AGARD-AR-325| p 1751 N95-23601
Software agents for the dissemination of remote terrestrial sensing data p 1721 N95-23675
Commercialization of JPL Virtual Reality calibration and redundant manipulator control technologies p 1768 N95-23676
Knowledge representation and reasoning for mixed-initiative planning
|TR-562| p 1783 N95-24031
Architecture and evolution of Goddard Space Flight Center Distributed Active Archive Center p 1862 N95-24134

HUMIDITY
Corrosion of landing gear steels p 1642 N95-23500
Assessing the relative contribution of biogenic and fossil processes to visibility scattering aerosols found in remote areas: Near-term Organic Research Program
|DE95-003149| p 1735 N95-24146

HUNGARY
Revitalization of the Gemenc-area, Baja, Hungary. 1: A study on hydrological possibilities to revitalise the ecosystem in the Keselyues-area. 2: Towards the restoration of the Gyueruesalj floodplain
|PB95-139283| p 1718 N95-23469

HYBRID PROPULSION
Fundamental phenomena on fuel decomposition and boundary layer combustion processes with applications to hybrid rocket motors
|NASA-CR-197919| p 1625 N95-23261

HYDRAULIC JETS
Experimental study of vortex breakdown in a swirling water jet
|PB95-130407| p 1665 N95-22767

HYDROCARBON COMBUSTION
Ethylene oxidation chemistry in a well-stirred reactor
|DE95-004823| p 1635 N95-23381

HYDROCARBON FUEL PRODUCTION
Design and demonstration of an immobilized-cell fluidized-bed reactor for the efficient production of ethanol
|DE94-014023| p 1652 N95-22587
Preliminary assessment of air toxic emissions in the natural gas industry, phase 1
|PB95-135547| p 1732 N95-22865

HYDROCARBON FUELS
Multi-fuel reformers for fuel cells used in transportation: Assessment of hydrogen storage technologies
|DE94-017655| p 1727 N95-22861

HYDROCARBONS
Magnetic resonance and optical spectroscopic studies of carotenoids
|DE95-003729| p 1631 N95-22575
Particle size dependence in Fischer-Tropsch synthesis
|DE95-003124| p 1633 N95-22876
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
|DE95-000362| p 1634 N95-23164

HYDROCYANIC ACID
Interstellar molecules in the large magellanic cloud
|PB95-139267| p 1868 N95-23230

HYDRODYNAMICS
Laser-plasma instability in hohlraums
|DE95-000914| p 1829 N95-22676
Dimensional scaling for impact cratering and perforation p 1624 N95-23843

HYDROELECTRICITY
Renewable Energy Sources Brno 1993
|DE94-633975| p 1727 N95-22855

HYDROGEN
More about the q-deformed H-atom wave functions: Normal and abnormal series
|DE94-628434| p 1801 N95-22643
Hydrogen vibrational density of states of adsorbed water on rare-earth modified zirconia
|DE95-001127| p 1632 N95-22681
Investigation of mechanical properties and their relation to the internal structure of nanocrystalline metals and composites
|DE95-001151| p 1627 N95-22683
Ethylene oxidation chemistry in a well-stirred reactor
|DE95-004823| p 1635 N95-23381
Hydrogen and fuel cells for energy storage
|DE95-723907| p 1729 N95-23382
Multi-fuel reformers for fuel cells used in transportation. Phase 1: Multi-fuel reformers
|DE95-004215| p 1729 N95-23482
Time-resolved EPR studies of the H atom: A stable heavy isotope of muonium
|DE95-004614| p 1810 N95-23491
Theoretical calculations of pressure broadening coefficients for H2O perturbed by hydrogen or helium gas
|NASA-CR-197345| p 1636 N95-23545
Search for millimeterwave CO emission in damped Lyman-alpha systems
|PB95-139259| p 1868 N95-23607

HYDROGEN ATOMS
Exotic atoms
|DE95-003199| p 1805 N95-22881

HYDROGEN BONDS
A supersymmetric family of harmonic oscillators simulating H-bonds in DNA p 1748 N95-22963

HYDROGEN EMBRITTLEMENT
Temperature effects on hydrogen-induced cracking in an iron-based superalloy
|DE95-003037| p 1639 N95-22724
An investigation into the effects of hydrogen on the fracture and deformation of Alloy X-750
|DE95-003206| p 1639 N95-22732
The hydrogen embrittlement of alloy X-750
|DE95-003207| p 1640 N95-22893

HYDROGEN ENGINES
A hybrid vehicle evaluation code and its application to vehicle design
|DE95-004205| p 1662 N95-23334

HYDROGEN FUELS
Multi-fuel reformers for fuel cells used in transportation: Assessment of hydrogen storage technologies
|DE94-017655| p 1727 N95-22861
Structural Arrangement Trade Study. Volume 1: Reusable Hydrogen Composite Tank System (RHCTS) and Graphite Composite Primary Structures (GCPS). Executive summary
|NASA-CR-197685| p 1621 N95-23188
Structural arrangement trade study. Volume 3: Reusable Hydrogen Composite Tank System (RHCTS) and Graphite Composite Primary Structures (GCPS). Addendum
|NASA-CR-197687| p 1621 N95-23189
Flowfield characterization in a LOX/GH2 propellant rocket p 1684 N95-23642
A summary of the slush hydrogen technology program for the National Aero-Space Plane
|NASA-TM-106863| p 1653 N95-24186

HYDROGEN ISOTOPES
Large-sized and highly radioactive H-3 and Cd-109 Langmuir-Blodgett films
|DE94-785270| p 1811 N95-23775
Modified molecular sieves: Stationary phase for the gas chromatographic separation of hydrogen isotopes
|DE94-627282| p 1814 N95-24175

HYDROGEN OXYGEN ENGINES
Predicted performance of an integrated modular engine system
|NASA-CR-190787| p 1625 N95-23791

HYDROGEN PEROXIDE
Atmospheric peroxides
|DE95-004435| p 1733 N95-23362

HYDROGEN PRODUCTION
Supported transition metal catalysts for para- to ortho-hydrogen conversion
|NASA-CR-197907| p 1634 N95-23252
Multi-fuel reformers for fuel cells used in transportation. Phase 1: Multi-fuel reformers
|DE95-004215| p 1729 N95-23482

HYDROGEOLOGY
Energy flux and hydrogeology of thermal anomalies in the Gulf of Mexico Basin - South Texas example
|DE95-003341| p 1743 N95-22695

HYDROGRAPHY
Assimilation of altimeter data in a quasi-geostrophic model of the Gulf Stream system: A dynamical perspective
|NASA-CR-196313| p 1744 N95-23766

HYDROLOGY
Effects of wind on rainfall simulation. Spatial distribution of water application, kinetic energy, and overland flow under single full-cone nozzle sprays
|PB95-127304| p 1717 N95-22537
HAPEX-Sahel: Basic description of methods and data sets
|PB95-127262| p 1701 N95-22639
Accuracy of radar rainfall estimates compared to raingauge measurements and a hydrological application
|PB95-127296| p 1741 N95-22640
Streamflow and selected precipitation data for Yucca Mountain Region, southern Nevada and eastern California, water years 1986-90
|DE95-001893| p 1742 N95-23385

HYDROLYSIS
Continuous production of cellulase in a fluidized-bed reactor by Pseudonomas fluorescens immobilized in hydrogel beads
[DE94-014105] p 1744 N95-22588
On the formation of iron(3) oxides via oxidation of iron(2)
[DE94-018392] p 1632 N95-22857
A kinetic study of hydrolysis of polyester elastomer in magnetic tape p 1652 N95-24124
HYDROMETEOROLOGY
Accuracy of radar rainfall estimates compared to raingauge measurements and a hydrological application
[PB95-127296] p 1741 N95-22640
HYDROSTATICS
Three-D CFD analysis of hydrostatic bearings
p 1678 N95-23616
HYDROTHERMAL SYSTEMS
Application of MAC-Europe AVIRIS data to the analysis of various alteration stages in the Landdmannalauger Hydrothermal Area (South Iceland)
p 1709 N95-23885
HYDROXYL RADICALS
Dimethylsulfide oxidation over the tropical South Atlantic: OH and other oxidants
[NASA-CR-197417] p 1732 N95-22930
HYPERBARIC CHAMBERS
Effect of hyperbaric carbon dioxide on spores and vegetative cells of bacillus stearothermophilus
[AD-A280115] p 1747 N95-23251
HYPERBOLIC DIFFERENTIAL EQUATIONS
Nonlinear generalized functions and nonconservative shock simulations
[DE95-003307] p 1795 N95-22734
Fourth order difference methods for hyperbolic IBVP's
[NASA-CR-197955] p 1791 N95-23548
HYPERION
IUE observing programs: NSOSS, VEOEB, and PCOEB
[NASA-CR-197424] p 1866 N95-23560
HYPERNUCLEI
Do narrow Sigma hypernuclear states exist?
[DE95-002930] p 1803 N95-22763
HYPERPLANES
The fundamental group of complex hyperplanes arrangements
[DE94-628426] p 1796 N95-22933
HYPERSONIC FLIGHT
Particle kinetic simulation of high altitude hypervelocity flight
[NASA-CR-197383] p 1664 N95-22481
HYPERSONIC FLOW
Experimental results for a hypersonic nozzle/afterbody flow field
[NASA-TM-4638] p 1609 N95-23250
Design of a variable area diffuser for a 15-inch Mach 6 open-jet tunnel p 1617 N95-23309
HYPERSONIC NOZZLES
Optimized design of a hypersonic nozzle
p 1617 N95-23304
HYPERSONIC SPEED
Mach 10 computational study of a three-dimensional scramjet inlet flow field
[NASA-TM-4602] p 1666 N95-23015
Mach 10 computational study of a three-dimensional scramjet inlet flow field
[NASA-TM-4602] p 1667 N95-23210
Design of a variable area diffuser for a 15-inch Mach 6 open-jet tunnel p 1617 N95-23309
HYPERSONIC VEHICLES
Particle kinetic simulation of high altitude hypervelocity flight
[NASA-CR-197383] p 1664 N95-22481
HYPERSONIC WIND TUNNELS
Optimized design of a hypersonic nozzle
p 1617 N95-23304
HYPERSPACES
Browsing semantics in the tower model
[PB95-127221] p 1855 N95-22534
On the scalar curvature of minimal hypersurfaces
[DE94-628516] p 1796 N95-22741
HYPERVELOCITY IMPACT
Impact shock and penetration fragmentation in porous media
[DE94-018900] p 1868 N95-23656
Effect of the space environment on materials flown on the EURECA/TICCE-HVI experiment
p 1623 N95-23803
Long term microparticle impact fluxes on LDEF determined from optical survey of Interplanetary Dust Experiment (IDE) sensors p 1623 N95-23826
Hypervelocity impact survivability experiments for carbonaceous impactors, part 2 p 1700 N95-23831
Micro-abrasion package capture cell experiment on the trailing edge of LDEF: Impactor chemistry and whipple bumper shield efficiencies p 1624 N95-23835
Secondary ion mass spectrometry (SIMS) analysis of hypervelocity microparticle impact sites on LDEF surfaces p 1637 N95-23836
The effect of impact angle on craters formed by hypervelocity particles p 1700 N95-23839
Determining orbital particle parameters of impacts into germanium using morphology analysis and calibration data from hypervelocity impact experiments in the laboratory
p 1700 N95-23841
Cratering and penetration experiments in Teflon targets at velocities from 1 to 7 km/s p 1700 N95-23842
Axial focusing of energy from a hypervelocity impact on earth
[DE95-003347] p 1740 N95-24008
Axial focusing of impact energy in the earth's interior: A possible link to flood basalts and hotspots
[DE95-003357] p 1741 N95-24009
HYPOTHALAMUS
Cellular interactions in the suprachiasmatic nucleus
[AD-A285639] p 1749 N95-23780
HYPOTHESES
Is omega* - (mu) absolutely countably compact?
[PB95-127981] p 1785 N95-22528
HYSTERESIS
Effects of Bi and Bi2O3 additions on the microstructure and superconducting properties of powder-in-tube BSCCO (2212) tapes
[DE95-004605] p 1845 N95-24150

I

ICE
Collaborative research on aircraft icing and charging processes in ice
[AD-A285102] p 1609 N95-23201
Experimental technique and assessment for measuring the convective heat transfer coefficient from natural ice accretions
[NASA-TM-106864] p 1668 N95-23248
Charging of interplanetary grains
[NASA-CR-198032] p 1869 N95-24066
ICE FORMATION
Experimental technique and assessment for measuring the convective heat transfer coefficient from natural ice accretions
[NASA-TM-106864] p 1668 N95-23248
IDAHO
Seismic evidence of conjugate normal faulting: The 1994 Devil Canyon earthquake sequence near Challis, Idaho
[DE95-002052] p 1740 N95-23386
IDENTIFYING
Toward an automated signature recognition toolkit for mission operations p 1659 N95-23682
Automatic generation of efficient orderings of events for scheduling applications p 1618 N95-23764
IDENTITIES
Fibonacci chain polynomials: Identities from self-similarity p 1814 N95-22962
IGNITERS
Laser-plasma instability in hohlraums
[DE95-000914] p 1829 N95-22676
The railplug: Development of a new ignitor for internal combustion engines
[DE95-004375] p 1695 N95-23342
IGNITION SYSTEMS
Diesel fuel component contributions to engine emissions and performance: Clean fuel study
[DE94-011868] p 1732 N95-22834
The railplug: Development of a new ignitor for internal combustion engines
[DE95-004375] p 1695 N95-23342
Ignition transient calculations in the Space Shuttle solid rocket motor p 1625 N95-23640
ILL-POSED PROBLEMS (MATHEMATICS)
Diffusion terms in systems of reaction diffusion equations can lead to blow up
[DE94-628408] p 1785 N95-22618
IMAGE ANALYSIS
A multispectral scanner survey of the Tonopah Test Range, Nevada. Date of survey: August 1993
[DE95-003920] p 1717 N95-22503
Combining optical and microwave remote sensing data of forest vegetation: MAC Europe 1991
[PB95-127312] p 1717 N95-22538
Scientific and technical photography at NASA Langley Research Center p 1690 N95-23290
Vision-sensing image analysis for GTAW process control
[DE95-003936] p 1695 N95-23373
A new generation of intelligent trainable tools for analyzing large scientific image databases
p 1775 N95-23717
Investigations on the 1.7 micron residual absorption feature in the vegetation reflection spectrum
p 1710 N95-23891
Remote identification of a gravel laden Pleistocene river bed p 1712 N95-23921
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 3: AIRSAR Workshop
[NASA-CR-197354-VOL-3] p 1712 N95-23938
AIRSAR views of aerolian terrain
p 1713 N95-23941
Statistics of multi-look AIRSAR imagery: A comparison of theory with measurements p 1714 N95-23947
Preliminary analysis of the sensitivity of AIRSAR images to soil moisture variations p 1714 N95-23950
Relating P-band AIRSAR backscatter to forest stand parameters p 1716 N95-23959
Soil moisture retrieval in the Oberpfaffenhofen testsite using MAC Europe AIRSAR data p 1716 N95-23960
Dynamics and pattern of a managed coniferous forest landscape in Oregon p 1720 N95-24104
IMAGE CLASSIFICATION
Classification of high dimensional multispectral image data p 1705 N95-23868
MAC Europe 1991 campaign: AIRSAR/AVIRIS data integration for agricultural test site classification
p 1715 N95-23952
Polarimetric radar data decomposition and interpretation p 1715 N95-23955
SAR terrain classifier and mapper of biophysical attributes p 1715 N95-23957
IMAGE CORRELATORS
Optical image correlator using orthogonal data storage
[AD-A285795] p 1819 N95-22508
IMAGE ENHANCEMENT
A multispectral scanner survey of the Tonopah Test Range, Nevada. Date of survey: August 1993
[DE95-003920] p 1717 N95-22503
IMAGE FURNACES
A new containerless image furnace with electro-static positioning device p 1690 N95-23674
Robotic servicing system for space material experiment p 1697 N95-23722
IMAGE INTENSIFIERS
Video frame processor
[DE94-635414] p 1753 N95-23962
IMAGE PROCESSING
A certainty grid to object boundary algorithm
[PB94-203510] p 1755 N95-22637
Ghost images and feasibility of reconstructions with the Richardson-Lucy algorithm
[DE95-002351] p 1756 N95-23079
Locating buildings in aerial photos
p 1721 N95-23295
Electronic photography at NASA Langley Research Center p 1690 N95-23298
Vision-sensing image analysis for GTAW process control
[DE95-003936] p 1695 N95-23373
Manipulating flexible parts using a teleoperated system with time delay: An experiment p 1777 N95-23729
Mark Tracking: Position/orientation measurements using 4-circle mark and its tracking experiments
p 1778 N95-23736
A fuzzy structural matching scheme for space robotics vision p 1778 N95-23737
Active vision in satellite scene analysis
p 1778 N95-23738
Automated synthesis of image processing procedures using AI planning techniques p 1779 N95-23745
10x reduction imaging at 13.4 nm
[DE94-016612] p 1828 N95-23767
Edge fluctuation measurements by phase contrast imaging on DIII-D
[DE94-016681] p 1836 N95-23768
Spectral decomposition of AVIRIS data
p 1704 N95-23859
AVIRIS and TIMS data processing and distribution at the land processes distributed active archive center
p 1706 N95-23872
Classification of the LCVF AVIRIS test site with a Kohonen artificial neural network p 1706 N95-23874
Extraction of auxiliary data from AVIRIS distribution tape for spectral, radiometric, and geometric quality assessment p 1706 N95-23875
Preprocessing: Geocoding of AVIRIS data using navigation, engineering, DEM, and radar tracking system data p 1707 N95-23876
Mapping and monitoring changes in vegetation communities of Jasper Ridge, CA, using spectral fractions derived from AVIRIS images p 1708 N95-23883
Optimal band selection for dimensionality reduction of hyperspectral imagery p 1709 N95-23887

Atmospheric correction of AVIRIS data of Monterey Bay contaminated by thin cirrus clouds p 1710 N95-23890
Statistics of multi-look AIRSAR imagery: A comparison of theory with measurements p 1714 N95-23947
Polarimetric radar data decomposition and interpretation p 1715 N95-23955
Video frame processor
|DE94-635414| p 1753 N95-23962

IMAGE RESOLUTION
Full resolution hologram-like autostereoscopic display
|NASA-CR-197913| p 1689 N95-23789
Preprocessing: Geocoding of AVIRIS data using navigation, engineering, DEM, and radar tracking system data p 1707 N95-23876

IMAGE TRANSDUCERS
Amplified MOS Imager
|NHK-LABS-NOTE-432| p 1690 N95-24107

IMAGES
Optical image correlator using orthogonal data storage
|AD-A285795| p 1819 N95-22508
Color orthophotography: To scan or not
|DE95-002749| p 1689 N95-24069
Document image archive transfer from DOS to UNIX p 1761 N95-24117
Proposal of a Modified EBU method for reliable evaluation of picture quality
|NHK-LABS-NOTE-431| p 1863 N95-24180

IMAGING RADAR
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 3: AIRSAR Workshop
|NASA-CR-197354-VOL-3| p 1712 N95-23938

IMAGING SPECTROMETERS
Ocean observations with EOS/MODIS: Algorithm development and post launch studies
|NASA-CR-197402| p 1717 N95-22916
Land surface temperature measurements for EOS MODIS data
|NASA-CR-197443| p 1717 N95-23191
Infrared algorithm development for ocean observations with EOS/MODIS
|NASA-CR-197851| p 1743 N95-23212
Ocean observations with EOS/MODIS: Algorithm development and post launch studies
|NASA-CR-197894| p 1718 N95-23473
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 1: AVIRIS Workshop
|NASA-CR-197877-VOL-1| p 1701 N95-23844
A tool for manual endmember selection and spectral unmixing p 1701 N95-23846
Automating spectral unmixing of AVIRIS data using convex geometry concepts p 1702 N95-23848
AVIRIS calibration using the cloud-shadow method p 1702 N95-23849
Field observations using an AOTF polarimetric imaging spectrometer p 1702 N95-23850
Instantaneous field of view and spatial sampling of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1702 N95-23851
Airborne Visible/Infrared Imaging Spectrometer (AVIRIS): Recent improvements to the sensor p 1690 N95-23852
Comparison of three methods for materials identification and mapping with imaging spectroscopy p 1702 N95-23853
Comparison of methods for calibrating AVIRIS data to ground reflectance p 1703 N95-23854
Discrimination of poorly exposed lithologies in AVIRIS data p 1703 N95-23858
Spectral decomposition of AVIRIS data p 1704 N95-23859
Remote sensing of smoke, clouds, and fire using AVIRIS data p 1704 N95-23860
Use of data from the AVIRIS onboard calibrator p 1704 N95-23861
Inflight calibration of AVIRIS in 1992 and 1993 p 1690 N95-23862
Estimation of aerosol optical depth and additional atmospheric parameters for the calculation of apparent reflectance from radiance measured by the Airborne Visible/Infrared Imaging Spectrometer p 1704 N95-23863
Use of the Airborne Visible/Infrared Imaging Spectrometer to calibrate the optical sensor on board the Japanese Earth Resources Satellite-1 p 1624 N95-23864
A role for AVIRIS in the Landsat and Advanced Land Remote Sensing Systems program p 1705 N95-23866
Estimating dry grass residues using landscape integration analysis p 1705 N95-23867
Classification of high dimensional multispectral image data p 1705 N95-23868
Geologic mapping using integrated AIRSAR, AVIRIS, and TIMS data p 1714 N95-23946
Land surface temperature measurements from EOS MODIS data
|NASA-CR-197969| p 1721 N95-24190

IMAGING TECHNIQUES
Aviator's night vision imaging system preflight adjustment/assessment procedures
|AD-A285829| p 1750 N95-22513
Programmable hyperspectral image mapper with on-array processing
|NASA-CASE-NPO-17794-1-CU| p 1819 N95-22765
Continuation of BNCT Research Program at NEMC and MIT
|DE94-016228| p 1748 N95-22875
Ghost images and feasibility of reconstructions with the Richardson-Lucy algorithm
|DE95-002351| p 1756 N95-23079
TIMED Imaging Photometer Experiment (TIPE)
|NASA-CR-197431| p 1688 N95-23087
Measurements of striae in CR+ doped YAG laser crystals p 1847 N95-23285
Scientific and technical photography at NASA Langley Research Center p 1690 N95-23290
Method development for compensating temperature effects in pressure sensitive paint measurements p 1650 N95-23291
Application of electron paramagnetic resonance imaging to the characterization of the Ultem(R) exposed to 1 MeV electrons. Correlation of radical density data to tiger code calculations p 1815 N95-23328
Vision-sensing image analysis for GTAW process control
|DE95-003936| p 1695 N95-23373
Multiband VLBI imaging of the jet in 3C 345
|PB95-139275| p 1866 N95-23468
Automatic commanding of the Mars Observer Camera p 1620 N95-23754
10x reduction imaging at 13.4 nm
|DE94-016612| p 1828 N95-23767
Edge fluctuation measurements by phase contrast imaging on DIII-D
|DE94-016681| p 1836 N95-23768
Full resolution hologram-like autostereoscopic display
|NASA-CR-197913| p 1689 N95-23789
Hypervelocity impact survivability experiments for carbonaceous impactors, part 2 p 1700 N95-23831
Field observations using an AOTF polarimetric imaging spectrometer p 1702 N95-23850
Comparison of three methods for materials identification and mapping with imaging spectroscopy p 1702 N95-23853
Simulation of landsat thematic mapper imagery using AVIRIS hyperspectral imagery p 1705 N95-23869
Classification of the LCVF AVIRIS test site with a Kohonen artificial neural network p 1706 N95-23874
Estimation of crown closure from AVIRIS data using regression analysis p 1709 N95-23886
Optimal band selection for dimensionality reduction of hyperspectral imagery p 1709 N95-23887
Objective determination of image end-members in spectral mixture analysis of AVIRIS data p 1709 N95-23888
Relationships between pigment composition variation and reflectance for plant species from a coastal savannah in California p 1709 N95-23889
Investigations on the 1.7 micron residual absorption feature in the vegetation reflection spectrum p 1710 N95-23891
Laboratory spectra of field samples as a check on two atmospheric correction methods p 1711 N95-23894
Determination of semi-arid landscape endmembers and seasonal trends using convex geometry spectral unmixing techniques p 1711 N95-23895
Interferometric synthetic aperture radar imagery of the Gulf Stream p 1712 N95-23939
AIRSAR deployment in Australia, September 1993: Management and objectives p 1714 N95-23948
Comparison of 7.5-minute and 1-degree digital elevation models p 1719 N95-24095
Amplified MOS Imager
|NHK-LABS-NOTE-432| p 1690 N95-24107

IMMUNE SYSTEMS
Interrelations between nervous system and immune system in stress situations
|PB95-135521| p 1748 N95-22770

IMPACT DAMAGE
Impact shock and penetration fragmentation in porous media
|DE94-018900| p 1868 N95-23656
Status of LDEF contributions to current knowledge of meteoroid and manmade debris environments and their effects on spacecraft in LEO p 1623 N95-23822
Long term microparticle impact fluxes on LDEF determined from optical survey of Interplanetary Dust Experiment (IDE) sensors p 1623 N95-23826
Penetration rates over 30 years in the space age p 1624 N95-23827
LDEF Interplanetary Dust Experiment (IDE) results p 1869 N95-23828
Orbital debris and meteoroid population as estimated from LDEF impact data p 1869 N95-23830
Hypervelocity impact survivability experiments for carbonaceous impactors, part 2 p 1700 N95-23831
Analytical electron microscopy of LDEF impactor residues p 1869 N95-23832

IMPACT TESTS
High-velocity penetrators
|DE95-001886| p 1698 N95-22500
Analytical electron microscopy of LDEF impactor residues p 1869 N95-23832
Debris and meteoroid proportions deduced from impact crater residue analysis p 1869 N95-23834
Experimental investigation of the relationship between impact crater morphology and impacting particle velocity and direction p 1700 N95-23840
Cratering and penetration experiments in Teflon targets at velocities from 1 to 7 km/s p 1700 N95-23842
Axial focusing of energy from a hypervelocity impact on earth
|DE95-003347| p 1740 N95-24008

IMPACTORS
Hypervelocity impact survivability experiments for carbonaceous impactors, part 2 p 1700 N95-23831
Dimensional scaling for impact cratering and perforation p 1624 N95-23843

IMPEDANCE MEASUREMENT
The use of electrochemical impedance spectroscopy to predict the corrosion of aluminum-lithium alloys in marine environments p 1637 N95-23504

IMPELLERS
Comparison between predicted and experimentally measured flow fields at the exit of the SSME HPFTP impeller p 1679 N95-23622
Three-dimensional flow analysis inside consortium impeller at design and off-design conditions p 1679 N95-23623
Optimization of a centrifugal impeller design through CFD analysis p 1680 N95-23624
The influence of swirl brakes and a tip discharge orifice on the rotordynamic forces generated by discharge-to-suction leakage flows in shrouded centrifugal pumps p 1680 N95-23628
An inducer CFD solution and effects associated with cavitation p 1681 N95-23631

IMPINGEMENT
Effects of jet strength on NOx formation in premixed impinging jet combustion with minimum heat losses
|NAL-TR-1237T| p 1637 N95-24181

IMPULSE GENERATORS
High gain GaAs Photoconductive Semiconductor Switches for impulse sources
|DE95-001885| p 1659 N95-22549

IMPURITIES
Engineering design of a radiative divertor for DIII-D
|DE95-003008| p 1693 N95-22798
Measurements and modeling of impurity source distributions from the Tore Supra outboard pump limiter
|DE95-003097| p 1831 N95-22800
Variational calculations for He-3 impurities on He-4 droplets
|DE94-628469| p 1840 N95-22839
D3-D program overview
|DE95-003879| p 1837 N95-24086

IN SITU MEASUREMENT
The difference between laboratory and in-situ pixel-averaged emissivity: The effects on temperature-emissivity separation p 1711 N95-23919

IN-FLIGHT MONITORING
Summary of OARE flight calibration measurements
|NASA-TM-109159| p 1688 N95-23012
Enhancement of F/A-18 operational flight measurements: Data report for phase 1
|DSTO-TR-0049| p 1613 N95-23666
An intelligent ground operator support system p 1769 N95-23681
Attention focusing and anomaly detection in systems monitoring p 1769 N95-23683
An expert system for diagnosing anomalies of spacecraft p 1770 N95-23684
Distributed intelligence for ground/space systems p 1770 N95-23685
Learning time series for intelligent monitoring p 1770 N95-23686
An operations and command systems for the extreme ultraviolet explorer p 1770 N95-23687
Performance results of cooperating expert systems in a distributed real-time monitoring system p 1761 N95-23688
Use of data from the AVIRIS onboard calibrator p 1704 N95-23861
Inflight calibration of AVIRIS in 1992 and 1993 p 1690 N95-23862

INCENDIARY AMMUNITION
Rationale for the Modular Air-system Vulnerability Estimation Network (MAVEN) methodology
| AD-A285797 | p 1611 N95-22510
INCIDENCE
Prediction of incidence and surface roughness effects on turbine performance p 1671 N95-23424
INCIDENT RADIATION
Resonant infrared detector with substantially unit quantum efficiency
| NASA-CASE-ARC-11940-1-SB | p 1827 N95-23378
INCINERATORS
The Louisiana State University waste-to-energy incinerator
| DE95-004417 | p 1728 N95-23344
INCOMPRESSIBLE FLOW
An adaptive projection method for the incompressible Navier-Stokes equations
| DE94-019049 | p 1665 N95-22491
BEm-BDF scheme for curvature driven moving stokes flows
| PB95-138905 | p 1667 N95-23144
Quasistatic model for the motion of a viscous capillary liquid drop
| PB95-138848 | p 1667 N95-23172
Numerical simulation of axisymmetric viscous sintering
| PB95-138889 | p 1667 N95-23175
The initial-value problem for viscous channel flows
| NASA-CR-195034 | p 1667 N95-23207
A controlled variation scheme for convection treatment in pressure-based algorithm p 1677 N95-23448
On the conservative interface treatment for multi-block viscous flow computations
| NASA-CR-195442 | p 1677 N95-23451
Incompressible Navier-Stokes calculations in pump flows p 1680 N95-23627
INDENTATION
Investigation of depth-area relationships associated with nanoindentations
| DE95-001353 | p 1639 N95-22686
INDEXES (DOCUMENTATION)
NASA Thesaurus, Supplement
| NASA-SP-7096-SUPPL-1 | p 1856 N95-23223
Index of nuclear data libraries available from the IAEA nuclear data section
| DE94-634271 | p 1857 N95-23453
Using Dedal to share and reuse distributed engineering design information p 1768 N95-23678
INDIUM COMPOUNDS
Polycrystalline CuInSe2 and CdTePV solar cells
| DE95-000244 | p 1727 N95-22842
Four space application material coatings on the Long-Duration Exposure Facility (LDEF) p 1651 N95-23913
INDIUM PHOSPHIDES
Study of photorefractive non-linearities in the 3-5 and 2-4 semi-insulator compounds: The effect of electron irradiation
| PB94-189057 | p 1839 N95-22584
Carbon doping of III-V compound semiconductors
| DE95-003431 | p 1844 N95-24013
INDUCTION MOTORS
Motor drive technologies for the power-by-wire (PBW) program: Options, trends and tradeoffs
| NASA-TM-106885 | p 1616 N95-23671
INDUSTRIAL PLANTS
Preliminary assessment of air toxic emissions in the natural gas industry, phase 1
| PB95-135547 | p 1732 N95-22865
Aerospace Industries Association (AIA) work practices report for composites p 1628 N95-23029
INDUSTRIAL SAFETY
Environmental, Safety, and Health Considerations: Composite Materials in the Aerospace Industry
| NASA-CP-3289 | p 1628 N95-23025
Health, safety and environmental requirements for composite materials p 1628 N95-23026
Offgassing test methodology for composite materials p 1629 N95-23035
INDUSTRIAL WASTES
Biotransformation of an uncured composite material p 1629 N95-23033
Chemical recycling of scrap composites p 1629 N95-23034
INDUSTRIES
Solar photochemistry: Twenty years of progress, what's been accomplished, and where does it lead?
| DE95-004007 | p 1730 N95-23778
INELASTIC SCATTERING
Experimental results on polarized structure functions in deep inelastic lepton-nucleon scattering
| DE95-002782 | p 1801 N95-22521
Gluon distribution as function of F(sub 2) and dF(sub 2)/dlnQ(exp 2) at small x
| DE94-635677 | p 1812 N95-23975
INEQUALITIES
Capacitated facility location: Valid inequalities and facets (revised)
| PB95-130225 | p 1786 N95-22641
INERTIAL CONFINEMENT FUSION
High current induction linacs
| DE95-003442 | p 1818 N95-24014
Progress in ion beam power coupling and ion-driven hohlraums on PBFA 2
| DE95-004544 | p 1818 N95-24160
INERTIAL PLATFORMS
Dynamic response tests of inertial and optical wind-tunnel model attitude measurement devices
| NASA-TM-109182 | p 1616 N95-23011
INERTIAL REFERENCE SYSTEMS
Terrain modelling and motion planning for an autonomous exploration rover p 1721 N95-23765
INFECTIOUS DISEASES
Interrelations between nervous system and immune system in stress situations
| PB95-135521 | p 1748 N95-22770
An extension of Freedman's results on a model of predator-prey dynamics as modified by the action of a parasite
| DE94-628488 | p 1796 N95-23052
INFERENCE
Simultaneous inference in multivariate calibration
| DE95-003592 | p 1794 N95-23066
Combinatorial semantics
| TR-563 | p 1792 N95-23793
INFILTRATION
Effects of wind on rainfall simulation. Spatial distribution of water application, kinetic energy, and overland flow under single full-cone nozzle sprays
| PB95-127304 | p 1717 N95-22537
Development and verification of a resin film infusion/resin transfer molding simulation model for fabrication of advanced textile composites
| NASA-CR-197439 | p 1648 N95-23179
INFORMATION DISSEMINATION
NASAwide electronic publishing system: Electronic printing and duplicating, stage-2 evaluation report (GSFC)
| NASA-TM-104615 | p 1856 N95-23209
A network-based distributed, media-rich computing and information environment
| DE95-003696 | p 1765 N95-24074
The design of a petabyte archive and distribution system for the NASA ECS project p 1858 N95-24110
NSSDC provides network access to key data via NDADS p 1862 N95-24136
Analysis of the request patterns to the NSSDC on-line archive p 1862 N95-24137
INFORMATION FLOW
A study of policy issues affecting the Defense Technical Information Center
| AD-A286629 | p 1854 N95-22494
Jackson system development, entity-relationship analysis and data flow models: A comparative study
| PB95-127338 | p 1855 N95-22523
INFORMATION MANAGEMENT
Online Nuclear Data Service
| DE94-634268 | p 1856 N95-23452
The data facility of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1707 N95-23877
A network-based distributed, media-rich computing and information environment
| DE95-003696 | p 1765 N95-24074
Applications drivers for data parking on the Information Superhighway p 1857 N95-24109
INFORMATION PROCESSING (BIOLOGY)
Functions of external cues in prospective memory
| DOT/FAA/AM-95/9 | p 1750 N95-24088
INFORMATION RETRIEVAL
A multispectral scanner survey of the Tonopah Test Range, Nevada. Date of survey: August 1993
| DE95-003920 | p 1717 N95-22503
NASA Thesaurus, Supplement
| NASA-SP-7096-SUPPL-1 | p 1856 N95-23223
Search Hanford accessible reports electronically system requirements specification
| DE95-004367 | p 1856 N95-23340
Index of nuclear data libraries available from the IAEA nuclear data section
| DE94-634271 | p 1857 N95-23453
A network-based distributed, media-rich computing and information environment
| DE95-003696 | p 1765 N95-24074
INFORMATION SYSTEMS
Layered Electrical Product Application Protocol (AP)
| DE95-001524 | p 1754 N95-22548
Review of uncertainty files and improved multigroup cross section files for FENDL
| DE94-628639 | p 1830 N95-22757
Cost and schedule analytical techniques development
| NASA-CR-196548 | p 1853 N95-22891
Distributed VIRtual System (DIVIRS) project
| NASA-CR-197855 | p 1757 N95-23180
Automation technology using Geographic Information System (GIS) p 1863 N95-23284
Application Protocol, Initial Graphics Exchange Specification (IGES), Layered Electrical Product
| DE95-004266 | p 1757 N95-23337
Search Hanford accessible reports electronically system requirements specification
| DE95-004367 | p 1856 N95-23340
Search Hanford accessible reports electronically system design description, revision 1
| DE95-004369 | p 1856 N95-23341
Index of nuclear data libraries available from the IAEA nuclear data section
| DE94-634271 | p 1857 N95-23453
BROND-2.1. Russian evaluated neutron reaction data library
| DE94-634417 | p 1810 N95-23458
Information technology standards process guide
| DE95-003967 | p 1857 N95-23574
AMPHION: Specification-based programming for scientific subroutine libraries p 1761 N95-23680
Search Hanford accessible reports electronically system configuration management plan
| DE95-004493 | p 1857 N95-24089
Optimizing raid performance with cache p 1761 N95-24116
INFORMATION TRANSFER
A study of policy issues affecting the Defense Technical Information Center
| AD-A286629 | p 1854 N95-22494
A network-based distributed, media-rich computing and information environment
| DE95-003696 | p 1765 N95-24074
A 500 megabyte/second disk array p 1753 N95-24114
Document image archive transfer from DOS to UNIX p 1761 N95-24117
INFRARED ASTRONOMY
IRAS sky survey atlas: Explanatory supplement
| NASA-CR-197335 | p 1865 N95-22539
Near infrared and optical spectroscopy of FSC10214+4724
| NASA-CR-197966 | p 1828 N95-24068
INFRARED ASTRONOMY SATELLITE
IRAS sky survey atlas: Explanatory supplement
| NASA-CR-197335 | p 1865 N95-22539
INFRARED DETECTORS
High Tc superconducting bolometric and nonbolometric infrared (IR) detectors
| NASA-CR-197868 | p 1827 N95-23224
Resonant infrared detector with substantially unit quantum efficiency
| NASA-CASE-ARC-11940-1-SB | p 1827 N95-23378
INFRARED IMAGERY
IRAS sky survey atlas: Explanatory supplement
| NASA-CR-197335 | p 1865 N95-22539
Infrared algorithm development for ocean observations with EOS/MODIS
| NASA-CR-197851 | p 1743 N95-23212
AVIRIS and TIMS data processing and distribution at the land processes distributed active archive center p 1706 N95-23872
Monitoring land use and degradation using satellite and airborne data p 1707 N95-23880
The red edge in arid region vegetation: 340-1060 nm spectra p 1708 N95-23881
Temporal changes in endmember abundances, liquid water and water vapor over vegetation at Jasper Ridge p 1708 N95-23882
Mapping and monitoring changes in vegetation communities of Jasper Ridge, CA, using spectral fractions derived from AVIRIS images p 1708 N95-23883
The effect of signal noise on the remote sensing of Foliar biochemical concentration p 1708 N95-23884
Application of MAC-Europe AVIRIS data to the analysis of various alteration stages in the Landdmannalauger Hydrothermal Area (South Iceland) p 1709 N95-23885
Estimation of crown closure from AVIRIS data using regression analysis p 1709 N95-23886
Objective determination of image end-members in spectral mixture analysis of AVIRIS data p 1709 N95-23888
Atmospheric correction of AVIRIS data of Monterey Bay contaminated by thin cirrus clouds p 1710 N95-23890
A comparison of spectral mixture analysis an NDVI for ascertaining ecological variables p 1710 N95-23892
Laboratory spectra of field samples as a check on two atmospheric correction methods p 1711 N95-23894
INFRARED RADIATION
Infrared study of carbon deposits on bimetallic catalysts
| DE95-000902 | p 1631 N95-22517

Relationships between pigment composition variation and reflectance for plant species from a coastal savannah in California p 1709 N95-23889
Estimation of spectral emissivity in the thermal infrared p 1711 N95-23918
The difference between laboratory and in-situ pixel-averaged emissivity: The effects on temperature-emissivity separation p 1711 N95-23919
Investigation of infra-red and nonequilibrium air radiation
| NASA-CR-197977 | p 1741 N95-24041

INFRARED SCANNERS
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 2: TIMS Workshop
| NASA-CR-197876-VOL-2 | p 1711 N95-23917
Mineralogic variability of the Kelso Dunes, Mojave Desert, California derived from Thermal Infrared Multispectral Scanner (TIMS) data p 1711 N95-23920
Geologic mapping using integrated AIRSAR, AVIRIS, and TIMS data p 1714 N95-23946

INFRARED SIGNATURES
Investigation of infra-red and nonequilibrium air radiation
| NASA-CR-197977 | p 1741 N95-24041

INFRARED SOURCES (ASTRONOMY)
Near infrared and optical spectroscopy of FSC10214+4724
| NASA-CR-197966 | p 1828 N95-24068

INFRARED SPECTRA
Outgassing products from orbiter TPS materials p 1637 N95-23798
A proposed update to the solar irradiance spectrum used in LOWTRAN and MODTRAN p 1705 N95-23865
AVIRIS spectra correlated with the chlorophyll concentration of a forest canopy p 1705 N95-23871
AVIRIS and TIMS data processing and distribution at the land processes distributed active archive center p 1706 N95-23872
Classification of the LCVF AVIRIS test site with a Kohonen artificial neural network p 1706 N95-23874
Extraction of auxiliary data from AVIRIS distribution tape for spectral, radiometric, and geometric quality assessment p 1706 N95-23875
Mapping of the Ronda peridotite massif (Spain) from AVIRIS spectro-imaging survey: A first attempt p 1707 N95-23878
Spectral variations in a collection of AVIRIS imagery p 1707 N95-23879
The red edge in arid region vegetation: 340-1060 nm spectra p 1708 N95-23881
Temporal changes in endmember abundances, liquid water and water vapor over vegetation at Jasper Ridge p 1708 N95-23882
Mapping and monitoring changes in vegetation communities of Jasper Ridge, CA, using spectral fractions derived from AVIRIS images p 1708 N95-23883
The effect of signal noise on the remote sensing of Foliar biochemical concentration p 1708 N95-23884
Application of MAC-Europe AVIRIS data to the analysis of various alteration stages in the Landdmannalauger Hydrothermal Area (South Iceland) p 1709 N95-23885
Estimation of crown closure from AVIRIS data using regression analysis p 1709 N95-23886
Objective determination of image end-members in spectral mixture analysis of AVIRIS data p 1709 N95-23888
Atmospheric correction of AVIRIS data of Monterey Bay contaminated by thin cirrus clouds p 1710 N95-23890
Investigations on the 1.7 micron residual absorption feature in the vegetation reflection spectrum p 1710 N95-23891
A comparison of spectral mixture analysis an NDVI for ascertaining ecological variables p 1710 N95-23892
Using AVIRIS for in-flight calibration of the spectral shifts of SPOT-HRV and of AVHRR? p 1710 N95-23893
Laboratory spectra of field samples as a check on two atmospheric correction methods p 1711 N95-23894
Determination of semi-arid landscape endmembers and seasonal trends using convex geometry spectral unmixing techniques p 1711 N95-23895
MAC Europe 1991 campaign: AIRSAR/AVIRIS data integration for agricultural test site classification p 1715 N95-23952

INFRARED SPECTROMETERS
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 1: AVIRIS Workshop
| NASA-CR-197877-VOL-1 | p 1701 N95-23844
Lithologic discrimination and alteration mapping from AVIRIS Data, Socorro, New Mexico p 1701 N95-23847
Automating spectral unmixing of AVIRIS data using convex geometry concepts p 1702 N95-23848
AVIRIS calibration using the cloud-shadow method p 1702 N95-23849
Instantaneous field of view and spatial sampling of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1702 N95-23851
Airborne Visible/Infrared Imaging Spectrometer (AVIRIS): Recent improvements to the sensor p 1690 N95-23852
Comparison of three methods for materials identification and mapping with imaging spectroscopy p 1702 N95-23853
Comparison of methods for calibrating AVIRIS data to ground reflectance p 1703 N95-23854
Discrimination of poorly exposed lithologies in AVIRIS data p 1703 N95-23858
Spectral decomposition of AVIRIS data p 1704 N95-23859
Remote sensing of smoke, clouds, and fire using AVIRIS data p 1704 N95-23860
Use of data from the AVIRIS onboard calibrator p 1704 N95-23861
Inflight calibration of AVIRIS in 1992 and 1993 p 1690 N95-23862
Estimation of aerosol optical depth and additional atmospheric parameters for the calculation of apparent reflectance from radiance measured by the Airborne Visible/Infrared Imaging Spectrometer p 1704 N95-23863
Use of the Airborne Visible/Infrared Imaging Spectrometer to calibrate the optical sensor on board the Japanese Earth Resources Satellite-1 p 1624 N95-23864
A role for AVIRIS in the Landsat and Advanced Land Remote Sensing Systems program p 1705 N95-23866
Classification of high dimensional multispectral image data p 1705 N95-23868
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 2: TIMS Workshop
| NASA-CR-197876-VOL-2 | p 1711 N95-23917
Geologic mapping using integrated AIRSAR, AVIRIS, and TIMS data p 1714 N95-23946

INFRARED SPECTROSCOPY
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer
| NASA-CR-197368 | p 1735 N95-22482
The effect of signal noise on the remote sensing of Foliar biochemical concentration p 1708 N95-23884
Near infrared and optical spectroscopy of FSC10214+4724
| NASA-CR-197966 | p 1828 N95-24068

INHIBITORS
Solderability preservation through the use of organic inhibitors
| DE95-003633 | p 1664 N95-24149

INITIATION
Investigation of the role of gravity waves in the generation of equatorial bubbles
| NASA-CR-197962 | p 1739 N95-23272

INJECTION
Finite-difference solutions of the alternate turbopump development high-pressure oxidizer turbopump pump-end ball-bearing cavity flows p 1678 N95-23617

INJECTORS
Heat transfer in rocket engine combustion chambers and nozzles p 1668 N95-23413
Mechanical design of the CDF SVX 2 silicon vertex detector
| DE94-018985 | p 1689 N95-23520
New pellet production and acceleration technologies for high speed pellet injection system HIPEL in Large Helical Device
| NISF-326 | p 1835 N95-23566

INLET FLOW
Flow visualization studies of VTOL aircraft models during Hover in ground effect
| NASA-TM-108860 | p 1607 N95-22666
Mach 10 computational study of a three-dimensional scramjet inlet flow field
| NASA-TM-4602 | p 1666 N95-23015
Mach 10 computational study of a three-dimensional scramjet inlet flow field
| NASA-TM-4602 | p 1667 N95-23210
Three-dimensional Navier-Stokes analysis and redesign of an imbedded bellmouth nozzle in a turbine cascade inlet section p 1671 N95-23423
Supersonic flow and shock formation in turbine tip gaps p 1672 N95-23429
Three-dimensional viscous flow analysis inside a turbine volute p 1674 N95-23437
Detailed measurements in the SSME high pressure fuel turbine with smooth rotor blades p 1675 N95-23441
CFD parametric study of consortium impeller p 1680 N95-23626

INNER RADIATION BELT
Characteristics of low energy ions in the Heavy Ions In Space (HIIS) experiment p 1815 N95-23807

INOCULATION
MHD seed recovery and regeneration, phase 2
| DE95-004308 | p 1833 N95-23338

INORGANIC COMPOUNDS
Ligand K-edge x-ray adsorption spectroscopic studies of the electronic structure of inorganic model complexes and metalloprotein active sites
| DE95-003338 | p 1840 N95-22851

INPUT/OUTPUT ROUTINES
Distributed VIRtual System (DIVIRS) project
| NASA-CR-197855 | p 1757 N95-23180
Integrating O/S models during conceptual design, part 2
| NASA-CR-197904 | p 1622 N95-23399
A 500 megabyte/second disk array p 1753 N95-24114

INSERTS
Extraction and detection of pesticide residues from air filter inserts using supercritical carbon dioxide
| DE95-004579 | p 1735 N95-23580

INSPECTION
Double pass retroreflection for corrosion detection in aircraft structures p 1642 N95-23503
The use of electrochemical impedance spectroscopy to predict the corrosion of aluminum-lithium alloys in marine environments p 1637 N95-23504
Non-destructive detection of corrosion for life management p 1643 N95-23505
Health and usage monitoring systems: Corrosion surveillance p 1607 N95-23506
Eddy current detection of pitting corrosion around fastener holes p 1643 N95-23507
Corrosion detection and monitoring of aircraft structures: An overview p 1644 N95-23515
Experience of in-service corrosion on military aircraft p 1644 N95-23516
POD assessment of NDI procedures using a round robin test
| AGARD-R-809 | p 1697 N95-23602
Robotic system for the servicing of the orbiter thermal protection system p 1697 N95-23724
10x reduction imaging at 13.4 nm
| DE94-016612 | p 1828 N95-23767

INSTRUCTORS
Formative and summative evaluation efforts for the Teacher Enhancement Institute conducted at the NASA Langley Research Center, summer 1994 p 1853 N95-23286
Teacher Enhancement Institute p 1853 N95-23312
Teacher Enhancement Institute p 1853 N95-23324

INTEGERS
Capacitated facility location: Valid inequalities and facets (revised)
| PB95-130225 | p 1786 N95-22641

INTEGRAL EQUATIONS
Lectures on 2D gauge theories. Topological aspects and path integral techniques
| DE94-628509 | p 1849 N95-22752
Nonlinear thermoviscoelastic behaviour in complex materials
| PB95-140653 | p 1630 N95-23537

INTEGRATED CIRCUITS
Current estimation for electromigration, hot carriers, and voltage drop
| AD-A285794 | p 1659 N95-22507
Limited bandwidth microwave filter
| AD-D016553 | p 1660 N95-22708
Segregated rigid and structural control for a photolithography positioning system
| DE95-002603 | p 1766 N95-23134
High-performance GaAs/AlGaAs optical modulators: Their performance and packaging for microwave photonic integrated circuits
| DE95-004533 | p 1828 N95-23575
Micro heat spreader enhanced heat transfer in MCM's
| DE95-004520 | p 1663 N95-23779
Cu deposition using a permanent magnet electron cyclotron resonance microwave plasma source
| DE94-017768 | p 1650 N95-23981

INTEGRATED LIBRARY SYSTEMS
Online Nuclear Data Service
| DE94-634268 | p 1856 N95-23452
Index of nuclear data libraries available from the IAEA nuclear data section
| DE94-634271 | p 1857 N95-23453
BROND-2.1. Russian evaluated neutron reaction data library
| DE94-634417 | p 1810 N95-23458
An expert system for diagnosing anomalies of spacecraft p 1770 N95-23684
AVIRIS and TIMS data processing and distribution at the land processes distributed active archive center p 1706 N95-23872
The data facility of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1707 N95-23877

A network-based distributed, media-rich computing and information environment
[DE95-003696] p 1765 N95-24074
OPUS: A new generation Knowledge Engineering Environment p 1760 N95-24176

INTEGRATORS
Ultrafast, high precision gated integrator
[DE95-004616] p 1664 N95-24164

INTELLIGENCE
The viability of establishing collaborative, reconfigurable research environments for the Human Performance Research Laboratory at NASA Ames
[NASA-CR-197384] p 1753 N95-22480

INTELSAT SATELLITES
Endeavor: Now and then
[NASA-TM-110539] p 1620 N95-23664

INTERACTIVE CONTROL
Commercialization of JPL Virtual Reality calibration and redundant manipulator control technologies
p 1768 N95-23676

INTERATOMIC FORCES
Structural properties of silicon clusters: An empirical potential study
[DE94-628902] p 1805 N95-22935
Calculations of alloy phases with a direct Monte-Carlo method
[DE94-018963] p 1640 N95-23121

INTERFACES
Advanced growth and surface analysis system for in situ studies of interface formation
[DE95-002850] p 1838 N95-22555
Magnetic multilayer physics
[DE95-003408] p 1798 N95-23083

INTERFACIAL TENSION
Morphology of Laplacian growth processes and statistics of equivalent many-body systems
[DE95-002734] p 1847 N95-22655
Quasistatic model for the motion of a viscous capillary liquid drop
[PB95-138848] p 1667 N95-23172
Numerical simulation of axisymmetric viscous sintering
[PB95-138889] p 1667 N95-23175

INTERFEROMETERS
Stellar Interferometer Technology Experiment (SITE)
[NASA-CR-197856] p 1827 N95-23089

INTERFEROMETRY
Interferometric synthetic aperture radar imagery of the Gulf Stream p 1712 N95-23939

INTERGRANULAR CORROSION
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
[DE95-002941] p 1638 N95-22532

INTERLAMINAR STRESS
Notch-tip damage and translaminar fracture toughness measurements from carbon/epoxy laminates
[AD-A280101] p 1627 N95-22833

INTERLAYERS
Magnetic multilayer physics
[DE95-003408] p 1798 N95-23083

INTERMETALLICS
Analysis of physiochemical processes during solder aging
[DE95-003811] p 1638 N95-22576
Nanophase materials: Synthesis, properties, applications
[AD-A286013] p 1627 N95-22940
Deformation of C15 Laves phase alloys
[DE95-003636] p 1646 N95-24067
Experimental and theoretical studies on the C15 intermetallic compounds MV2 (M = Zr, Hf and Ta): Elasticity and phase stability
[DE95-003723] p 1845 N95-24079
High resolution microstructural analysis of zirconia eutectic interfaces
[DE95-003143] p 1845 N95-24143

INTERMODULATION
Passive intermodulation generation in wire mesh deployable reflector antennas p 1656 N95-22816

INTERNAL COMBUSTION ENGINES
The influence of high-octane fuel blends on the performance of a two-stroke SI engine with knock-limited-compression ratio
[DE95-002902] p 1692 N95-22556
Performance of thin-ceramic-coated combustion chamber with gasoline and methanol as fuels in a two-stroke SI engine
[DE95-002903] p 1693 N95-22557
A hybrid vehicle evaluation code and its application to vehicle design
[DE95-004205] p 1662 N95-23334
The railplug: Development of a new ignitor for internal combustion engines
[DE95-004375] p 1695 N95-23342
Multi-fuel reformers for fuel cells used in transportation. Phase 1: Multi-fuel reformers
[DE95-004215] p 1729 N95-23482

INTERNAL FLOW
Mach 10 computational study of a three-dimensional scramjet inlet flow field
[NASA-TM-4602] p 1666 N95-23015
NASA low-speed axial compressor for fundamental research
[NASA-TM-4635] p 1616 N95-23192
CFD analysis of turbopump volutes
p 1674 N95-23436
Three-dimensional viscous flow analysis inside a turbine volute p 1674 N95-23437
Impeller flow field characterization with a laser two-focus velocimeter p 1675 N95-23440
A fine-grid model for the ASRM aft segment with gimballed nozzle p 1685 N95-23648
Application of CFD analysis to design support and problem resolution for ASRM and RSRM
p 1685 N95-23649
Time-accurate unsteady flow simulations supporting the SRM T+68-second pressure spike anomaly investigation (STS-54B) p 1685 N95-23650
Status of axisymmetric CFD of an eleven inch diameter hybrid rocket motor p 1686 N95-23651

INTERNAL PRESSURE
Residual strength of thin panels with cracks
p 1700 N95-23311

INTERNATIONAL COOPERATION
Basic data sets description and preliminary results of EFEDA-Spain
[PB95-139291] p 1740 N95-23470

INTERNATIONAL SPACE STATION
Hey! What's Space Station Freedom?
[NASA-TM-110531] p 1620 N95-22542
Functional testing of the space station plasma contactor
[NASA-TM-106841] p 1624 N95-23240
Automation and crew time saving in the space experiment p 1752 N95-23715
Graphical timeline editing p 1761 N95-23746
A format for the interchange of scheduling models
p 1780 N95-23747

INTERNETS
Applications drivers for data parking on the Information Superhighway p 1857 N95-24109
Analysis of the request patterns to the NSSDC on-line archive p 1862 N95-24137

INTERPLANETARY DUST
Transmission electron microscope studies of extraterrestrial materials
[NASA-CR-188363] p 1633 N95-23092
Micrometeoroids and debris on LDEF comparison with MIR data p 1623 N95-23824
Long term microparticle impact fluxes on LDEF determined from optical survey of Interplanetary Dust Experiment (IDE) sensors p 1623 N95-23826
LDEF Interplanetary Dust Experiment (IDE) results
p 1869 N95-23828
The orbital characteristics of debris particle rings as derived from IDE observations of multiple orbit intersections with LDEF p 1869 N95-23829

INTERPLANETARY MAGNETIC FIELDS
An explanation for tailward flows with positive B(sub z) in the distant tail neutral sheet during quite times
[ATR-95(7270)-1] p 1740 N95-23933

INTERPLANETARY MEDIUM
Results from the Heavy Ions in Space (HIIS) experiment on the ionic charge state of solar energetic particles
p 1870 N95-23808

INTERPOLATION
Stress intensity factors and crack mouth openings for bridged cracks emanating from circular holes
[AR-008-408] p 1699 N95-22952
On-line, adaptive state estimator for active noise control p 1784 N95-23308

INTERPROCESSOR COMMUNICATION
Description of a MIL-STD-1553B data bus Ada driver for the LeRC EPS Testbed
[NASA-TM-106866] p 1762 N95-22668
Using Dedal to share and reuse distributed engineering design information p 1768 N95-23678
Performance results of cooperating expert systems in a distributed real-time monitoring system
p 1761 N95-23688
Algorithms for categorizing multiprocessor communication under invalidate and update-based coherence protocols
[TR-533-REV] p 1759 N95-23928
Client/Server data serving for high performance computing p 1761 N95-24123

INTERSTELLAR GAS
Search for millimeterwave CO emission in damped Lyman-alpha systems
[PB95-139259] p 1868 N95-23607

INTERSTELLAR MATTER
Interstellar molecules in the large magellanic cloud
[PB95-139267] p 1868 N95-23230

INTRAVEHICULAR ACTIVITY
The Charlotte (TM) intra-vehicular robot
p 1697 N95-23703

INTRUSION
An automated computer misuse detection system for UNICOS
[DE95-000929] p 1762 N95-22680

INVARIANCE
Anti-invariant submanifolds of trans-Sasakian manifolds
[DE94-628413] p 1829 N95-22622
Classification of SU(3) modular invariants revisited
[PB95-110771] p 1787 N95-22715
Linearizing W-algebras
[DE94-634324] p 1790 N95-23457

INVARIANT IMBEDDINGS
Existence of solutions for some superlinear or sublinear elliptic systems on R(sup N)
[DE94-628417] p 1785 N95-22625
The Euler series of restricted Chow varieties
[DE94-628418] p 1785 N95-22626
On the theory of smooth structures 3
[DE94-628411] p 1786 N95-22642
Trisecant curve associated to a smooth curve in P(sub 3) of degree d greater than g+2
[DE94-628425] p 1787 N95-22809

INVENTIONS
Limited bandwidth microwave filter
[AD-D016553] p 1660 N95-22708
Motion-sensitive optical correlator using a VanderLugt correlator
[NASA-CASE-NPO-18769-1-CU] p 1827 N95-23045

INVERSIONS
Determinants of elliptic pseudo-differential operators
[PB95-109062] p 1786 N95-22711
Tomographic analysis of the three-dimensional variation of the seismic velocity structure of the shallow crust underlying Southern New England
[AD-A279406] p 1739 N95-23247
Comparison of inversion models using AIRSAR data for Death Valley, California p 1713 N95-23945

INVESTIGATION
Military bases: Environmental impact at closing installations. Report to Congressional requesters
[GAO/NSIAD-95-70] p 1735 N95-24057
DOD budget: Selected categories of planned funding for fiscal years 1995-99. Report to Congressional requesters
[GAO/NSIAD-95-92] p 1864 N95-24062
Ballistic Missile Defense: Current status of strategic target system. Report to Congressional requesters
[GAO/NSIAD-95-78] p 1903 N95-24080
Inspector General: Alleged misconduct by NASA Inspector General. Report to Congressional requesters
[GAO/OSI-95-9] p 1854 N95-24085

INVISCID FLOW
Numerical simulation of steady and unsteady viscous flow in turbomachinery using pressure based algorithm
p 1671 N95-23426
Entropy jump across an inviscid shock wave
[NASA-CR-195046] p 1678 N95-23596

IODIDES
Pressure shifts and electron scattering in atomic and molecular gases
[DE95-003102] p 1803 N95-22747

IODINE LASERS
Reduced dimer production in solar-simulator-pumped continuous wave iodine lasers based on model simulations and scaling and pumping studies
[NASA-TP-3486] p 1691 N95-23411

ION ACOUSTIC WAVES
Theory of HF induced turbulence in the ionosphere: Status and challenges
[DE95-002705] p 1739 N95-23256

ION BEAMS
Pulsed Ion Beam Surface Treatment for preparing rapidly solidified corrosion resistant alloy surfaces
[DE94-012072] p 1640 N95-22835
Genetic effects on heavy ions in drosophila
[NASA-CR-197916] p 1746 N95-22911
Ion rings for magnetic fusion
[DE94-017606] p 1832 N95-23120
The energy broadening resulting from electron stripping process of a low energy Au(-) beam
[NIFS-325] p 1836 N95-23569
High current induction linacs
[DE95-003442] p 1818 N95-24014
Thermochemistry of transition metal clusters
[DE95-003144] p 1646 N95-24144
Progress in ion beam power coupling and ion-driven hohlraums on PBFA 2
[DE95-004544] p 1818 N95-24160

ION CHARGE
Results from the Heavy Ions In Space (HIIS) experiment on the ionic charge state of solar energetic particles
p 1870 N95-23808

ION CURRENTS
Advanced detector development, laboratory simulations, diagnostic development, and data analysis on wake physics
|PL-TR-94-2204| p 1831 N95-22948

ION CYCLOTRON RADIATION
TFTR Ion Cyclotron Range of Frequencies (ICRF) experimental data analysis collaboration
|DE95-003409| p 1832 N95-23084
Cu deposition using a permanent magnet electron cyclotron resonance microwave plasma source
|DE94-017768| p 1650 N95-23981
A 4 MW fast wave current drive upgrade for D3-D
|DE95-003741| p 1837 N95-24083

ION ENGINES
NASA 30 cm ion thruster development status
|NASA TM-106842| p 1624 N95-23221

ION EXCHANGE RESINS
Test procedure for anion exchange chromatography
|DE95-003767| p 1809 N95-23407

ION EXCHANGING
NO decomposition in non-reducing atmospheres
|DE95-004324| p 1634 N95-23339
Test procedure for cation exchange chromatography
|DE95-003770| p 1808 N95-23350

ION IMPLANTATION
Increasing the retained dose by plasma immersion ion implantation and deposition
|DE95-003423| p 1844 N95-24011
Carbon doping of III-V compound semiconductors
|DE95-003431| p 1844 N95-24013

ION IRRADIATION
Genetic effects on heavy ions in drosophila
|NASA-CR-197916| p 1746 N95-22911
Temperature effects on ion irradiation damage in MgAl2O4 spinel single crystals
|DE95-003679| p 1844 N95-24073
A phenomenological model for the effect of nanocrystalline microstructure on irradiation-induced amorphization in U3Si
|DE95-004631| p 1846 N95-24169

ION PROPULSION
NASA 30 cm ion thruster development status
|NASA TM-106842| p 1624 N95-23221

ION RECOMBINATION
Rate coefficients for the electron-impact excitation, ionization and recombination of He-like ions, S XV, Ca XIX and Fe XXV, and related processes
|ISAS-R-657| p 1811 N95-23604

ION SCATTERING
Comparison of exact solution with Eikonal approximation for elastic heavy ion scattering
|NASA-TP-3498| p 1817 N95-22929

ION SOURCES
Progress in ion beam power coupling and ion-driven hohlraums on PBFA 2
|DE95-004544| p 1818 N95-24160

ION STORAGE
A brief history in time of ion traps and their achievements in science
|DE95-002815| p 1805 N95-22936

ION STRIPPING
The energy broadening resulting from electron stripping process of a low energy Au(-) beam
|NIFS-325| p 1836 N95-23569

ION TEMPERATURE
Numerical Tokamak Project code comparison
|DE95-003475| p 1831 N95-22899

IONIC COLLISIONS
Dimuon production in proton-nucleus interactions
|DE95-002613| p 1801 N95-22551
(pi)N correlations at AGS
|DE95-002933| p 1801 N95-22656
Studies of photon and electron interactions with atoms and ions
|DE95-003340| p 1802 N95-22700
The problem of phase transition and the heavy ion collisions at very high energies
|DE94-628584| p 1816 N95-22785

IONIC CRYSTALS
Computer simulation of the structure of ionic surfaces and interfaces
|DE95-002991| p 1804 N95-22792

IONIC DIFFUSION
Diffusion behavior of lysozyme in aqueous ammonium sulfate solutions under varying solution conditions as determined by dynamic light scattering
|DE95-004821| p 1635 N95-23380

IONIC MOBILITY
Analytical and numerical studies of ion mobility near the tokamak plasma edge
|DE95-003019| p 1830 N95-22693

IONIZATION
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
|DE95-001135| p 1687 N95-22682
Rate coefficients for the electron-impact excitation, ionization and recombination of He-like ions, S XV, Ca XIX and Fe XXV, and related processes
|ISAS-R-657| p 1811 N95-23604
Near infrared and optical spectroscopy of FSC10214+4724
|NASA-CR-197966| p 1828 N95-24068
Atoms as many-body systems
|DE95-004609| p 1813 N95-24151

IONIZING RADIATION
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 1
|NASA-CP-3275-PT-1| p 1889 N95-23796
Dosimetric results on EURECA p 1872 N95-23800
Contribution of proton-induced short range secondaries to the LET spectra on LDEF p 1815 N95-23813
Charge, energy and LET spectra of high LET primary and secondary particles in CR-39 plastic nuclear track detectors of the P0006 experiment
p 1815 N95-23814
Predictions of LET spectra measured on LDEF
p 1815 N95-23815
Predictions of LDEF radioactivity and comparison with measurements p 1815 N95-23818
Status of LDEF radiation modeling
p 1815 N95-23819

IONOSPHERES
Observation model and parameter partials for the JPL VLBI parameter estimation software MODEST, 19 94
|NASA-CR-197328| p 1756 N95-22853
Theory of HF induced turbulence in the ionosphere: Status and challenges
|DE95-002705| p 1739 N95-23256

IONOSPHERIC HEATING
Magnetospheric space plasma investigations
|NASA-CR-197405| p 1831 N95-22955
The high latitude ionosphere-magnetosphere transition region: Simulation and data comparison
|NASA-CR-197404| p 1737 N95-22956

IONOSPHERIC SOUNDING
Investigation of Federal Standard 1045 high-frequency ALE radio performance in the Southern Trans-Auroral Zone
|PB94-204831| p 1655 N95-22636

IONS
Turbidity of a near critical ionic fluid
|DE94-014916| p 1633 N95-22869
Ionic core effects on the Mie resonance in lithium clusters
|DE94-014974| p 1805 N95-22870
Effect of different ions on the anodic behaviour of alloy 800 chloride solutions at high temperature
|DE94-634944| p 1645 N95-23983
Increasing the retained dose by plasma immersion ion implantation and deposition
|DE95-003423| p 1844 N95-24011
Charging of interplanetary grains
|NASA-CR-198032| p 1869 N95-24066
Temperature effects on ion irradiation damage in MgAl2O4 spinel single crystals
|DE95-003679| p 1844 N95-24073

IRON
Trapped iron measured on LDEF
p 1872 N95-23806

IRON ALLOYS
Nanophase materials: Synthesis, properties, applications
|AD-A286013| p 1627 N95-22940

IRON ISOTOPES
Rate coefficients for the electron-impact excitation, ionization and recombination of He-like ions, S XV, Ca XIX and Fe XXV, and related processes
|ISAS-R-657| p 1811 N95-23604

IRON OXIDES
On the formation of iron(3) oxides via oxidation of iron(2)
|DE94-018392| p 1632 N95-22857
Particle size dependence in Fischer-Tropsch synthesis
|DE95-003124| p 1633 N95-22876
Nanophase materials: Synthesis, properties, applications
|AD-A286013| p 1627 N95-22940
Charge distribution analysis of catalysts under simulated reaction conditions
|DE95-003526| p 1633 N95-23064

IRRADIANCE
Twelve month performance evaluation for the rotating shadowband radiometer
|DE95-002847| p 1726 N95-22554
A proposed update to the solar irradiance spectrum used in LOWTRAN and MODTRAN p 1705 N95-23865

IRRADIATION
Laser irradiation effects: A functional assessment
|AD-A285100| p 1691 N95-22937
The effect of simulated low earth orbit radiation on polyimides (UV degradation study) p 1651 N95-23903
Charging of interplanetary grains
|NASA-CR-198032| p 1869 N95-24066
Effect of dynamically charged helium on mechanical properties of vanadium-base alloys
|DE95-004613| p 1646 N95-24153
Transient radiation-induced absorption in materials for the DOI laser
|DE95-004549| p 1828 N95-24161

ISING MODEL
Continuous local symmetry in Ising-type models
|DE94-629045| p 1839 N95-22649
Turbidity of a near critical ionic fluid
|DE94-014916| p 1633 N95-22869

ISOMORPHISM
Grassman and hyperKaehler structures on some spaces of sections of holomorphic bundles
|PB95-109104| p 1795 N95-22712
Graph isomorphism models for non interleaving process algebra
|PB95-110490| p 1786 N95-22714

ISOTHERMAL FLOW
A computer model in general 3-D curvilinear coordinates for the prediction of the turbulent flow field in a jet induced ram combustor
|NAL-TR-1240T| p 1687 N95-24051

ISOTHERMAL PROCESSES
Decomposition mechanisms in thermally-aged thin-film explosives
|DE95-000741| p 1652 N95-22838

ISOTOPE RATIOS
Recent developments in inductively coupled plasma source magnetic sector multiple collector mass spectrometry
|DE95-003002| p 1830 N95-22793
Precise determinations of the isotopic compositions and atomic weights of molybdenum, tellurium, tin and tungsten using ICP source magnetic sector multiple collector mass spectrometry
|DE95-003003| p 1632 N95-22795

ISOTOPE SEPARATION
Modified molecular sieves: Stationary phase for the gas chromatographic separation of hydrogen isotopes
|DE94-627282| p 1814 N95-24175

ISOTOPES
Recent developments in inductively coupled plasma source magnetic sector multiple collector mass spectrometry
|DE95-003002| p 1830 N95-22793

ISOTOPIC LABELING
Precise determinations of the isotopic compositions and atomic weights of molybdenum, tellurium, tin and tungsten using ICP source magnetic sector multiple collector mass spectrometry
|DE95-003003| p 1632 N95-22795
SIMS chemical and isotopic analysis of impact features from LDEF experiments AO187-1 and AO187-2
p 1637 N95-23837

ISOTOPIC SPIN
Search for top quark at CDF
|DE95-003748| p 1809 N95-23406

ITALY
Intermediate-term earthquake prediction and seismic zoning in Northern Italy
|DE94-627689| p 1736 N95-22612

ITERATION
Iterative solutions of nonlinear equations in smooth Banach spaces
|DE94-634287| p 1790 N95-23455
Quasi-kernel polynomials and convergence results for quasi-minimal residual iterations
|NASA-CR-197948| p 1791 N95-23593
Ishikawa iteration process for nonlinear Lipschitz strongly accretive mappings
|DE94-634284| p 1792 N95-23658

ITERATIVE SOLUTION
A worst-case example using linesearch methods for numerical optimization with inexact gradient evaluations
|DE95-002917| p 1754 N95-22570
Iterative solutions of nonlinear equations with strongly accretive or strongly pseudocontractive maps
|DE94-628432| p 1786 N95-22634
Stability and efficiency of waveform relaxation methods
|PB95-138863| p 1789 N95-23173
Iterative solutions of nonlinear equations in smooth Banach spaces
|DE94-634287| p 1790 N95-23455
Recent advances in Lanczos-based iterative methods for nonsymmetric linear systems
|NASA-CR-197950| p 1791 N95-23611

An implementation of the QMR method based on coupled two-term recurrences
|NASA-CR-197956| p 1791 N95-23612

IUE
IUE observing programs: NSOSS, VEOEB, and PCOEB
|NASA-CR-197424| p 1866 N95-23560
Observational studies of the clearing phase in proto-planetary disk systems
|NASA-CR-197900| p 1866 N95-23561
A constraint-logic based implementation of the coarse-grained approach to data acquisition scheduling of the International Ultraviolet Explorer orbiting observatory p 1779 N95-23741

J

JAHN-TELLER EFFECT
Quantum fluctuations of D(sub 5d) polarons on C(sub 60) molecules
|DE94-635787| p 1812 N95-23985

JAPANESE SPACE PROGRAM
Third International Symposium on Artificial Intelligence, Robotics, and Automation for Space 1994
|NASA-CR-197340| p 1767 N95-23672
A perspective on space robotics in Japan p 1697 N95-23695
Space robotic experiment in JEM flight demonstration p 1697 N95-23701
Development of Japanese experiment module remote manipulator system p 1752 N95-23708
Automatic satellite capture and berthing with robot arm (ASCABRA) p 1623 N95-23713

JAPANESE SPACECRAFT
Use of the Airborne Visible/Infrared Imaging Spectrometer to calibrate the optical sensor on board the Japanese Earth Resources Satellite-1 p 1624 N95-23864
Dynamical model and numerical simulations for Engineering Test Satellite-6
|NAL-TR-1239| p 1622 N95-24049

JET AIRCRAFT NOISE
Supersonic jet noise reductions predicted with increased jet spreading rate
|NASA-TM-106872| p 1800 N95-23178

JET ENGINES
High-performance parallel analysis of coupled problems for aircraft propulsion
|NASA-CR-197440| p 1614 N95-23088

JET FLOW
Experimental study of vortex breakdown in a swirling water jet
|PB95-130407| p 1665 N95-22767
Modeling NO(x) emissions in turbulent jet flames: Effects of buoyancy and radiation
|DE94-016621| p 1633 N95-22886
Testing QCD with jet physics at CDF
|DE94-018980| p 1807 N95-23196
Measurement of correlated b quark cross sections at CDF
|DE95-004240| p 1808 N95-23336
On the breakup of viscous liquid threads
|NASA-CR-195023| p 1678 N95-23544

JET MIXING FLOW
Supersonic jet noise reductions predicted with increased jet spreading rate
|NASA-TM-106872| p 1800 N95-23178

JET PROPULSION
NASA procurement: Contract and management improvements at the Jet Propulsion Laboratory. Report to Congressional requesters
|GAO/NSIAD-95-40| p 1854 N95-24054

JETS
Testing QCD with jet physics at CDF
|DE94-018980| p 1807 N95-23196
Properties of jets in Z events from 1.8 TeV (bar p)p collisions
|DE94-018982| p 1808 N95-23197

JOINTS (JUNCTIONS)
Controlling under-actuated robot arms using a high speed dynamics process
|NASA-CASE-NPO-18498-1-CU| p 1692 N95-22543

JOSEPHSON JUNCTIONS
High power Josephson effect sources
|AD-A285808| p 1838 N95-22511
Microstructure and composition of a SNS Josephson junction using CaRuO3 as the metallic barrier
|DE95-004611| p 1845 N95-24152
Dependence of the Josephson coupling of unconventional superconductors on the properties of the tunneling barrier
|DE95-004649| p 1846 N95-24173

JUPITER SATELLITES
IUE observing programs: NSOSS, VEOEB, and PCOEB
|NASA-CR-197424| p 1866 N95-23560

K

K-EPSILON TURBULENCE MODEL
GGOT total pressure loss control concept evaluation p 1672 N95-23427
Advanced turbulence models for turbomachinery p 1675 N95-23443
Numerical computation of aerodynamics and heat transfer in a turbine cascade and a turn-around duct using advanced turbulence models p 1675 N95-23444

KALMAN FILTERS
Tutorial on filtering, restoration, and state estimation
|TR-534| p 1793 N95-24042

KAONS
Limit on the muon neutrino mass from K(exp 0)muon 3 decay spectra
|DE95-000816| p 1801 N95-22583
Chiral anomalies in non-leptonic decays within chiral perturbation theory at the quark level
|DE94-628613| p 1849 N95-22753
Do narrow Sigma hypernuclear states exist?
|DE95-002930| p 1803 N95-22763
New determination of V(sub us) from K(sub e3)(+) decay
|DE94-628616| p 1811 N95-23769

KAPTON (TRADEMARK)
LDEF polymeric materials: A summary of Langley characterization p 1651 N95-23899
Atomic oxygen interactions with protected organic materials on the Long Duration Exposure Facility (LDEF) p 1627 N95-23909

KERNEL FUNCTIONS
Quasi-kernel polynomials and convergence results for quasi-minimal residual iterations
|NASA-CR-197948| p 1791 N95-23593
Scale-invariant Lipatov kernels from t-channel unitarity
|DE95-004625| p 1813 N95-24166

KERR EFFECTS
Spin polarized photoemission studies of magnetic quantum well states
|DE95-004218| p 1851 N95-23335

KINEMATICS
Effects of delaminations on the damped dynamic characteristics of composite laminates: Mechanics and experiments
|NASA-TM-106862| p 1630 N95-23258

KINETIC ENERGY
Energetic particle observations at geosynchronous orbit
|DE95-000873| p 1867 N95-22516
Effects of wind on rainfall simulation. Spatial distribution of water application, kinetic energy, and overland flow under single full-cone nozzle sprays
|PB95-127304| p 1717 N95-22537
Variational calculations for He-3 impurities on He-4 droplets
|DE94-628469| p 1840 N95-22839
Galactic oscillator symmetry p 1822 N95-22973

KINETIC EQUATIONS
MHD-Vlasov simulation of the toroidal Alfven eigenmode
|NIFS-319| p 1836 N95-23591
The kinetics of quantum system with time-dependent periodic Hamiltonian
|DE94-635422| p 1797 N95-23966

KINETIC THEORY
Theory of HF induced turbulence in the ionosphere: Status and challenges
|DE95-002705| p 1739 N95-23256

KINETICS
Magnetospheric space plasma investigations
|NASA-CR-197405| p 1831 N95-22955
The kinetics of quantum system with time-dependent periodic Hamiltonian
|DE94-635422| p 1797 N95-23966

KLEIN-GORDON EQUATION
Deformed Heisenberg algebra and fractional spin field in 2+1 dimensions
|DE94-628507| p 1850 N95-22779
Notes on oscillator-like interactions of various spin relativistic particles p 1815 N95-22997

KLYSTRONS
Design study of longitudinal dynamics of the drive beam in 1 TeV relativistic klystron two-beam accelerator
|DE95-004683| p 1817 N95-23485
Design study of beam dynamics issues for 1 TeVnext linear collider based on the relativistic-klystron two-beam accelerator
|DE95-004673| p 1817 N95-23493

KNOWLEDGE BASED SYSTEMS
Towards method-independent knowledge acquisition
|AD-A285823| p 1766 N95-22512
Knowledge-based guidance and control functions
|AGARD-AR-325| p 1751 N95-23601
A toolbox and record for scientific models p 1775 N95-23716
Space science experimentation automation and support p 1775 N95-23718
Intelligent monitoring system applied to super long distance telerobotic tasks p 1777 N95-23728

KNOWLEDGE BASES (ARTIFICIAL INTELLIGENCE)
AMPHION: Specification-based programming for scientific subroutine libraries p 1761 N95-23680
An expert system for diagnosing anomalies of spacecraft p 1770 N95-23684
Performance results of cooperating expert systems in a distributed real-time monitoring system p 1761 N95-23688
Classification of the LCVF AVIRIS test site with a Kohonen artificial neural network p 1706 N95-23874

KNOWLEDGE REPRESENTATION
Knowledge representation and reasoning for mixed-initiative planning
|TR-562| p 1783 N95-24031
OPUS: A new generation Knowledge Engineering Environment p 1760 N95-24176
The TRAINS project: A case study in building a conversational planning agent
|TR-532| p 1659 N95-24193

KOLMOGOROV THEORY
On inertial range scaling laws
|DE95-004515| p 1677 N95-23484
Large sets in AC(exp 0): A Kolmogorov complexity related property and some applications
|TR-556| p 1797 N95-24029
Martin-Lof tests can help too
|TR-541| p 1797 N95-24063

KRYPTON
Krypton isotope analysis using near-resonant stimulated Raman spectroscopy
|DE95-005061| p 1635 N95-23348

KRYPTON ISOTOPES
Krypton isotope analysis using near-resonant stimulated Raman spectroscopy
|DE95-005061| p 1635 N95-23348

KUTTA-JOUKOWSKI CONDITION
Aeroacoustic computation of gust-blade interaction p 1800 N95-23313

L

LABORATORIES
Southeast Regional Experiment Station
|DE95-000903| p 1726 N95-22518

LABORATORY EQUIPMENT
Atomic oxygen durability evaluation of protected polymers using thermal energy plasma systems
|NASA-TM-106855| p 1626 N95-23270

LAGRANGE COORDINATES
Quasistatic model for the motion of a viscous capillary liquid drop
|PB95-138848| p 1667 N95-23172

LAGRANGIAN FUNCTION
Twistor-like type 2 superstring with the heterotic (2,0) and (4,0) worldsheet supersymmetry
|DE94-628510| p 1848 N95-22735
Aspects of sigma models
|DE94-628511| p 1795 N95-22736
Dirac canonical quantization and Faddeev-Jackiw symplectic quantization of higher order Lagrangians
|DE94-628428| p 1796 N95-22788
The decays of D(sup *)-mesons
|DE94-628610| p 1804 N95-22810
The omega pi(sup 0)-transient form factor within effective chiral Lagrangian approach
|DE94-628612| p 1850 N95-22812
Once more about the omega approaches 3(pi) contact term
|DE94-633202| p 1804 N95-22847
Modeling NO(x) emissions in turbulent jet flames: Effects of buoyancy and radiation
|DE94-016621| p 1633 N95-22886
Non-Noetherian symmetries for oscillators in classical mechanics and in field theory p 1823 N95-22977
Pseudoclassical description of the Dirac Oscillator p 1825 N95-22996
A generalized Eulerian-Lagrangian analysis, with application to liquid flows with vapor bubbles p 1682 N95-23633
Modeling of non-spherical droplet dynamics p 1685 N95-23647

LAMINAR BOUNDARY LAYER
Bursting in the near-surface boundary layer: Comparisons between realistic models and observations
[DE95-003714] p 1741 N95-24078
LAMINAR FLOW
The initial-value problem for viscous channel flows
[NASA-CR-195034] p 1667 N95-23207
High-lift flow-physics flight experiments on a subsonic civil transport aircraft (B737-100) p 1609 N95-23333
CFD modeling of turbulent duct flows for coolant channel analysis p 1682 N95-23635
Supersonic laminar flow control research
[NASA-CR-197938] p 1609 N95-23669
Bursting in the near-surface boundary layer: Comparisons between realistic models and observations
[DE95-003714] p 1741 N95-24078
LAMINATES
Vibration-damping structural component
[AD-D016550] p 1693 N95-22707
Notch-tip damage and translaminar fracture toughness measurements from carbon/epoxy laminates
[AD-A280101] p 1627 N95-22833
Advanced development of PV encapsulants
[DE95-000246] p 1728 N95-23062
Effects of delaminations on the damped dynamic characteristics of composite laminates: Mechanics and experiments
[NASA-TM-106862] p 1630 N95-23258
Interlaminar shear test method development for long term durability testing of composites
p 1631 N95-23300
New nondestructive techniques for the detection and quantification of corrosion in aircraft structures
p 1644 N95-23512
Thermoelastic theory for the response of materials functionally graded in two directions with applications to the free-edge problem
[NASA-TM-106882] p 1699 N95-24055
LAND ICE
Glaciological studies in the central Andes using AIRSAR/TOPSAR p 1713 N95-23942
Unusual radar echoes from the Greenland ice sheet
p 1714 N95-23951
LAND SURFACE TEMPERATURE
Land surface temperature measurements for EOS MODIS data
[NASA-CR-197443] p 1717 N95-23191
Validation data for land surface temperature determination from satellites
[CSIRO-TR-33] p 1718 N95-23597
Land surface temperature measurements from EOS MODIS data
[NASA-CR-197969] p 1721 N95-24190
LAND USE
Monitoring land use and degradation using satellite and airborne data p 1707 N95-23880
Estimation of crown closure from AVIRIS data using regression analysis p 1709 N95-23886
LANDAU DAMPING
MHD-Vlasov simulation of the toroidal Alfven eigenmode
[NIFS-319] p 1836 N95-23591
LANDAU-GINZBURG EQUATIONS
Analyses, algorithms, and computations for models of high-temperature superconductivity
[DE95-003290] p 1661 N95-22733
LANDING AIDS
Guidance and control requirements for high-speed Rollout and Turnoff (ROTO)
[NASA-CR-195026] p 1614 N95-22674
LANDING GEAR
Corrosion of landing gear steels p 1642 N95-23500
LANDING SITES
The effect of sensor spacing on wind measurements at the Shuttle Landing Facility
[NASA-TP-3529] p 1742 N95-23010
LANDSAT SATELLITES
A role for AVIRIS in the Landsat and Advanced Land Remote Sensing Systems program
p 1705 N95-23866
A preliminary comparison of Landsat Thematic Mapper and SPOT-1 HRV multispectral data for estimating coniferous forest volume p 1719 N95-24097
Determining successional stage of temperate coniferous forests with Landsat satellite data p 1720 N95-24102
LANGMUIR TURBULENCE
Langmuir-like waves and radiation in planetary foreshocks
[NASA-CR-197376] p 1869 N95-22828
Theory of HF induced turbulence in the ionosphere: Status and challenges
[DE95-002705] p 1739 N95-23256
LANGMUIR-BLODGETT FILMS
Large-sized and highly radioactive H-3 and Cd-109 Langmuir-Blodgett films
[DE94-785270] p 1811 N95-23775
LANGUAGE PROGRAMMING
Realizing parallel reduction operation in Sisal 1.2
[DE94-017524] p 1763 N95-22858
Realizing parallel reduction operations in Sisal 1.2
[DE94-017525] p 1763 N95-22859
LANGUAGES
Automatic verification of regular protocols in P/T nets
[PB95-138921] p 1789 N95-23146
Proceedings of the workshop on deductive databases and logic programming
[PB95-139382] p 1758 N95-23553
Combinatorial semantics
[TR-563] p 1792 N95-23793
LANTHANUM OXIDES
Phonon characteristics of high (T sub c) superconductors from neutron Doppler broadening measurements
[DE95-003703] p 1844 N95-24076
LAPLACE TRANSFORMATION
Morphology of Laplacian growth processes and statistics of equivalent many-body systems
[DE95-002734] p 1847 N95-22655
Fourth order difference methods for hyperbolic IBVP's
[NASA-CR-197955] p 1791 N95-23548
A theory for the morphology of Laplacian growth from statistics of equivalent many-body Hamiltonian systems
[DE94-014473] p 1799 N95-23979
LARGE SCALE INTEGRATION
Integrating O/S models during conceptual design, part 1
[NASA-CR-197903] p 1622 N95-23398
Integrating O/S models during conceptual design, part 2
[NASA-CR-197904] p 1622 N95-23399
LASER APPLICATIONS
Production of high contrast ultrashort laser pulses for short scale length plasma experiments
[DE95-003640] p 1690 N95-22595
Ground-based and space-based laser beam power applications
[NASA-TM-106744] p 1691 N95-22670
7th International Symposium on Applications of Laser Techniques to Fluid Mechanics, volume 1
[AD-A285647] p 1691 N95-23118
Transient radiation-induced absorption in materials for the DOI laser
[DE95-004549] p 1828 N95-24161
LASER BEAMS
Ground-based and space-based laser beam power applications
[NASA-TM-106744] p 1691 N95-22670
Laser irradiation effects: A functional assessment
[AD-A285100] p 1691 N95-22937
10x reduction imaging at 13.4 nm
[DE94-016612] p 1828 N95-23767
Laser light induced drift for atoms of radioactive isotopes Na-22 and Na-24
[DE94-635759] p 1812 N95-23976
LASER DAMAGE
A ruggedness evaluation of procedures for damage threshold testing optical materials
[NASA-TM-4639] p 1840 N95-22803
LASER DEPOSITION
Large-area triple-junction a-Si alloy production scaleup
[DE95-000245] p 1726 N95-22546
LASER DOPPLER VELOCIMETERS
Impeller flow field characterization with a laser two-focus velocimeter p 1675 N95-23440
Flow diagnostics, chemically reacting turbulent flow modeling and turbulent mixing: A summary of project studies in combustion
[NASA-CR-197348] p 1687 N95-24022
LASER MATERIALS
Computational modelling of Er(3+): Garnet laser materials p 1692 N95-23326
Reduced dimer production in solar-simulator-pumped continuous wave iodine lasers based on model simulations and scaling and pumping studies
[NASA-TP-3486] p 1691 N95-23411
LASER OUTPUTS
Proceedings of NATO Advanced Research Workshop on the Formation, Transport and Consequences of Particles in Plasmas
[AD-A285850] p 1829 N95-22514
Ground-based and space-based laser beam power applications
[NASA-TM-106744] p 1691 N95-22670
Laser irradiation effects: A functional assessment
[AD-A285100] p 1691 N95-22937
Annual report of the Osaka Laboratory for Radiation Chemistry Japan Atomic Energy Research Institute, (No. 26)
[DE94-785277] p 1626 N95-23477
LASER PLASMAS
10x reduction imaging at 13.4 nm
[DE94-016612] p 1828 N95-23767
LASER RANGE FINDERS
Small image laser range finder for planetary rover
p 1692 N95-23712
LASER SPECTROMETERS
AIRSAR deployment in Australia, September 1993: Management and objectives p 1714 N95-23948
LASER SPECTROSCOPY
Raman-shifting an ArF excimer laser to generate new lines for obtaining optical diagnostic based information in flow fields p 1692 N95-23303
LASER TARGET INTERACTIONS
Optogalvanic monitoring of collisional transfer of laser excitation energy in a neon RF plasma
[DE95-003103] p 1691 N95-22748
LASER TARGETS
Progress in ion beam power coupling and ion-driven hohlraums on PBFA 2
[DE95-004544] p 1818 N95-24160
LASERS
Laser-plasma instability in hohlraums
[DE95-000914] p 1829 N95-22676
Real lasers and other deformed objects
p 1692 N95-23001
7th International Symposium on Applications of Laser Techniques to Fluid Mechanics, volume 1
[AD-A285647] p 1691 N95-23118
Computational modelling of Er(3+): Garnet laser materials p 1692 N95-23326
Krypton isotope analysis using near-resonant stimulated Raman spectroscopy
[DE95-005061] p 1635 N95-23348
LASING
Reduced dimer production in solar-simulator-pumped continuous wave iodine lasers based on model simulations and scaling and pumping studies
[NASA-TP-3486] p 1691 N95-23411
LATERAL CONTROL
Aerodynamic surface distension system for high angle of attack forebody vortex control
[NASA-CASE-ARC-11979-1] p 1612 N95-23390
Feedback control laws for highly maneuverable aircraft
[NASA-CR-197944] p 1615 N95-23410
LATTICE PARAMETERS
Transformation behavior in Al2O3-ZrO2 ceraamic composites
[DE95-001359] p 1647 N95-22688
Block spins and chirality in Heisenberg model on Kagome and triangular lattices
[DE94-629044] p 1840 N95-22845
Lattice relaxation study on self-trapped exciton and biexciton in neutral and charged fullerenes
[DE94-635788] p 1844 N95-23986
LATTICE VIBRATIONS
A report on the Indiana University Workshop on future U.S. hadron facilities
[DE95-003951] p 1817 N95-23353
LATTICES (MATHEMATICS)
Static parametric fluctuations give nonstatistical behaviour in uncoupled chaotic systems
[DE94-628478] p 1794 N95-23019
Dynamical behaviour of the coupled diffusion map lattice
[DE94-628481] p 1841 N95-23022
LAUNCH VEHICLES
Multidisciplinary design optimization using genetic algorithms p 1619 N95-23332
NLS base heating CFD analysis p 1673 N95-23432
Aerodynamic flight control to increase payload capability of future launch vehicles
[NASA-CR-197704] p 1619 N95-24032
Airborne rotary air separator study
[NASA-CR-189099] p 1614 N95-24053
Ballistic Missile Defense: Current status of strategic target system. Report to Congressional requesters
[GAO/NSIAD-95-78] p 1903 N95-24080
LAUNCHING
On-orbit science in a small package: Managing the ALEXIS satellite and experiments
[DE94-014426] p 1621 N95-22868
LEADERSHIP
Upward appraisal as a means for improving supervisory performance and promoting process improvement, with long-term implications for organizational change
p 1854 N95-23323
LEADING EDGE FLAPS
Wing pressure distributions from subsonic tests of a high-wing transport model --- in the Langley 14- by 22-Foot Subsonic Wind Tunnel
[NASA-TM-4583] p 1607 N95-22802
LEADING EDGE SLATS
Lift enhancing tabs for airfoils
[NASA-CASE-ARC-11990-1] p 1613 N95-23395
LEAKAGE
Optimization of a centrifugal impeller design through CFD analysis p 1680 N95-23624

The influence of swirl brakes and a tip discharge orifice on the rotordynamic forces generated by discharge-to-suction leakage flows in shrouded centrifugal pumps p 1680 N95-23628

LEARNING

Design and implementation of two two-week Teacher Enhancement Institutes p 1853 N95-23306

Teacher Enhancement Institute p 1853 N95-23312

Unsupervised classification learning from cross-modal environmental structure
|TR-536| p 1784 N95-24040

LEARNING THEORY

Unsupervised classification learning from cross-modal environmental structure
|TR-536| p 1784 N95-24040

LEAST SQUARES METHOD

Objective determination of image end-members in spectral mixture analysis of AVIRIS data p 1709 N95-23888

LEAVES

Use of spectral analogy to evaluate canopy reflectance sensitivity to leaf optical property p 1701 N95-23845

Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 1 p 1703 N95-23856

Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 2 p 1703 N95-23857

Relationships between pigment composition variation and reflectance for plant species from a coastal savannah in California p 1709 N95-23889

LECTURES

Glass science tutorial: Lecture 1, Chemistry and properties of oxide glasses
|DE95-002963| p 1647 N95-22647

Glass science tutorial: Lecture 2, operating electric glass melters
|DE95-002965| p 1647 N95-22648

Higgs searches and WW scattering
|PB95-139143| p 1807 N95-23160

LENSES

Development of microchannel plate x-ray optics
|NASA-CR-197935| p 1866 N95-23540

LENTICULAR BODIES

Evolution of oxidation and creep damage mechanisms in HIPed silicon nitride materials
|DE95-001360| p 1647 N95-22689

LEPTONS

Experimental results on polarized structure functions in deep inelastic lepton-nucleon scattering
|DE95-002782| p 1801 N95-22521

Supersymmetric singlet majorons and cosmology
|DE94-628571| p 1850 N95-22783

Results from neutrino experiments
|DE94-628604| p 1804 N95-22790

Search for second generation leptoquarks at CDF
|DE94-018983| p 1805 N95-22939

Final result on the mass of the tau lepton from the BES collaboration
|DE95-003466| p 1806 N95-23139

High Energy Theory: Task B and Task L
|DE95-003453| p 1817 N95-23148

Search for Z' and W' at CDF
|DE94-018987| p 1808 N95-23203

Recent results from Fermilab E-687, charm particle decays, lifetimes and photoproduction dynamics: A compilation results presented at DPF 1994
|DE95-004580| p 1808 N95-23347

New determination of V(sub us) from K(sub e3)(+) decay
|DE94-628616| p 1811 N95-23769

Neutrino masses and mixing
|DE94-628632| p 1812 N95-23784

Neutrino mass
|DE94-628634| p 1812 N95-23786

Hard e(+)e(-)-pair Bremsstrahlung as a lepton polarimeter
|DE94-635615| p 1812 N95-23984

W mass measurements from D(circle slash) and CDF experiments at TeVatron
|DE95-003497| p 1813 N95-24000

LEUKEMIAS

Activation of the jun-D gene in human myeloid cells by 1-(beta)-D-arabinofuranosylcytosine
|DE94-016591| p 1746 N95-22912

LEVITATION

Initial crystallization and growth in melt processing of large-domain YBa2Cu3O(x) for magnetic levitation
|DE95-002993| p 1839 N95-22572

Processing of single- and multi-domain YBa2Cu3O(x) bulk materials for levitation applications by Nd(1+x)Ba(2-x)Cu3O(y) seeding
|DE95-004615| p 1845 N95-24154

LIAPUNOV FUNCTIONS

Symplectic computation of Lyapunov exponents
|DE95-002732| p 1795 N95-22654

Lyapunov exponents from CHUA's circuit time series using artificial neural networks p 1784 N95-22988

LIBRARIES

Review of uncertainty files and improved multigroup cross section files for FENDL
|DE94-628639| p 1830 N95-22757

Effective management of classified documents using the library document system
|AD-A286021| p 1855 N95-23024

AMPHION: Specification-based programming for scientific subroutine libraries p 1761 N95-23680

LIE GROUPS

On the theory of smooth structures 3
|DE94-628411| p 1786 N95-22642

Grassman and hyperKaehler structures on some spaces of sections of holomorphic bundles
|PB95-109104| p 1795 N95-22712

On diagonalization in map (M,G)
|DE94-628515| p 1796 N95-22740

Second International Workshop on Harmonic Oscillators
|NASA-CP-3286| p 1820 N95-22957

Algebraic theory of molecules p 1814 N95-22958

Algebraic approach to the vibrational excitations in methane p 1814 N95-22960

Linearizing W-algebras
|DE94-634324| p 1790 N95-23457

LIFE (DURABILITY)

NASA 30 cm ion thruster development status
|NASA TM-106842| p 1624 N95-23221

Recent results from Fermilab E-687, charm particle decays, lifetimes and photoproduction dynamics: A compilation results presented at DPF 1994
|DE95-004580| p 1808 N95-23347

Test method and test results for environmental assessment of aircraft materials p 1643 N95-23509

LIFE CYCLE COSTS

Multidisciplinary design optimization using genetic algorithms p 1619 N95-23332

Integrating O/S models during conceptual design, part 3
|NASA-CR-197905| p 1622 N95-23400

LIFE SUPPORT SYSTEMS

Life support systems analysis and technical trades for a lunar outpost
|NASA-TM-109927| p 1751 N95-23194

LIFT

High-lift flow-physics flight experiments on a subsonic civil transport aircraft (B737-100) p 1609 N95-23333

Lift enhancing tabs for airfoils
|NASA-CASE-ARC-11990-1| p 1613 N95-23395

LIGANDS

Ligand K-edge x-ray adsorption spectroscopic studies of the electronic structure of inorganic model complexes and metalloprotein active sites
|DE95-003338| p 1840 N95-22851

Computational studies of metal-metal and metal-ligand interactions
|NASA-CR-197862| p 1641 N95-23215

LIGHT (VISIBLE RADIATION)

VLPC characterization for the Dzero upgrade
|DE95-003742| p 1818 N95-24084

LIGHT BEAMS

Proceedings of NATO Advanced Research Workshop on the Formation, Transport and Consequences of Particles in Plasmas
|AD-A285850| p 1829 N95-22514

Supersymmetric oscillator in optics p 1826 N95-23002

LIGHT CURVE

IUE observing programs: NSOSS, VEOEB, and PCOEB
|NASA-CR-197424| p 1866 N95-23560

LIGHT GAS GUNS

Hypervelocity impact survivability experiments for carbonaceous impactors, part 2 p 1700 N95-23831

Cratering and penetration experiments in Teflon targets at velocities from 1 to 7 km/s p 1700 N95-23842

LIGHT SCATTERING

Diffusion behavior of lysozyme in aqueous ammonium sulfate solutions under varying solution conditions as determined by dynamic light scattering
|DE95-004821| p 1635 N95-23380

Measurement and analysis of scatter from silicon wafers
|DE95-002411| p 1827 N95-23531

Profiling and light scattering studies of Si surfaces
|DE95-002931| p 1828 N95-24005

LIGHT SOURCES

Preserving the high source brightness with x ray beam line optics
|DE95-003172| p 1820 N95-22877

Undulators for short wavelength FEL amplifiers
|DE95-004690| p 1692 N95-23487

Chemical Sciences Division
|DE95-002655| p 1626 N95-24142

LIGHT TRANSMISSION

Method for making fiber-optic bundle collimator assembly
|AD-D016491| p 1819 N95-22492

Optical absorption in an indirect-gap semiconductor quantum well systems
|DE94-628878| p 1849 N95-22759

A fiber-optic bundle and collimator assembly
|AD-D016500| p 1820 N95-22864

LIGHT-CONE EXPANSION

A model of mesons based on chi SB in the light-front frame
|DE95-003203| p 1802 N95-22731

The impact of QCD and light-cone quantum mechanics on nuclear physics
|DE95-004293| p 1851 N95-23352

LIGNIN

Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 1 p 1703 N95-23856

Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 2 p 1703 N95-23857

AVIRIS spectra correlated with the chlorophyll concentration of a forest canopy p 1705 N95-23871

Measurements of canopy chemistry with 1992 AVIRIS data at Blackhawk Island and Harvard Forest p 1706 N95-23873

Relationships between pigment composition variation and reflectance for plant species from a coastal savannah in California p 1709 N95-23889

LIMITERS (FUSION REACTORS)

Runaway electrons in TEXT-U
|DE94-019218| p 1831 N95-22862

LINE SPECTRA

Theoretical studies of spectroscopic problems of importance for atmospheric radiation measurements p 1741 N95-23329

ROSAT observation program
|NASA-CR-197683| p 1866 N95-23595

Search for millimeterwave CO emission in damped Lyman-alpha systems
|PB95-139259| p 1868 N95-23607

LINEAR ACCELERATORS

Interdigital-H linac for unstable nuclei at INS
|DE94-765448| p 1816 N95-22644

A heavy ion linac complex for unstable nuclei
|DE94-765443| p 1816 N95-22848

Design study of longitudinal dynamics of the drive beam in 1 TeV relativistic klystron two-beam accelerator
|DE95-004683| p 1817 N95-23485

Parallel computation of automatic differentiation applied to magnetic field calculations
|DE95-004689| p 1763 N95-23486

Undulators for short wavelength FEL amplifiers
|DE95-004690| p 1692 N95-23487

High current induction linacs
|DE95-003442| p 1818 N95-24014

Advanced technologies for a compact RF linac FEL
|DE95-003674| p 1692 N95-24072

LINEAR ARRAYS

High power Josephson effect sources
|AD-A285808| p 1838 N95-22511

LINEAR ENERGY TRANSFER (LET)

Dosimetric results on EURECA p 1872 N95-23800

Absorbed dose and LET spectra measurements on LDEF p 1815 N95-23810

Contribution of proton-induced short range secondaries to the LET spectra on LDEF p 1815 N95-23813

Charge, energy and LET spectra of high LET primary and secondary particles in CR-39 plastic nuclear track detectors of the P0006 experiment p 1815 N95-23814

Predictions of LET spectra measured on LDEF p 1815 N95-23815

LINEAR EQUATIONS

Deformed Heisenberg algebra and fractional spin field in 2+1 dimensions
|DE94-628507| p 1850 N95-22779

An implementation of the QMR method based on coupled two-term recurrences
|NASA-CR-197956| p 1791 N95-23612

Objective determination of image end-members in spectral mixture analysis of AVIRIS data p 1709 N95-23888

LINEAR OPERATORS

AR-descriptions in translatable Frechet spaces
|PB95-138855| p 1789 N95-23149

LINEAR PROGRAMMING

Fuzziness and randomness in an optimization framework
|DE94-628383| p 1755 N95-22616

Characterization of non-negative greedy matrices
|PB95-139366| p 1757 N95-23232

Some recent results in the analysis of greedy algorithms for assignment problems
|PB95-140620| p 1757 N95-23238
Submodular linear programs on forests
|PB95-139820| p 1758 N95-23608
LINEAR QUADRATIC GAUSSIAN CONTROL
Normalized coprime factorizations and balancing for unstable nonlinear systems
|PB95-141222| p 1767 N95-23557
LINEAR QUADRATIC REGULATOR
System identification of the Large-Angle Magnetic Suspension Test Fixture (LAMSTF)
p 1617 N95-23299
LINEAR SYSTEMS
Adaptive control of linear systems based on approximate models
|PB95-139333| p 1767 N95-23199
On adaptive weighted polynomial preconditioning for Hermitian positive definite matrices
|NASA-CR-197946| p 1791 N95-23547
Normalized coprime factorizations and balancing for unstable nonlinear systems
|PB95-141222| p 1767 N95-23557
Quasi-kernel polynomials and convergence results for quasi-minimal residual iterations
|NASA-CR-197948| p 1791 N95-23593
Recent advances in Lanczos-based iterative methods for nonsymmetric linear systems
|NASA-CR-197950| p 1791 N95-23611
An implementation of the QMR method based on coupled two-term recurrences
|NASA-CR-197956| p 1791 N95-23612
LINEAR VIBRATION
Active control of panel vibrations induced by a boundary layer flow
|NASA-CR-197867| p 1608 N95-23182
LINEARITY
A certainty grid to object boundary algorithm
|PB94-203510| p 1755 N95-22637
LINEARIZATION
Design of high performance multivariable control systems for supermaneuverable aircraft at high angle of attack
|NASA-CR-197661| p 1615 N95-22908
Linearizing W-algebras
|DE94-634324| p 1790 N95-23457
Dynamic disturbance decoupling of nonlinear systems and linearization
|PB95-141248| p 1767 N95-23558
LINGUISTICS
Spoken dialogue understanding and local context
|TR-523| p 1658 N95-23937
LIOUVILLE EQUATIONS
The exchange algebra for Liouville field on Riemann surfaces with h greater than 1 genus
|DE94-635446| p 1792 N95-23971
LIPIDS
Membrane phase separations, asymmetry and implications in the origin of life
|DE94-628486| p 1747 N95-23050
LIQUID FLOW
A generalized Eulerian-Lagrangian analysis, with application to liquid flows with vapor bubbles
p 1682 N95-23633
LIQUID FUELS
Particle size dependence in Fischer-Tropsch synthesis
|DE95-003124| p 1633 N95-22876
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
|DE95-000362| p 1634 N95-23164
LIQUID METALS
Electrical resistivity of liquid alkali metals and non-local pseudopotential
|DE94-627417| p 1639 N95-22608
Non local pseudopotentials, transport properties of liquid noble metals
|DE94-627416| p 1640 N95-22840
LIQUID NITROGEN
Liquid nitrogen temperature operation of a switching power converter
|NASA-TM-106867| p 1662 N95-23219
Performance of the 0.3-meter transonic cryogenic tunnel with air, nitrogen, and sulfur hexafluoride media under closed loop automatic control
|NASA-CR-195052| p 1668 N95-23257
Modified molecular sieves: Stationary phase for the gas chromatographic separation of hydrogen isotopes
|DE94-627282| p 1814 N95-24175
LIQUID OXYGEN
Advanced liquid oxygen (LO2) propellant conditioning concept testing
|NASA-TM-108477| p 1652 N95-22672
Flowfield characterization in a LOX/GH2 propellant rocket p 1684 N95-23642
LIQUID PHASES
High-temperature ultrasonic characterization of Ag-clad superconductor tapes
|DE95-002909| p 1838 N95-22530
Quick connect coupling
|NASA-CASE-ARC-11921-2| p 1695 N95-23376
A generalized Eulerian-Lagrangian analysis, with application to liquid flows with vapor bubbles
p 1682 N95-23633
Development of an atomization methodology for spray combustion p 1637 N95-23646
LIQUID PROPELLANT ROCKET ENGINES
Damage-mitigating control of a reusable rocket engine for high performance and extended life
|NASA-CR-4640| p 1654 N95-23195
Eleventh Workshop for Computational Fluid Dynamic Applications in Rocket Propulsion
|NASA-CP-3221-PT-2| p 1668 N95-23412
Heat transfer in rocket engine combustion chambers and nozzles p 1668 N95-23413
Liquid propellant rocket engine combustion simulation with a time-accurate CFD method p 1676 N95-23445
A generalized Eulerian-Lagrangian analysis, with application to liquid flows with vapor bubbles
p 1682 N95-23633
CFD modeling of turbulent duct flows for coolant channel analysis p 1682 N95-23635
LIQUID ROCKET PROPELLANTS
Flowfield characterization in a LOX/GH2 propellant rocket p 1684 N95-23642
LIQUID-GAS MIXTURES
Development of an atomization methodology for spray combustion p 1637 N95-23646
Modeling of non-spherical droplet dynamics
p 1685 N95-23647
LIQUID-VAPOR INTERFACES
Sullivan model for wetting transition in closed system
|DE94-628472| p 1665 N95-22771
LIQUIDS
Sullivan model for wetting transition in closed system
|DE94-628472| p 1665 N95-22771
The role of triplet correlation function in dense fluids
|DE94-628476| p 1849 N95-22775
LITHIUM
The TEXT neutral lithium beam edge density diagnostic
|DE95-003256| p 1830 N95-22719
Ionic core effects on the Mie resonance in lithium clusters
|DE94-014974| p 1805 N95-22870
Solar mass loss, solar lithium, and solar oscillations
|DE94-018262| p 1870 N95-22938
Thermal modeling of the lithium/polymer battery
|DE95-004680| p 1663 N95-23494
LITHIUM COMPOUNDS
Transient radiation-induced absorption in materials for the DOI laser
|DE95-004549| p 1828 N95-24161
LITHIUM ISOTOPES
Harmonic oscillator representation in the theory of scattering and nuclear reactions p 1814 N95-22967
LITHIUM OXIDES
Modeling of tritium recovery from lithium ceramics
|DE95-004626| p 1838 N95-24167
LITHOGRAPHY
Method and system for electron beam lithography
|AD-D016554| p 1660 N95-22709
LITHOLOGY
Lithologic discrimination and alteration mapping from AVIRIS Data, Socorro, New Mexico
p 1701 N95-23847
Discrimination of poorly exposed lithologies in AVIRIS data p 1703 N95-23858
LIVER
A comparative study of the effects of clofibrate, ciprofibrate, WY-14,643, and di-(2-ethylhexyl)-phthalate on liver protein expression in mice
|DE94-016587| p 1748 N95-23771
LOAD DISTRIBUTION (FORCES)
Application requirements for wind turbine gearboxes
|DE94-011883| p 1694 N95-22923
LOAD TESTS
Exfoliation corrosion and stress corrosion cracking behaviour of Al-Li alloys p 1641 N95-23498
LOADS (FORCES)
Investigation of depth-area relationships associated with nanoindentations
|DE95-001353| p 1639 N95-22686
Current status in cavitation modeling
p 1681 N95-23632
LOCAL AREA NETWORKS
Digital Linear Tape (DLT) technology and product family overview p 1753 N95-24125
LOCI
Rearrangement of RAG-1 recombinase gene in radiation-sensitive wasted mice
|DE94-017083| p 1746 N95-22913
LOGIC PROGRAMMING
Roles and dynamic subclasses: A modal logic approach
|PB95-127320| p 1754 N95-22522
Temporal model theory for default logic
|PB95-127346| p 1766 N95-22524
Proceedings of the workshop on deductive databases and logic programming
|PB95-139382| p 1758 N95-23553
LOGISTICS
Addendum to the Proceedings of the Third International Mobile Satellite Conference (IMSC 1993)
|NASA-CR-197343| p 1655 N95-22813
LONG DURATION EXPOSURE FACILITY
Summary of solar cell data from the Long Duration Exposure Facility (LDEF)
|NASA-CR-196539| p 1727 N95-22904
Evaluation of adhesive materials used on the Long Duration Exposure Facility
|NASA-CR-4646| p 1626 N95-22918
LDEF materials results for spacecraft applications: Executive summary
|NASA-CP-3261| p 1617 N95-23549
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 1
|NASA-CP-3275-PT-1| p 1889 N95-23796
LDEF environment modeling updates
p 1637 N95-23797
LDEF contributions to cosmic ray and radiation environments research p 1872 N95-23805
Trapped iron measured on LDEF
p 1872 N95-23806
Status of LDEF activation measurements and archive
p 1815 N95-23817
Predictions of LDEF radioactivity and comparison with measurements p 1815 N95-23818
Status of LDEF radiation modeling
p 1815 N95-23819
Status of LDEF contributions to current knowledge of meteoroid and manmade debris environments and their effects on spacecraft in LEO p 1623 N95-23822
LDEF meteoroid and debris special investigation group investigations and activities at the Johnson Space Center p 1623 N95-23823
Micrometeoroids and debris on LDEF comparison with MIR data p 1623 N95-23824
Small craters on the meteoroid and space debris impact experiment p 1623 N95-23825
Long term microparticle impact fluxes on LDEF determined from optical survey of Interplanetary Dust Experiment (IDE) sensors p 1623 N95-23826
LDEF Interplanetary Dust Experiment (IDE) results
p 1869 N95-23828
The orbital characteristics of debris particle rings as derived from IDE observations of multiple orbit intersections with LDEF p 1869 N95-23829
Orbital debris and meteoroid population as estimated from LDEF impact data p 1869 N95-23830
Analytical electron microscopy of LDEF impactor residues p 1869 N95-23832
Natural and orbital debris particles on LDEF's trailing and forward-facing surfaces p 1869 N95-23833
Debris and meteoroid proportions deduced from impact crater residue analysis p 1869 N95-23834
Micro-abrasion package capture cell experiment on the trailing edge of LDEF: Impactor chemistry and whipple bumper shield efficiencies p 1624 N95-23835
Secondary ion mass spectrometry (SIMS) analysis of hypervelocity microparticle impact sites on LDEF surfaces p 1637 N95-23836
SIMS chemical and isotopic analysis of impact features from LDEF experiments AO187-1 and AO187-2
p 1637 N95-23837
Image and compositional characteristics of the LDEF Big Guy impact crater p 1700 N95-23838
Determining orbital particle parameters of impacts into germanium using morphology analysis and calibration data from hypervelocity impact experiments in the laboratory
p 1700 N95-23841
Cratering and penetration experiments in Teflon targets at velocities from 1 to 7 km/s p 1700 N95-23842
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 2
|NASA-CP-3275-PT-2| p 1899 N95-23896
Summary and review of Materials Special Investigation Group evaluations of hardware from the Long Duration Exposure Facility p 1638 N95-23897
Recent results from Long Duration Exposure Facility materials testing p 1638 N95-23898
LDEF polymeric materials: A summary of Langley characterization p 1651 N95-23899

Surface characterization of LDEF carbon fiber/polymer matrix composites p 1631 N95-23900
Space environmental effects on polymer matrix composites as a function of sample location on LDEF p 1651 N95-23901
Collection and review of metals data obtained from LDEF experiment specimens and support hardware p 1646 N95-23905
Changes in chemical and optical properties of thin film metal mirrors on LDEF p 1651 N95-23907
Further investigations of experiment A0034 atomic oxygen stimulated outgassing p 1651 N95-23908
Atomic oxygen interactions with protected organic materials on the Long Duration Exposure Facility (LDEF) p 1627 N95-23909
Trend analysis of in-situ spectral reflectance data from the Thermal Control Surfaces Experiment (TCSE) p 1631 N95-23910
Whisker/Cone growth on the thermal control surfaces experiment no. S0069 p 1651 N95-23911
Durability of reflector materials in the space environment p 1651 N95-23912
Four space application material coatings on the Long-Duration Exposure Facility (LDEF) p 1651 N95-23913
Organic matrix composite protective coatings for space applications p 1627 N95-23914
Overview of the LDEF MSIG databasing activities p 1864 N95-23916

LONG DURATION SPACE FLIGHT
Material inspection of EURECA first findings and recommendations p 1637 N95-23804

LONG TERM EFFECTS
Long-term aging of type 308 stainless steel welds: Effects on properties and microstructure
|DE94-018961| p 1640 N95-23132
Effect of loading direction and long-term aging on fatigue-crack growth in Al-Li alloy 2090 p 1641 N95-23499
Preliminary results of radiation measurements on EURECA p 1872 N95-23801
Germination, growth rates, and electron microscope analysis of tomato seeds flown on the LDEF p 1748 N95-23821

LONGITUDINAL CONTROL
Analysis of the longitudinal handling qualities and pilot-induced-oscillation tendencies of the High-Angle-of-Attack Research Vehicle (HARV) p 1616 N95-23297
Aerodynamic surface distension system for high angle of attack forebody vortex control
|NASA-CASE-ARC-11979-1| p 1612 N95-23390

LONGITUDINAL WAVES
Plasmo-magnetoelastic waves in a semiconducting heterostructure. 1: Plasmo-elastic longitudinal modes. 2: Sh-magnetoelastic modes
|PB95-138822| p 1833 N95-23170

LOOPS
Loop scheduling for heterogeneity
|TR-540| p 1764 N95-23936
Unifying data and control transformations for distributed shared-memory machines
|TR-542| p 1765 N95-24061

LORENTZ TRANSFORMATIONS
A note on the angular Fourier transformation p 1797 N95-22986
Does the relativity principle violate?
|DE94-635420| p 1851 N95-23964
Tachyons - it was the end of history?
|DE94-635439| p 1851 N95-23968

LOSSES
GGOT total pressure loss control concept evaluation p 1672 N95-23427
Navier-Stokes analysis of an oxidizer turbine blade with tip clearance with and without a mini-shroud p 1672 N95-23428
Use of blade lean in turbomachinery redesign p 1680 N95-23625
On the accuracy of CFD-based pressure drop predictions for right-angle ducts p 1682 N95-23634

LOW ALTITUDE
Geolocation applications of the Gonets LEO messaging satellites p 1656 N95-22818
Low Earth Orbit satellite/terrestrial mobile service compatibility p 1656 N95-22819

LOW COST
The associate principal astronomer telescope operations model p 1779 N95-23743

LOW CURRENTS
The q profile evolution and enhanced core confinement of high (beta)(sub p) plasmas in D3-D
|DE95-003878| p 1834 N95-23371

LOW DENSITY MATERIALS
Deflections of anisotropic sandwich beams with variable face sheets and core thicknesses p 1700 N95-23310
Impact shock and penetration fragmentation in porous media
|DE94-018900| p 1868 N95-23656

LOW EARTH ORBITS
Status of LDEF radiation modeling p 1815 N95-23819
Micrometeoroids and debris on LDEF comparison with MIR data p 1623 N95-23824
LDEF Interplanetary Dust Experiment (IDE) results p 1869 N95-23828
The orbital characteristics of debris particle rings as derived from IDE observations of multiple orbit intersections with LDEF p 1869 N95-23829

LOW GRAVITY MANUFACTURING
A new containerless image furnace with electro-static positioning device p 1690 N95-23674

LOW PRESSURE
Proceedings of NATO Advanced Research Workshop on the Formation, Transport and Consequences of Particles in Plasmas
|AD-A285850| p 1829 N95-22514

LOW SPEED
NASA low-speed axial compressor for fundamental research
|NASA-TM-4635| p 1616 N95-23192
Handling qualities of the High Speed Civil Transport p 1616 N95-23325
Towards a generalized computational fluid dynamics technique for all Mach numbers p 1670 N95-23420

LOW VISIBILITY
Differential GPS and system integration of the Low Visibility Landing and Surface Operations (LVLASO) demonstration p 1611 N95-23318

LOWER CALIFORNIA (MEXICO)
Revitalization of the Gemenc-area, Baja, Hungary. 1: A study on hydrological possibilities to revitalise the ecosystem in the Keselyues-area. 2: Towards the restoration of the Gyueruesalj floodplain
|PB95-139283| p 1718 N95-23469

LOWER IONOSPHERE
Semikinetic modeling and observations of high-latitude plasma outflow
|NASA-CR-197403| p 1831 N95-23008

LUMBAR REGION
A multibody/finite element analysis approach for modeling of crash dynamic responses
|NIAR-94-3| p 1610 N95-24050

LUMINAIRES
A new containerless image furnace with electro-static positioning device p 1690 N95-23674

LUMINOSITY
A model for ball lightning
|DE95-003366| p 1742 N95-22701
Preserving the high source brightness with x ray beam line optics
|DE95-003172| p 1820 N95-22877
Properties of jets in Z events from 1.8 TeV (bar p)p collisions
|DE94-018982| p 1808 N95-23197
Search for Z' and W' at CDF
|DE94-018987| p 1808 N95-23203
Standardization of CDF and D(O) reported luminosities
|DE95-003388| p 1818 N95-24077

LUMINOUS INTENSITY
Optical fiber strain sensor with improved linearity range
|NASA-CASE-LAR-14857-1-SB| p 1819 N95-22807

LUNAR BASES
Life support systems analysis and technical trades for a lunar outpost
|NASA-TM-109927| p 1751 N95-23194

LUNAR CRATERS
Classification of the LCVF AVIRIS test site with a Kohonen artificial neural network p 1706 N95-23874

LUNAR EXPLORATION
Robotic all-terrain lunar exploration rover (RATLER) FY93 program status report
|DE95-003589| p 1694 N95-23065
Robotics and telepresence for moon missions p 1776 N95-23725

LUNAR ROVING VEHICLES
Robotics and telepresence for moon missions p 1776 N95-23725

LUNAR SOIL
Transmission electron microscope studies of extraterrestrial materials
|NASA-CR-188363| p 1633 N95-23092

LUNAR SURFACE
Lunar rover technology demonstrations with Dante and Ratler p 1697 N95-23694

LYMAN ALPHA RADIATION
Search for millimeterwave CO emission in damped Lyman-alpha systems
|PB95-139259| p 1868 N95-23607

LYSOZYME
Diffusion behavior of lysozyme in aqueous ammonium sulfate solutions under varying solution conditions as determined by dynamic light scattering
|DE95-004821| p 1635 N95-23380

M

MACH NUMBER
Wing pressure distributions from subsonic tests of a high-wing transport model --- in the Langley 14- by 22-Foot Subsonic Wind Tunnel
|NASA-TM-4583| p 1607 N95-22802
Advanced detector development, laboratory simulations, diagnostic development, and data analysis on wake physics
|PL-TR-94-2204| p 1831 N95-22948
Performance of the 0.3-meter transonic cryogenic tunnel with air, nitrogen, and sulfur hexafluoride media under closed loop automatic control
|NASA-CR-195052| p 1668 N95-23257
Design of a variable area diffuser for a 15-inch Mach 6 open-jet tunnel p 1617 N95-23309
Towards a generalized computational fluid dynamics technique for all Mach numbers p 1670 N95-23420
Preconditioning for the Navier-Stokes equations with finite-rate chemistry p 1670 N95-23421
A numerical procedure for analysis of finite rate reacting flows p 1671 N95-23422

MACHINE LEARNING
Towards method-independent knowledge acquisition
|AD-A285823| p 1766 N95-22512
A Newton-type neural network learning algorithm
|DE94-628371| p 1766 N95-22614
Learning time series for intelligent monitoring p 1770 N95-23686
Subsumption-based architecture for autonomous movement planning for planetary rovers p 1771 N95-23690
A new generation of intelligent trainable tools for analyzing large scientific image databases p 1775 N95-23717
Applications of dynamic scheduling technique to space related problems: Some case studies p 1618 N95-23759
Robot skill learning through intelligent experimentation
|TR-567| p 1784 N95-24038

MACHINING
Aspects of surface generation in orthogonal ultraprecision machining
|DE95-000922| p 1654 N95-22678

MACROMOLECULES
Protein folding and protein metallocluster studies using synchrotron small angler x ray scattering
|DE95-003339| p 1746 N95-22897
A supersymmetric family of harmonic oscillators simulating H-bonds in DNA p 1748 N95-22963

MAGELLANIC CLOUDS
Interstellar molecules in the large magellanic cloud
|PB95-139267| p 1868 N95-23230

MAGNESIUM
Studies of autoionizing states relevant to dielectronic recombination
|DE94-014162| p 1812 N95-23978

MAGNESIUM OXIDES
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
|DE95-000362| p 1634 N95-23164
Orientation selection and microstructural evolution of epitaxial platinum films on (001) magnesium oxide
|DE95-003680| p 1842 N95-23265
Temperature effects on ion irradiation damage in MgAl2O4 spinel single crystals
|DE95-003679| p 1844 N95-24073
Epitaxial growth of bcc transition metal films and superlattices onto MgO (111), (011) and (001) substrates
|DE95-004629| p 1846 N95-24168

MAGNETIC ANOMALIES
Trapped iron measured on LDEF p 1872 N95-23806

MAGNETIC BEARINGS
Influence of backup bearings and support structure dynamics on the behavior of rotors with active supports
|NASA-CR-197438| p 1694 N95-23190
Dynamic modelling and response characteristics of a magnetic bearing rotor system including auxiliary bearings
|NASA-CR-197859| p 1694 N95-23213
Synchronous dynamics of a coupled shaft/bearing/housing system with auxiliary support from a clearance bearing: Analysis and experiment
|NASA-CR-197858| p 1695 N95-23214

MAGNETIC COMPRESSION
Runaway electrons in TEXT-U
[DE94-019218] p 1831 N95-22862
MAGNETIC COOLING
Effect on c-axis transport properties of a critical state in Bi2Sr2CaCu2O8
[DE95-003695] p 1843 N95-23366
MAGNETIC CORES
A brief history in time of ion traps and their achievements in science
[DE95-002815] p 1805 N95-22936
MAGNETIC DISKS
Optimizing raid performance with cache p 1761 N95-24116
Document image archive transfer from DOS to UNIX p 1761 N95-24117
MAGNETIC DOMAINS
Microstructural behavior of nonequilibrium systems
[DE95-004450] p 1630 N95-23924
MAGNETIC EFFECTS
Resonant shallow donor magnetopolaron effect in a GaAs/AlGaAs quantum dot in high magnetic fields
[DE94-629039] p 1798 N95-22497
The effect of magnetic field on the edge plasmons of two-dimensional electron gas systems
[DE94-018044] p 1837 N95-23982
Biological interactions and human health effects of static magnetic fields
[DE95-003147] p 1749 N95-24145
MAGNETIC ENERGY STORAGE
Design of a high-temperature superconductor current lead for electric utility SMES
[DE95-004604] p 1664 N95-24163
MAGNETIC FIELD CONFIGURATIONS
Turbulent transport across invariant canonical flux surfaces
[DE95-000710] p 1832 N95-23072
TPX magnet system status
[DE95-002389] p 1661 N95-23080
Plasma properties and magnetic field structure of the solar corona, based on coordinated Max 1991 observations from SERTS, the VLA, and magnetographs
[NASA-CR-197864] p 1870 N95-23181
Recent studies of the Large Helical Device
[NIFS-322] p 1835 N95-23543
An explanation for tailward flows with positive B(sub z) in the distant tail neutral sheet during quite times
[ATR-95(7270)-1] p 1740 N95-23933
MAGNETIC FIELD RECONNECTION
Non-Taylor magnetohydrodynamic self-organization
[NIFS-314] p 1834 N95-23524
Collisionless magnetic reconnection associated with coalescence of flux bundles
[NIFS-315] p 1834 N95-23525
Macro-EM particle simulation method and a study of collisionless magnetic reconnection
[NIFS-316] p 1834 N95-23526
MAGNETIC FIELDS
Magnetic field effects on strong-coupling polaron in quantum dots
[DE94-629038] p 1847 N95-22496
High magnetic fields in the USA
[DE95-002716] p 1798 N95-22552
A brief history in time of ion traps and their achievements in science
[DE95-002815] p 1805 N95-22936
On pseudosupersymmetric oscillators and reality of relativistic energies for vector mesons p 1815 N95-22994
On parasupersymmetric oscillators and relativistic vector mesons in constant magnetic fields p 1815 N95-22995
Plasmo-magnetoelastic waves in a semiconducting heterostructure. 1: Plasmo-elastic longitudinal modes. 2: Sh-magnetoelastic modes
[PB95-138822] p 1833 N95-23170
Potential aerospace applications of high temperature superconductors p 1664 N95-23322
Generation of fast electrons in reversed field pinches by the equilibrium grad (vert bar)B(vert bar) force
[DE95-004467] p 1809 N95-23363
Effect on c-axis transport properties of a critical state in Bi2Sr2CaCu2O8
[DE95-003695] p 1843 N95-23366
Transport properties of Tl2Ba2CaCu2O8 meander lines
[DE95-003715] p 1843 N95-23367
Parallel computation of automatic differentiation applied to magnetic field calculations
[DE95-004689] p 1763 N95-23486
Modification and damping of Alfven waves in a magnetized dusty plasma
[NIFS-312] p 1834 N95-23523
Non-Taylor magnetohydrodynamic self-organization
[NIFS-314] p 1834 N95-23524
Collisionless magnetic reconnection associated with coalescence of flux bundles
[NIFS-315] p 1834 N95-23525
The next Large Helical Devices
[NIFS-323] p 1835 N95-23535
Current-profile flattening and hot core shift due to the nonlinear development of resistive kink mode
[NIFS-311] p 1835 N95-23564
Quasisymmetry equations for conventional stellarators
[NIFS-324] p 1836 N95-23572
Effect of satellite helical harmonics on the stellarator configuration
[NIFS-328] p 1609 N95-23787
The effect of magnetic field on the edge plasmons of two-dimensional electron gas systems
[DE94-018044] p 1837 N95-23982
Biological interactions and human health effects of static magnetic fields
[DE95-003147] p 1749 N95-24145
MAGNETIC FLUX
Turbulent transport across invariant canonical flux surfaces
[DE95-000710] p 1832 N95-23072
Collisionless magnetic reconnection associated with coalescence of flux bundles
[NIFS-315] p 1834 N95-23525
MAGNETIC ISLANDS
Theory of pressure-induced islands and self-healing in three-dimensional toroidal magnetohydrodynamic equilibria
[NIFS-321] p 1836 N95-23589
MAGNETIC PROPERTIES
Correlation effects in high-Tc superconductors and heavy fermion compounds
[DE94-629057] p 1840 N95-22846
Magnetic multilayer physics
[DE95-003408] p 1798 N95-23083
MAGNETIC RECORDING
A comparison of rotary- and stationary-head tape recorders p 1690 N95-24122
Approaches to 100 Gbit/sq. in. recording density p 1690 N95-24128
A terabyte linear tape recorder p 1690 N95-24139
MAGNETIC RESONANCE
Magnetic resonance and optical spectroscopic studies of carotenoids
[DE95-003729] p 1631 N95-22575
MAGNETIC SIGNATURES
Plasma properties and magnetic field structure of the solar corona, based on coordinated Max 1991 observations from SERTS, the VLA, and magnetographs
[NASA-CR-197864] p 1870 N95-23181
MAGNETIC STORAGE
Fourth NASA Goddard Conference on Mass Storage Systems and Technologies
[NASA-CP-3295] p 1857 N95-24108
Applications drivers for data parking on the Information Superhighway p 1857 N95-24109
Influence of technology on magnetic tape storage device characteristics p 1690 N95-24127
Reproducible direct exposure environmental testing of metal-based magnetic media p 1690 N95-24129
MAGNETIC STORMS
Energetic particle observations at geosynchronous orbit
[DE95-000873] p 1867 N95-22516
MAGNETIC SUSPENSION
Computation of magnetic forces on moving conductors by using ELEKTRA and other 3-D computer codes
[DE95-003308] p 1798 N95-22895
System identification of the Large-Angle Magnetic Suspension Test Fixture (LAMSTF) p 1617 N95-23299
MAGNETIC TAPES
Index of nuclear data libraries available from the IAEA nuclear data section
[DE94-634271] p 1857 N95-23453
A comparison of rotary- and stationary-head tape recorders p 1690 N95-24122
A kinetic study of hydrolysis of polyester elastomer in magnetic tape p 1652 N95-24124
Digital Linear Tape (DLT) technology and product family overview p 1753 N95-24125
The MAMMOTH project p 1753 N95-24126
Influence of technology on magnetic tape storage device characteristics p 1690 N95-24127
ASF archive issues: Current status, past history, and questions for the future p 1861 N95-24133
The growth of the UniTree mass storage system at the NASA Center for Computational Sciences: Some lessons learned p 1862 N95-24135
MAGNETIZATION
Effects of Bi and Bi2O3 additions on the microstructure and superconducting properties of powder-in-tube BSCCO (2212) tapes
[DE95-004605] p 1845 N95-24150
MAGNETOACOUSTIC WAVES
Plasmo-magnetoelastic waves in a semiconducting heterostructure. 1: Plasmo-elastic longitudinal modes. 2: Sh-magnetoelastic modes
[PB95-138822] p 1833 N95-23170
MAGNETOHYDRODYNAMIC FLOW
Modeling of nonequilibrium space plasma flows
[NASA-CR-197432] p 1833 N95-23211
Non-Taylor magnetohydrodynamic self-organization
[NIFS-314] p 1834 N95-23524
An explanation for tailward flows with positive B(sub z) in the distant tail neutral sheet during quite times
[ATR-95(7270)-1] p 1740 N95-23933
MAGNETOHYDRODYNAMIC GENERATORS
Particle transport in plasma reactors
[DE95-004541] p 1837 N95-24158
MAGNETOHYDRODYNAMIC STABILITY
Comparisons of nonlinear toroidal turbulence simulations with experiment
[DE95-003020] p 1830 N95-22694
An upper bound for the proton temperature anisotrophy
[DE95-002752] p 1737 N95-22903
Global electric field determination in the Earth's outer magnetosphere using energetic charged particles
[NASA-CR-197392] p 1737 N95-22945
High beta and second stability region transport and stability analysis
[DE95-003411] p 1832 N95-23147
Current-profile flattening and hot core shift due to the nonlinear development of resistive kink mode
[NIFS-311] p 1835 N95-23564
Theory of pressure-induced islands and self-healing in three-dimensional toroidal magnetohydrodynamic equilibria
[NIFS-321] p 1836 N95-23589
Effect of satellite helical harmonics on the stellarator configuration
[NIFS-328] p 1609 N95-23787
MAGNETOHYDRODYNAMIC WAVES
Modification and damping of Alfven waves in a magnetized dusty plasma
[NIFS-312] p 1834 N95-23523
MHD-Vlasov simulation of the toroidal Alfven eigenmode
[NIFS-319] p 1836 N95-23591
MAGNETOHYDRODYNAMICS
Analytical and numerical studies of ion mobility near the tokamak plasma edge
[DE95-003019] p 1830 N95-22693
Parallal Arnoldi method for the construction of a Krylov subspace basis: An application in magnetohydrodynamics
[PB95-135786] p 1787 N95-22717
High beta and second stability region transport and stability analysis
[DE95-003411] p 1832 N95-23147
Physics of magnetospheric boundary layers
[NASA-CR-197920] p 1739 N95-23271
MHD seed recovery and regeneration, phase 2
[DE95-004308] p 1833 N95-23338
Fast potential change in sawteeth in JIPP T-IIU tokamak plasmas
[NIFS-327] p 1835 N95-23533
Current-profile flattening and hot core shift due to the nonlinear development of resistive kink mode
[NIFS-311] p 1835 N95-23564
Theory of pressure-induced islands and self-healing in three-dimensional toroidal magnetohydrodynamic equilibria
[NIFS-321] p 1836 N95-23589
Computer simulation of a magnetohydrodynamic dynamo 2
[NIFS-320] p 1836 N95-23590
MHD-Vlasov simulation of the toroidal Alfven eigenmode
[NIFS-319] p 1836 N95-23591
MAGNETOMECHANICS (PHYSICS)
Biological interactions and human health effects of static magnetic fields
[DE95-003147] p 1749 N95-24145
MAGNETOPAUSE
Observations of the magnetopause current layer: Cases with no boundary layer and tests of recent models
[NASA-CR-197391] p 1738 N95-23184
MAGNETOSHEATH
An upper bound for the proton temperature anisotrophy
[DE95-002752] p 1737 N95-22903
Observations of the magnetopause current layer: Cases with no boundary layer and tests of recent models
[NASA-CR-197391] p 1738 N95-23184
Physics of magnetospheric boundary layers
[NASA-CR-197920] p 1739 N95-23271

MAGNETOSPHERE-IONOSPHERE COUPLING
Magnetospheric space plasma investigations
[NASA-CR-197405] p 1831 N95-22955
The high latitude ionosphere-magnetosphere transition region: Simulation and data comparison
[NASA-CR-197404] p 1737 N95-22956
Semikinetic modeling and observations of high-latitude plasma outflow
[NASA-CR-197403] p 1831 N95-23008
Modeling of the coupled magnetospheric and neutral wind dynamos
[NASA-CR-197861] p 1738 N95-23090
MAGNETOSPHERIC INSTABILITY
Hot proton anisotropies and cool proton temperatures in the outer magnetosphere
[DE95-002719] p 1736 N95-22850
Global electric field determination in the Earth's outer magnetosphere using energetic charged particles
[NASA-CR-197392] p 1737 N95-22945
MAGNETS
Dynamical properties of critical and paramagnetic spin fluctuations in anisotropic heisenberg magnets
[PB95-134623] p 1798 N95-23127
MAGNIFICATION
X-ray transmission microscope development
[NASA-CR-197884] p 1826 N95-23016
MAINTAINABILITY
Integrating O/S models during conceptual design, part 2
[NASA-CR-197904] p 1622 N95-23399
Integrating O/S models during conceptual design, part 3
[NASA-CR-197905] p 1622 N95-23400
MAINTENANCE
Application requirements for wind turbine gearboxes
[DE94-011883] p 1694 N95-22923
MAN ENVIRONMENT INTERACTIONS
Emissions of greenhouse gases in the United States, 1987-1992
[DE95-003001] p 1731 N95-22691
MAN MACHINE SYSTEMS
Human-centered design of human-computer-human dialogs in aerospace systems
[NASA-CR-197379] p 1750 N95-22797
Design of teleoperation system with a force-reflecting real-time simulator p 1778 N95-23733
Telepresence control of a dual-arm dexterous robot p 1752 N95-23735
Knowledge representation and reasoning for mixed-initiative planning
[TR-562] p 1783 N95-24031
MANAGEMENT
Inspector General: Alleged misconduct by NASA Inspector General. Report to Congressional requesters
[GAO/OSI-95-9] p 1854 N95-24085
MANAGEMENT INFORMATION SYSTEMS
NASA university program management information system, FY 1994
[NASA-TM-110345] p 1856 N95-23364
AVIRIS and TIMS data processing and distribution at the land processes distributed active archive center p 1706 N95-23872
The data facility of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1707 N95-23877
The design of a petabyte archive and distribution system for the NASA ECS project p 1858 N95-24110
The architecture of the High Performance Storage System (HPSS) p 1858 N95-24113
Client/Server data serving for high performance computing p 1761 N95-24123
MANAGEMENT METHODS
Method for building and evaluating formal specifications of object-oriented conceptual models of database systems
[PB95-127353] p 1855 N95-22525
Stochastic decision analysis p 1854 N95-23305
Upward appraisal as a means for improving supervisory performance and promoting process improvement, with long-term implications for organizational change p 1854 N95-23323
Optimizing tertiary storage organization and access for spatio-temporal datasets p 1861 N95-24131
MANAGEMENT PLANNING
Outline for a global environmental strategic planning exercise (GESPE-project)
[PB95-133773] p 1733 N95-23067
STS-61 mission director's post-mission report
[NASA-TM-104803] p 1617 N95-23262
Upward appraisal as a means for improving supervisory performance and promoting process improvement, with long-term implications for organizational change p 1854 N95-23323
The software analysis project for the Office of Human Resources p 1854 N95-23331
CRI planning and scheduling for space p 1617 N95-23751
Artificial intelligence techniques for scheduling Space Shuttle missions p 1781 N95-23755
Search Hanford accessible reports electronically system configuration management plan
[DE95-004493] p 1857 N95-24089
Defense technology plan
[AD-A285415] p 1903 N95-24178
MANAGEMENT SYSTEMS
The viability of establishing collaborative, reconfigurable research environments for the Human Performance Research Laboratory at NASA Ames
[NASA-CR-197384] p 1753 N95-22480
Investigation of Federal Standard 1045 high-frequency ALE radio performance in the Southern Trans-Auroral Zone
[PB94-204831] p 1655 N95-22636
CDMS: CAD data set system design description
[DE95-003218] p 1756 N95-22894
MANIFOLDS
Trisecant curve associated to a smooth curve in P(sub 3) of degree d greater than g+2
[DE94-628425] p 1787 N95-22809
Aerodynamic design and analysis of a highly loaded turbine exhaust p 1673 N95-23435
Phase 2: HGM air flow tests in support of HEX vane investigation p 1674 N95-23438
Methodology for CFD design analysis of National Launch System nozzle manifold p 1683 N95-23637
MANIFOLDS (MATHEMATICS)
Lectures on homology with internal symmetries
[DE94-628409] p 1785 N95-22619
Geometry of Moishezon and 1-convex spaces 2: Projectivity of Moishezon spaces and its non-compact version
[DE94-628415] p 1795 N95-22623
Vector bundles as direct images of line bundles
[DE94-628422] p 1795 N95-22630
Grassman and hyperKaehler structures on some spaces of sections of holomorphic bundles
[PB95-109104] p 1795 N95-22712
Possibility of extending space-time coordinates
[DE94-628512] p 1796 N95-22737
On diagonalization in map (M,G)
[DE94-628515] p 1796 N95-22740
MANIPULATORS
Controlling under-actuated robot arms using a high speed dynamics process
[NASA-CASE-NPO-18498-1-CU] p 1692 N95-22543
A microcontroller-based three degree-of-freedom manipulator testbed
[NASA-CR-197423] p 1696 N95-23409
ASI's space automation and robotics programs: The second step p 1697 N95-23696
Hardware interface unit for control of shuttle RMS vibrations p 1697 N95-23706
Development of Japanese experiment module remote manipulator system p 1752 N95-23708
Robust control of multi-jointed arm with a decentralized autonomous control mechanism p 1659 N95-23710
Development of the dynamic motion simulator of 3D micro-gravity with a combined passive/active suspension system p 1618 N95-23711
Dexterous Orbital Servicing System (DOSS) p 1752 N95-23723
Visually guided grasping to study teleprogrammation within the BAROCO testbed p 1777 N95-23731
Telepresence control of a dual-arm dexterous robot p 1752 N95-23735
Morphing hands and virtual tools (or What good is an extra degree of freedom?)
[TR-551] p 1783 N95-24036
Vision-based planning and execution of precision grasps
[TR-546] p 1784 N95-24185
MANPOWER
Integrating O/S models during conceptual design, part 3
[NASA-CR-197905] p 1622 N95-23400
MANUALS
Rationale for the Modular Air-system Vulnerability Estimation Network (MAVEN) methodology
[AD-A285797] p 1611 N95-22510
Tutorial on filtering, restoration, and state estimation
[TR-534] p 1793 N95-24042
MANUFACTURING
Chemical vapor deposition in low pressure batch furnaces
[DE95-003035] p 1632 N95-22722
Aerospace Industries Association (AIA) work practices report for composites p 1628 N95-23029
Continuous roll-to-roll amorphous-silicon photovoltaic manufacturing technology
[DE95-000243] p 1728 N95-23061
A manufacturing database of advanced materials used in spacecraft structures p 1623 N95-23279
Fabric geometry distortion during composites processing p 1631 N95-23288
Application Protocol, Initial Graphics Exchange Specification (IGES), Layered Electrical Product
[DE95-004266] p 1757 N95-23337
Scheduling with genetic algorithms p 1761 N95-23762
Particle transport in plasma reactors
[DE95-004541] p 1837 N95-24158
MANY BODY PROBLEM
Bethe ansatz and quantum Davey-Stewartson 1 system with multicomponent in two dimensions
[DE94-628423] p 1786 N95-22631
Morphology of Laplacian growth processes and statistics of equivalent many-body systems
[DE95-002734] p 1847 N95-22655
The relativistic many body problem with an oscillator interaction p 1824 N95-22991
Structure and evolution of long-lived spiral patterns in galaxies
[PB95-139242] p 1868 N95-23228
CDM and Omega in the local neighborhood
[DE95-003683] p 1868 N95-23570
A theory for the morphology of Laplacian growth from statistics of equivalent many-body Hamiltonian systems
[DE94-014473] p 1799 N95-23979
Atoms as many-body systems
[DE95-004609] p 1813 N95-24151
MAPPING
Vector bundles as direct images of line bundles
[DE94-628422] p 1795 N95-22630
Iterative solutions of nonlinear equations with strongly accretive or strongly pseudocontractive maps
[DE94-628432] p 1786 N95-22634
Programmable hyperspectral image mapper with on-array processing
[NASA-CASE-NPO-17794-1-CU] p 1819 N95-22765
Boson mapping techniques applied to constant gauge fields in QCD p 1814 N95-22969
Ishikawa iteration process for nonlinear Lipschitz strongly accretive mappings
[DE94-634284] p 1792 N95-23658
Comparison of three methods for materials identification and mapping with imaging spectroscopy p 1702 N95-23853
Comparison of 7.5-minute and 1-degree digital elevation models p 1719 N95-24095
MAPS
Automation technology using Geographic Information System (GIS) p 1863 N95-23284
MARAGING STEELS
Specific features of corrosion behavior of stainless maraging steels for aerospace application p 1642 N95-23501
MARANGONI CONVECTION
USML-1 Glovebox experiments
[NASA-CR-196574] p 1653 N95-24028
MARINE ENVIRONMENTS
SWIFT BOAT 1994: Using a fast chase boat to investigate offshore weather features in conjunction with WSR-88D observations
[PB94-195146] p 1742 N95-22651
The use of electrochemical impedance spectroscopy to predict the corrosion of aluminum-lithium alloys in marine environments p 1637 N95-23504
MARINE METEOROLOGY
Dimethylsulfide oxidation over the tropical South Atlantic: OH and other oxidants
[NASA-CR-197417] p 1732 N95-22930
MARKET RESEARCH
The airline quality report, 1994
[NIAR-94-11] p 1610 N95-24012
MARKETING
NASA Technology Applications Team: Commercial applications of aerospace technology
[NASA-CR-197589] p 1864 N95-22526
MARKING
Light emission-or-absorbance-based binding assays for polynucleic acids
[AD-D016557] p 1632 N95-22710
MARKOV CHAINS
Open problems of computational molecular biology
[DE95-000895] p 1745 N95-22866
Discrete-time Markovian stochastic Petri nets
[NASA-CR-195039] p 1758 N95-23613
MARKOV PROCESSES
Nonparametric measure of spatial interaction in point patterns
[PB95-127965] p 1793 N95-22527
Strong collision approach to calculation of depolarization function for neutron beam passing through ferromagnetic bulk domains
[DE94-628847] p 1803 N95-22758
MARS EXPLORATION
Autonomous navigation system for the Marsokhod rover project p 1771 N95-23693

MARS OBSERVER
Automatic commanding of the Mars Observer Camera
p 1620 N95-23754
MASS
Alert-derivative bimodal space power and propulsion systems
| DE95-002754 | p 1624 N95-22905
MASS DISTRIBUTION
The Atmospheric Lifetime Experiment and the Global Atmospheric Gas Experiment (ALE/GAGE)
| NASA-CR-197400 | p 1731 N95-22673
Neutrinos with Zee-mass matrix in vacuum and matter
| DE94-628635 | p 1803 N95-22756
MASS FLOW
Mass loss in the interacting semi-detached binary delta librae
| NASA-CR-197924 | p 1866 N95-23402
MASS SPECTRA
Do narrow Sigma hypernuclear states exist?
| DE95-002930 | p 1803 N95-22763
Search for Z' and W' at CDF
| DE94-018987 | p 1808 N95-23203
J/psi, psi' yields mu(+)mu(-) and B yields J/psi, psi' cross sections
| DE94-018996 | p 1808 N95-23242
Outgassing products from orbiter TPS materials
p 1637 N95-23798
A measurement of the mass of the W vector boson at CDF
| DE95-003498 | p 1813 N95-24016
MASS SPECTROMETERS
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
| DE95-001135 | p 1687 N95-22682
MASS SPECTROSCOPY
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
| DE95-001135 | p 1687 N95-22682
Recent developments in inductively coupled plasma source magnetic sector multiple collector mass spectrometry
| DE95-003002 | p 1830 N95-22793
Precise determinations of the isotopic compositions and atomic weights of molybdenum, tellurium, tin and tungsten using ICP source magnetic sector multiple collector mass spectrometry
| DE95-003003 | p 1632 N95-22795
MASS TRANSFER
Mass transport through polycrystalline microstructures
| DE95-004552 | p 1811 N95-23576
MASSIFS
Mapping of the Ronda peridotite massif (Spain) from AVIRIS spectro-imaging survey: A first attempt
p 1707 N95-23878
MASSIVELY PARALLEL PROCESSORS
Evaluation of a Multiple Instruction/Multiple Data (MIMD) parallel computer for CFD applications
| AD-A285796 | p 1762 N95-22509
MATCHING
A fuzzy structural matching scheme for space robotics vision p 1778 N95-23737
MATERIALS RECOVERY
Chemical recycling of scrap composites
p 1629 N95-23034
MHD seed recovery and regeneration, phase 2
| DE95-004308 | p 1833 N95-23338
MATERIALS SCIENCE
Deflections of anisotropic sandwich beams with variable face sheets and core thicknesses p 1700 N95-23310
MATERIALS TESTS
A ruggedness evaluation of procedures for damage threshold testing optical materials
| NASA-TM-4639 | p 1840 N95-22803
Offgassing test methodology for composite materials
p 1629 N95-23035
Calorimetric measurement of energy of ultrasonic cleaners
| DE95-003938 | p 1800 N95-23375
Explosive bonding and its application in the Advanced Photon Source front-end and beamline components design
| DE95-004132 | p 1696 N95-23397
LDEF materials results for spacecraft applications: Executive summary
| NASA-CP-3261 | p 1617 N95-23549
The sound insulations of studio doors. Part 1: Door blanks
| BBC-RD-1994/14 | p 1654 N95-24093
MATHEMATICAL LOGIC
Temporal model theory for default logic
| PB95-127346 | p 1766 N95-22524
Temporal operators viewed as predicate transformers
| PB95-138996 | p 1757 N95-23152
Combinatorial semantics
| TR-563 | p 1792 N95-23793
Martin-Lof tests can help too
| TR-541 | p 1797 N95-24063
MATHEMATICAL MODELS
Particle kinetic simulation of high altitude hypervelocity flight
| NASA-CR-197383 | p 1664 N95-22481
Roles and dynamic subclasses: A modal logic approach
| PB95-127320 | p 1754 N95-22522
Jackson system development, entity-relationship analysis and data flow models: A comparative study
| PB95-127338 | p 1855 N95-22523
Temporal model theory for default logic
| PB95-127346 | p 1766 N95-22524
Method for building and evaluating formal specifications of object-oriented conceptual models of database systems
| PB95-127353 | p 1855 N95-22525
Nonparametric measure of spatial interaction in point patterns
| PB95-127965 | p 1793 N95-22527
Browsing semantics in the tower model
| PB95-127221 | p 1855 N95-22534
Effects of wind on rainfall simulation. Spatial distribution of water application, kinetic energy, and overland flow under single full-cone nozzle sprays
| PB95-127304 | p 1717 N95-22537
The chirality operators for Heisenberg spin systems
| DE94-629043 | p 1847 N95-22545
Analysis of physiochemical processes during solder aging
| DE95-003811 | p 1638 N95-22576
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 1: HARP introduction and user's guide
| NASA-TP-3452-VOL-1 | p 1754 N95-22603
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 2: HARP tutorial
| NASA-TP-3452-VOL-2 | p 1755 N95-22604
Glass science tutorial: Lecture 1, Chemistry and properties of oxide glasses
| DE95-002963 | p 1647 N95-22647
LCM 3.0: A language for describing conceptual models. Syntax definition
| PB95-128005 | p 1755 N95-22652
A model for ball lightning
| DE95-003366 | p 1742 N95-22701
Computer modeling of detonators
| DE95-003031 | p 1652 N95-22721
Chemical vapor deposition in low pressure batch furnaces
| DE95-003035 | p 1632 N95-22722
A model of mesons based on chi SB in the light-front frame
| DE95-003203 | p 1802 N95-22731
Analyses, algorithms, and computations for models of high-temperature superconductivity
| DE95-003290 | p 1661 N95-22733
Measurements and modeling of impurity source distributions from the Tore Supra outboard pump limiter
| DE95-003097 | p 1831 N95-22800
Specification and verification of gate-level VHDL models of synchronous and asynchronous circuits
| NASA-CR-191608 | p 1762 N95-22830
Observation model and parameter partials for the JPL VLBI parameter estimation software MODEST, 19 94
| NASA-CR-197328 | p 1756 N95-22853
Photon and electron interaction databases and their use in medical applications
| DE94-015558 | p 1855 N95-22871
Modeling NO(x) emissions in turbulent jet flames: Effects of buoyancy and radiation
| DE94-016621 | p 1633 N95-22886
Computational modeling of properties
| NAS-CR-196544 | p 1841 N95-22907
Statistically generated weighted curve fit of residual functions for modal analysis of structures
| NASA-TM-108481 | p 1699 N95-22950
Magnetospheric space plasma investigations
| NASA-CR-197405 | p 1831 N95-22955
Second International Workshop on Harmonic Oscillators
| NASA-CP-3286 | p 1820 N95-22957
Algebraic approach to the vibrational excitations in methane p 1814 N95-22960
Algebraic description of atom-molecule interactions
p 1814 N95-22961
Fibonacci chain polynomials: Identities from self-similarity p 1814 N95-22962
A supersymmetric family of harmonic oscillators simulating H-bonds in DNA p 1748 N95-22963
Molecular vibrational states during a collision
p 1814 N95-22964
Quantum field between moving mirrors: A three dimensional example p 1821 N95-22965
Harmonic oscillator representation in the theory of scattering and nuclear reactions p 1814 N95-22967
Geometrical interpretation for the outer SU(3) outer multiplicity label p 1814 N95-22968
Boson mapping techniques applied to constant gauge fields in QCD p 1814 N95-22969
An algebraic cluster model based on the harmonic oscillator basis p 1814 N95-22971
Oscillator-like coherent states for the Jaynes-Cummings Model p 1826 N95-23003
Slightly anharmonic systems in quantum optics
p 1826 N95-23004
Origins of interstellar and solar system: Carbonaceous materials
| NASA-CR-197436 | p 1867 N95-23013
Surface growth of two kinds of particles deposition models
| DE94-628480 | p 1841 N95-23021
Modeling aerosol emissions from the combustion of composite materials p 1629 N95-23038
An extension of Freedman's results on a model of predator-prey dynamics as modified by the action of a parasite
| DE94-628488 | p 1796 N95-23052
A numerical study of interannual wind forcing effects on the California current system, 1980-1983
| AD-A286023 | p 1743 N95-23074
The probabilistic structure of sprays: Implications for measurements by in site particle counters
| DE95-002483 | p 1666 N95-23081
The electronic structure of heavy element complexes
| DE95-003407 | p 1806 N95-23082
Modeling of the coupled magnetospheric and neutral wind dynamos
| NASA-CR-197861 | p 1738 N95-23090
Segregated rigid and structural control for a photolithography positioning system
| DE95-002603 | p 1766 N95-23134
Supersonic jet noise reductions predicted with increased jet spreading rate
| NASA-TM-106872 | p 1800 N95-23178
Development and verification of a resin film infusion/resin transfer molding simulation model for fabrication of advanced textile composites
| NASA-CR-197439 | p 1648 N95-23179
An approximate theoretical method for modeling the static thrust performance of non-axisymmetric two-dimensional convergent-divergent nozzles
| NASA-CR-195050 | p 1608 N95-23193
Damage-mitigating control of a reusable rocket engine for high performance and extended life
| NASA-CR-4640 | p 1654 N95-23195
An investigation of helicopter dynamic coupling using an analytical model
| NASA-CR-197420 | p 1612 N95-23217
Idealized textile composites for experimental/analytical correlation p 1631 N95-23277
Infinite possibilities: Computational structures technology p 1700 N95-23280
Deflections of anisotropic sandwich beams with variable face sheets and core thicknesses p 1700 N95-23310
Aeroacoustic computation of gust-blade interaction
p 1800 N95-23313
Inner loop flight control for the High-Speed Civil Transport p 1616 N95-23314
Preparation of course materials: Elementary mathematics of powered flight p 1853 N95-23320
Associated with aerospace vehicles development of methodologies for the estimation of thermal properties
p 1700 N95-23321
Computational modelling of Er(3+): Garnet laser materials p 1692 N95-23326
A hybrid vehicle evaluation code and its application to vehicle design
| DE95-004205 | p 1662 N95-23334
Dynamic response of a transducer mounted at one end of an acoustical cavity which is subjected to a specified pressure at the open end of the cavity
| DE95-004192 | p 1799 N95-23379
Diffusion behavior of lysozyme in aqueous ammonium sulfate solutions under varying solution conditions as determined by dynamic light scattering
| DE95-004821 | p 1635 N95-23380
Ethylene oxidation chemistry in a well-stirred reactor
| DE95-004823 | p 1635 N95-23381
Integrating O/S models during conceptual design, part 1
| NASA-CR-197903 | p 1622 N95-23398
Integrating O/S models during conceptual design, part 2
| NASA-CR-197904 | p 1622 N95-23399
Integrating O/S models during conceptual design, part 3
| NASA-CR-197905 | p 1622 N95-23400

Reduced dimer production in solar-simulator-pumped continuous wave iodine lasers based on model simulations and scaling and pumping studies
| NASA-TP-3486 | p 1691 N95-23411
Heat transfer in rocket engine combustion chambers and nozzles p 1668 N95-23413
A generic efficient adaptive grid scheme for rocket propulsion modeling p 1670 N95-23418
Numerical study of the SSME nozzle flow fields during transient operations: A comparison of the animated results with test p 1673 N95-23434
Aerodynamic design and analysis of a highly loaded turbine exhaust p 1673 N95-23435
Three-dimensional viscous flow analysis inside a turbine volute p 1674 N95-23437
Phase 2: HGM air flow tests in support of HEX vane investigation p 1674 N95-23438
Detailed measurements in the SSME high pressure fuel turbine with smooth rotor blades p 1675 N95-23441
Liquid propellant rocket engine combustion simulation with a time-accurate CFD method p 1676 N95-23445
Spontaneous wave packet reduction
| DE94-634280 | p 1851 N95-23454
Spinning particles in the Euclidean Taub-NUT space
| DE94-634320 | p 1810 N95-23456
A wavenumber-partitioning scheme for two-dimensional statistical closures
| DE95-004514 | p 1677 N95-23483
Study of b(anti b) production in e(+)e(-) annihilation at radical s = 29 GeV with the aid of neural networks
| DE95-004691 | p 1810 N95-23488
Thermal modeling of the lithium/polymer battery
| DE95-004680 | p 1663 N95-23494
Moving mass trim control for aerospace vehicles
| DE95-002602 | p 1622 N95-23532
Electromagnetic production of pions on the nucleon
| DE95-004658 | p 1811 N95-23587
CFD analysis of spray combustion and radiation in OMV thrust chamber p 1637 N95-23645
Modeling of non-spherical droplet dynamics p 1685 N95-23647
Theoretical estimates of high frequency acoustic attenuation and backscattering from suspended sand particles in the ocean and in an estuary
| DSTO-TR-0078 | p 1743 N95-23667
Simulation of cookoff results in a small scale test
| DSTO-TR-0090 | p 1653 N95-23668
Operator procedure verification with a rapidly reconfigurable simulator p 1618 N95-23679
Learning time series for intelligent monitoring p 1770 N95-23686
Path planning for planetary rover using extended elevation map p 1771 N95-23689
Autonomous navigation system for the Marsokhod rover project p 1771 N95-23693
A toolbox and record for scientific models p 1775 N95-23716
Assimilation of altimeter data in a quasi-geostrophic model of the Gulf Stream system: A dynamical perspective
| NASA-CR-196313 | p 1744 N95-23766
Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 1 p 1703 N95-23856
Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 2 p 1703 N95-23857
Objective determination of image end-members in spectral mixture analysis of AVIRIS data p 1709 N95-23888
Statistics of multi-look AIRSAR imagery: A comparison of theory with measurements p 1714 N95-23947
A modal test design strategy for model correlation
| DE95-003631 | p 1759 N95-24020
Improved AVHRR data navigation using automated land feature recognition to correct a satellite orbital model
| CSIRO-TR-34 | p 1718 N95-24026
Unsupervised classification learning from cross-modal environmental structure
| TR-536 | p 1784 N95-24040
Pauli-blocking effects in neutron-alpha reactions
| DE94-016358 | p 1813 N95-24046
A multibody/finite element analysis approach for modeling of crash dynamic responses
| NIAR-94-3 | p 1610 N95-24050
Transferring ecosystem simulation codes to supercomputers
| NASA-TM-4662 | p 1759 N95-24052
Thermal radiant exitance model performance: Soils and forests
| DE95-003619 | p 1721 N95-24148
Modeling of tritium recovery from lithium ceramics
| DE95-004626 | p 1838 N95-24167
A phenomenological model for the effect of nanocrystalline microstructure on irradiation-induced amorphization in U3Si
| DE95-004631 | p 1846 N95-24169

MATHEMATICAL PROGRAMMING
Capacitated facility location: Valid inequalities and facets (revised)
| PB95-130225 | p 1786 N95-22641

MATHEMATICS
Teacher Enhancement Institute p 1853 N95-23312
Schwarz-Christoffel methods for multiply-elongated regions
| DE94-019048 | p 1790 N95-23536

MATRICES (MATHEMATICS)
Is omega* - (mu) absolutely countably compact?
| PB95-127981 | p 1785 N95-22528
Parallal Arnoldi method for the construction of a Krylov subspace basis: An application in magnetohydrodynamics
| PB95-135786 | p 1787 N95-22717
Jacobson radicals in matrix near rings
| DE94-628424 | p 1796 N95-22808
Finite-element time evolution operator for the anharmonic oscillator p 1823 N95-22983
Second derivative of the likelihood of an exact ARMA model
| PB95-135158 | p 1788 N95-23069
Asymptotic justification for a modified GLS procedure to estimate ARMA parameters
| PB95-135166 | p 1788 N95-23070
Characterization of non-negative greedy matrices
| PB95-139366 | p 1757 N95-23232
Partition of real symmetric matrices according to the multiplicities of their eigenvalues
| PB95-139846 | p 1790 N95-23235
Taylor series expansion and modified extended Prony analysis for localization
| DE95-003671 | p 1758 N95-23567
Block LU factorization
| NASA-CR-197949 | p 1791 N95-23592
Tutorial on filtering, restoration, and state estimation
| TR-534 | p 1793 N95-24042

MATRIX MATERIALS
Method of making a semiconductor device using a nanochannel glass matrix
| AD-D016383 | p 1662 N95-23241
US Navy operating experience with new aircraft construction materials p 1645 N95-23517

MATRIX METHODS
A new look at the simultaneous analysis and design of structures p 1700 N95-23327

MATTER (PHYSICS)
Neutrinos with Zee-mass matrix in vacuum and matter
| DE94-628635 | p 1803 N95-22756

MAXIMUM ENTROPY METHOD
Non-zero temperature two-mode squeezing for time-dependent two-level systems
| DE94-628427 | p 1850 N95-22782

MAXIMUM LIKELIHOOD ESTIMATES
Ghost images and feasibility of reconstructions with the Richardson-Lucy algorithm
| DE95-002351 | p 1756 N95-23079
A preliminary measurement of the average B hadron lifetime
| DE95-003138 | p 1808 N95-23226
Maximum-likelihood spectral estimation and adaptive filtering techniques with application to airborne Doppler weather radar
| NASA-CR-197699 | p 1658 N95-23670

MAXWELL EQUATION
Generalized phase transformations of spinor fields
| DE94-628505 | p 1656 N95-22841

MEASURE AND INTEGRATION
A generalized Eulerian-Lagrangian analysis, with application to liquid flows with vapor bubbles p 1682 N95-23633
Weyl connection and non-Abelian gauge field
| DE94-635440 | p 1851 N95-23969

MEASURING INSTRUMENTS
Radioisotope thermoelectric generator transportation system subsystem 143 software development plan
| DE95-003774 | p 1662 N95-23351

MECHANICAL DEVICES
Toys in space, 2
| NASA-TM-110541 | p 1620 N95-23275

MECHANICAL PROPERTIES
High-velocity penetrators
| DE95-001886 | p 1698 N95-22500
Glass science tutorial: Lecture 1, Chemistry and properties of oxide glasses
| DE95-002963 | p 1647 N95-22647
Glass science tutorial: Lecture 2, operating electric glass melters
| DE95-002965 | p 1647 N95-22648
Investigation of mechanical properties and their relation to the internal structure of nanocrystalline metals and composites
| DE95-001151 | p 1627 N95-22683
Investigation of depth-area relationships associated with nanoindentations
| DE95-001353 | p 1639 N95-22686
Plinius intermediate report
| PB95-135216 | p 1648 N95-23128
Idealized textile composites for experimental/analytical correlation p 1631 N95-23277
Explosive bonding and its application in the Advanced Photon Source front-end and beamline components design
| DE95-004132 | p 1696 N95-23397
Structure and properties of polymeric composite materials during 1501 days outer space exposure at Salyut-7 orbital station p 1652 N95-23915

MEDICAL EQUIPMENT
Continuation of BNCT Research Program at NEMC and MIT
| DE94-016228 | p 1748 N95-22875
Biological interactions and human health effects of static magnetic fields
| DE95-003147 | p 1749 N95-24145

MEDICAL SCIENCE
The development and applications of biomarkers
| DE94-014249 | p 1744 N95-22589

MELTING
Metallization and incomplete melting of a semiconductor surface at high temperature
| DE94-627342 | p 1660 N95-22591
Glass science tutorial: Lecture 2, operating electric glass melters
| DE95-002965 | p 1647 N95-22648
Oxygen enriched combustion system performance study. Phase 2: 100 percent oxygen enriched combustion in regenerative glass melters
| DE95-004212 | p 1635 N95-23481
Microstructural behavior of nonequilibrium systems
| DE95-004450 | p 1630 N95-23924
Processing of single- and multi-domain YBa2Cu3O(x) bulk materials for levitation applications by Nd(1+x)Ba(2-x)Cu3O(y) seeding
| DE95-004615 | p 1845 N95-24154

MELTS (CRYSTAL GROWTH)
Initial crystallization and growth in melt processing of large-domain YBa2Cu3O(x) for magnetic levitation
| DE95-002993 | p 1839 N95-22572
The 1993 Annual Conference of the Israeli Association for Crystal Growth. Program and abstracts
| DE94-633510 | p 1841 N95-22854

MEMORY
Functions of external cues in prospective memory
| DOT/FAA/AM-95/9 | p 1750 N95-24088

MEMORY (COMPUTERS)
A draft standard for message passing in a distributed memory environment
| DE94-019159 | p 1657 N95-23075
Verifying sequentially consistent memory using interface refinement
| PB95-139002 | p 1752 N95-23153
GPP user's guide: A general-purpose postprocessor for wind turbine data analysis
| DE95-000293 | p 1730 N95-23776
Scalability of atomic primitives on distributed shared memory multiprocessors
| TR-528 | p 1764 N95-23930
Unifying data and control transformations for distributed shared-memory machines
| TR-542 | p 1765 N95-24061
Petabyte mass memory system using the Newell Opticel(TM) p 1753 N95-24119
Using simple page placement policies to reduce the cost of cache fills in coherent shared-memory systems
| TR-535 | p 1753 N95-24177
Lazy release consistency for hardware-coherent multiprocessors
| TR-547 | p 1765 N95-24184

MENTAL PERFORMANCE
Some performance effects of age and low blood alcohol levels on a computerized neuropsychological test
| DOT/FAA/AM-95/7 | p 1749 N95-23788

MERCURY (METAL)
Mercury detection with thermal neutrons
| DE95-002061 | p 1806 N95-23055

MESON-MESON INTERACTIONS
(pi)- and a(sub 1)-meson physics in current algebra at the quark level
| DE94-628611 | p 1804 N95-22811

MESONS
New preliminary results on the physics of charm hadroproduction subprocesses
| DE95-002530 | p 1801 N95-22646

QCD improved exclusive rare B-decays at the heavy b-quark limit
|DE94-628609| p 1802 N95-22720
A model of mesons based on chi SB in the light-front frame
|DE95-003203| p 1802 N95-22731
On the D yields K-bar(sup *)e(sup +)(nu)(sub e) form factors
|DE94-628614| p 1803 N95-22754
To the problem of D-meson leptonic and semileptonic decays
|DE94-628615| p 1803 N95-22755
The U(3) x U(3) Nambu - Jona-Lasinio model with the gluon condensate and axial anomaly at finite temperature
|DE94-628588| p 1804 N95-22787
The decays of D(sup *)-mesons
|DE94-628610| p 1804 N95-22810
(pi)- and a(sub 1)-meson physics in current algebra at the quark level
|DE94-628611| p 1804 N95-22811
The omega pi(sup 0)-transient form factor within effective chiral Lagrangian approach
|DE94-628612| p 1850 N95-22812
Heavy quark physics at SLD: Preliminary results
|DE95-003372| p 1806 N95-23138
Flavour dependence of form factors in heavy meson decays
|PB95-139101| p 1807 N95-23156
J/psi, psi' yields mu(+)mu(-) and B yields J/psi, psi' cross sections
|DE94-018996| p 1808 N95-23242
Recent results from Fermilab E-687, charm particle decays, lifetimes and photoproduction dynamics: A compilation results presented at DPF 1994
|DE95-004580| p 1808 N95-23347
Inclusive rapidity correlations of (pi)(-) mesons in pp-interactions
|DE94-635654| p 1812 N95-23974

MESSAGE PROCESSING
Learning time series for intelligent monitoring p 1770 N95-23686

MESSAGES
Hierarchical membership protocol for synchronous distributed systems
|PB95-138947| p 1763 N95-23129
Algebraic semantics of basic message sequence charts
|PB95-138970| p 1657 N95-23151
Eliminating useless messages in write-update protocols on scalable multiprocessors
|TR-539| p 1764 N95-24037

METABOLISM
Plant metabolism and cell wall formation in space (microgravity) and on Earth
|NASA-CR-197618| p 1745 N95-22801

METAL BONDING
Support research for solid oxide fuel cells
|DE95-002910| p 1726 N95-22568

METAL CLUSTERS
Structure, melting, and reactivity of nickel clusters from numerical simulations
|DE95-002911| p 1638 N95-22531
Ionic core effects on the Mie resonance in lithium clusters
|DE94-014974| p 1805 N95-22870
Thermochemistry of transition metal clusters
|DE95-003144| p 1646 N95-24144

METAL COATINGS
The corrosion protection of 2219-T87 aluminum by organic and inorganic zinc-rich primers
|NASA-TP-3543| p 1641 N95-23186
Durability of reflector materials in the space environment p 1651 N95-23912
Cu deposition using a permanent magnet electron cyclotron resonance microwave plasma source
|DE94-017768| p 1650 N95-23981

METAL FATIGUE
Nondestructive evaluation of fatigue damage in aluminum 2024 by x-ray diffraction p 1698 N95-23293
Effect of loading direction and long-term aging on fatigue-crack growth in Al-Li alloy 2090 p 1641 N95-23499

METAL FILMS
Vacuum vapor deposition
|NASA-CASE-MFS-28652-1| p 1647 N95-22558
Orientation selection and microstructural evolution of epitaxial platinum films on (001) magnesium oxide
|DE95-003680| p 1842 N95-23265
Spin polarized photoemission studies of magnetic quantum well states
|DE95-004218| p 1851 N95-23335
Measurements of the optical properties of thin films of silver and silver oxide p 1651 N95-23906
Changes in chemical and optical properties of thin film metal mirrors on LDEF p 1651 N95-23907
Epitaxial growth of bcc transition metal films and superlattices onto MgO (111), (011) and (001) substrates
|DE95-004629| p 1846 N95-24168

METAL FOILS
Protective coating for ceramic materials
|NASA-CASE-ARC-11969-1-CU| p 1649 N95-23394
Micro-abrasion package capture cell experiment on the trailing edge of LDEF: Impactor chemistry and whipple bumper shield efficiencies p 1624 N95-23835

METAL FUELS
Microgravity combustion science: 1995 program update
|NASA-TM-106858| p 1626 N95-24004

METAL IONS
Solvation of isolated transition metal ions
|DE95-002978| p 1638 N95-22571

METAL OXIDES
Electrochemical studies of perovskite mixed conductors
|DE95-003704| p 1636 N95-23573
Four space application material coatings on the Long-Duration Exposure Facility (LDEF) p 1651 N95-23913

METAL PLATES
The effect of impact angle on craters formed by hypervelocity particles p 1700 N95-23839
Characterization of Type 304L stainless steel solid-state closure welds for radioactive waste containment
|DE94-016539| p 1645 N95-23980

METAL SHEETS
Technology maturation project on optimization of sheet metal forming of aluminum for use in transportation systems
|DE95-003005| p 1654 N95-22692

METAL SURFACES
Advanced growth and surface analysis system for in situ studies of interface formation
|DE95-002850| p 1838 N95-22555
Pulsed Ion Beam Surface Treatment for preparing rapidly solidified corrosion resistant alloy surfaces
|DE94-012072| p 1640 N95-22835
Nanophase materials: Synthesis, properties, applications
|AD-A286013| p 1627 N95-22940
Charge distribution analysis of catalysts under simulated reaction conditions
|DE95-003526| p 1633 N95-23064
Experimental technique and assessment for measuring the convective heat transfer coefficient from natural ice accretions
|NASA-TM-106864| p 1668 N95-23248
Natural and orbital debris particles on LDEF's trailing and forward-facing surfaces p 1869 N95-23833
Secondary ion mass spectrometry (SIMS) analysis of hypervelocity microparticle impact sites on LDEF surfaces p 1637 N95-23836
Collection and review of metals data obtained from LDEF experiment specimens and support hardware p 1646 N95-23905
Solderability preservation through the use of organic inhibitors
|DE95-003633| p 1664 N95-24149

METAL WORKING
Technology maturation project on optimization of sheet metal forming of aluminum for use in transportation systems
|DE95-003005| p 1654 N95-22692
Characterization of Type 304L stainless steel solid-state closure welds for radioactive waste containment
|DE94-016539| p 1645 N95-23980

METAL-WATER REACTIONS
The use of electrochemical impedance spectroscopy to predict the corrosion of aluminum-lithium alloys in marine environments p 1637 N95-23504

METALLIC GLASSES
Microstructural behavior of nonequilibrium systems
|DE95-004450| p 1630 N95-23924

METALLIZING
Vacuum vapor deposition
|NASA-CASE-MFS-28652-1| p 1647 N95-22558

METALLOGRAPHY
X-ray transmission microscope development
|NASA-CR-197884| p 1826 N95-23016
Nondestructive evaluation of fatigue damage in aluminum 2024 by x-ray diffraction p 1698 N95-23293

METALORGANIC CHEMICAL VAPOR DEPOSITION
MOCVD of gallium and calcium sulfides for improved phosphor processing
|DE95-000918| p 1631 N95-22677

METALS
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
|DE95-001135| p 1687 N95-22682
Investigation of mechanical properties and their relation to the internal structure of nanocrystalline metals and composites
|DE95-001151| p 1627 N95-22683
Recent developments in inductively coupled plasma source magnetic sector multiple collector mass spectrometry
|DE95-003002| p 1830 N95-22793
Aqueous alternatives for metal and composite cleaning p 1630 N95-23039
Strongly interacting fermion systems
|DE95-003405| p 1806 N95-23054
Computational studies of metal-metal and metal-ligand interactions
|NASA-CR-197862| p 1641 N95-23215
Collection and review of metals data obtained from LDEF experiment specimens and support hardware p 1646 N95-23905
Reproducible direct exposure environmental testing of metal-based magnetic media p 1690 N95-24129

METAMORPHISM (GEOLOGY)
Lithologic discrimination and alteration mapping from AVIRIS Data, Socorro, New Mexico p 1701 N95-23847

METASTABLE STATE
Study of frustrated systems via dissipative maps
|PB95-139093| p 1799 N95-23155
Temperature effects on ion irradiation damage in MgAl2O4 spinel single crystals
|DE95-003679| p 1844 N95-24073

METEORITE COLLISIONS
Small craters on the meteoroid and space debris impact experiment p 1623 N95-23825
Penetration rates over 30 years in the space age p 1624 N95-23827
Debris and meteoroid proportions deduced from impact crater residue analysis p 1869 N95-23834

METEORITE CRATERS
Micrometeoroids and debris on LDEF comparison with MIR data p 1623 N95-23824
Small craters on the meteoroid and space debris impact experiment p 1623 N95-23825

METEORITIC DAMAGE
Status of LDEF contributions to current knowledge of meteoroid and manmade debris environments and their effects on spacecraft in LEO p 1623 N95-23822
LDEF meteoroid and debris special investigation group investigations and activities at the Johnson Space Center p 1623 N95-23823
Micrometeoroids and debris on LDEF comparison with MIR data p 1623 N95-23824
Natural and orbital debris particles on LDEF's trailing and forward-facing surfaces p 1869 N95-23833

METEOROID CONCENTRATION
Small craters on the meteoroid and space debris impact experiment p 1623 N95-23825
Orbital debris and meteoroid population as estimated from LDEF impact data p 1869 N95-23830

METEOROIDS
Status of LDEF contributions to current knowledge of meteoroid and manmade debris environments and their effects on spacecraft in LEO p 1623 N95-23822
LDEF meteoroid and debris special investigation group investigations and activities at the Johnson Space Center p 1623 N95-23823
Orbital debris and meteoroid population as estimated from LDEF impact data p 1869 N95-23830
Natural and orbital debris particles on LDEF's trailing and forward-facing surfaces p 1869 N95-23833

METEOROLOGICAL PARAMETERS
Compendium of NASA data base for the Global Tropospheric Experiment's Pacific Exploratory Mission West-A (PEM West-A)
|NASA-TM-109177| p 1733 N95-23009
Study of atmospheric parameters measurements using MM-wave radar in synergy with LITE-2 p 1741 N95-23278
Estimation of aerosol optical depth and additional atmospheric parameters for the calculation of apparent reflectance from radiance measured by the Airborne Visible/Infrared Imaging Spectrometer p 1704 N95-23863

METEOROLOGICAL RADAR
Accuracy of radar rainfall estimates compared to raingauge measurements and a hydrological application
|PB95-127296| p 1741 N95-22640
SWIFT BOAT 1994: Using a fast chase boat to investigate offshore weather features in conjunction with WSR-88D observations
|PB94-195146| p 1742 N95-22651
Maximum-likelihood spectral estimation and adaptive filtering techniques with application to airborne Doppler weather radar
|NASA-CR-197699| p 1658 N95-23670

METEOROLOGICAL SATELLITES
Calculation of satellite drag coefficients
| AD-A285118 | p 1622 N95-23781
METEOROLOGY
Development of an advanced finite difference atmospheric general circulation model
| DE95-003187 | p 1736 N95-22879
RAS Division model evaluation database description
| DE95-003481 | p 1733 N95-23124
Extraction of auxiliary data from AVIRIS distribution tape for spectral, radiometric, and geometric quality assessment p 1706 N95-23875
METHANATION
Transmethylation reactions during methanogenesis from acetate in Methanosarcina barkeri
| DE94-016222 | p 1745 N95-22873
METHANE
Emissions of greenhouse gases in the United States, 1987-1992
| DE95-003001 | p 1731 N95-22691
Transmethylation reactions during methanogenesis from acetate in Methanosarcina barkeri
| DE94-016222 | p 1745 N95-22873
Algebraic approach to the vibrational excitations in methane p 1814 N95-22960
Ethylene oxidation chemistry in a well-stirred reactor
| DE95-004823 | p 1635 N95-23381
Effects of jet strength on NOx formation in premixed impinging jet combustion with minimum heat losses
| NAL-TR-1237T | p 1637 N95-24181
METHODOLOGY
Addendum to the Proceedings of the Third International Mobile Satellite Conference (IMSC 1993)
| NASA-CR-197343 | p 1655 N95-22813
METHYL ALCOHOL
The influence of high-octane fuel blends on the performance of a two-stroke SI engine with knock-limited-compression ratio
| DE95-002902 | p 1692 N95-22556
Performance of thin-ceramic-coated combustion chamber with gasoline and methanol as fuels in a two-stroke SI engine
| DE95-002903 | p 1693 N95-22557
Transmethylation reactions during methanogenesis from acetate in Methanosarcina barkeri
| DE94-016222 | p 1745 N95-22873
METHYL COMPOUNDS
Pressure shifts and electron scattering in atomic and molecular gases
| DE95-003102 | p 1803 N95-22747
Transmethylation reactions during methanogenesis from acetate in Methanosarcina barkeri
| DE94-016222 | p 1745 N95-22873
Atmospheric peroxides
| DE95-004435 | p 1733 N95-23362
METRIC SPACE
Q-analytic functions on quantum spaces
| DE94-628412 | p 1847 N95-22621
Geometry of Moishezon and 1-convex spaces 2: Projectivity of Moishezon spaces and its non-compact version
| DE94-628415 | p 1795 N95-22623
A new method of constructing scalar-flat Kaehler surfaces
| DE94-628419 | p 1785 N95-22627
Hausdorff dimension of Julia sets of complex Henon mappings
| DE94-628420 | p 1785 N95-22628
A prescribing geodesic curvature problem
| DE94-628503 | p 1787 N95-22750
Spinning particles in the Euclidean Taub-NUT space
| DE94-634320 | p 1810 N95-23456
Relating multifunctions and predicate transformers through closure operators
| PB95-135646 | p 1757 N95-23467
METROLOGY
EUV metrology of multilayer optics
| DE95-003036 | p 1819 N95-22723
MICE
Rearrangement of RAG-1 recombinase gene in radiation-sensitive wasted mice
| DE94-017083 | p 1746 N95-22913
A comparative study of the effects of clofibrate, ciprofibrate, WY-14,643, and di-(2-ethylhexyl)-phthalate on liver protein expression in mice
| DE94-016587 | p 1748 N95-23771
MICHELSON INTERFEROMETERS
Nonclassical light in interferometric measurements p 1822 N95-22976
MICROANALYSIS
Analytical electron microscopy of LDEF impactor residues p 1869 N95-23832
Natural and orbital debris particles on LDEF's trailing and forward-facing surfaces p 1869 N95-23833
Micro-abrasion package capture cell experiment on the trailing edge of LDEF: Impactor chemistry and whipple bumper shield efficiencies p 1624 N95-23835
SIMS chemical and isotopic analysis of impact features from LDEF experiments AO187-1 and AO187-2 p 1637 N95-23837
Image and compositional characteristics of the LDEF Big Guy impact crater p 1700 N95-23838
High resolution microstructural analysis of zirconia eutectic interfaces
| DE95-003143 | p 1845 N95-24143
MICROCHANNEL PLATES
Development of microchannel plate x-ray optics
| NASA-CR-197935 | p 1866 N95-23540
MICROCRYSTALS
A fractal model for intergranular fractures in nanocrystals
| DE94-627393 | p 1839 N95-22606
MICROGRAVITY
Quick look report of acceleration measurements on Mir Space Station during Mir-16
| NASA-TM-106835 | p 1621 N95-22667
Plant metabolism and cell wall formation in space (microgravity) and on Earth
| NASA-CR-197618 | p 1745 N95-22801
Microgravity sciences application visiting scientist program
| NASA-CR-197854 | p 1653 N95-23204
Microgravity experiments safety and integration requirements document tree
| NASA-CR-195447 | p 1855 N95-23206
Newton in space
| NASA-TM-110535 | p 1799 N95-23273
Living in space
| NASA-TM-110536 | p 1751 N95-23274
Toys in space, 2
| NASA-TM-110541 | p 1620 N95-23275
USML-1 microgravity glovebox experiment no. 1 Passive Accelerometer System
| NASA-CR-196575 | p 1653 N95-23552
All systems go!
| NASA-TM-110542 | p 1620 N95-23665
A new containerless image furnace with electro-static positioning device p 1690 N95-23674
Development of the dynamic motion simulator of 3D micro-gravity with a combined passive/active suspension system p 1618 N95-23711
Microgravity combustion science: 1995 program update
| NASA-TM-106858 | p 1626 N95-24004
USML-1 Glovebox experiments
| NASA-CR-196574 | p 1653 N95-24028
MICROMACHINING
Development of microchannel plate x-ray optics
| NASA-CR-197935 | p 1866 N95-23540
MICROMECHANICS
Thermoelastic theory for the response of materials functionally graded in two directions with applications to the free-edge problem
| NASA-TM-106882 | p 1699 N95-24055
MICROMETEOROIDS
Micrometeoroids and debris on LDEF comparison with MIR data p 1623 N95-23824
Orbital debris and meteoroid population as estimated from LDEF impact data p 1869 N95-23830
Analytical electron microscopy of LDEF impactor residues p 1869 N95-23832
Experimental investigation of the relationship between impact crater morphology and impacting particle velocity and direction p 1700 N95-23840
MICROPARTICLES
Long term microparticle impact fluxes on LDEF determined from optical survey of Interplanetary Dust Experiment (IDE) sensors p 1623 N95-23826
LDEF Interplanetary Dust Experiment (IDE) results p 1869 N95-23828
Hypervelocity impact survivability experiments for carbonaceous impactors, part 2 p 1700 N95-23831
Micro-abrasion package capture cell experiment on the trailing edge of LDEF: Impactor chemistry and whipple bumper shield efficiencies p 1624 N95-23835
Secondary ion mass spectrometry (SIMS) analysis of hypervelocity microparticle impact sites on LDEF surfaces p 1637 N95-23836
MICROPOROSITY
High surface area, high permeability carbon monoliths
| DE95-004555 | p 1650 N95-23577
Microporous polyimide films for reduced dielectric applications
| DE95-004543 | p 1650 N95-24159
MICROSCOPES
X-ray transmission microscope development
| NASA-CR-197884 | p 1826 N95-23016
MICROSCOPY
X-ray transmission microscope development
| NASA-CR-197884 | p 1826 N95-23016
MICROSTRUCTURE
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
| DE95-002941 | p 1638 N95-22532
Initial crystallization and growth in melt processing of large-domain YBa2Cu3O(x) for magnetic levitation
| DE95-002993 | p 1839 N95-22572
An investigation into the effects of hydrogen on the fracture and deformation of Alloy X-750
| DE95-003206 | p 1639 N95-22732
Long-term aging of type 308 stainless steel welds: Effects on properties and microstructure
| DE94-018961 | p 1640 N95-23132
Surface structural dependence of cesium adsorption on the (alpha)-Al2O3(0001) surface
| DE95-002610 | p 1842 N95-23135
Orientation selection and microstructural evolution of epitaxial platinum films on (001) magnesium oxide
| DE95-003680 | p 1842 N95-23265
Nondestructive evaluation of fatigue damage in aluminum 2024 by x-ray diffraction p 1698 N95-23293
Internal strain measurement using pulsed neutron diffraction at LANSCE
| DE95-003677 | p 1842 N95-23365
Mass transport through polycrystalline microstructures
| DE95-004552 | p 1811 N95-23576
Structure and properties of polymeric composite materials during 1501 days outer space exposure at Salyut-7 orbital station p 1652 N95-23915
Microstructural behavior of nonequilibrium systems
| DE95-004450 | p 1630 N95-23924
Thermoelastic theory for the response of materials functionally graded in two directions with applications to the free-edge problem
| NASA-TM-106882 | p 1699 N95-24055
The effect of elastic stress on Ostwald Ripening Phenomena
| DE95-002599 | p 1646 N95-24140
High resolution microstructural analysis of zirconia eutectic interfaces
| DE95-003143 | p 1845 N95-24143
Effects of Bi and Bi2O3 additions on the microstructure and superconducting properties of powder-in-tube BSCCO (2212) tapes
| DE95-004605 | p 1845 N95-24150
Microstructure and composition of a SNS Josephson junction using CaRuO3 as the metallic barrier
| DE95-004611 | p 1845 N95-24152
Processing of single- and multi-domain YBa2Cu3O(x) bulk materials for levitation applications by Nd(1 + x)Ba(2-x)Cu3O(y) seeding
| DE95-004615 | p 1845 N95-24154
A phenomenological model for the effect of nanocrystalline microstructure on irradiation-induced amorphization in U3Si
| DE95-004631 | p 1846 N95-24169
Cooling rate effects on the microstructure, critical current density, and (T(sub c)) transition of one- and two-powder BSCCO-2223 Ag sheathed tapes
| DE95-004639 | p 1846 N95-24171
MICROTRONS
The project of high free electron laser using race-track microtron-recuperator
| DE94-634034 | p 1692 N95-23657
MICROWAVE CIRCUITS
Limited bandwidth microwave filter
| AD-D016553 | p 1660 N95-22708
High-performance GaAs/AlGaAs optical modulators: Their performance and packaging for microwave photonic integrated circuits
| DE95-004533 | p 1828 N95-23575
MICROWAVE EMISSION
A new containerless image furnace with electro-static positioning device p 1690 N95-23674
MICROWAVE EQUIPMENT
A 4 MW fast wave current drive upgrade for D3-D
| DE95-003741 | p 1837 N95-24083
MICROWAVE FILTERS
Limited bandwidth microwave filter
| AD-D016553 | p 1660 N95-22708
MICROWAVE IMAGERY
Combining optical and microwave remote sensing data of forest vegetation: MAC Europe 1991
| PB95-127312 | p 1717 N95-22538
Synergy between optical and microwave remote sensing to derive soil and vegetation parameters from MAC Europe 1991 Experiment p 1715 N95-23956
Soil moisture retrieval in the Oberpfaffenhofen testsite using MAC Europe AIRSAR data p 1716 N95-23960
Microwave dielectric properties of boreal forest trees p 1716 N95-23961
MICROWAVE RADIOMETERS
TOGA/COARE AMMR 1992 data processing
| NASA-CR-197289 | p 1736 N95-22867

Upgrade of the 92 GHz airborne multi-channel meteorological radiometer (AMMR)
| NASA-CR-197875 | p 1742 N95-23208

MICROWAVES
Studies of autoionizing states relevant to dielectronic recombination
| DE94-014162 | p 1812 N95-23978
Cu deposition using a permanent magnet electron cyclotron resonance microwave plasma source
| DE94-017768 | p 1650 N95-23981

MILITARY OPERATIONS
Military bases: Environmental impact at closing installations. Report to Congressional requesters
| GAO/NSIAD-95-70 | p 1735 N95-24057
DOD budget: Selected categories of planned funding for fiscal years 1995-99. Report to Congressional requesters
| GAO/NSIAD-95-92 | p 1864 N95-24062
Ballistic Missile Defense: Current status of strategic target system. Report to Congressional requesters
| GAO/NSIAD-95-78 | p 1903 N95-24080

MILITARY TECHNOLOGY
Alert-derivative bimodal space power and propulsion systems
| DE95-002754 | p 1624 N95-22905
Defense technology plan
| AD-A285415 | p 1903 N95-24178
Defense science and technology strategy
| AD-A285414 | p 1903 N95-24179

MILITARY VEHICLES
Fire hazard considerations for composites in vehicle design p 1628 N95-23032

MILLIMETER WAVES
Interstellar molecules in the large magellanic cloud
| PB95-139267 | p 1868 N95-23230
Study of atmospheric parameters measurements using MM-wave radar in synergy with LITE-2 p 1741 N95-23278
Search for millimeterwave CO emission in damped Lyman-alpha systems
| PB95-139259 | p 1868 N95-23607

MIMD (COMPUTERS)
Evaluation of a Multiple Instruction/Multiple Data (MIMD) parallel computer for CFD applications
| AD-A285796 | p 1762 N95-22509
Towards the Teraflop CFD
| NASA-CR-197947 | p 1764 N95-23594

MINERAL EXPLORATION
Lithologic discrimination and alteration mapping from AVIRIS Data, Socorro, New Mexico p 1701 N95-23847

MINERALOGY
The effects of AVIRIS atmospheric calibration methodology on identification and quantitative mapping of surface mineralogy, Drum Mountains, Utah p 1705 N95-23870
Mapping of the Ronda peridotite massif (Spain) from AVIRIS spectro-imaging survey: A first attempt p 1707 N95-23878
Application of MAC-Europe AVIRIS data to the analysis of various alteration stages in the Landdmannalauger Hydrothermal Area (South Iceland) p 1709 N95-23885
Mineralogic variability of the Kelso Dunes, Mojave Desert, California derived from Thermal Infrared Multispectral Scanner (TIMS) data p 1711 N95-23920

MINERALS
The significance of hair mineral analysis as a means for assessing internal body burdens of environmental pollutants
| DE94-633512 | p 1734 N95-23541
Scandinavian symposium on surface chemistry
| PB95-140687 | p 1636 N95-23554
Comparison of three methods for materials identification and mapping with imaging spectroscopy p 1702 N95-23853
The effects of AVIRIS atmospheric calibration methodology on identification and quantitative mapping of surface mineralogy, Drum Mountains, Utah p 1705 N95-23870
The red edge in arid region vegetation: 340-1060 nm spectra p 1708 N95-23881

MINIMUM DRAG
Control of flow separation in airfoil/wing design applications p 1609 N95-23294

MIR SPACE STATION
Quick look report of acceleration measurements on Mir Space Station during Mir-16
| NASA-TM-106835 | p 1621 N95-22667
Mir hardware heritage
| NASA-RP-1357 | p 1621 N95-23249
Micrometeoroids and debris on LDEF comparison with MIR data p 1623 N95-23824

MIRRORS
Quantum field between moving mirrors: A three dimensional example p 1821 N95-22965
Changes in chemical and optical properties of thin film metal mirrors on LDEF p 1651 N95-23907
PRISM Spectrograph Optical Design
| NASA-CR-197965 | p 1828 N95-24035

MISALIGNMENT
Neural network for detection and correction of local boundary misalignments between images
| AD-D016539 | p 1766 N95-22705

MISSILE CONTROL
Moving mass trim control for aerospace vehicles
| DE95-002602 | p 1622 N95-23532

MISSILE DEFENSE
Ballistic Missile Defense: Current status of strategic target system. Report to Congressional requesters
| GAO/NSIAD-95-78 | p 1903 N95-24080

MISSILE TRAJECTORIES
A CFD study of complex missile and store configurations in relative motion
| NASA-CR-197912 | p 1612 N95-22949

MISSION PLANNING
Space Science for the 21st Century. Strategic Plan for 1995-2000
| NASA-TM-110546 | p 1617 N95-22947
STS-61 mission director's post-mission report
| NASA-TM-104803 | p 1617 N95-23262
Integrating O/S models during conceptual design, part 2
| NASA-CR-197904 | p 1622 N95-23399
Operator procedure verification with a rapidly reconfigurable simulator p 1618 N95-23679
An operations and command systems for the extreme ultraviolet explorer p 1770 N95-23687
Autonomous spacecraft executive and its application to rendezvous and docking p 1623 N95-23719
Robotics and telepresence for moon missions p 1776 N95-23725
Modeling actions and operations to support mission preparation p 1617 N95-23750
CRI planning and scheduling for space p 1617 N95-23751
Benefits of advanced software techniques for mission planning systems p 1618 N95-23752
Artificial intelligence techniques for scheduling Space Shuttle missions p 1781 N95-23755
Design and implementation of an experiment scheduling system for the ACTS satellite p 1620 N95-23756
High performance techniques for space mission scheduling p 1618 N95-23758
Applications of dynamic scheduling technique to space related problems: Some case studies p 1618 N95-23759
Solution and reasoning reuse in space planning and scheduling applications p 1618 N95-23760
Integrating planning and reactive control p 1618 N95-23763
Ballistic Missile Defense: Current status of strategic target system. Report to Congressional requesters
| GAO/NSIAD-95-78 | p 1903 N95-24080

MIXING
Biological determinants of photobioreactor design
| DE94-016032 | p 1745 N95-22872

MIXING RATIOS
Objective determination of image end-members in spectral mixture analysis of AVIRIS data p 1709 N95-23888

MIXTURES
The influence of high-octane fuel blends on the performance of a two-stroke SI engine with knock-limited-compression ratio
| DE95-002902 | p 1692 N95-22556
Chemical recognition software
| DE95-003346 | p 1636 N95-24007

MOBILE COMMUNICATION SYSTEMS
Addendum to the Proceedings of the Third International Mobile Satellite Conference (IMSC 1993)
| NASA-CR-197343 | p 1655 N95-22813
Adaptive beamforming in a CDMA mobile satellite communications system p 1655 N95-22815
Passive intermodulation generation in wire mesh deployable reflector antennas p 1656 N95-22816
The possibilities for mobile and fixed services up to the 20/30 GHz frequency bands p 1656 N95-22817
Low Earth Orbit satellite/terrestrial mobile service compatibility p 1656 N95-22819

MOBILITY
Revitalization of the Gemenc-area, Baja, Hungary. 1: A study on hydrological possibilities to revitalise the ecosystem in the Keselyues-area. 2: Towards the restoration of the Gyueruesalj floodplain
| PB95-139283 | p 1718 N95-23469

MODAL RESPONSE
A modal test design strategy for model correlation
| DE95-003631 | p 1759 N95-24020

MODELS
Simultaneous inference in multivariate calibration
| DE95-003592 | p 1794 N95-23066
High beta and second stability region transport and stability analysis
| DE95-003411 | p 1832 N95-23147
Carbon monoxide oxidation over three different states of copper: Development of a model metal oxide catalyst
| DE95-004682 | p 1636 N95-23495

MODEMS
Parallel digital modem using multirate digital filter banks
| NASA-CR-197331 | p 1761 N95-22478

MODULARITY
Predicted performance of an integrated modular engine system
| NASA-CR-190787 | p 1625 N95-23791

MODULATION
Effects of modulation index on telecommunications
| AD-A286018 | p 1657 N95-23023

MODULATORS
High-performance GaAs/AlGaAs optical modulators: Their performance and packaging for microwave photonic integrated circuits
| DE95-004533 | p 1828 N95-23575

MODULES
Hey! What's Space Station Freedom?
| NASA-TM-110531 | p 1620 N95-22542
World's first 15%-efficient multicrystalline silicon modules
| DE95-002604 | p 1727 N95-22650
Amorphous silicon photovoltaic manufacturing technology, phase 2A
| DE95-000298 | p 1729 N95-23478
Proceedings of the workshop on deductive databases and logic programming
| PB95-139382 | p 1758 N95-23553

MODULUS OF ELASTICITY
Interlaminar shear test method development for long term durability testing of composites p 1631 N95-23300

MOISTURE
Outgassing considerations for composites in space applications p 1629 N95-23037

MOISTURE CONTENT
An improved algorithm for retrieval of snow wetness using C-band AIRSAR p 1715 N95-23954
Determining successional stage of temperate coniferous forests with Landsat satellite data p 1720 N95-24102

MOJAVE DESERT (CA)
Monitoring land use and degradation using satellite and airborne data p 1707 N95-23880

MOLECULAR BIOLOGY
Open problems of computational molecular biology
| DE95-000895 | p 1745 N95-22866
Regulation of alcohol fermentation in Escherichia coli
| DE94-016227 | p 1745 N95-22874
Activation of the jun-D gene in human myeloid cells by 1-(beta)-D-arabinofuranosylcytosine
| DE94-016591 | p 1746 N95-22912
Rearrangement of RAG-1 recombinase gene in radiation-sensitive wasted mice
| DE94-017083 | p 1746 N95-22913

MOLECULAR CHAINS
Fibonacci chain polynomials: Identities from self-similarity p 1814 N95-22962
Coherent state constructions of bases for some physically relevant group chains p 1814 N95-22966

MOLECULAR COLLISIONS
Structure, melting, and reactivity of nickel clusters from numerical simulations
| DE95-002911 | p 1638 N95-22531
Algebraic description of atom-molecule interactions p 1814 N95-22961
Molecular vibrational states during a collision p 1814 N95-22964
Energy transfer dynamics in isolated and in colliding highly vibrationally excited molecules
| AD-A285771 | p 1806 N95-23077

MOLECULAR DYNAMICS
Structure, melting, and reactivity of nickel clusters from numerical simulations
| DE95-002911 | p 1638 N95-22531
Metallization and incomplete melting of a semiconductor surface at high temperature
| DE94-627342 | p 1660 N95-22591
A parallel molecular dynamics simulation of crystal growth at a cluster of workstations
| DE94-628382 | p 1839 N95-22615
A multi-region radial integration scheme
| NASA-CR-197982 | p 1809 N95-23408

MOLECULAR ENERGY LEVELS
Geometrical interpretation for the outer SU(3) outer multiplicity label p 1814 N95-22968

MOLECULAR EXCITATION
Algebraic approach to the vibrational excitations in methane p 1814 N95-22960

Energy transfer dynamics in isolated and in colliding highly vibrationally excited molecules
| AD-A285771 | p 1806 N95-23077

MOLECULAR GASES
Pressure shifts and electron scattering in atomic and molecular gases
| DE95-003102 | p 1803 N95-22747
Search for millimeterwave CO emission in damped Lyman-alpha systems
| PB95-139259 | p 1868 N95-23607

MOLECULAR ORBITALS
Ligand K-edge x-ray adsorption spectroscopic studies of the electronic structure of inorganic model complexes and metalloprotein active sites
| DE95-003338 | p 1840 N95-22851
Exact, E = 0, classical and quantum solutions for general power-law oscillators p 1820 N95-22959

MOLECULAR OSCILLATIONS
Enhanced oscillation of neutrinos of different masses in matter
| DE94-635648 | p 1812 N95-23973

MOLECULAR OSCILLATORS
Algebraic description of atom-molecule interactions p 1814 N95-22961

MOLECULAR RELAXATION
Energy transfer dynamics in isolated and in colliding highly vibrationally excited molecules
| AD-A285771 | p 1806 N95-23077

MOLECULAR STRUCTURE
Structure, melting, and reactivity of nickel clusters from numerical simulations
| DE95-002911 | p 1638 N95-22531
Asymptotically exact solution of a local copper-oxide model
| DE94-628492 | p 1842 N95-23059
Organometallic chemistry of bimetallic compounds
| DE95-004436 | p 1634 N95-23345

MOLECULAR TRAJECTORIES
Exact, E = 0, classical and quantum solutions for general power-law oscillators p 1820 N95-22959

MOLECULES
The torsion space nucleic acids molecular mechanics program DUPLEX: Surveying conformation space by potential energy minimization
| DE94-017707 | p 1805 N95-22889
Algebraic theory of molecules p 1814 N95-22958
Harmonic oscillator in quantum rotational spectra: Molecules and nuclei p 1814 N95-22972
Quantum fluctuations of D(sub 5d) polarons on C(sub 60) molecules
| DE94-635787 | p 1812 N95-23985
Monte Carlo simulation of rarefied nitrogen gases contained between parallel plates using the statistical inelastic cross-section model
| NAL-TR-1229T | p 1687 N95-24082

MOLTEN SALTS
A model for the metal-nonmetal transition in metal-molten salt solutions
| DE94-628490 | p 1640 N95-23057

MOLYBDENUM
Precise determinations of the isotopic compositions and atomic weights of molybdenum, tellurium, tin and tungsten using ICP source magnetic sector multiple collector mass spectrometry
| DE95-003003 | p 1632 N95-22795
Changes in chemical and optical properties of thin film metal mirrors on LDEF p 1651 N95-23907

MOLYBDENUM ALLOYS
Thermal outgassing studies on machinable tungsten and TZM molybdenum alloy
| DE95-002984 | p 1638 N95-22592

MOLYBDENUM COMPOUNDS
Dislocation decomposition, dissociation, and deformation in MoSi2 and (alpha)-Al2O3 single crystals
| DE95-002715 | p 1839 N95-22653

MOLYBDENUM DISULFIDES
Ethanol synthesis and water gas shift over bifunctional sulfide catalysts
| DE94-017376 | p 1634 N95-23202

MOMENTS OF INERTIA
Harmonic oscillator in quantum rotational spectra: Molecules and nuclei p 1814 N95-22972

MOMENTUM
Bose condensation, macroscopic quantum phenomena and atomic spatial correlations in superfluid He-4
| PB95-139085 | p 1850 N95-23154
Neutron compton scattering
| PB95-139135 | p 1807 N95-23159
Measurement of correlated b quark cross sections at CDF
| DE95-004240 | p 1808 N95-23336

MOMENTUM TRANSFER
Collisionless magnetic reconnection associated with coalescence of flux bundles
| NIFS-315 | p 1834 N95-23525

MONATOMIC GASES
Pressure shifts and electron scattering in atomic and molecular gases
| DE95-003102 | p 1803 N95-22747

MONKEYS
Laser irradiation effects: A functional assessment
| AD-A285100 | p 1691 N95-22937

MONOMERS
Polyazomethines containing trifluoromethylbenzene units
| NASA-CASE-LAR-14896-1 | p 1649 N95-23253

MONTE CARLO METHOD
Particle kinetic simulation of high altitude hypervelocity flight
| NASA-CR-197383 | p 1664 N95-22481
Variational calculations for He-3 impurities on He-4 droplets
| DE94-628469 | p 1840 N95-22839
Photon and electron interaction databases and their use in medical applications
| DE94-015558 | p 1855 N95-22871
Calculations of alloy phases with a direct Monte-Carlo method
| DE94-018963 | p 1640 N95-23121
Consistency and Monte Carlo simulation of a data driven version of smooth goodness-of-fit tests
| PB95-141255 | p 1794 N95-23559
Increasing the retained dose by plasma immersion ion implantation and deposition
| DE95-003423 | p 1844 N95-24011
Monte Carlo simulation of rarefied nitrogen gases contained between parallel plates using the statistical inelastic cross-section model
| NAL-TR-1229T | p 1687 N95-24082

MONTMORILLONITE
Application of MAC-Europe AVIRIS data to the analysis of various alteration stages in the Landdmannalauger Hydrothermal Area (South Iceland) p 1709 N95-23885

MORPHOLOGICAL INDEXES
Learning time series for intelligent monitoring p 1770 N95-23686

MORPHOLOGY
Morphology of extinguished monolithic JA2 grains fired in a 30-mm Solid Propellant Electrothermal Chemical (SPETC) gun
| AD-A285792 | p 1652 N95-22506
Glass science tutorial: Lecture 1, Chemistry and properties of oxide glasses
| DE95-002963 | p 1647 N95-22647
Determination of semi-arid landscape endmembers and seasonal trends using convex geometry spectral unmixing techniques p 1711 N95-23895
A theory for the morphology of Laplacian growth from statistics of equivalent many-body Hamiltonian systems
| DE94-014473 | p 1799 N95-23979
Structural studies of complex carbohydrates of plant cell walls
| DE95-003099 | p 1748 N95-24075

MORSE POTENTIAL
Algebraic theory of molecules p 1814 N95-22958
A supersymmetric family of harmonic oscillators simulating H-bonds in DNA p 1748 N95-22963

MOTION SIMULATION
Concept verification of three dimensional free motion simulator for space robot p 1618 N95-23702

MOTION SIMULATORS
Concept verification of three dimensional free motion simulator for space robot p 1618 N95-23702
Development of the dynamic motion simulator of 3D micro-gravity with a combined passive/active suspension system p 1618 N95-23711
Design of a cervical spine gross motion simulator for standard size human and anthropomorphic dummy adult and child
| NIAR-94-16 | p 1751 N95-24021

MOUNTAINS
GPS survey of the western Tien Shan
| NASA-CR-197901 | p 1717 N95-22832
Comparison of 7.5-minute and 1-degree digital elevation models p 1719 N95-24095

MSM (SEMICONDUCTORS)
Circular electrode geometry metal-semiconductor-metal photodetectors
| NASA-CASE-LAR-15172-1-CU | p 1663 N95-24048

MULTICHANNEL COMMUNICATION
Passive intermodulation generation in wire mesh deployable reflector antennas p 1656 N95-22816

MULTIDISCIPLINARY DESIGN OPTIMIZATION
Multidisciplinary design optimization using genetic algorithms p 1619 N95-23332

MULTIGRID METHODS
New robust multigrid method for 2D convection-diffusion problems
| PB95-138897 | p 1789 N95-23176

MULTILAYER INSULATION
The sound insulations of studio doors. Part 2: Door seals
| BBC-RD-1994/15 | p 1654 N95-24045
The sound insulations of studio doors. Part 1: Door blanks
| BBC-RD-1994/14 | p 1654 N95-24093

MULTIPATH TRANSMISSION
Adaptive beamforming in a CDMA mobile satellite communications system p 1655 N95-22815

MULTIPHASE FLOW
Advanced multi-phase flow CFD model development for solid rocket motor flowfield analysis p 1683 N95-23638

MULTIPLEXING
Optical image correlator using orthogonal data storage
| AD-A285795 | p 1819 N95-22508

MULTIPOLES
Multipole contribution from an off-axis orbit in an IR quadrupole and the consequences on the dynamic aperture
| DE95-002874 | p 1816 N95-22567
Accelerated panel methods using the fast multipole method p 1687 N95-23307
The effect of magnetic field on the edge plasmons of two-dimensional electron gas systems
| DE94-018044 | p 1837 N95-23982

MULTIPROCESSING (COMPUTERS)
Verifying sequentially consistent memory using interface refinement
| PB95-139002 | p 1752 N95-23153
Distributed VIRtual System (DIVIRS) project
| NASA-CR-197855 | p 1757 N95-23180
Block LU factorization
| NASA-CR-197949 | p 1791 N95-23592
WHAMS3D Project: Parallel implementations of WHAMS3D on two shared-memory multiprocessors
| CSRD-1248 | p 1764 N95-23599
Very fast motion planning for highly dexterous-articulated robots p 1771 N95-23691
Algorithms for categorizing multiprocessor communication under invalidate and update-based coherence protocols
| TR-533-REV | p 1759 N95-23928
Scalability of atomic primitives on distributed shared memory multiprocessors
| TR-528 | p 1764 N95-23930
Eliminating useless messages in write-update protocols on scalable multiprocessors
| TR-539 | p 1764 N95-24037
Using simple page placement policies to reduce the cost of cache fills in coherent shared-memory systems
| TR-535 | p 1753 N95-24177
Scheduler-conscious synchronization
| TR-550 | p 1765 N95-24183
Lazy release consistency for hardware-coherent multiprocessors
| TR-547 | p 1765 N95-24184

MULTIPROGRAMMING
Scheduler-conscious synchronization
| TR-550 | p 1765 N95-24183

MULTISENSOR APPLICATIONS
Development of a multi-sensor in situ fiber optic fluorometer
| DE95-003105 | p 1819 N95-22780
A three-finger multisensory hand for dexterous space robotic tasks p 1752 N95-23705
MAC Europe 1991 campaign: AIRSAR/AVIRIS data integration for agricultural test site classification p 1715 N95-23952

MULTISPECTRAL BAND SCANNERS
A multispectral scanner survey of the Tonopah Test Range, Nevada. Date of survey: August 1993
| DE95-003920 | p 1717 N95-22503
Optimal band selection for dimensionality reduction of hyperspectral imagery p 1709 N95-23887
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 2: TIMS Workshop
| NASA-CR-197876-VOL-2 | p 1711 N95-23917
Estimation of spectral emissivity in the thermal infrared p 1711 N95-23918
Mineralogic variability of the Kelso Dunes, Mojave Desert, California derived from Thermal Infrared Multispectral Scanner (TIMS) data p 1711 N95-23920
Geologic mapping using integrated AIRSAR, AVIRIS, and TIMS data p 1714 N95-23946

MULTIVARIABLE CONTROL
Design of high performance multivariable control systems for supermaneuverable aircraft at high angle of attack
| NASA-CR-197661 | p 1615 N95-22908

MULTIVARIATE STATISTICAL ANALYSIS
Chemical recognition software
| DE95-003346 | p 1636 N95-24007

MUONIUM
Time-resolved EPR studies of the H atom: A stable heavy isotope of muonium
| DE95-004614 | p 1810 N95-23491
MUONS
Dimuon production in proton-nucleus interactions
| DE95-002613 | p 1801 N95-22551
Limit on the muon neutrino mass from K(exp 0)muon 3 decay spectra
| DE95-000816 | p 1801 N95-22583
Bottom-quark production from muon-jet and dimuon events in p(bar p)-interactions at the square root of s = 1.8 TeV
| DE95-001286 | p 1801 N95-22685
Exotic atoms
| DE95-003199 | p 1805 N95-22881
J/psi, psi' yields mu(+)mu(-) and B yields J/psi, psi' cross sections
| DE94-018996 | p 1808 N95-23242
Measurement of correlated b quark cross sections at CDF
| DE95-004240 | p 1808 N95-23336
D(O) upgrade muon electronics design
| DE95-003744 | p 1817 N95-23369
Measurement of W and Z boson production and extraction of the W width and branching ratios at CDF
| DE94-018989 | p 1810 N95-23522
Search for supersymmetric (tilde W)(sub 1) and (tilde Z)(sub 2) states using the D0 detector
| DE95-004581 | p 1811 N95-23581
MUTATIONS
Analysis of structural domains required for phytochrome function by in vitro mutagenesis
| DE94-016230 | p 1745 N95-22884

N

N-TYPE SEMICONDUCTORS
Doing photons with MERLIN 2 at Oroville
p 1815 N95-23816
NASA PROGRAMS
1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program
| NASA-CR-194972 | p 1872 N95-23276
Teams and teamwork at NASA Langley Research Center p 1854 N95-23292
Electronic photography at NASA Langley Research Center p 1690 N95-23298
NASA university program management information system, FY 1994
| NASA-TM-110345 | p 1856 N95-23364
Research and Technology, 1994
| NASA-TM-106764 | p 1607 N95-24025
NASA SPACE PROGRAMS
Third International Symposium on Artificial Intelligence, Robotics, and Automation for Space 1994
| NASA-CR-197340 | p 1767 N95-23672
NASTRAN
Thin tailored composite wing for civil tiltrotor
p 1613 N95-23317
A new look at the simultaneous analysis and design of structures p 1700 N95-23327
NATIONAL AEROSPACE PLANE PROGRAM
A summary of the slush hydrogen technology program for the National Aero-Space Plane
| NASA-TM-106863 | p 1653 N95-24186
NATURAL GAS
Preliminary assessment of air toxic emissions in the natural gas industry, phase 1
| PB95-135547 | p 1732 N95-22865
NATURAL GAS EXPLORATION
Preliminary assessment of air toxic emissions in the natural gas industry, phase 1
| PB95-135547 | p 1732 N95-22865
NATURAL LANGUAGE (COMPUTERS)
A computational theory of grounding in natural language conversation
| TR-545 | p 1760 N95-24058
The TRAINS project: A case study in building a conversational planning agent
| TR-532 | p 1659 N95-24193
NAVIER-STOKES EQUATION
An adaptive projection method for the incompressible Navier-Stokes equations
| DE94-019049 | p 1665 N95-22491
A perspective on unstructured grid flow solvers
| NASA-CR-195025 | p 1788 N95-22931
An assessment of viscous effects in computational simulation of benign and burst vortex flows on generic fighter wind-tunnel models using TEAM code
| NASA-CR-4650 | p 1608 N95-23185
Mach 10 computational study of a three-dimensional scramjet inlet flow field
| NASA-TM-4602 | p 1667 N95-23210
Direct numerical simulation of sheared turbulent flow
p 1687 N95-23296
Benchmark problems in computational aeroacoustics
p 1800 N95-23315
A generic efficient adaptive grid scheme for rocket propulsion modeling p 1670 N95-23418
Preconditioning for the Navier-Stokes equations with finite-rate chemistry p 1670 N95-23421
Navier-Stokes analysis of an oxidizer turbine blade with tip clearance with and without a mini-shroud
p 1672 N95-23428
Advanced turbulence models for turbomachinery
p 1675 N95-23443
Numerical computation of aerodynamics and heat transfer in a turbine cascade and a turn-around duct using advanced turbulence models p 1675 N95-23444
Convergence acceleration of implicit schemes in the presence of high aspect ratio grid cells
p 1676 N95-23446
A time-accurate finite volume method valid at all flow velocities p 1676 N95-23447
On the conservative interface treatment for multi-block viscous flow computations
| NASA-CR-195442 | p 1677 N95-23451
Navier-Stokes flow field analysis of compressible flow in a pressure relief valve p 1679 N95-23618
Incompressible Navier-Stokes calculations in pump flows p 1680 N95-23627
Cavitation modeling in Euler and Navier-Stokes codes
p 1681 N95-23630
On the accuracy of CFD-based pressure drop predictions for right-angle ducts p 1682 N95-23634
NAVIGATION
Experience with CANDID: Comparison algorithm for navigating digital image databases
| DE95-000869 | p 1855 N95-22515
Small image laser range finder for planetary rover
p 1692 N95-23712
NAVIGATION AIDS
Cueing light configuration for aircraft navigation
| NASA-CASE-ARC-11982-1 | p 1611 N95-23393
TRISTAR 1: Evaluation methods for testing head-up display (HUD) flight symbology
| NASA-TM-4665 | p 1613 N95-24030
NEAR FIELDS
Taylor series expansion and modified extended Prony analysis for localization
| DE95-003671 | p 1758 N95-23567
NEAR INFRARED RADIATION
Study of photorefractive non-linearities in the 3-5 and 2-4 semi-insulator compounds: The effect of electron irradiation
| PB94-189057 | p 1839 N95-22584
AVIRIS and TIMS data processing and distribution at the land processes distributed active archive center
p 1706 N95-23872
Near infrared and optical spectroscopy of FSC10214+4724
| NASA-CR-197966 | p 1828 N95-24068
NEARSHORE WATER
SWIFT BOAT 1994: Using a fast chase boat to investigate offshore weather features in conjunction with WSR-88D observations
| PB94-195146 | p 1742 N95-22651
NECK (ANATOMY)
Design of a cervical spine gross motion simulator for standard size human and anthropomorphic dummy adult and child
| NIAR-94-16 | p 1751 N95-24021
NEODYMIUM LASERS
Transient radiation-induced absorption in materials for the DOI laser
| DE95-004549 | p 1828 N95-24161
NERVOUS SYSTEM
Interrelations between nervous system and immune system in stress situations
| PB95-135521 | p 1748 N95-22770
NETHERLANDS
Review of aeronautical fatigue investigation in the Netherlands during the period March 1991-March 1993
| PB95-139184 | p 1612 N95-23161
NETS
Modelling and analysis of a high speed data bus with predicate/transition nets
| PB95-140695 | p 1764 N95-23538
NETWORK ANALYSIS
Lyapunov exponents from CHUA's circuit time series using artificial neural networks p 1784 N95-22988
Loop scheduling for heterogeneity
| TR-540 | p 1764 N95-23936
NEURAL NETS
A Newton-type neural network learning algorithm
| DE94-628371 | p 1766 N95-22614
Neural network for detection and correction of local boundary misalignments between images
| AD-D016539 | p 1766 N95-22705
An improved system for exon recognition and gene modeling in human DNA sequences
| DE94-017863 | p 1746 N95-22890
Neurodynamic oscillators p 1749 N95-22987
Lyapunov exponents from CHUA's circuit time series using artificial neural networks p 1784 N95-22988
Neural net prediction of tokamak plasma disruptions
| DE95-002616 | p 1832 N95-23136
On-line, adaptive state estimator for active noise control p 1784 N95-23308
Method and system for pattern analysis using a coarse-coded neural network
| NASA-CASE-ARC-11961-1 | p 1767 N95-23387
Study of b(anti b) production in e(+)e(-) annihilation at radical s = 29 GeV with the aid of neural networks
| DE95-004691 | p 1810 N95-23488
Alpha spectral analysis via artificial neural networks
| DE95-004567 | p 1767 N95-23578
Interactive autonomy and robotic skills
p 1777 N95-23730
A self-organizing neural network architecture for auditory and speech perception with applications to acoustic and other temporal prediction problems
| AD-A285640 | p 1800 N95-23782
Classification of the LCVF AVIRIS test site with a Kohonen artificial neural network p 1706 N95-23874
Mapping and monitoring changes in vegetation communities of Jasper Ridge, CA, using spectral fractions derived from AVIRIS images p 1708 N95-23883
NEURONS
Neurodynamic oscillators p 1749 N95-22987
NEUROPSYCHIATRY
Some performance effects of age and low blood alcohol levels on a computerized neuropsychological test
| DOT/FAA/AM-95/7 | p 1749 N95-23788
NEUTRAL ATMOSPHERES
Modeling of the coupled magnetospheric and neutral wind dynamos
| NASA-CR-197861 | p 1738 N95-23090
NEUTRAL BEAMS
The TEXT neutral lithium beam edge density diagnostic
| DE95-003256 | p 1830 N95-22719
NEUTRAL SHEETS
An explanation for tailward flows with positive B(sub z) in the distant tail neutral sheet during quite times
| ATR-95(7270)-1 | p 1740 N95-23933
NEUTRINO BEAMS
Neutrino oscillation experiments with atmospheric neutrinos
| DE95-002994 | p 1801 N95-22573
Long-baseline neutrino oscillation experiments
| DE95-004636 | p 1870 N95-23584
NEUTRINOS
Neutrino oscillation experiments with atmospheric neutrinos
| DE95-002994 | p 1801 N95-22573
Limit on the muon neutrino mass from K(exp 0)muon 3 decay spectra
| DE95-000816 | p 1801 N95-22583
Neutrino overview
| DE95-003201 | p 1802 N95-22729
On the D yields K-bar(sup *)e(sup +)(nu)(sub e) form factors
| DE94-628614 | p 1803 N95-22754
Neutrinos with Zee-mass matrix in vacuum and matter
| DE94-628635 | p 1803 N95-22756
Results from neutrino experiments
| DE94-628604 | p 1804 N95-22790
Structural properties of silicon clusters: An empirical potential study
| DE94-628902 | p 1805 N95-22935
Long-baseline neutrino oscillation experiments
| DE95-004636 | p 1870 N95-23584
Neutrino masses and mixing
| DE94-628632 | p 1812 N95-23784
Neutrino mass
| DE94-628634 | p 1812 N95-23786
Enhanced oscillation of neutrinos of different masses in matter
| DE94-635648 | p 1812 N95-23973
NEUTRON BEAMS
Strong collision approach to calculation of depolarization function for neutron beam passing through ferromagnetic bulk domains
| DE94-628847 | p 1803 N95-22758
Continuation of BNCT Research Program at NEMC and MIT
| DE94-016228 | p 1748 N95-22875
NEUTRON DIFFRACTION
High pressure neutron powder diffraction at LANSCE
| DE95-002703 | p 1839 N95-22565
Transformation behavior in Al2O3-ZrO2 ceramic composites
| DE95-001359 | p 1647 N95-22688

PRISMA GENIE data analysis manual
| PB95-130464 | p 1755 N95-22769
Internal strain measurement using pulsed neutron diffraction at LANSCE
| DE95-003677 | p 1842 N95-23365

NEUTRON IRRADIATION
Study of radiation damages in AISI 316 and 347 steels
| DE94-627480 | p 1639 N95-22609
Cation disorder determined by MAS Al-27 NMR in high dose neutron irradiated spinel
| DE95-003681 | p 1842 N95-23266

NEUTRON SCATTERING
Neutron scattering analysis of rubber carbon black composite structure
| DE95-002735 | p 1646 N95-22553
Neutron compton scattering
| PB95-139135 | p 1807 N95-23159

NEUTRON SOURCES
Status of helium-production reaction studies with a spallation neutron source
| DE95-002816 | p 1806 N95-23137
Neutron compton scattering
| PB95-139135 | p 1807 N95-23159

NEUTRONS
Experimental results on polarized structure functions in deep inelastic lepton-nucleon scattering
| DE95-002782 | p 1801 N95-22521
Geometrical interpretation for the outer SU(3) outer multiplicity label p 1814 N95-22968
Reflectivity studies on adsorbed block copolymers under shear
| DE95-003676 | p 1649 N95-23568
Pauli-blocking effects in neutron-alpha reactions
| DE94-016358 | p 1813 N95-24046
Phonon characteristics of high (T sub c) superconductors from neutron Doppler broadening measurements
| DE95-003703 | p 1844 N95-24076

NEVADA
Streamflow and selected precipitation data for Yucca Mountain Region, southern Nevada and eastern California, water years 1986-90
| DE95-001893 | p 1742 N95-23385

NEWTON
Newton in space
| NASA-TM-110535 | p 1799 N95-23273

NEWTON METHODS
A Newton-type neural network learning algorithm
| DE94-628371 | p 1766 N95-22614

NEWTONIAN FLUIDS
BEm-BDF scheme for curvature driven moving stokes flows
| PB95-138905 | p 1667 N95-23144
On the breakup of viscous liquid threads
| NASA-CR-195023 | p 1678 N95-23544

NICKEL
Structure, melting, and reactivity of nickel clusters from numerical simulations
| DE95-002911 | p 1638 N95-22531
X-ray diffraction characterization of defect behavior in nanocrystalline nickel during annealing
| DE95-002992 | p 1639 N95-22594
Changes in chemical and optical properties of thin film metal mirrors on LDEF p 1651 N95-23907
Durability of reflector materials in the space environment p 1651 N95-23912

NICKEL ALLOYS
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
| DE95-002941 | p 1638 N95-22532
An investigation into the effects of hydrogen on the fracture and deformation of Alloy X-750
| DE95-003206 | p 1639 N95-22732

NIGHT VISION
Aviator's night vision imaging system preflight adjustment/assessment procedures
| AD-A285829 | p 1750 N95-22513

NIOBATES
Transient radiation-induced absorption in materials for the DOI laser
| DE95-004549 | p 1828 N95-24161

NIOBIUM ALLOYS
Deformation of C15 Laves phase alloys
| DE95-003636 | p 1646 N95-24067

NITRATES
Test procedure for anion exchange chromatography
| DE95-003767 | p 1809 N95-23407

NITRIC OXIDE
NO decomposition in non-reducing atmospheres
| DE95-004324 | p 1634 N95-23339
Carbon monoxide oxidation over three different states of copper: Development of a model metal oxide catalyst
| DE95-004682 | p 1636 N95-23495

NITROGEN
Progress towards the synthesis of polymeric nitrogen
| DE94-017547 | p 1841 N95-22860
Analytical Boltzmann moments for electrons in N2-O2-H2O gas mixtures
| DE95-003474 | p 1732 N95-22898
High surface area, high permeability carbon monoliths
| DE95-004555 | p 1650 N95-23577
Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 1 p 1703 N95-23856
AVIRIS spectra correlated with the chlorophyll concentration of a forest canopy p 1705 N95-23871
Measurements of canopy chemistry with 1992 AVIRIS data at Blackhawk Island and Harvard Forest p 1706 N95-23873
Relationships between pigment composition variation and reflectance for plant species from a coastal savannah in California p 1709 N95-23889
Monte Carlo simulation of rarefied nitrogen gases contained between parallel plates using the statistical inelastic cross-section model
| NAL-TR-1229T | p 1687 N95-24082

NITROGEN COMPOUNDS
The atmosphere below
| NASA-TM-110538 | p 1740 N95-23663

NITROGEN OXIDES
Modeling NO(x) emissions in turbulent jet flames: Effects of buoyancy and radiation
| DE94-016621 | p 1633 N95-22886
Effects of jet strength on NOx formation in premixed impinging jet combustion with minimum heat losses
| NAL-TR-1237T | p 1637 N95-24181

NITROUS OXIDES
Emissions of greenhouse gases in the United States, 1987-1992
| DE95-003001 | p 1731 N95-22691

NOBLE METALS
Non local pseudopotentials, transport properties of liquid noble metals
| DE94-627416 | p 1640 N95-22840

NOISE MEASUREMENT
High Tc superconducting bolometric and nonbolometric infrared (IR) detectors
| NASA-CR-197868 | p 1827 N95-23224

NOISE PREDICTION (AIRCRAFT)
Supersonic jet noise reductions predicted with increased jet spreading rate
| NASA-TM-106872 | p 1800 N95-23178

NOISE REDUCTION
The use of cowl camber and taper to reduce rotor/stator interaction noise
| NASA-CR-195421 | p 1799 N95-22675
Supersonic jet noise reductions predicted with increased jet spreading rate
| NASA-TM-106872 | p 1800 N95-23178
On-line, adaptive state estimator for active noise control p 1784 N95-23308

NOMENCLATURES
Glass science tutorial: Lecture 2, operating electric glass melters
| DE95-002965 | p 1647 N95-22648

NONDESTRUCTIVE TESTS
High-temperature ultrasonic characterization of Ag-clad superconductor tapes
| DE95-002909 | p 1838 N95-22530
Nondestructive evaluation of fatigue damage in aluminum 2024 by x-ray diffraction p 1698 N95-23293
Internal strain measurement using pulsed neutron diffraction at LANSCE
| DE95-003677 | p 1842 N95-23365
Double pass retroreflection for corrosion detection in aircraft structures p 1642 N95-23503
Non-destructive detection of corrosion for life management p 1643 N95-23505
New nondestructive techniques for the detection and quantification of corrosion in aircraft structures p 1644 N95-23512
POD assessment of NDI procedures using a round robin test
| AGARD-R-809 | p 1697 N95-23602

NONEQUILIBRIUM FLOW
Preconditioning for the Navier-Stokes equations with finite-rate chemistry p 1670 N95-23421

NONEQUILIBRIUM PLASMAS
Modeling of nonequilibrium space plasma flows
| NASA-CR-197432 | p 1833 N95-23211

NONEQUILIBRIUM RADIATION
Investigation of infra-red and nonequilibrium air radiation
| NASA-CR-197977 | p 1741 N95-24041

NONINTRUSIVE MEASUREMENT
Non-intrusive measurements in a rocket engine combustor p 1625 N95-23439
Impeller flow field characterization with a laser two-focus velocimeter p 1675 N95-23440

NONLINEAR EQUATIONS
Iterative solutions of nonlinear equations with strongly accretive or strongly pseudocontractive maps
| DE94-628432 | p 1786 N95-22634
Nonlinear generalized functions and nonconservative shock simulations
| DE95-003307 | p 1795 N95-22734
Development of an adaptive hp-version finite element method for computational optimal control
| NASA-CR-197898 | p 1766 N95-22831
Time-periodic solutions of some forced nonlinear wave equations: Analysis, approximations and applications
| PB95-135083 | p 1788 N95-22932
Algorithms for parallel and vector computations
| NASA-CR-197394 | p 1756 N95-23017
Iterative solutions of nonlinear equations in smooth Banach spaces
| DE94-634287 | p 1790 N95-23455
Linearizing W-algebras
| DE94-634324 | p 1790 N95-23457
Moving mass trim control for aerospace vehicles
| DE95-002602 | p 1622 N95-23532
Nonlinear thermoviscoelastic behaviour in complex materials
| PB95-140653 | p 1630 N95-23537

NONLINEAR EVOLUTION EQUATIONS
Morphology of Laplacian growth processes and statistics of equivalent many-body systems
| DE95-002734 | p 1847 N95-22655

NONLINEAR FEEDBACK
Design of high performance multivariable control systems for supermaneuverable aircraft at high angle of attack
| NASA-CR-197661 | p 1615 N95-22908

NONLINEAR OPTICS
Study of photorefractive non-linearities in the 3-5 and 2-4 semi-insulator compounds: The effect of electron irradiation
| PB94-189057 | p 1839 N95-22584
Two-photon absorption in an indirect-gap semiconductor quantum well systems 1. Interband transitions
| DE94-628879 | p 1849 N95-22760

NONLINEAR SYSTEMS
Nonlinear system guidance in the presence of transmission zero dynamics
| NASA-TM-4661 | p 1654 N95-22804
Disorder-induced breakdown of soliton and polaron particles
| DE95-003694 | p 1808 N95-23267
Complexity in plasma: A grand view of self-organization
| NIFS-318 | p 1835 N95-23528
On the breakup of viscous liquid threads
| NASA-CR-195023 | p 1678 N95-23544
Normalized coprime factorizations and balancing for unstable nonlinear systems
| PB95-141222 | p 1767 N95-23557
Dynamic disturbance decoupling of nonlinear systems and linearization
| PB95-141248 | p 1767 N95-23558

NONLINEARITY
COYOTE 2: A Finite Element Computer Program for nonlinear heat conduction problems
| DE95-002848 | p 1666 N95-22914
Structure and evolution of long-lived spiral patterns in galaxies
| PB95-139242 | p 1868 N95-23228
Nonlinear thermoviscoelastic behaviour in complex materials
| PB95-140653 | p 1630 N95-23537
Normalized coprime factorizations and balancing for unstable nonlinear systems
| PB95-141222 | p 1767 N95-23557
Dynamic disturbance decoupling of nonlinear systems and linearization
| PB95-141248 | p 1767 N95-23558
Ishikawa iteration process for nonlinear Lipschitz strongly accretive mappings
| DE94-634284 | p 1792 N95-23658
Nonlinear viscoelastic characterization of polymer materials using a dynamic-mechanical methodology p 1651 N95-23902

NORMAL DENSITY FUNCTIONS
Wigner distribution function and entropy of the damped harmonic oscillator within the theory of the open quantum systems p 1798 N95-22990
Stochastic decision analysis p 1854 N95-23305

NORMALITY
Second derivative of the likelihood of an exact ARMA model
| PB95-135158 | p 1788 N95-23069

NORTH ATLANTIC TREATY ORGANIZATION (NATO)
Proceedings of NATO Advanced Research Workshop on the Formation, Transport and Consequences of Particles in Plasmas
| AD-A285850 | p 1829 N95-22514

NORTH SEA
Study on possible environmental effects of a WBM cutting discharge in the north sea, one year after termination of drilling
|PB95-133740| p 1733 N95-23125

NOTCH SENSITIVITY
Notch-tip damage and translaminar fracture toughness measurements from carbon/epoxy laminates
|AD-A280101| p 1627 N95-22833

NOTCH TESTS
Notch-tip damage and translaminar fracture toughness measurements from carbon/epoxy laminates
|AD-A280101| p 1627 N95-22833
Interlaminar shear test method development for long term durability testing of composites
p 1631 N95-23300

NOZZLE DESIGN
An approximate theoretical method for modeling the static thrust performance of non-axisymmetric two-dimensional convergent-divergent nozzles
|NASA-CR-195050| p 1608 N95-23193
Optimized design of a hypersonic nozzle
p 1617 N95-23304
Design of a variable area diffuser for a 15-inch Mach 6 open-jet tunnel p 1617 N95-23309
Three-dimensional Navier-Stokes analysis and redesign of an imbedded bellmouth nozzle in a turbine cascade inlet section p 1671 N95-23423
Methodology for CFD design analysis of National Launch System nozzle manifold p 1683 N95-23637

NOZZLE EFFICIENCY
An approximate theoretical method for modeling the static thrust performance of non-axisymmetric two-dimensional convergent-divergent nozzles
|NASA-CR-195050| p 1608 N95-23193

NOZZLE FLOW
Experimental study of vortex breakdown in a swirling water jet
|PB95-130407| p 1665 N95-22767
An approximate theoretical method for modeling the static thrust performance of non-axisymmetric two-dimensional convergent-divergent nozzles
|NASA-CR-195050| p 1608 N95-23193
Experimental results for a hypersonic nozzle/afterbody flow field
|NASA-TM-4638| p 1609 N95-23250
Axisymmetric computational fluid dynamics analysis of Saturn V/S1-C/F1 nozzle and plume
p 1672 N95-23430
Computational Fluid Dynamic (CFD) analysis of axisymmetric plume and base flow of film/dump cooled rocket nozzle p 1673 N95-23431
Numerical study of the SSME nozzle flow fields during transient operations: A comparison of the animated results with test p 1673 N95-23434
Development of an algebraic stress/two-layer model for calculating thrust chamber flow fields
p 1675 N95-23442
Application of CFD analysis to design support and problem resolution for ASRM and RSRM
p 1685 N95-23649

NOZZLE GEOMETRY
Axisymmetric computational fluid dynamics analysis of Saturn V/S1-C/F1 nozzle and plume
p 1672 N95-23430

NOZZLE WALLS
Supersonic laminar flow control research
|NASA-CR-197938| p 1609 N95-23669

NUCLEAR BINDING ENERGY
Strong-coupling polaron effect in quantum dots
|DE94-628485| p 1850 N95-23049
Surface structural dependence of cesium adsorption on the (alpha)-Al2O3(0001) surface
|DE95-002610| p 1842 N95-23135
Thermochemistry of transition metal clusters
|DE95-003144| p 1646 N95-24144

NUCLEAR DEFORMATION
Geometrical interpretation for the outer SU(3) outer multiplicity label p 1814 N95-22968

NUCLEAR ELECTRIC POWER GENERATION
Review of uncertainty files and improved multigroup cross section files for FENDL
|DE94-628639| p 1830 N95-22757

NUCLEAR EMULSIONS
Dosimetric results on EURECA p 1872 N95-23800

NUCLEAR FUELS
EXTRA.M: A computing code system for analysis of the Purex process with mixer settlers for reprocessing
|DE94-785273| p 1635 N95-23476
New pellet production and acceleration technologies for high speed pellet injection system HIPEL in Large Helical Device
|NISF-326| p 1835 N95-23566

NUCLEAR FUSION
Ion rings for magnetic fusion
|DE94-017606| p 1832 N95-23120

NUCLEAR INTERACTIONS
(pi)N correlations at AGS
|DE95-002933| p 1801 N95-22656
Comparison of exact solution with Eikonal approximation for elastic heavy ion scattering
|NASA-TP-3498| p 1817 N95-22929
An algebraic cluster model based on the harmonic oscillator basis p 1814 N95-22971

NUCLEAR MAGNETIC RESONANCE
Cation disorder determined by MAS Al-27 NMR in high dose neutron irradiated spinel
|DE95-003681| p 1842 N95-23266
NMR study of nanophase Al/Al-oxide powder and consolidated composites
|DE95-004655| p 1843 N95-23586

NUCLEAR MEDICINE
Continuation of BNCT Research Program at NEMC and MIT
|DE94-016228| p 1748 N95-22875

NUCLEAR MODELS
Geometrical interpretation for the outer SU(3) outer multiplicity label p 1814 N95-22968
Shapes and stability of algebraic nuclear models
p 1814 N95-22974

NUCLEAR PARTICLES
Second International Workshop on Harmonic Oscillators
|NASA-CP-3286| p 1820 N95-22957
Measurement of trapped proton fluences in main stack of P0006 experiment p 1815 N95-23812
Contribution of proton-induced short range secondaries to the LET spectra on LDEF p 1815 N95-23813
Charge, energy and LET spectra of high LET primary and secondary particles in CR-39 plastic nuclear track detectors of the P0006 experiment
p 1815 N95-23814

NUCLEAR PHYSICS
Neutrino overview
|DE95-003201| p 1802 N95-22729
Outlook from the intersections
|DE95-003202| p 1802 N95-22730
Exotic atoms
|DE95-003199| p 1805 N95-22881
Galactic oscillator symmetry p 1822 N95-22973
Heavy quark physics at SLD: Preliminary results
|DE95-003372| p 1806 N95-23138
The impact of QCD and light-cone quantum mechanics on nuclear physics
|DE95-004293| p 1851 N95-23352
Online Nuclear Data Service
|DE94-634268| p 1856 N95-23452
Index of nuclear data libraries available from the IAEA nuclear data section
|DE94-634271| p 1857 N95-23453
BROND-2.1. Russian evaluated neutron reaction data library
|DE94-634417| p 1810 N95-23458

NUCLEAR REACTIONS
Harmonic oscillator representation in the theory of scattering and nuclear reactions p 1814 N95-22967
BROND-2.1. Russian evaluated neutron reaction data library
|DE94-634417| p 1810 N95-23458
Pauli-blocking effects in neutron-alpha reactions
|DE94-016358| p 1813 N95-24046

NUCLEAR REACTORS
Closing the circle on the splitting of the atom: The environmental legacy of nuclear weapons production in the United States and what the Department of Energy is doing about it p 1818 N95-23562

NUCLEAR RESEARCH
Review of uncertainty files and improved multigroup cross section files for FENDL
|DE94-628639| p 1830 N95-22757

NUCLEAR SCATTERING
Harmonic oscillator representation in the theory of scattering and nuclear reactions p 1814 N95-22967

NUCLEAR STRUCTURE
The impact of QCD and light-cone quantum mechanics on nuclear physics
|DE95-004293| p 1851 N95-23352

NUCLEAR WARHEADS
Closing the circle on the splitting of the atom: The environmental legacy of nuclear weapons production in the United States and what the Department of Energy is doing about it p 1818 N95-23562

NUCLEAR WEAPONS
Closing the circle on the splitting of the atom: The environmental legacy of nuclear weapons production in the United States and what the Department of Energy is doing about it p 1818 N95-23562

NUCLEATION
Origins of interstellar and solar system: Carbonaceous materials
|NASA-CR-197436| p 1867 N95-23013

NUCLEI (NUCLEAR PHYSICS)
A heavy ion linac complex for unstable nuclei
|DE94-765443| p 1816 N95-22848
An algebraic cluster model based on the harmonic oscillator basis p 1814 N95-22971
Harmonic oscillator in quantum rotational spectra: Molecules and nuclei p 1814 N95-22972

NUCLEIC ACIDS
General crystal in prebiotic context
|DE94-628475| p 1840 N95-22774

NUCLEON-NUCLEON INTERACTIONS
Pauli-blocking effects in neutron-alpha reactions
|DE94-016358| p 1813 N95-24046

NUCLEONS
Dimuon production in proton-nucleus interactions
|DE95-002613| p 1801 N95-22551
Theoretical aspects of electroweak and other interactions in medium energy nuclear physics
|DE95-004341| p 1808 N95-23357
Electromagnetic production of pions on the nucleon
|DE95-004658| p 1811 N95-23587
Pauli-blocking effects in neutron-alpha reactions
|DE94-016358| p 1813 N95-24046

NUMBER THEORY
Lectures on Fermat's last theorem
|DE94-628392| p 1795 N95-22617

NUMERICAL ANALYSIS
A worst-case example using linesearch methods for numerical optimization with inexact gradient evaluations
|DE95-002917| p 1754 N95-22570
Gas cooled leads. Part 1: Theoretical Study. Part 2: Frost free lead optimized for a specific current. Part 3: Frost free lead optimized for a large current range
|DE95-002657| p 1660 N95-22716
Net energy analysis: Powerful tool for selecting electric power options
|DE95-002516| p 1728 N95-23133
Stoermer-Cowell: Straight, summed and split. An overview
|PB95-139341| p 1789 N95-23200
Orders of predictor-corrector pairs for second-order ODE's
|PB95-140612| p 1790 N95-23237
Institute for Computational Mechanics in Propulsion (ICOMP)
|NASA-TM-106884| p 1677 N95-23464
Note on the tau-value and tau-related solution concepts
|PB95-140752| p 1795 N95-23555
Spray combustion experiments and numerical predictions p 1637 N95-23643

NUMERICAL CONTROL
Material characterization system
|AD-D016536| p 1800 N95-23073
Progress report on a fully automatic Gas Tungsten Arc Welding (GTAW) system development
|DE95-004397| p 1695 N95-23343
A microcontroller-based three degree-of-freedom manipulator testbed
|NASA-CR-197423| p 1696 N95-23409

NUMERICAL INTEGRATION
Stability and efficiency of waveform relaxation methods
|PB95-138863| p 1789 N95-23173
Numerical simulation of axisymmetric viscous sintering
|PB95-138889| p 1667 N95-23175
Stoermer-Cowell: Straight, summed and split. An overview
|PB95-139341| p 1789 N95-23200
A multi-region radial integration scheme
|NASA-CR-197982| p 1809 N95-23408

NUMERICAL STABILITY
Stability and efficiency of waveform relaxation methods
|PB95-138863| p 1789 N95-23173

O

O STARS
A study of EUV emission from the O4f star Zeta Puppis
|NASA-CR-197350| p 1871 N95-23472

OBJECT-ORIENTED PROGRAMMING
Roles and dynamic subclasses: A modal logic approach
|PB95-127320| p 1754 N95-22522
Method for building and evaluating formal specifications of object-oriented conceptual models of database systems
|PB95-127353| p 1855 N95-22525
Comparing data synchronization in Ada 9X and Orca
|PB95-127999| p 1754 N95-22529
A certainty grid to object boundary algorithm
|PB94-203510| p 1755 N95-22637

LCM 3.0: A language for describing conceptual models. Syntax definition
| PB95-128005 | p 1755 N95-22652
Utilizing inheritance in requirements engineering
p 1768 N95-23677
AMPHION: Specification-based programming for scientific subroutine libraries p 1761 N95-23680
Learning time series for intelligent monitoring
p 1770 N95-23686

OBLIQUE SHOCK WAVES
Supersonic flow and shock formation in turbine tip gaps p 1672 N95-23429

OCCURRENCES
Seismic hazards at Kilauea and Mauna Loa volcanoes, Hawaii
| DE94-012109 | p 1737 N95-22924

OCEAN COLOR SCANNER
SeaWiFS technical report series. Volume 25: Ocean optics protocols for SeaWiFS validation, revision 1
| NASA-TM-104566-VOL-25-REV- | p 1743 N95-22671

OCEAN CURRENTS
A numerical study of interannual wind forcing effects on the California current system, 1980-1983
| AD-A286023 | p 1743 N95-23074

OCEAN DATA ACQUISITIONS SYSTEMS
TOGA/COARE AMMR 1992 data processing
| NASA-CR-197289 | p 1736 N95-22867

OCEAN MODELS
Observation model and parameter partials for the JPL VLBI parameter estimation software MODEST, 19 94
| NASA-CR-197328 | p 1756 N95-22853
A numerical study of interannual wind forcing effects on the California current system, 1980-1983
| AD-A286023 | p 1743 N95-23074
Assimilation of altimeter data in a quasi-geostrophic model of the Gulf Stream system: A dynamical perspective
| NASA-CR-196313 | p 1744 N95-23766

OCEAN SURFACE
Assimilation of altimeter data in a quasi-geostrophic model of the Gulf Stream system: A dynamical perspective
| NASA-CR-196313 | p 1744 N95-23766
Measurement of ocean wave spectra using polarimetric AIRSAR data p 1715 N95-23953

OCEANOGRAPHY
SWIFT BOAT 1994: Using a fast chase boat to investigate offshore weather features in conjunction with WSR-88D observations
| PB94-195146 | p 1742 N95-22651
SeaWiFS technical report series. Volume 25: Ocean optics protocols for SeaWiFS validation, revision 1
| NASA-TM-104566-VOL-25-REV- | p 1743 N95-22671
Development of a multi-sensor in situ fiber optic fluorometer
| DE95-003105 | p 1819 N95-22780

OCEANS
Ocean observations with EOS/MODIS: Algorithm development and post launch studies
| NASA-CR-197894 | p 1718 N95-23473
Theoretical estimates of high frequency acoustic attenuation and backscattering from suspended sand particles in the ocean and in an estuary
| DSTO-TR-0078 | p 1743 N95-23667
AVIRIS calibration using the cloud-shadow method
p 1702 N95-23849

OFFGASSING
Offgassing test methodology for composite materials
p 1629 N95-23035

OHMIC DISSIPATION
The DIII-D divertor cryopump system: Design and operational experience
| DE95-003007 | p 1693 N95-22796

OIL EXPLORATION
Energy flux and hydrogeology of thermal anomalies in the Gulf of Mexico Basin - South Texas example
| DE95-003341 | p 1743 N95-22695

OILS
The influence of high-octane fuel blends on the performance of a two-stroke SI engine with knock-limited-compression ratio
| DE95-002902 | p 1692 N95-22556

OMEGA-MESONS
Once more about the omega approaches 3(pi) contact term
| DE94-633202 | p 1804 N95-22847

ON-LINE PROGRAMMING
Evaluating the effect of online data compression on the disk cache of a mass storage system
p 1862 N95-24138

ON-LINE SYSTEMS
An automated computer misuse detection system for UNICOS
| DE95-000929 | p 1762 N95-22680
Environmental Systems Management Analysis and Reporting Network (E-SMART)
| AD-A279766 | p 1732 N95-22856
On-line, adaptive state estimator for active noise control p 1784 N95-23308
Online Nuclear Data Service
| DE94-634268 | p 1856 N95-23452
Index of nuclear data libraries available from the IAEA nuclear data section
| DE94-634271 | p 1857 N95-23453
BROND-2.1. Russian evaluated neutron reaction data library
| DE94-634417 | p 1810 N95-23458
Building a COTS archive for satellite data
p 1861 N95-24132
Analysis of the request patterns to the NSSDC on-line archive p 1862 N95-24137
Evaluating the effect of online data compression on the disk cache of a mass storage system
p 1862 N95-24138

ONE DIMENSIONAL FLOW
Benchmark problems in computational aeroacoustics
p 1800 N95-23315
On the breakup of viscous liquid threads
| NASA-CR-195023 | p 1678 N95-23544

OPEN CHANNEL FLOW
Flow measuring structures
| PB95-127254 | p 1665 N95-22638

OPERATING COSTS
The associate principal astronomer telescope operations model p 1779 N95-23743
DOD budget: Selected categories of planned funding for fiscal years 1995-99. Report to Congressional requesters
| GAO/NSIAD-95-92 | p 1864 N95-24062

OPERATING SYSTEMS (COMPUTERS)
Integrating O/S models during conceptual design, part 1
| NASA-CR-197903 | p 1622 N95-23398
Integrating O/S models during conceptual design, part 2
| NASA-CR-197904 | p 1622 N95-23399

OPERATING TEMPERATURE
Advances in research for solid oxide fuel cells
| DE95-004590 | p 1730 N95-23582
VLPC characterization for the Dzero upgrade
| DE95-003742 | p 1818 N95-24084

OPERATIONS RESEARCH
STS-61 mission director's post-mission report
| NASA-TM-104803 | p 1617 N95-23262

OPERATORS (MATHEMATICS)
Spectral application of the theorem for the essential quasi-Fredholm spectrum
| DE94-628430 | p 1795 N95-22632
Iterative solutions of nonlinear equations with strongly accretive or strongly pseudocontractive maps
| DE94-628432 | p 1786 N95-22634
Determinants of elliptic pseudo-differential operators
| PB95-109062 | p 1786 N95-22711
A supersymmetric family of harmonic oscillators simulating H-bonds in DNA p 1748 N95-22963
A note on the angular Fourier transformation
p 1797 N95-22986
Oscillator-like coherent states for the Jaynes-Cummings Model p 1826 N95-23003
Slightly anharmonic systems in quantum optics
p 1826 N95-23004
Canonical typing and pi-conversion
| PB95-139218 | p 1788 N95-23130
Taxonomy of finite automata construction algorithms
| PB95-139234 | p 1758 N95-23606
Ishikawa iteration process for nonlinear Lipschitz strongly accretive mappings
| DE94-634284 | p 1792 N95-23658
Operator procedure verification with a rapidly reconfigurable simulator p 1618 N95-23679

OPERATORS (PERSONNEL)
Formalizing procedures for operations automation, operator training and spacecraft autonomy
p 1752 N95-23720

OPTICAL COMMUNICATION
Non-blocking crossbar permutation engine with constant routing latency
| NASA-CASE-NPO-18864-1-CU | p 1762 N95-22564

OPTICAL CONTROL
Stellar Interferometer Technology Experiment (SITE)
| NASA-CR-197856 | p 1827 N95-23089

OPTICAL CORRELATORS
Motion-sensitive optical correlator using a VanderLugt correlator
| NASA-CASE-NPO-18769-1-CU | p 1827 N95-23045

OPTICAL COUPLING
Calculated coupling efficiency between an elliptical-core optical fiber and a silicon oxynitride rib waveguide
| NASA-TM-106850 | p 1820 N95-22915

OPTICAL DISKS
Document image archive transfer from DOS to UNIX
p 1761 N95-24117
Optical storage media data integrity studies
p 1829 N95-24130

OPTICAL EQUIPMENT
The STAR EM calorimeter design and small prototype test results
| DE95-004592 | p 1689 N95-23583

OPTICAL FIBERS
Method for making fiber-optic bundle collimator assembly
| AD-D016491 | p 1819 N95-22492
Measurements and modeling of impurity source distributions from the Tore Supra outboard pump limiter
| DE95-003097 | p 1831 N95-22800
Optical fiber strain sensor with improved linearity range
| NASA-CASE-LAR-14857-1-SB | p 1819 N95-22807
A fiber-optic bundle and collimator assembly
| AD-D016500 | p 1820 N95-22864
Calculated coupling efficiency between an elliptical-core optical fiber and a silicon oxynitride rib waveguide
| NASA-TM-106850 | p 1820 N95-22915
Photoinduced Bragg grating formation in optical fibres as a consequence of convective instability
| DE94-628479 | p 1841 N95-23020

OPTICAL FILTERS
Transient radiation-induced absorption in materials for the DOI laser
| DE95-004549 | p 1828 N95-24161

OPTICAL MATERIALS
Advanced reflector materials for solar concentrators
| DE95-000248 | p 1726 N95-22547
A ruggedness evaluation of procedures for damage threshold testing optical materials
| NASA-TM-4639 | p 1840 N95-22803

OPTICAL MEASUREMENT
HAPEX-Sahel: Basic description of methods and data sets
| PB95-127262 | p 1701 N95-22639
EUV metrology of multilayer optics
| DE95-003036 | p 1819 N95-22723
Dynamic response tests of inertial and optical wind-tunnel model attitude measurement devices
| NASA-TM-109182 | p 1616 N95-23011
High Tc superconducting bolometric and nonbolometric infrared (IR) detectors
| NASA-CR-197868 | p 1827 N95-23224

OPTICAL MEASURING INSTRUMENTS
Development of a multi-sensor in situ fiber optic fluorometer
| DE95-003105 | p 1819 N95-22780
Electrochemical studies of perovskite mixed conductors
| DE95-003704 | p 1636 N95-23573

OPTICAL MEMORY (DATA STORAGE)
Fourth NASA Goddard Conference on Mass Storage Systems and Technologies
| NASA-CP-3295 | p 1857 N95-24108
Petabyte mass memory system using the Newell Opticel(TM) p 1753 N95-24119
Optical storage media data integrity studies
p 1829 N95-24130

OPTICAL PROPERTIES
SeaWiFS technical report series. Volume 25: Ocean optics protocols for SeaWiFS validation, revision 1
| NASA-TM-104566-VOL-25-REV- | p 1743 N95-22671
Two-photon absorption in an indirect-gap semiconductor quantum well systems 1. Interband transitions
| DE94-628879 | p 1849 N95-22760
Strongly interacting fermion systems
| DE95-003405 | p 1806 N95-23054
Use of spectral analogy to evaluate canopy reflectance sensitivity to leaf optical property p 1701 N95-23845
Measurements of the optical properties of thin films of silver and silver oxide p 1651 N95-23906

OPTICAL PUMPING
Photoinduced Bragg grating formation in optical fibres as a consequence of convective instability
| DE94-628479 | p 1841 N95-23020

OPTICAL RADAR
Combining optical and microwave remote sensing data of forest vegetation: MAC Europe 1991
| PB95-127312 | p 1717 N95-22538
Study of atmospheric parameters measurements using MM-wave radar in synergy with LITE-2
p 1741 N95-23278

OPTICAL THICKNESS
Estimation of aerosol optical depth and additional atmospheric parameters for the calculation of apparent reflectance from radiance measured by the Airborne Visible/Infrared Imaging Spectrometer
p 1704 N95-23863

OPTICAL WAVEGUIDES
Calculated coupling efficiency between an elliptical-core optical fiber and a silicon oxynitride rib waveguide
| NASA-TM-106850 | p 1820 N95-22915
OPTIMAL CONTROL
Development of an adaptive hp-version finite element method for computational optimal control
| NASA-CR-197898 | p 1766 N95-22831
Active control of panel vibrations induced by a boundary layer flow
| NASA-CR-197867 | p 1608 N95-23182
OPTIMIZATION
IRAS sky survey atlas: Explanatory supplement
| NASA-CR-197335 | p 1865 N95-22539
A worst-case example using linesearch methods for numerical optimization with inexact gradient evaluations
| DE95-002917 | p 1754 N95-22570
Direct adaptive performance optimization of subsonic transports: A periodic perturbation technique
| NASA-TM-4676 | p 1612 N95-22829
Realizing parallel reduction operation in Sisal 1.2
| DE94-017524 | p 1763 N95-22858
Realizing parallel reduction operations in Sisal 1.2
| DE94-017525 | p 1763 N95-22859
Integrated aerodynamic/dynamic/structural optimization of helicopter rotor blades using multilevel decomposition
| NASA-TP-3465 | p 1612 N95-22953
Geometrical interpretation for the outer SU(3) outer multiplicity label p 1814 N95-22968
Taxonomy of finite automata minimization algorithms
| PB95-139226 | p 1756 N95-23131
Aerodynamic design optimization with sensitivity analysis and computational fluid dynamics
| NASA-CR-197419 | p 1608 N95-23218
The data facility of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1707 N95-23877
Optimal band selection for dimensionality reduction of hyperspectral imagery p 1709 N95-23887
Logspace reducibility and self-reducibility: Models and equivalences
| TR-544 | p 1760 N95-24059
A 4 MW fast wave current drive upgrade for D3-D
| DE95-003741 | p 1837 N95-24083
OPTOELECTRONIC DEVICES
Low-cost packaging of high-performance optoelectronic components
| DE95-003645 | p 1827 N95-23449
OPTOGALVANIC SPECTROSCOPY
Optogalvanic monitoring of collisional transfer of laser excitation energy in a neon RF plasma
| DE95-003103 | p 1691 N95-22748
ORBITAL ASSEMBLY
Hey! What's Space Station Freedom?
| NASA-TM-110531 | p 1620 N95-22542
Truss structure tele-manipulation experiment using ETS-7 p 1623 N95-23726
Antenna-assembling mechanism test on ETS-7 p 1623 N95-23727
ORBITAL ELEMENTS
The orbital characteristics of debris particle rings as derived from IDE observations of multiple orbit intersections with LDEF p 1869 N95-23829
ORBITAL MANEUVERING VEHICLES
CFD analysis of spray combustion and radiation in OMV thrust chamber p 1637 N95-23645
ORBITAL RENDEZVOUS
Autonomous spacecraft executive and its application to rendezvous and docking p 1623 N95-23719
ORBITAL SERVICING
The next decade of space robotics p 1768 N95-23673
Commercialization of JPL Virtual Reality calibration and redundant manipulator control technologies p 1768 N95-23676
ASI's space automation and robotics programs: The second step p 1697 N95-23696
JPL space robotics: Present accomplishments and future thrusts p 1697 N95-23697
A US-Japan collaborative robotics research program p 1772 N95-23698
Dexterous Orbital Servicing System (DOSS) p 1752 N95-23723
ORBITS
Harmonic oscillators and resonance series generated by a periodic unstable classical orbit p 1825 N95-22999
ORDER-DISORDER TRANSFORMATIONS
Fermion-spin transformation to implement the charge-spin separation
| DE94-629035 | p 1800 N95-22495
Protein folding and protein metallocluster studies using synchrotron small angler x ray scattering
| DE95-003339 | p 1746 N95-22897
Computational modeling of properties
| NAS-CR-196544 | p 1841 N95-22907
KKR-CPA calculations of density of states and soft X ray emission from disordered Li-Mg alloys
| DE94-628882 | p 1640 N95-22934
High resolution microstructural analysis of zirconia eutectic interfaces
| DE95-003143 | p 1845 N95-24143
OREGON
Dynamics and pattern of a managed coniferous forest landscape in Oregon p 1720 N95-24104
ORGANIC COMPOUNDS
Development of novel separation techniques for biological samples in capillary electrophoresis
| DE95-001672 | p 1744 N95-22493
Turbidity of a near critical ionic fluid
| DE94-014916 | p 1633 N95-22869
Assessing the relative contribution of biogenic and fossil processes to visibility scattering aerosols found in remote areas: Near-term Organic Research Program
| DE95-003149 | p 1735 N95-24146
ORGANIC MATERIALS
Organic coating technology for the protection of aircraft against corrosion p 1644 N95-23513
Atomic oxygen interactions with protected organic materials on the Long Duration Exposure Facility (LDEF) p 1627 N95-23909
Organic matrix composite protective coatings for space applications p 1627 N95-23914
ORGANIC PEROXIDES
Atmospheric peroxides
| DE95-004435 | p 1733 N95-23362
ORGANIC SUPERCONDUCTORS
Surface impedance studies on the electrodynamical response of organic superconductors
| DE95-002986 | p 1660 N95-22593
ORGANIC WASTES (FUEL CONVERSION)
Review of research results for the photocatalytic oxidation of hazardous wastes in air
| DE95-004004 | p 1734 N95-23480
ORGANIZATIONS
Optimization of a centrifugal impeller design through CFD analysis p 1680 N95-23624
CFD parametric study of consortium impeller p 1680 N95-23626
ORGANOMETALLIC COMPOUNDS
The electronic structure of heavy element complexes
| DE95-003407 | p 1806 N95-23082
Organometallic chemistry of bimetallic compounds
| DE95-004436 | p 1634 N95-23345
ORIFICES
The influence of swirl brakes and a tip discharge orifice on the rotordynamic forces generated by discharge-to-suction leakage flows in shrouded centrifugal pumps p 1680 N95-23628
ORTHO HYDROGEN
Supported transition metal catalysts for para- to ortho-hydrogen conversion
| NASA-CR-197907 | p 1634 N95-23252
ORTHO PARA CONVERSION
Supported transition metal catalysts for para- to ortho-hydrogen conversion
| NASA-CR-197907 | p 1634 N95-23252
ORTHOGONAL FUNCTIONS
A Ramanujan-type measure for the Askey-Wilson polynomials p 1797 N95-22975
Kravchuk functions for the finite oscillator approximation p 1798 N95-23006
ORTHOGONALITY
Parallal Arnoldi method for the construction of a Krylov subspace basis: An application in magnetohydrodynamics
| PB95-135786 | p 1787 N95-22717
Tutorial on filtering, restoration, and state estimation
| TR-534 | p 1793 N95-24042
ORTHOPHOTOGRAPHY
Color orthophotography: To scan or not
| DE95-002749 | p 1689 N95-24069
Old-growth and mature forests near spotted owl nests in western Oregon p 1719 N95-24098
OSCILLATIONS
Neutrino oscillation experiments with atmospheric neutrinos
| DE95-002994 | p 1801 N95-22573
On oscillations of higher order neutral differential equations
| DE94-628421 | p 1786 N95-22629
Self-generating oscillating pressure exercise device
| NASA-CASE-ARC-12000-1 | p 1751 N95-23264
Fast potential change in sawteeth in JIPP T-IIU tokamak plasmas
| NIFS-327 | p 1835 N95-23533
Long-baseline neutrino oscillation experiments
| DE95-004636 | p 1870 N95-23584
OSCILLATORS
Capacitive acoustic wave detector and method of using same
| NASA-CASE-LAR-13890-1 | p 1799 N95-22921
Exact, E = 0, classical and quantum solutions for general power-law oscillators p 1820 N95-22959
Non-Noetherian symmetries for oscillators in classical mechanics and in field theory p 1823 N95-22977
Covariant deformed oscillator algebras p 1797 N95-22978
Neurodynamic oscillators p 1749 N95-22987
Lyapunov exponents from CHUA's circuit time series using artificial neural networks p 1784 N95-22988
The relativistic many body problem with an oscillator interaction p 1824 N95-22991
Covariant harmonic oscillators and coupled harmonic oscillators p 1825 N95-22992
On pseudosupersymmetric oscillators and reality of relativistic energies for vector mesons p 1815 N95-22994
On parasupersymmetric oscillators and relativistic vector mesons in constant magnetic fields p 1815 N95-22995
Pseudoclassical description of the Dirac Oscillator p 1825 N95-22996
Notes on oscillator-like interactions of various spin relativistic particles p 1815 N95-22997
The Duffin-Kemmer-Petiau oscillator p 1825 N95-22998
Supersymmetric oscillator in optics p 1826 N95-23002
OSTWALD RIPENING
The effect of elastic stress on Ostwald Ripening Phenomena
| DE95-002599 | p 1646 N95-24140
OUTGASSING
Thermal outgassing studies on machinable tungsten and TZM molybdenum alloy
| DE95-002984 | p 1638 N95-22592
Society of the plastic industry process emission initiatives p 1629 N95-23036
Outgassing considerations for composites in space applications p 1629 N95-23037
LDEF environment modeling updates p 1637 N95-23797
Outgassing products from orbiter TPS materials p 1637 N95-23798
Effect of the space environment on materials flown on the EURECA/TICCE-HVI experiment p 1623 N95-23803
Further investigations of experiment A0034 atomic oxygen stimulated outgassing p 1651 N95-23908
OUTLET FLOW
Three-dimensional viscous flow analysis inside a turbine volute p 1674 N95-23437
OXIDATION
Evolution of oxidation and creep damage mechanisms in HIPed silicon nitride materials
| DE95-001360 | p 1647 N95-22689
On the formation of iron(3) oxides via oxidation of iron(2)
| DE94-018392 | p 1632 N95-22857
Analytical Boltzmann moments for electrons in N2-O2-H2O gas mixtures
| DE95-003474 | p 1732 N95-22898
Dimethylsulfide oxidation over the tropical South Atlantic: OH and other oxidants
| NASA-CR-197417 | p 1732 N95-22930
Ethylene oxidation chemistry in a well-stirred reactor
| DE95-004823 | p 1635 N95-23381
Oxidants and oxidation in the Earth's atmosphere
| NASA-CR-197945 | p 1734 N95-23460
Multi-fuel reformers for fuel cells used in transportation. Phase 1: Multi-fuel reformers
| DE95-004215 | p 1729 N95-23482
Carbon monoxide oxidation over three different states of copper: Development of a model metal oxide catalyst
| DE95-004682 | p 1636 N95-23495
NMR study of nanophase Al/Al-oxide powder and consolidated composites
| DE95-004655 | p 1843 N95-23586
The surface properties of fluorinated polyimides exposed to VUV and atomic oxygen p 1651 N95-23904
Collection and review of metals data obtained from LDEF experiment specimens and support hardware p 1646 N95-23905
Solderability preservation through the use of organic inhibitors
| DE95-003633 | p 1664 N95-24149
OXIDE FILMS
Vapor deposition of thin-film Y-doped ZrO2 for electrochemical device applications
| DE95-003705 | p 1649 N95-23268
OXIDES
Support research for solid oxide fuel cells
| DE95-002910 | p 1726 N95-22568
Glass science tutorial: Lecture 1, Chemistry and properties of oxide glasses
| DE95-002963 | p 1647 N95-22647

Reflectivity studies on adsorbed block copolymers under shear
[DE95-003676] p 1649 N95-23568

Advances in research for solid oxide fuel cells
[DE95-004590] p 1730 N95-23582

OXIDIZERS

Navier-Stokes analysis of an oxidizer turbine blade with tip clearance with and without a mini-shroud
p 1672 N95-23428

Finite-difference solutions of the alternate turbopump development high-pressure oxidizer turbopump pump-end ball-bearing cavity flows p 1678 N95-23617

Three-D flow analysis of the alternate SSME HPOT TAD p 1679 N95-23620

OXYGEN

Evolution of oxidation and creep damage mechanisms in HIPed silicon nitride materials
[DE95-001360] p 1647 N95-22689

Analytical Boltzmann moments for electrons in N2-O2-H2O gas mixtures
[DE95-003474] p 1732 N95-22898

Oxygen enriched combustion system performance study. Phase 2: 100 percent oxygen enriched combustion in regenerative glass melters
[DE95-004212] p 1635 N95-23481

Navier-Stokes flow field analysis of compressible flow in a pressure relief valve p 1679 N95-23618

OXYGEN ATOMS

Atomic oxygen durability evaluation of protected polymers using thermal energy plasma systems
[NASA-TM-106855] p 1626 N95-23270

Performance characterization of EURECA retroreflectors with fluoropolymer-filled SiO(x) protective coatings p 1651 N95-23802

Summary and review of Materials Special Investigation Group evaluations of hardware from the Long Duration Exposure Facility p 1638 N95-23897

The surface properties of fluorinated polyimides exposed to VUV and atomic oxygen p 1651 N95-23904

Measurements of the optical properties of thin films of silver and silver oxide p 1651 N95-23906

Further investigations of experiment A0034 atomic oxygen stimulated outgassing p 1651 N95-23908

Atomic oxygen interactions with protected organic materials on the Long Duration Exposure Facility (LDEF) p 1627 N95-23909

Atomic oxygen textured polymers
[NASA-TM-106769] p 1650 N95-24187

OXYGEN IONS

Symmetry breaking in O4(+): An application of the Brueckner coupled-cluster method
[NASA-CR-197981] p 1810 N95-23459

Photoionization of O(6+) below the n=3 threshold of the reduced ion
[DE94-634436] p 1844 N95-23774

OXYGEN PLASMA

Atomic oxygen durability evaluation of protected polymers using thermal energy plasma systems
[NASA-TM-106855] p 1626 N95-23270

Atomic oxygen textured polymers
[NASA-TM-106769] p 1650 N95-24187

OXYGEN SUPPLY EQUIPMENT

Oxygen enriched combustion system performance study. Phase 2: 100 percent oxygen enriched combustion in regenerative glass melters
[DE95-004212] p 1635 N95-23481

OZONE

Compendium of NASA data base for the Global Tropospheric Experiment's Pacific Exploratory Mission West-A (PEM West-A)
[NASA-TM-109177] p 1733 N95-23009

Oxidants and oxidation in the Earth's atmosphere
[NASA-CR-197945] p 1734 N95-23460

The atmosphere below
[NASA-TM-110538] p 1740 N95-23663

Laboratory studies of the sensitivity of tropospheric ozone to the chemistry of sea salt aerosol
[DE95-003607] p 1735 N95-24147

OZONE DEPLETION

The Atmospheric Lifetime Experiment and the Global Atmospheric Gas Experiment (ALE/GAGE)
[NASA-CR-197400] p 1731 N95-22673

The atmosphere below
[NASA-TM-110538] p 1740 N95-23663

OZONOSPHERE

The Atmospheric Lifetime Experiment and the Global Atmospheric Gas Experiment (ALE/GAGE)
[NASA-CR-197400] p 1731 N95-22673

The atmosphere below
[NASA-TM-110538] p 1740 N95-23663

P

P-I-N JUNCTIONS

Research on defects and transport in amorphous-silicon-based semiconductors
[DE94-011888] p 1660 N95-22586

P-TYPE SEMICONDUCTORS

Annealing of nitrogen-doped ZnSe at high pressures: Toward suppression of native defect formation
[DE95-003420] p 1844 N95-24010

PACIFIC OCEAN

Oceanic operations: An authoritative guide to oceanic operations
[FAA-AFS-550] p 1610 N95-24065

PACKAGING

Radioisotope thermoelectric generator licensed hardware package and certification tests
[DE95-003039] p 1661 N95-22799

Low-cost packaging of high-performance optoelectronic components
[DE95-003645] p 1827 N95-23449

High-performance GaAs/AlGaAs optical modulators: Their performance and packaging for microwave photonic integrated circuits
[DE95-004533] p 1828 N95-23575

Micro heat spreader enhanced heat transfer in MCM's
[DE95-004520] p 1663 N95-23779

PACKET SWITCHING

Non-blocking crossbar permutation engine with constant routing latency
[NASA-CASE-NPO-18864-1-CU] p 1762 N95-22564

PACKET TRANSMISSION

Non-blocking crossbar permutation engine with constant routing latency
[NASA-CASE-NPO-18864-1-CU] p 1762 N95-22564

Geolocation applications of the Gonets LEO messaging satellites p 1656 N95-22818

PACKETS (COMMUNICATION)

Non-blocking crossbar permutation engine with constant routing latency
[NASA-CASE-NPO-18864-1-CU] p 1762 N95-22564

PAINTS

Low Earth orbit thermal control coatings exposure flight tests: A comparison of U.S. and Russian results
[NASA-CR-4647] p 1626 N95-22919

Method development for compensating temperature effects in pressure sensitive paint measurements p 1650 N95-23291

Progress report on conductive paints, September 1, 1994-November 30, 1994
[DE95-004297] p 1649 N95-23356

PAIR PRODUCTION

Dimuon production in proton-nucleus interactions
[DE95-002613] p 1801 N95-22551

QCD test in three-jet Z(sup 0) decays at SLD and detector development for H(sup 0) yields gamma gamma searches in high energy hadron colliders
[DE95-003336] p 1848 N95-22698

Search for second generation leptoquarks at CDF
[DE94-018983] p 1805 N95-22939

Final result on the mass of the tau lepton from the BES collaboration
[DE95-003466] p 1806 N95-23139

Search for top quark at CDF
[DE95-003748] p 1809 N95-23406

Search for scalar and vector leptoquarks in electron-proton collisions at radical S = 300 GeV
[DE94-785267] p 1810 N95-23475

Search for supersymmetric (tilde W)(sub 1) and (tilde Z)(sub 2) states using the D0 detector
[DE95-004581] p 1811 N95-23581

PANEL METHOD (FLUID DYNAMICS)

Accelerated panel methods using the fast multipole method p 1687 N95-23307

PANELS

Active control of panel vibrations induced by a boundary layer flow
[NASA-CR-197867] p 1608 N95-23182

Residual strength of thin panels with cracks p 1700 N95-23311

PARA HYDROGEN

Supported transition metal catalysts for para- to ortho-hydrogen conversion
[NASA-CR-197907] p 1634 N95-23252

PARALLEL COMPUTERS

Evaluation of a Multiple Instruction/Multiple Data (MIMD) parallel computer for CFD applications
[AD-A285796] p 1762 N95-22509

Block LU factorization
[NASA-CR-197949] p 1791 N95-23592

Scalable, extensible, and portable numerical libraries
[DE95-004643] p 1765 N95-24172

PARALLEL FLOW

Experimental technique and assessment for measuring the convective heat transfer coefficient from natural ice accretions
[NASA-TM-106864] p 1668 N95-23248

PARALLEL PLATES

Capacitive acoustic wave detector and method of using same
[NASA-CASE-LAR-13890-1] p 1799 N95-22921

Quantum field between moving mirrors: A three dimensional example p 1821 N95-22965

Monte Carlo simulation of rarefied nitrogen gases contained between parallel plates using the statistical inelastic cross-section model
[NAL-TR-1229T] p 1687 N95-24082

PARALLEL PROCESSING (COMPUTERS)

Partitioning methods for unstructured finite element meshes
[PB95-130555] p 1785 N95-22544

A parallel molecular dynamics simulation of crystal growth at a cluster of workstations
[DE94-628382] p 1839 N95-22615

Accepting the T3D
[DE95-000924] p 1762 N95-22679

Software for the generalized eigenproblem on distributed memory architectures
[DE95-002999] p 1755 N95-22690

Realizing parallel reduction operation in Sisal 1.2
[DE94-017524] p 1763 N95-22858

Realizing parallel reduction operations in Sisal 1.2
[DE94-017525] p 1763 N95-22859

Algorithms for parallel and vector computations
[NASA-CR-197394] p 1756 N95-23017

Overview of Ph.D. theses and memoranda, 1993
[PB95-135190] p 1756 N95-23071

A draft standard for message passing in a distributed memory environment
[DE94-019159] p 1657 N95-23075

High-performance parallel analysis of coupled problems for aircraft propulsion
[NASA-CR-197440] p 1614 N95-23088

Distributed VIRtual System (DIVIRS) project
[NASA-CR-197855] p 1757 N95-23180

Two portable parallel tridiagonal solvers
[DE94-019044] p 1763 N95-23243

Task scheduling in dataflow computer architectures p 1753 N95-23301

MPI implementation of CFD program PHOENICS
[DE95-003896] p 1668 N95-23372

Parallel computation of automatic differentiation applied to magnetic field calculations
[DE95-004689] p 1763 N95-23486

Towards the Teraflop CFD
[NASA-CR-197947] p 1764 N95-23594

WHAMS3D Project: Parallel implementations of WHAMS3D on two shared-memory multiprocessors
[CSRD-1248] p 1764 N95-23599

Microarchitecture support for dynamic scheduling of acyclic task graphs
[CSRD-1207] p 1791 N95-23600

Unstructured grids on SIMD torus machines
[NASA-CR-197954] p 1758 N95-23610

Very fast motion planning for highly dexterous-articulated robots p 1771 N95-23691

Algorithms for categorizing multiprocessor communication under invalidate and update-based coherence protocols
[TR-533-REV] p 1759 N95-23928

Loop scheduling for heterogeneity
[TR-540] p 1764 N95-23936

Unifying data and control transformations for distributed shared-memory machines
[TR-542] p 1765 N95-24061

A distributed parallel storage architecture and its potential application within EOSDIS p 1858 N95-24111

Client/Server data serving for high performance computing p 1761 N95-24123

Scalable, extensible, and portable numerical libraries
[DE95-004643] p 1765 N95-24172

PARALLEL PROGRAMMING

Comparing data synchronization in Ada 9X and Orca
[PB95-127999] p 1754 N95-22529

Realizing parallel reduction operation in Sisal 1.2
[DE94-017524] p 1763 N95-22858

Realizing parallel reduction operations in Sisal 1.2
[DE94-017525] p 1763 N95-22859

DUALITY: A simple formalism for the analysis of UNITY
[PB95-135703] p 1763 N95-23166

Loop scheduling for heterogeneity
[TR-540] p 1764 N95-23936

Unifying data and control transformations for distributed shared-memory machines
[TR-542] p 1765 N95-24061

Scalable, extensible, and portable numerical libraries
|DE95-004643| p 1765 N95-24172
PARTIAL DIFFERENTIAL EQUATIONS
Existence of solutions for some superlinear or sublinear elliptic systems on R(sup N)
|DE94-628417| p 1785 N95-22625
Nonlinear generalized functions and nonconservative shock simulations
|DE95-003307| p 1795 N95-22734
Level set techniques applied to unsteady detonation propagation
|DE95-002741| p 1666 N95-22901
Time-periodic solutions of some forced nonlinear wave equations: Analysis, approximations and applications
|PB95-135083| p 1788 N95-22932
VLUGR2: A vectorizable adaptive grid solver for PDes in 2D
|PB95-136008| p 1789 N95-23167
Stability and efficiency of waveform relaxation methods
|PB95-138863| p 1789 N95-23173
Fourth order difference methods for hyperbolic IBVP's
|NASA-CR-197955| p 1791 N95-23548
PARTICLE ACCELERATION
Interdigital-H linac for unstable nuclei at INS
|DE94-765448| p 1816 N95-22644
Introduction to the physics of Higgs bosons
|DE95-003965| p 1809 N95-23396
PARTICLE ACCELERATORS
A report on the Indiana University Workshop on future U.S. hadron facilities
|DE95-003951| p 1817 N95-23353
D(O) upgrade muon electronics design
|DE95-003744| p 1817 N95-23369
PARTICLE BEAMS
Interdigital-H linac for unstable nuclei at INS
|DE94-765448| p 1816 N95-22644
PARTICLE COLLISIONS
Search for second generation leptoquarks at CDF
|DE94-018983| p 1805 N95-22939
Final result on the mass of the tau lepton from the BES collaboration
|DE95-003466| p 1806 N95-23139
Measurement of the left-right charge asymmetry in hadronic Z decays and A(sub e) determination
|DE95-003467| p 1806 N95-23140
Measuring the left-right cross section asymmetry in Z boson production by e(+)e(-) collisions at the SLC
|DE95-003468| p 1807 N95-23141
Testing QCD with jet physics at CDF
|DE94-018980| p 1807 N95-23196
Properties of jets in Z events from 1.8 TeV (bar p)p collisions
|DE94-018982| p 1808 N95-23197
Search for Z' and W' at CDF
|DE94-018987| p 1808 N95-23203
J/psi, psi' yields mu(+)mu(-) and B yields J/psi, psi' cross sections
|DE94-018996| p 1808 N95-23242
D(O) upgrade muon electronics design
|DE95-003744| p 1817 N95-23369
Introduction to the physics of Higgs bosons
|DE95-003965| p 1809 N95-23396
Search for scalar and vector leptoquarks in electron-proton collisions at radical S = 300 GeV
|DE94-785267| p 1810 N95-23475
Measurement of W and Z boson production and extraction of the W width and branching ratios at CDF
|DE94-018989| p 1810 N95-23522
Inclusive rapidity correlations of (pi)(-) mesons in pp-interactions
|DE94-635654| p 1812 N95-23974
PARTICLE DECAY
Limit on the muon neutrino mass from K(exp 0)muon 3 decay spectra
|DE95-000816| p 1801 N95-22583
The first measurement of the left-right cross section asymmetry in Z(sup 0) boson production
|DE95-003335| p 1802 N95-22697
The charm physics potential of a Tau-Charm Factory
|DE95-003369| p 1802 N95-22703
QCD improved exclusive rare B-decays at the heavy b-quark limit
|DE94-628609| p 1802 N95-22720
Chiral anomalies in non-leptonic decays within chiral perturbation theory at the quark level
|DE94-628613| p 1849 N95-22753
On the D yields K-bar(sup *)e(sup +)(nu)(sub e) form factors
|DE94-628614| p 1803 N95-22754
To the problem of D-meson leptonic and semileptonic decays
|DE94-628615| p 1803 N95-22755
The decays of D(sup *)-mesons
|DE94-628610| p 1804 N95-22810
(pi)- and a(sub 1)-meson physics in current algebra at the quark level
|DE94-628611| p 1804 N95-22811
The omega pi(sup 0)-transient form factor within effective chiral Lagrangian approach
|DE94-628612| p 1850 N95-22812
Once more about the omega approaches 3(pi) contact term
|DE94-633202| p 1804 N95-22847
Heavy quark physics at SLD: Preliminary results
|DE95-003372| p 1806 N95-23138
Measurement of the left-right charge asymmetry in hadronic Z decays and A(sub e) determination
|DE95-003467| p 1806 N95-23140
High Energy Theory: Task B and Task L
|DE95-003453| p 1817 N95-23148
Flavour dependence of form factors in heavy meson decays
|PB95-139101| p 1807 N95-23156
Search for Z' and W' at CDF
|DE94-018987| p 1808 N95-23203
J/psi, psi' yields mu(+)mu(-) and B yields J/psi, psi' cross sections
|DE94-018996| p 1808 N95-23242
Measurement of correlated b quark cross sections at CDF
|DE95-004240| p 1808 N95-23336
Recent results from Fermilab E-687, charm particle decays, lifetimes and photoproduction dynamics: A compilation results presented at DPF 1994
|DE95-004580| p 1808 N95-23347
Search for new gauge bosons at D(O)
|DE95-003745| p 1809 N95-23404
New determination of V(sub us) from K(sub e3)(+) decay
|DE94-628616| p 1811 N95-23769
Charm-conserving strangeness-changing two body hadronic decays of charmed baryons
|DE94-628621| p 1811 N95-23770
Neutrinoless double beta decay and the solar neutrino problem
|DE94-628633| p 1812 N95-23785
W mass measurements from D(circle slash) and CDF experiments at TeVatron
|DE95-003497| p 1813 N95-24000
PARTICLE DIFFUSION
Surface growth of two kinds of particles deposition models
|DE94-628480| p 1841 N95-23021
PARTICLE ENERGY
Energetic particle observations at geosynchronous orbit
|DE95-000873| p 1867 N95-22516
Variational calculations for He-3 impurities on He-4 droplets
|DE94-628469| p 1840 N95-22839
Second order focusing property of 210 deg cylindrical energy analyzer
|NIFS-317| p 1834 N95-23527
Alpha spectral analysis via artificial neural networks
|DE95-004567| p 1767 N95-23578
PARTICLE IMAGE VELOCIMETRY
Direct numerical simulations and modeling of a spatially-evolving turbulent wake p 1687 N95-23289
PARTICLE INTERACTIONS
Chiral symmetry breaking in QCD with linearly rising confinement potential
|DE94-628559| p 1848 N95-22744
Spontaneous breaking of chiral symmetry as a consequence of confinement
|DE94-628560| p 1849 N95-22745
Inclusive rapidity correlations of (pi)(-) mesons in pp-interactions
|DE94-635654| p 1812 N95-23974
Lattice relaxation study on self-trapped exciton and biexciton in neutral and charged fullerenes
|DE94-635788| p 1844 N95-23986
PARTICLE MASS
Limit on the muon neutrino mass from K(exp 0)muon 3 decay spectra
|DE95-000816| p 1801 N95-22583
Final result on the mass of the tau lepton from the BES collaboration
|DE95-003466| p 1806 N95-23139
Introduction to the physics of Higgs bosons
|DE95-003965| p 1809 N95-23396
Search for new gauge bosons at D(O)
|DE95-003745| p 1809 N95-23404
Electroweak physics from the Tevatron
|DE95-002213| p 1810 N95-23530
Neutrino masses and mixing
|DE94-628632| p 1812 N95-23784
Neutrinoless double beta decay and the solar neutrino problem
|DE94-628633| p 1812 N95-23785
Neutrino mass
|DE94-628634| p 1812 N95-23786
Enhanced oscillation of neutrinos of different masses in matter
|DE94-635648| p 1812 N95-23973
W mass measurements from D(circle slash) and CDF experiments at TeVatron
|DE95-003497| p 1813 N95-24000
A measurement of the mass of the W vector boson at CDF
|DE95-003498| p 1813 N95-24016
PARTICLE MOTION
Photon and electron interaction databases and their use in medical applications
|DE94-015558| p 1855 N95-22871
Design study of longitudinal dynamics of the drive beam in 1 TeV relativistic klystron two-beam accelerator
|DE95-004683| p 1817 N95-23485
A generalized Eulerian-Lagrangian analysis, with application to liquid flows with vapor bubbles p 1682 N95-23633
PARTICLE PRECIPITATION
Diffusion behavior of lysozyme in aqueous ammonium sulfate solutions under varying solution conditions as determined by dynamic light scattering
|DE95-004821| p 1635 N95-23380
PARTICLE PRODUCTION
New preliminary results on the physics of charm hadroproduction subprocesses
|DE95-002530| p 1801 N95-22646
(pi)N correlations at AGS
|DE95-002933| p 1801 N95-22656
Perturbative QCD tests from the LEP, HERA, and TEVATRON colliders
|DE95-001285| p 1816 N95-22684
Bottom-quark production from muon-jet and dimuon events in p(bar p)-interactions at the square root of s = 1.8 TeV
|DE95-001286| p 1801 N95-22685
The first measurement of the left-right cross section asymmetry in Z(sup 0) boson production
|DE95-003335| p 1802 N95-22697
Measurement of the left-right asymmetry in Z boson production by electron-positron collisions
|DE95-003337| p 1802 N95-22699
Searches for the H-dibaryon at the AGS
|DE95-003091| p 1802 N95-22727
Status of helium-production reaction studies with a spallation neutron source
|DE95-002816| p 1806 N95-23137
Measuring the left-right cross section asymmetry in Z boson production by e(+)e(-) collisions at the SLC
|DE95-003468| p 1807 N95-23141
Electroweak coupling measurements from polarized Bhabha scattering at SLD
|DE95-003137| p 1807 N95-23165
Properties of jets in Z events from 1.8 TeV (bar p)p collisions
|DE94-018982| p 1808 N95-23197
Measurement of correlated b quark cross sections at CDF
|DE95-004240| p 1808 N95-23336
Introduction to the physics of Higgs bosons
|DE95-003965| p 1809 N95-23396
Study of b(anti b) production in e(+)e(-) annihilation at radical s = 29 GeV with the aid of neural networks
|DE95-004691| p 1810 N95-23488
Measurement of W and Z boson production and extraction of the W width and branching ratios at CDF
|DE94-018989| p 1810 N95-23522
Independent production and Poisson distribution
|DE94-635632| p 1794 N95-23972
PARTICLE SPIN
Fermion-spin transformation to implement the charge-spin separation
|DE94-629035| p 1800 N95-22495
Experimental results on polarized structure functions in deep inelastic lepton-nucleon scattering
|DE95-002782| p 1801 N95-22521
Spin physics in the next decade
|DE95-003727| p 1809 N95-23403
Spinning particles in the Euclidean Taub-NUT space
|DE94-634320| p 1810 N95-23456
PARTICLE THEORY
The charm physics potential of a Tau-Charm Factory
|DE95-003369| p 1802 N95-22703
How to measure the Q(bar Q) potential in a light-front calculation
|DE95-003200| p 1848 N95-22728
Neutrino overview
|DE95-003201| p 1802 N95-22729
Outlook from the intersections
|DE95-003202| p 1802 N95-22730
Aspects of sigma models
|DE94-628511| p 1795 N95-22736

Problems in particle theory
| DE95-003106 | p 1803 N95-22749
Disorder-induced breakdown of soliton and polaron particles
| DE95-003694 | p 1808 N95-23267

PARTICLE TRACKS
Performance of a large scale scintillating fiber tracker using VLPC readout
| DE95-003746 | p 1871 N95-23370
Thermal effects on the STAR electromagnetic calorimeter
| DE95-004663 | p 1688 N95-23492
Absorbed dose and LET spectra measurements on LDEF p 1815 N95-23810
Measurement of trapped proton fluences in main stack of P0006 experiment p 1815 N95-23812
Charge, energy and LET spectra of high LET primary and secondary particles in CR-39 plastic nuclear track detectors of the P0006 experiment p 1815 N95-23814
VLPC characterization for the Dzero upgrade
| DE95-003742 | p 1818 N95-24084

PARTICLE TRAJECTORIES
Spinning particles in the Euclidean Taub-NUT space
| DE94-634320 | p 1810 N95-23456
A generalized Eulerian-Lagrangian analysis, with application to liquid flows with vapor bubbles p 1682 N95-23633
LDEF Interplanetary Dust Experiment (IDE) results p 1869 N95-23828
The orbital characteristics of debris particle rings as derived from IDE observations of multiple orbit intersections with LDEF p 1869 N95-23829
The effect of impact angle on craters formed by hypervelocity particles p 1700 N95-23839

PARTICLES
Particle size dependence in Fischer-Tropsch synthesis
| DE95-003124 | p 1633 N95-22876
Divertor heat and particle control experiments on the DIII-D tokamak
| DE94-017518 | p 1832 N95-23119

PARTICULATES
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
| DE95-001135 | p 1687 N95-22682
Applied research on air pollution using nuclear-related analytical techniques
| DE94-633513 | p 1734 N95-23542
Advanced multi-phase flow CFD model development for solid rocket motor flowfield analysis p 1683 N95-23638
An interactive tool for discrete phase analysis in two-phase flows p 1683 N95-23641

PARTITIONS (MATHEMATICS)
Partitioning methods for unstructured finite element meshes
| PB95-130555 | p 1785 N95-22544
Classification of SU(3) modular invariants revisited
| PB95-110771 | p 1787 N95-22715

PARTONS
Dimuon production in proton-nucleus interactions
| DE95-002613 | p 1801 N95-22551

PASSENGERS
A multibody/finite element analysis approach for modeling of crash dynamic responses
| NIAR-94-3 | p 1610 N95-24050

PASSIVITY
In-situ detection of surface passivation or activation and of localized corrosion: Experiences and prospectives in aircraft p 1643 N95-23508
Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides
| DE95-004531 | p 1731 N95-24090

PASTES
Sensor-based control of rocket thrust chamber feature location for automated braze paste dispensing
| DE94-016559 | p 1624 N95-22885

PATHOLOGICAL EFFECTS
All systems go!
| NASA-TM-110542 | p 1620 N95-23665

PATTERN RECOGNITION
An improved system for exon recognition and gene modeling in human DNA sequences
| DE94-017863 | p 1746 N95-22890
Locating buildings in aerial photos p 1721 N95-23295
Method and system for pattern analysis using a coarse-coded neural network
| NASA-CASE-ARC-11961-1 | p 1767 N95-23387
Toward an automated signature recognition toolkit for mission operations p 1659 N95-23682
Unsupervised classification learning from cross-modal environmental structure
| TR-536 | p 1784 N95-24040
Hierarchical analysis of spatial pattern and processes of Douglas-fir forests p 1719 N95-24099
Dynamics and pattern of a managed coniferous forest landscape in Oregon p 1720 N95-24104

PAYLOAD RETRIEVAL (STS)
Endeavor: Now and then
| NASA-TM-110539 | p 1620 N95-23664

PAYLOADS
Adaptive beamforming in a CDMA mobile satellite communications system p 1655 N95-22815
Toys in space, 2
| NASA-TM-110541 | p 1620 N95-23275
An operations and command systems for the extreme ultraviolet explorer p 1770 N95-23687
Aerodynamic flight control to increase payload capability of future launch vehicles
| NASA-CR-197704 | p 1619 N95-24032

PELLETS
New pellet production and acceleration technologies for high speed pellet injection system HIPEL in Large Helical Device
| NISF-326 | p 1835 N95-23566

PENETRATION
High-velocity penetrators
| DE95-001886 | p 1698 N95-22500
Rationale for the Modular Air-system Vulnerability Estimation Network (MAVEN) methodology
| AD-A285797 | p 1611 N95-22510
Projectile penetration into representative targets
| DE95-003089 | p 1698 N95-22726
Impact shock and penetration fragmentation in porous media
| DE94-018900 | p 1868 N95-23656
Small craters on the meteoroid and space debris impact experiment p 1623 N95-23825
Penetration rates over 30 years in the space age p 1624 N95-23827
Cratering and penetration experiments in Teflon targets at velocities from 1 to 7 km/s p 1700 N95-23842

PERCEPTION
Project: Internal communications p 1854 N95-23282

PERFORMANCE PREDICTION
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 1: HARP introduction and user's guide
| NASA-TP-3452-VOL-1 | p 1754 N95-22603
Neural net prediction of tokamak plasma disruptions
| DE95-002616 | p 1832 N95-23136
An approximate theoretical method for modeling the static thrust performance of non-axisymmetric two-dimensional convergent-divergent nozzles
| NASA-CR-195050 | p 1608 N95-23193
Damage-mitigating control of a reusable rocket engine for high performance and extended life
| NASA-CR-4640 | p 1654 N95-23195
An RL10A-3-3A rocket engine model using the rocket engine transient simulator (ROCETS) software
| NASA-CR-190786 | p 1625 N95-23790
Predicted performance of an integrated modular engine system
| NASA-CR-190787 | p 1625 N95-23791
Design of a high-temperature superconductor current lead for electric utility SMES
| DE95-004604 | p 1664 N95-24163

PERFORMANCE TESTS
Design and demonstration of an immobilized-cell fluidized-bed reactor for the efficient production of ethanol
| DE94-014023 | p 1652 N95-22587
Accepting the T3D
| DE95-000924 | p 1762 N95-22679
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
| DE95-000362 | p 1634 N95-23164
NASA 30 cm ion thruster development status
| NASA TM-106842 | p 1624 N95-23221
Functional testing of the space station plasma contactor
| NASA-TM-106841 | p 1624 N95-23240
Performance of the 0.3-meter transonic cryogenic tunnel with air, nitrogen, and sulfur hexafluoride media under closed loop automatic control
| NASA-CR-195052 | p 1668 N95-23257
Verification and validation of decision support software: Expert Choice(trademark) and PCM(trademark)
| DE95-004469 | p 1757 N95-23346
Calorimetric measurement of energy of ultrasonic cleaners
| DE95-003938 | p 1800 N95-23375
Operation and tests of a DDC101 A/D
| DE95-003747 | p 1663 N95-23405
Remote sensor test range update
| DE95-003629 | p 1735 N95-24018
A high speed digitizing photomultiplier tube base for the KTeV CsI calorimeter
| DE95-003739 | p 1664 N95-24081
VLPC characterization for the Dzero upgrade
| DE95-003742 | p 1818 N95-24084
Experimental achievement of toroidal beta beyond that predicted by 'Troyon' scaling
| DE95-003880 | p 1837 N95-24087
Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides
| DE95-004531 | p 1731 N95-24090
Report to the Secretary of Defense. Unmanned aerial vehicles: No more Hunter systems should be bought until problems are fixed
| GAO/NSIAD-95-52 | p 1613 N95-24091
Robotic tape library system level testing at NSA: Present and planned p 1858 N95-24112
Digital Linear Tape (DLT) technology and product family overview p 1753 N95-24125

PERIDOTITE
Mapping of the Ronda peridotite massif (Spain) from AVIRIS spectro-imaging survey: A first attempt p 1707 N95-23878

PERIODIC VARIATIONS
Static parametric fluctuations give nonstatistical behaviour in uncoupled chaotic systems
| DE94-628478 | p 1794 N95-23019
Telescope loading: A problem reduction approach p 1781 N95-23757

PERMANENT MAGNETS
Multipole contribution from an off-axis orbit in an IR quadrupole and the consequences on the dynamic aperture
| DE95-002874 | p 1816 N95-22567
Cu deposition using a permanent magnet electron cyclotron resonance microwave plasma source
| DE94-017768 | p 1650 N95-23981

PERMEABILITY
Permeability testing of composite material and adhesive bonds for the DC-XA composite feedline program
| NASA-TM-108483 | p 1630 N95-23551
High surface area, high permeability carbon monoliths
| DE95-004555 | p 1650 N95-23577

PERMUTATIONS
The chirality operators for Heisenberg spin systems
| DE94-629043 | p 1847 N95-22545
Non-blocking crossbar permutation engine with constant routing latency
| NASA-CASE-NPO-18864-1-CU | p 1762 N95-22564
Classification of SU(3) modular invariants revisited
| PB95-110771 | p 1787 N95-22715

PEROVSKITES
Electrochemical studies of perovskite mixed conductors
| DE95-003704 | p 1636 N95-23573

PEROXIDES
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer
| NASA-CR-197368 | p 1735 N95-22482

PERSONAL COMPUTERS
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
| DE95-001135 | p 1687 N95-22682
Development of qualification guidelines for personal computer-based aviation training devices
| DOT/FAA/AM-95/6 | p 1758 N95-23603

PERSONNEL
Project: Internal communications p 1854 N95-23282
The software analysis project for the Office of Human Resources p 1854 N95-23331
Security clearances: Consideration of sexual orientation in the clearance process. Report to Congressional requesters
| GAO/NSIAD-95-21 | p 1853 N95-23588
Inspector General: Alleged misconduct by NASA Inspector General. Report to Congressional requesters
| GAO/OSI-95-9 | p 1854 N95-24085

PERSONNEL MANAGEMENT
Upward appraisal as a means for improving supervisory performance and promoting process improvement, with long-term implications for organizational change p 1854 N95-23323
The software analysis project for the Office of Human Resources p 1854 N95-23331

PERTURBATION
Direct adaptive performance optimization of subsonic transports: A periodic perturbation technique
| NASA-TM-4676 | p 1612 N95-22829
Partition of real symmetric matrices according to the multiplicities of their eigenvalues
| PB95-139846 | p 1790 N95-23235

PERTURBATION THEORY
Chiral anomalies in non-leptonic decays within chiral perturbation theory at the quark level
| DE94-628613 | p 1849 N95-22753

On the D yields K-bar(sup *)e(sup +)(nu)(sub e) form factors
[DE94-628614] p 1803 N95-22754
To the problem of D-meson leptonic and semileptonic decays
[DE94-628615] p 1803 N95-22755
(pi)- and a(sub 1)-meson physics in current algebra at the quark level
[DE94-628611] p 1804 N95-22811
Optimally scaled systems for second order scalar singularity perturbed problems
[PB95-138814] p 1789 N95-23169

PESTICIDES
Extraction and detection of pesticide residues from air filter inserts using supercritical carbon dioxide
[DE95-004579] p 1735 N95-23580

PETN
Simulation of cookoff results in a small scale test
[DSTO-TR-0090] p 1653 N95-23668

PETRI NETS
Browsing semantics in the tower model
[PB95-127221] p 1855 N95-22534
Automatic verification of regular protocols in P/T nets
[PB95-138921] p 1789 N95-23146
Discrete-time Markovian stochastic Petri nets
[NASA-CR-195039] p 1758 N95-23613

PHASE COHERENCE
Bose condensation, macroscopic quantum phenomena and atomic spatial correlations in superfluid He-4
[PB95-139085] p 1850 N95-23154

PHASE CONTRAST
Edge fluctuation measurements by phase contrast imaging on DIII-D
[DE94-016681] p 1836 N95-23768

PHASE DIAGRAMS
Asymptotically exact solution of a local copper-oxide model
[DE94-628492] p 1842 N95-23059

PHASE MODULATION
Wavelet time-frequency analysis of phase-shift-key modulated signals
[AD-A285791] p 1655 N95-22505

PHASE SEPARATION (MATERIALS)
Turbidity of a near critical ionic fluid
[DE94-014916] p 1633 N95-22869
Enhancement of biomembrane functions under phase-separated conditions: A self-organized criticality phenomenon?
[DE94-628489] p 1747 N95-23053
Microporous polyimide films for reduced dielectric applications
[DE95-004543] p 1650 N95-24159

PHASE SHIFT
Using AVIRIS for in-flight calibration of the spectral shifts of SPOT-HRV and of AVHRR? p 1710 N95-23893

PHASE SHIFT KEYING
Wavelet time-frequency analysis of phase-shift-key modulated signals
[AD-A285791] p 1655 N95-22505
Effects of modulation index on telecommunications
[AD-A286018] p 1657 N95-23023

PHASE STABILITY (MATERIALS)
Experimental and theoretical studies on the C15 intermetallic compounds MV2 (M = Zr, Hf and Ta): Elasticity and phase stability
[DE95-003723] p 1845 N95-24079

PHASE TRANSFORMATIONS
Sullivan model for wetting transition in closed system
[DE94-628472] p 1665 N95-22771
Generalized phase transformations of spinor fields
[DE94-628505] p 1656 N95-22841
Progress towards the synthesis of polymeric nitrogen
[DE94-017547] p 1841 N95-22860
Enhancement of biomembrane functions under phase-separated conditions: A self-organized criticality phenomenon?
[DE94-628489] p 1747 N95-23053
A model for the metal-nonmetal transition in metal-molten salt solutions
[DE94-628490] p 1640 N95-23057
The origin of chirality in protein amino acids
[DE94-628491] p 1747 N95-23058
Calculations of alloy phases with a direct Monte-Carlo method
[DE94-018963] p 1640 N95-23121
Dynamics of L to H bifurcation
[DE94-019126] p 1832 N95-23163
Experimental and theoretical studies on the C15 intermetallic compounds MV2 (M = Zr, Hf and Ta): Elasticity and phase stability
[DE95-003723] p 1845 N95-24079
Microporous polyimide films for reduced dielectric applications
[DE95-004543] p 1650 N95-24159

PHASED ARRAYS
Adaptive beamforming in a CDMA mobile satellite communications system p 1655 N95-22815

PHENOMENOLOGY
Higgs searches and WW scattering
[PB95-139143] p 1807 N95-23160

PHONEMES
Reevaluation of the significance of sequence information for speech recognition
[TR-555] p 1658 N95-23794

PHONETICS
Phonetic set hashing: A novel scheme for transforming phone sequences to words
[TR-538] p 1658 N95-24039

PHONONS
Magnetic field effects on strong-coupling polaron in quantum dots
[DE94-629038] p 1847 N95-22496
Optical absorption in an indirect-gap semiconductor quantum well systems
[DE94-628878] p 1849 N95-22759
Two-photon absorption in an indirect-gap semiconductor quantum well systems 1. Interband transitions
[DE94-628879] p 1849 N95-22760
Two-photon absorption in an indirect-gap semiconductor quantum well systems 2. Excitonic transitions
[DE94-628880] p 1849 N95-22761
Strong-coupling polaron effect in quantum dots
[DE94-628485] p 1850 N95-23049
Phonon characteristics of high (T sub c) superconductors from neutron Doppler broadening measurements
[DE95-003703] p 1844 N95-24076

PHOSPHATES
Light emission-or-absorbance-based binding assays for polynucleic acids
[AD-D016557] p 1632 N95-22710

PHOSPHORS
MOCVD of gallium and calcium sulfides for improved phosphor processing
[DE95-000918] p 1631 N95-22677

PHOTOABSORPTION
Pressure shifts and electron scattering in atomic and molecular gases
[DE95-003102] p 1803 N95-22747
Atoms as many-body systems
[DE95-004609] p 1813 N95-24151
Atomic physics at high brilliance synchrotron sources: Proceedings
[DE95-006077] p 1813 N95-24174

PHOTOCHEMICAL OXIDANTS
Oxidants and oxidation in the Earth's atmosphere
[NASA-CR-197945] p 1734 N95-23460

PHOTOCHEMICAL REACTIONS
Photochemical energy conversion by membrane-bound photoredox systems
[DE95-004405] p 1729 N95-23361
Atmospheric peroxides
[DE95-004435] p 1733 N95-23362
Oxidants and oxidation in the Earth's atmosphere
[NASA-CR-197945] p 1734 N95-23460
Annual report of the Osaka Laboratory for Radiation Chemistry Japan Atomic Energy Research Institute, (No. 26)
[DE94-785277] p 1626 N95-23477
Review of research results for the photocatalytic oxidation of hazardous wastes in air
[DE95-004004] p 1734 N95-23480
Solar photochemistry: Twenty years of progress, what's been accomplished, and where does it lead?
[DE95-004007] p 1730 N95-23778
AVIRIS spectra correlated with the chlorophyll concentration of a forest canopy p 1705 N95-23871

PHOTOCONDUCTIVITY
High gain GaAs Photoconductive Semiconductor Switches for impulse sources
[DE95-001885] p 1659 N95-22549
High gain GaAs photoconductive semiconductor switches: Measurement of filament velocity and reduced trigger energy
[DE95-001884] p 1661 N95-22844

PHOTODIODES
VLPC characterization for the Dzero upgrade
[DE95-003742] p 1818 N95-24084

PHOTODISSOCIATION
Thermochemistry of transition metal clusters
[DE95-003144] p 1646 N95-24144

PHOTOELECTRIC EMISSION
Advanced growth and surface analysis system for in situ studies of interface formation
[DE95-002850] p 1838 N95-22555
Photoemission study of quantum confinement by a finite barrier: Cu/Co(wedge)/Cu(100)
[DE95-002913] p 1840 N95-22762
On core level electron diffraction
[DE94-628484] p 1842 N95-23048
A preliminary measurement of the average B hadron lifetime
[DE95-003138] p 1808 N95-23226
Spin polarized photoemission studies of magnetic quantum well states
[DE95-004218] p 1851 N95-23335

PHOTOELECTRONS
Long range potentials and multiple scattering theory in complex systems
[DE94-628881] p 1804 N95-22791

PHOTOEXCITATION
Photochemical energy conversion by membrane-bound photoredox systems
[DE95-004405] p 1729 N95-23361

PHOTOGRAMMETRY
Comparison of 7.5-minute and 1-degree digital elevation models p 1719 N95-24095

PHOTOGRAPHS
Scientific and technical photography at NASA Langley Research Center p 1690 N95-23290

PHOTOGRAPHY
Scientific and technical photography at NASA Langley Research Center p 1690 N95-23290

PHOTOINTERPRETATION
Locating buildings in aerial photos p 1721 N95-23295

PHOTOIONIZATION
Studies of photon and electron interactions with atoms and ions
[DE95-003340] p 1802 N95-22700
Pressure shifts and electron scattering in atomic and molecular gases
[DE95-003102] p 1803 N95-22747
Photoionization of O(6+) below the n=3 threshold of the reduced ion
[DE94-634436] p 1844 N95-23774
Some thoughts of future experiments with the new generation of storage rings
[DE95-004602] p 1818 N95-24162
Atomic physics at high brilliance synchrotron sources: Proceedings
[DE95-006077] p 1813 N95-24174

PHOTOLITHOGRAPHY
Segregated rigid and structural control for a photolithography positioning system
[DE95-002603] p 1766 N95-23134

PHOTOLUMINESCENCE
Method development for compensating temperature effects in pressure sensitive paint measurements p 1650 N95-23291

PHOTOLYSIS
Magnetic resonance and optical spectroscopic studies of carotenoids
[DE95-003729] p 1631 N95-22575

PHOTOMETERS
TIMED Imaging Photometer Experiment (TIPE)
[NASA-CR-197431] p 1688 N95-23087
Circular electrode geometry metal-semiconductor-metal photodetectors
[NASA-CASE-LAR-15172-1-CU] p 1663 N95-24048

PHOTOMULTIPLIER TUBES
A high speed digitizing photomultiplier tube base for the KTeV CsI calorimeter
[DE95-003739] p 1664 N95-24081

PHOTON BEAMS
Preserving the high source brightness with x ray beam line optics
[DE95-003172] p 1820 N95-22877

PHOTON-ELECTRON INTERACTION
Photon and electron interaction databases and their use in medical applications
[DE94-015558] p 1855 N95-22871

PHOTONS
Perturbative QCD tests from the LEP, HERA, and TEVATRON colliders
[DE95-001285] p 1816 N95-22684
Chiral anomalies in non-leptonic decays within chiral perturbation theory at the quark level
[DE94-628613] p 1849 N95-22753
Two-photon absorption in an indirect-gap semiconductor quantum well systems 1. Interband transitions
[DE94-628879] p 1849 N95-22760
Two-photon absorption in an indirect-gap semiconductor quantum well systems 2. Excitonic transitions
[DE94-628880] p 1849 N95-22761
The omega pi(sup 0)-transient form factor within effective chiral Lagrangian approach
[DE94-628612] p 1850 N95-22812
Photon and electron interaction databases and their use in medical applications
[DE94-015558] p 1855 N95-22871
Protein folding and protein metallocluster studies using synchrotron small angler x ray scattering
[DE95-003339] p 1746 N95-22897
Real lasers and other deformed objects p 1692 N95-23001

Doing photons with MERLIN 2 at Oroville
p 1815 N95-23816
Charging of interplanetary grains
|NASA-CR-198032| p 1869 N95-24066
VLPC characterization for the Dzero upgrade
|DE95-003742| p 1818 N95-24084

PHOTOOXIDATION
Review of research results for the photocatalytic oxidation of hazardous wastes in air
|DE95-004004| p 1734 N95-23480

PHOTOPRODUCTION
QCD test in three-jet Z(sup 0) decays at SLD and detector development for H(sup 0) yields gamma gamma searches in high energy hadron colliders
|DE95-003336| p 1848 N95-22698
Recent results from Fermilab E-687, charm particle decays, lifetimes and photoproduction dynamics: A compilation results presented at DPF 1994
|DE95-004580| p 1808 N95-23347

PHOTORECEPTORS
AVIRIS spectra correlated with the chlorophyll concentration of a forest canopy p 1705 N95-23871

PHOTOSYNTHESIS
Magnetic resonance and optical spectroscopic studies of carotenoids
|DE95-003729| p 1631 N95-22575
Comparison of the rate constants for energy transfer in the light-harvesting protein, C-phycocyanin, calculated from Foerster's theory and experimentally measured by time-resolved fluorescence spectroscopy
|DE94-014961| p 1745 N95-22590
Biological determinants of photobioreactor design
|DE94-016032| p 1745 N95-22872
Regulation of photosynthetic carbon fixation on the ocean margins
|DE95-003185| p 1743 N95-22878
Photochemical energy conversion by membrane-bound photoredox systems
|DE95-004405| p 1729 N95-23361
Relationships between pigment composition variation and reflectance for plant species from a coastal savannah in California p 1709 N95-23889

PHOTOVOLTAIC CELLS
Evaluating photovoltaic applications: A guide for utilities
|DE95-003807| p 1726 N95-22502
World's first 15%-efficient multicrystalline silicon modules
|DE95-002604| p 1727 N95-22650
Amorphous silicon photovoltaic manufacturing technology, phase 2A
|DE95-000298| p 1729 N95-23478
Crystalline-silicon photovoltaics: Necessary and sufficient
|DE95-004540| p 1731 N95-24157

PHOTOVOLTAIC CONVERSION
Evaluating photovoltaic applications: A guide for utilities
|DE95-003807| p 1726 N95-22502
Southeast Regional Experiment Station
|DE95-000903| p 1726 N95-22518
Advanced development of PV encapsulants
|DE95-000246| p 1728 N95-23062
Amorphous silicon photovoltaic manufacturing technology, phase 2A
|DE95-000298| p 1729 N95-23478
Automated solar cell assembly teamed process research
|DE95-000299| p 1730 N95-23777
Crystalline-silicon photovoltaics: Necessary and sufficient
|DE95-004540| p 1731 N95-24157

PHOTOVOLTAIC EFFECT
Continuous roll-to-roll amorphous-silicon photovoltaic manufacturing technology
|DE95-000243| p 1728 N95-23061

PHYSICAL CHEMISTRY
Diffusion behavior of lysozyme in aqueous ammonium sulfate solutions under varying solution conditions as determined by dynamic light scattering
|DE95-004821| p 1635 N95-23380

PHYSICAL EXERCISE
Self-generating oscillating pressure exercise device
|NASA-CASE-ARC-12000-1| p 1751 N95-23264

PHYSICAL PROPERTIES
Glass science tutorial: Lecture 2, operating electric glass melters
|DE95-002965| p 1647 N95-22648
Aqueous alternatives for metal and composite cleaning p 1630 N95-23039
Material characterization system
|AD-D016536| p 1800 N95-23073

PHYSIOCHEMISTRY
Analysis of physiochemical processes during solder aging
|DE95-003811| p 1638 N95-22576

PHYSIOLOGICAL EFFECTS
Cellular interactions in the suprachiasmatic nucleus
|AD-A285639| p 1749 N95-23780
The 1993 Gordon Research Conference on Chronobiology
|NASA-CR-197990| p 1748 N95-24047

PHYSIOLOGICAL RESPONSES
All systems go!
|NASA-TM-110542| p 1620 N95-23665

PHYTOPLANKTON
Development of a multi-sensor in situ fiber optic fluorometer
|DE95-003105| p 1819 N95-22780
Regulation of photosynthetic carbon fixation on the ocean margins
|DE95-003185| p 1743 N95-22878

PICRATES
Turbidity of a near critical ionic fluid
|DE94-014916| p 1633 N95-22869

PIEZOELECTRIC CERAMICS
Superconductivity devices: Commercial use of space
|NASA-CR-197885| p 1648 N95-22883

PIEZOELECTRICITY
Flexural vibration of thin piezoelectric laminate circular cylinder of hexagonal symmetry
|DE94-628474| p 1698 N95-22773
Superconductivity devices: Commercial use of space
|NASA-CR-197885| p 1648 N95-22883
A coupled layerwise analysis of the thermopiezoelectric response of smart composite beams beams
|NASA-TM-106889| p 1630 N95-23463

PIGMENTS
Magnetic resonance and optical spectroscopic studies of carotenoids
|DE95-003729| p 1631 N95-22575

PILOT INDUCED OSCILLATION
Analysis of the longitudinal handling qualities and pilot-induced-oscillation tendencies of the High-Angle-of-Attack Research Vehicle (HARV)
p 1616 N95-23297

PILOT PERFORMANCE
TRISTAR 1: Evaluation methods for testing head-up display (HUD) flight symbology
|NASA-TM-4665| p 1613 N95-24030
A review of civil aviation fatal accidents in which lost/disoriented was a cause/factor: 1981-1990
|DOT/FAA/AM-95/1| p 1611 N95-24071

PILOT TRAINING
Human-centered design of human-computer-human dialogs in aerospace systems
|NASA-CR-197379| p 1750 N95-22797

PILOTLESS AIRCRAFT
Design of a GaAs/Ge solar array for unmanned aerial vehicles
|NASA-TM-106870| p 1728 N95-23259
Report to the Secretary of Defense. Unmanned aerial vehicles: No more Hunter systems should be bought until problems are fixed
|GAO/NSIAD-95-52| p 1613 N95-24091

PIONS
Electromagnetic production of pions on the nucleon
|DE95-004658| p 1811 N95-23587

PIPELINES
Preliminary assessment of air toxic emissions in the natural gas industry, phase 1
|PB95-135547| p 1732 N95-22865

PISTON ENGINES
The influence of high-octane fuel blends on the performance of a two-stroke SI engine with knock-limited-compression ratio
|DE95-002902| p 1692 N95-22556

PITCH (INCLINATION)
Pitch sensor system
|AD-D016488| p 1799 N95-22863

PITTING
Eddy current detection of pitting corrosion around fastener holes p 1643 N95-23507

PIXELS
Neural network for detection and correction of local boundary misalignments between images
|AD-D016539| p 1766 N95-22705
AVIRIS calibration using the cloud-shadow method
p 1702 N95-23849
Discrimination of poorly exposed lithologies in AVIRIS data p 1703 N95-23858
The difference between laboratory and in-situ pixel-averaged emissivity: The effects on temperature-emissivity separation p 1711 N95-23919

PLANE WAVES
A uniform geometrical optics and an extended uniform geometrical theory of diffraction for evaluating high frequency EM fields near smooth caustics and composite shadow boundaries
|NASA-CR-197934| p 1657 N95-23391

PLANETARY MAPPING
The effects of AVIRIS atmospheric calibration methodology on identification and quantitative mapping of surface mineralogy, Drum Mountains, Utah
p 1705 N95-23870

PLANETARY SURFACES
Path planning for planetary rover using extended elevation map p 1771 N95-23689
Subsumption-based architecture for autonomous movement planning for planetary rovers
p 1771 N95-23690
Control technique for planetary rover
p 1771 N95-23692
Lunar rover technology demonstrations with Dante and Ratler p 1697 N95-23694
Small image laser range finder for planetary rover
p 1692 N95-23712

PLANETS
Space Science for the 21st Century. Strategic Plan for 1995-2000
|NASA-TM-110546| p 1617 N95-22947

PLANFORMS
A study of the vortex flow over 76/40-deg double-delta wing
|NASA-CR-195032| p 1677 N95-23466

PLANNING
Outline for a global environmental strategic planning exercise (GESPE-project)
|PB95-133773| p 1733 N95-23067
Planning and scheduling the Hubble Space Telescope: Practical application of advanced techniques
p 1779 N95-23740
Knowledge representation and reasoning for mixed-initiative planning
|TR-562| p 1783 N95-24031
Using simulation-based projection to plan in an uncertain and temporally complex world
|TR-531| p 1853 N95-24043
The TRAINS project: A case study in building a conversational planning agent
|TR-532| p 1659 N95-24193

PLANT DESIGN
Using the shield for thermal energy storage in PULSAR
|DE95-002457| p 1829 N95-22645

PLANTS (BOTANY)
Direct effects of atmospheric CO2 enrichment on plants and ecosystems: An updated bibliographic data base
|DE95-003060| p 1731 N95-22725
Plant metabolism and cell wall formation in space (microgravity) and on Earth
|NASA-CR-197618| p 1745 N95-22801
Structural studies of complex carbohydrates of plant cell walls
|DE95-003099| p 1748 N95-24075

PLASMA ACCELERATION
The high latitude ionosphere-magnetosphere transition region: Simulation and data comparison
|NASA-CR-197404| p 1737 N95-22956

PLASMA CONTROL
Analytical and numerical studies of ion mobility near the tokamak plasma edge
|DE95-003019| p 1830 N95-22693
Comparisons of nonlinear toroidal turbulence simulations with experiment
|DE95-003020| p 1830 N95-22694
Divertor heat and particle control experiments on the DIII-D tokamak
|DE94-017518| p 1832 N95-23119
Ion rings for magnetic fusion
|DE94-017606| p 1832 N95-23120
Dynamics of L to H bifurcation
|DE94-019126| p 1832 N95-23163
The q profile evolution and enhanced core confinement of high (beta)(sub p) plasmas in D3-D
|DE95-003878| p 1834 N95-23371
Quasisymmetry equations for conventional stellarators
|NIFS-324| p 1836 N95-23572
Effect of satellite helical harmonics on the stellarator configuration
|NIFS-328| p 1609 N95-23787
D3-D program overview
|DE95-003879| p 1837 N95-24086

PLASMA CURRENTS
TFTR Ion Cyclotron Range of Frequencies (ICRF) experimental data analysis collaboration
|DE95-003409| p 1832 N95-23084
Observations of the magnetopause current layer: Cases with no boundary layer and tests of recent models
|NASA-CR-197391| p 1738 N95-23184
Experimental achievement of toroidal beta beyond that predicted by 'Troyon' scaling
|DE95-003880| p 1837 N95-24087

PLASMA DENSITY
Dynamics and variability of the plasmasphere observed from synchronous orbit
| DE95-002733 | p 1829 N95-22665
The TEXT neutral lithium beam edge density diagnostic
| DE95-003256 | p 1830 N95-22719
Advanced detector development, laboratory simulations, diagnostic development, and data analysis on wake physics
| PL-TR-94-2204 | p 1831 N95-22948
Electromagnetic radiation in the plasma environment around the shuttle
| NASA-TM-106891 | p 1738 N95-23116
PLASMA DIAGNOSTICS
The TEXT neutral lithium beam edge density diagnostic
| DE95-003256 | p 1830 N95-22719
Measurements and modeling of impurity source distributions from the Tore Supra outboard pump limiter
| DE95-003097 | p 1831 N95-22800
Advanced detector development, laboratory simulations, diagnostic development, and data analysis on wake physics
| PL-TR-94-2204 | p 1831 N95-22948
Ninth topical conference on atomic processes in plasmas
| DE95-002810 | p 1833 N95-23246
Tritium transport, influx, and helium ash measurements on TFTR during DT operation
| DE95-003708 | p 1833 N95-23269
Edge fluctuation measurements by phase contrast imaging on DIII-D
| DE94-016681 | p 1836 N95-23768
PLASMA DYNAMICS
Collisionless magnetic reconnection associated with coalescence of flux bundles
| NIFS-315 | p 1834 N95-23525
Macro-EM particle simulation method and a study of collisionless magnetic reconnection
| NIFS-316 | p 1834 N95-23526
Complexity in plasma: A grand view of self-organization
| NIFS-318 | p 1835 N95-23528
Investigation of infra-red and nonequilibrium air radiation
| NASA-CR-197977 | p 1741 N95-24041
D3-D program overview
| DE95-003879 | p 1837 N95-24086
PLASMA FREQUENCIES
Langmuir-like waves and radiation in planetary foreshocks
| NASA-CR-197376 | p 1869 N95-22828
PLASMA GENERATORS
Functional testing of the space station plasma contactor
| NASA-TM-106841 | p 1624 N95-23240
Atomic oxygen durability evaluation of protected polymers using thermal energy plasma systems
| NASA-TM-106855 | p 1626 N95-23270
PLASMA HEATING
Magnetospheric space plasma investigations
| NASA-CR-197405 | p 1831 N95-22955
The high latitude ionosphere-magnetosphere transition region: Simulation and data comparison
| NASA-CR-197404 | p 1737 N95-22956
Semikinetic modeling and observations of high-latitude plasma outflow
| NASA-CR-197403 | p 1831 N95-23008
TFTR Ion Cyclotron Range of Frequencies (ICRF) experimental data analysis collaboration
| DE95-003409 | p 1832 N95-23084
Experimental achievement of toroidal beta beyond that predicted by 'Troyon' scaling
| DE95-003880 | p 1837 N95-24087
PLASMA INTERACTIONS
Electromagnetic radiation in the plasma environment around the shuttle
| NASA-TM-106891 | p 1738 N95-23116
Observations of the magnetopause current layer: Cases with no boundary layer and tests of recent models
| NASA-CR-197391 | p 1738 N95-23184
Performance characterization of EURECA retroreflectors with fluoropolymer-filled SiO(x) protective coatings p 1651 N95-23802
PLASMA JETS
The DIII-D divertor cryopump system: Design and operational experience
| DE95-003007 | p 1693 N95-22796
Neural net prediction of tokamak plasma disruptions
| DE95-002616 | p 1832 N95-23136
PLASMA PHYSICS
Plasma properties and magnetic field structure of the solar corona, based on coordinated Max 1991 observations from SERTS, the VLA, and magnetographs
| NASA-CR-197864 | p 1870 N95-23181
Ninth topical conference on atomic processes in plasmas
| DE95-002810 | p 1833 N95-23246
Modification and damping of Alfven waves in a magnetized dusty plasma
| NIFS-312 | p 1834 N95-23523
Macro-EM particle simulation method and a study of collisionless magnetic reconnection
| NIFS-316 | p 1834 N95-23526
Physical mechanism determining the radial electric field and its radial structure in a toroidal plasma
| NIFS-313 | p 1835 N95-23534
The next Large Helical Devices
| NIFS-323 | p 1835 N95-23535
Recent studies of the Large Helical Device
| NIFS-322 | p 1835 N95-23543
Effect of satellite helical harmonics on the stellarator configuration
| NIFS-328 | p 1609 N95-23787
PLASMA PINCH
Generation of fast electrons in reversed field pinches by the equilibrium grad (vert bar)B(vert bar) force
| DE95-004467 | p 1809 N95-23363
PLASMA PRESSURE
The q profile evolution and enhanced core confinement of high (beta)(sub p) plasmas in D3-D
| DE95-003878 | p 1834 N95-23371
Non-Taylor magnetohydrodynamic self-organization
| NIFS-314 | p 1834 N95-23524
Experimental achievement of toroidal beta beyond that predicted by 'Troyon' scaling
| DE95-003880 | p 1837 N95-24087
PLASMA RESONANCE
Hot proton anisotropies and cool proton temperatures in the outer magnetosphere
| DE95-002719 | p 1736 N95-22850
PLASMA SHEATHS
Physics of magnetospheric boundary layers
| NASA-CR-197920 | p 1739 N95-23271
PLASMA TEMPERATURE
Advanced detector development, laboratory simulations, diagnostic development, and data analysis on wake physics
| PL-TR-94-2204 | p 1831 N95-22948
PLASMA TURBULENCE
Comparisons of nonlinear toroidal turbulence simulations with experiment
| DE95-003020 | p 1830 N95-22694
Turbulent transport across invariant canonical flux surfaces
| DE95-000710 | p 1832 N95-23072
Dynamics of L to H bifurcation
| DE94-019126 | p 1832 N95-23163
Gyrokinetic and global fluid simulations of tokamak microturbulence and transport
| DE95-003628 | p 1837 N95-24017
PLASMA WAVES
Langmuir-like waves and radiation in planetary foreshocks
| NASA-CR-197376 | p 1869 N95-22828
PLASMA-ELECTROMAGNETIC INTERACTION
Modification and damping of Alfven waves in a magnetized dusty plasma
| NIFS-312 | p 1834 N95-23523
PLASMA-PARTICLE INTERACTIONS
The q profile evolution and enhanced core confinement of high (beta)(sub p) plasmas in D3-D
| DE95-003878 | p 1834 N95-23371
PLASMAPAUSE
Global electric field determination in the Earth's outer magnetosphere using energetic charged particles
| NASA-CR-197392 | p 1737 N95-22945
PLASMAS (PHYSICS)
Morphology of extinguished monolithic JA2 grains fired in a 30-mm Solid Propellant Electrothermal Chemical (SPETC) gun
| AD-A285792 | p 1652 N95-22506
Proceedings of NATO Advanced Research Workshop on the Formation, Transport and Consequences of Particles in Plasmas
| AD-A285850 | p 1829 N95-22514
Innovative technology for contamination control in plasma processing
| DE95-000913 | p 1829 N95-22519
Laser-plasma instability in hohlraums
| DE95-000914 | p 1829 N95-22676
A model for ball lightning
| DE95-003366 | p 1742 N95-22701
The problem of phase transition and the heavy ion collisions at very high energies
| DE94-628584 | p 1816 N95-22785
Baryon number fluctuations in a quark-hadron phase transition
| DE94-628585 | p 1804 N95-22786
Analytical Boltzmann moments for electrons in N2-O2-H2O gas mixtures
| DE95-003474 | p 1732 N95-22898
Ion rings for magnetic fusion
| DE94-017606 | p 1832 N95-23120
Neural net prediction of tokamak plasma disruptions
| DE95-002616 | p 1832 N95-23136
High beta and second stability region transport and stability analysis
| DE95-003411 | p 1832 N95-23147
The railplug: Development of a new ignitor for internal combustion engines
| DE95-004375 | p 1695 N95-23342
Multiband VLBI imaging of the jet in 3C 345
| PB95-139275 | p 1866 N95-23468
New pellet production and acceleration technologies for high speed pellet injection system HIPEL in Large Helical Device
| NISF-326 | p 1835 N95-23566
MHD-Vlasov simulation of the toroidal Alfven eigenmode
| NIFS-319 | p 1836 N95-23591
A new containerless image furnace with electro-static positioning device p 1690 N95-23674
10x reduction imaging at 13.4 nm
| DE94-016612 | p 1828 N95-23767
Cu deposition using a permanent magnet electron cyclotron resonance microwave plasma source
| DE94-017768 | p 1650 N95-23981
Increasing the retained dose by plasma immersion ion implantation and deposition
| DE95-003423 | p 1844 N95-24011
Investigation of infra-red and nonequilibrium air radiation
| NASA-CR-197977 | p 1741 N95-24041
D3-D program overview
| DE95-003879 | p 1837 N95-24086
PLASMASPHERE
Dynamics and variability of the plasmasphere observed from synchronous orbit
| DE95-002733 | p 1829 N95-22665
PLASMONS
The effect of magnetic field on the edge plasmons of two-dimensional electron gas systems
| DE94-018044 | p 1837 N95-23982
PLASTIC DEFORMATION
Aspects of surface generation in orthogonal ultraprecision machining
| DE95-000922 | p 1654 N95-22678
PLATE THEORY
Idealized textile composites for experimental/analytical correlation p 1631 N95-23277
PLATEAUS
The hydrogen embrittlement of alloy X-750
| DE95-003207 | p 1640 N95-22893
PLATENS
Segregated rigid and structural control for a photolithography positioning system
| DE95-002603 | p 1766 N95-23134
PLATINUM
Orientation selection and microstructural evolution of epitaxial platinum films on (001) magnesium oxide
| DE95-003680 | p 1842 N95-23265
Changes in chemical and optical properties of thin film metal mirrors on LDEF p 1651 N95-23907
PLOTTING
Old-growth and mature forests near spotted owl nests in western Oregon p 1719 N95-24098
PLUMES
Axisymmetric computational fluid dynamics analysis of Saturn V/S1-C/F1 nozzle and plume p 1672 N95-23430
Computational Fluid Dynamic (CFD) analysis of axisymmetric plume and base flow of film/dump cooled rocket nozzle p 1673 N95-23431
CFD flowfield simulation of Delta Launch Vehicles in a power-on configuration p 1673 N95-23433
Numerical study of the SSME nozzle flow fields during transient operations: A comparison of the animated results with test p 1673 N95-23434
NTS-spill test facility wind tunnel exhaust plume characterization
| DE95-003630 | p 1616 N95-24019
PLUTO (PLANET)
IUE observing programs: NSOSS, VEOEB, and PCOEB
| NASA-CR-197424 | p 1866 N95-23560
PLUTONIUM
Test procedure for anion exchange chromatography
| DE95-003767 | p 1809 N95-23407
Alpha spectral analysis via artificial neural networks
| DE95-004567 | p 1767 N95-23578
PNEUMATIC EQUIPMENT
Pressurized fluid torque driver control and method
| NASA-CASE-MSC-22385-1 | p 1694 N95-22892

POINT IMPACT
Axial focusing of energy from a hypervelocity impact on earth
|DE95-003347| p 1740 N95-24008
POINT SOURCES
Nonparametric measure of spatial interaction in point patterns
|PB95-127965| p 1793 N95-22527
POINTING CONTROL SYSTEMS
Stellar Interferometer Technology Experiment (SITE)
|NASA-CR-197856| p 1827 N95-23089
POINTS (MATHEMATICS)
The point interactions in the quantum problem of three particles with internal structure
|DE94-635423| p 1851 N95-23967
POISSON DENSITY FUNCTIONS
Light-traffic analysis for queues with spatially distributed arrivals
|PB95-140802| p 1767 N95-23556
Independent production and Poisson distribution
|DE94-635632| p 1794 N95-23972
POLAR CAPS
Continued studies of polar cap thermospheric dynamics
|PL-TR-94-2076| p 1737 N95-22951
Semikinetic modeling and observations of high-latitude plasma outflow
|NASA-CR-197403| p 1831 N95-23008
POLAR REGIONS
Continued studies of polar cap thermospheric dynamics
|PL-TR-94-2076| p 1737 N95-22951
The high latitude ionosphere-magnetosphere transition region: Simulation and data comparison
|NASA-CR-197404| p 1737 N95-22956
Semikinetic modeling and observations of high-latitude plasma outflow
|NASA-CR-197403| p 1831 N95-23008
Oceanic operations: An authoritative guide to oceanic operations
|FAA-AFS-550| p 1610 N95-24065
POLARIMETERS
SAR terrain classifier and mapper of biophysical attributes p 1715 N95-23957
Hard e(+)e(-)-pair Bremsstrahlung as a lepton polarimeter
|DE94-635615| p 1812 N95-23984
POLARIMETRY
Field observations using an AOTF polarimetric imaging spectrometer p 1702 N95-23850
MAX-91: Polarimetric SAR results on Montespertoli site p 1712 N95-23940
Estimation of biophysical properties of upland Sitka spruce (Picea sitchensis) plantations p 1713 N95-23943
Forest investigations by polarimetric AIRSAR data in the Harz mountains p 1713 N95-23944
Comparison of inversion models using AIRSAR data for Death Valley, California p 1713 N95-23945
Statistics of multi-look AIRSAR imagery: A comparison of theory with measurements p 1714 N95-23947
Unusual radar echoes from the Greenland ice sheet p 1714 N95-23951
Measurement of ocean wave spectra using polarimetric AIRSAR data p 1715 N95-23953
An improved algorithm for retrieval of snow wetness using C-band AIRSAR p 1715 N95-23954
Polarimetric radar data decomposition and interpretation p 1715 N95-23955
Classification and soil moisture determination of agricultural fields p 1716 N95-23958
Soil moisture retrieval in the Oberpfaffenhofen testsite using MAC Europe AIRSAR data p 1716 N95-23960
POLARIZATION
Field observations using an AOTF polarimetric imaging spectrometer p 1702 N95-23850
POLARIZATION (CHARGE SEPARATION)
Measurement of the left-right charge asymmetry in hadronic Z decays and A(sub e) determination
|DE95-003467| p 1806 N95-23140
POLARIZATION (SPIN ALIGNMENT)
Spin polarized photoemission studies of magnetic quantum well states
|DE95-004218| p 1851 N95-23335
POLARIZED LIGHT
Diffusion behavior of lysozyme in aqueous ammonium sulfate solutions under varying solution conditions as determined by dynamic light scattering
|DE95-004821| p 1635 N95-23380
POLARONS
Magnetic field effects on strong-coupling polaron in quantum dots
|DE94-629038| p 1847 N95-22496
Resonant shallow donor magnetopolaron effect in a GaAs/AlGaAs quantum dot in high magnetic fields
|DE94-629039| p 1798 N95-22497
Strong-coupling polaron effect in quantum dots
|DE94-628485| p 1850 N95-23049
Disorder-induced breakdown of soliton and polaron particles
|DE95-003694| p 1808 N95-23267
Quantum fluctuations of D(sub 5d) polarons on C(sub 60) molecules
|DE94-635787| p 1812 N95-23985
POLICIES
A study of policy issues affecting the Defense Technical Information Center
|AD-A286629| p 1854 N95-22494
Mishap risk control for advanced aerospace/composite materials p 1628 N95-23031
CO2 and waste policy: Monitoring results 1991/1992 and main problems
|PB95-133799| p 1733 N95-23126
Inspector General: Alleged misconduct by NASA Inspector General. Report to Congressional requesters
|GAO/OSI-95-9| p 1854 N95-24085
Using simple page placement policies to reduce the cost of cache fills in coherent shared-memory systems
|TR-535| p 1753 N95-24177
POLLUTION CONTROL
P2Info Resource Center: Linking the DOE Pollution Prevention community
|DE95-003133| p 1732 N95-22781
Society of the plastic industry process emission initiatives p 1629 N95-23036
POLLUTION MONITORING
Modeling aerosol emissions from the combustion of composite materials p 1629 N95-23038
Review of research results for the photocatalytic oxidation of hazardous wastes in air
|DE95-004004| p 1734 N95-23480
Applied research on air pollution using nuclear-related analytical techniques
|DE94-633513| p 1734 N95-23542
Remote sensor test range update
|DE95-003629| p 1735 N95-24018
POLOIDAL FLUX
TPX magnet system status
|DE95-002389| p 1661 N95-23080
POLYATOMIC MOLECULES
Non-intrusive measurements in a rocket engine combustor p 1625 N95-23439
POLYCARBONATES
Absorbed dose and LET spectra measurements on LDEF p 1815 N95-23810
POLYCRYSTALS
Thermal activation of steady-state creep in polycrystalline copper
|DE94-627394| p 1839 N95-22607
World's first 15%-efficient multicrystalline silicon modules
|DE95-002604| p 1727 N95-22650
Polycrystalline CuInSe2 and CdTePV solar cells
|DE95-000244| p 1727 N95-22842
Mass transport through polycrystalline microstructures
|DE95-004552| p 1811 N95-23576
POLYESTERS
A kinetic study of hydrolysis of polyester elastomer in magnetic tape p 1652 N95-24124
POLYGONS
Schwarz-Christoffel methods for multiply-elongated regions
|DE94-019048| p 1790 N95-23536
POLYHEDRONS
Capacitated facility location: Valid inequalities and facets (revised)
|PB95-130225| p 1786 N95-22641
POLYIMIDES
Process for preparing an assembly of an article and a polyimide which resists dimensional change, delamination and debonding when exposed to changes in temperature
|NASA-CASE-LAR-14538-2| p 1649 N95-23254
LDEF polymeric materials: A summary of Langley characterization p 1651 N95-23899
The effect of simulated low earth orbit radiation on polyimides (UV degradation study) p 1651 N95-23903
The surface properties of fluorinated polyimides exposed to VUV and atomic oxygen p 1651 N95-23904
Microporous polyimide films for reduced dielectric applications
|DE95-004543| p 1650 N95-24159
POLYISOPRENES
Neutron scattering analysis of rubber carbon black composite structure
|DE95-002735| p 1646 N95-22553
POLYMER CHEMISTRY
Progress towards the synthesis of polymeric nitrogen
|DE94-017547| p 1841 N95-22860
Process for preparing an assembly of an article and a polyimide which resists dimensional change, delamination and debonding when exposed to changes in temperature
|NASA-CASE-LAR-14538-2| p 1649 N95-23254
Atomic oxygen textured polymers
|NASA-TM-106769| p 1650 N95-24187
POLYMER MATRIX COMPOSITES
Mishap risk control for advanced aerospace/composite materials p 1628 N95-23031
Society of the plastic industry process emission initiatives p 1629 N95-23036
Technology reinvestment project's focus area. Affordable polymer matrix composites for airframe structures
|PB95-136032| p 1865 N95-23168
Application of electron paramagnetic resonance imaging to the characterization of the Ultem(R) exposed to 1 MeV electrons. Correlation of radical density data to tiger code calculations p 1815 N95-23328
The detection and analysis of galvanic damage in BMI/graphite fiber composites p 1631 N95-23502
LDEF polymeric materials: A summary of Langley characterization p 1651 N95-23899
Surface characterization of LDEF carbon fiber/polymer matrix composites p 1631 N95-23900
Space environmental effects on polymer matrix composites as a function of sample location on LDEF p 1651 N95-23901
Structure and properties of polymeric composite materials during 1501 days outer space exposure at Salyut-7 orbital station p 1652 N95-23915
POLYMERIC FILMS
LDEF polymeric materials: A summary of Langley characterization p 1651 N95-23899
Nonlinear viscoelastic characterization of polymer materials using a dynamic-mechanical methodology p 1651 N95-23902
The effect of simulated low earth orbit radiation on polyimides (UV degradation study) p 1651 N95-23903
The surface properties of fluorinated polyimides exposed to VUV and atomic oxygen p 1651 N95-23904
POLYMERIZATION
Annual report of the Osaka Laboratory for Radiation Chemistry Japan Atomic Energy Research Institute. (No. 26)
|DE94-785277| p 1626 N95-23477
POLYMERS
Polyazomethines containing trifluoromethylbenzene units
|NASA-CASE-LAR-14896-1| p 1649 N95-23253
Atomic oxygen durability evaluation of protected polymers using thermal energy plasma systems
|NASA-TM-106855| p 1626 N95-23270
Atomic oxygen textured polymers
|NASA-TM-106769| p 1650 N95-24187
POLYNOMIALS
Treewidth and pathwidth of cocomparability graphs of bounded dimension
|PB95-127239| p 1785 N95-22535
Fibonacci chain polynomials: Identities from self-similarity p 1814 N95-22962
A Ramanujan-type measure for the Askey-Wilson polynomials p 1797 N95-22975
Taylor series expansion and modified extended Prony analysis for localization
|DE95-003671| p 1758 N95-23567
Quasi-kernel polynomials and convergence results for quasi-minimal residual iterations
|NASA-CR-197948| p 1791 N95-23593
Optimal advice
|TR-527| p 1792 N95-23931
Witness-isomorphic reductions and the local search problem
|TR-522| p 1793 N95-24003
Large sets in AC(exp 0): A Kolmogorov complexity related property and some applications
|TR-556| p 1797 N95-24029
On the size of sets with weak membership properties
|TR-557| p 1793 N95-24034
Properties of probabilistic pushdown automata
|TR-554| p 1760 N95-24056
Polynomial-time membership comparable sets
|TR-552| p 1793 N95-24182
The satanic notations: Counting classes beyond #P and other definitional adventures
|TR-561| p 1793 N95-24194
POLYSACCHARIDES
Structural studies of complex carbohydrates of plant cell walls
|DE95-003099| p 1748 N95-24075
POLYSTYRENE
LDEF polymeric materials: A summary of Langley characterization p 1651 N95-23899

POLYTOPES
Note on the computational complexity of j-radii of polytopes in (R sup n)
[PB95-139358] p 1790 N95-23231
POPULATIONS
Orbital debris and meteoroid population as estimated from LDEF impact data p 1869 N95-23830
POROSITY
Thermal outgassing studies on machinable tungsten and TZM molybdenum alloy
[DE95-002984] p 1638 N95-22592
Investigation of mechanical properties and their relation to the internal structure of nanocrystalline metals and composites
[DE95-001151] p 1627 N95-22683
Influence of porosity and two-phase flow on diffusional/thermal instability of a deflagrating energetic material
[DE95-002592] p 1634 N95-23122
High surface area, high permeability carbon monoliths
[DE95-004555] p 1650 N95-23577
POROUS MATERIALS
Propagation of waves at the loosely bonded interface of two porous elastic half-spaces
[DE94-628477] p 1800 N95-23018
Impact shock and penetration fragmentation in porous media
[DE94-018900] p 1868 N95-23656
POSITION (LOCATION)
Capacitated facility location: Valid inequalities and facets (revised)
[PB95-130225] p 1786 N95-22641
Sensor-based control of rocket thrust chamber feature location for automated braze paste dispensing
[DE94-016559] p 1624 N95-22885
Localization in deformed quantum mechanics p 1823 N95-22979
Taylor series expansion and modified extended Prony analysis for localization
[DE95-003671] p 1758 N95-23567
Space environmental effects on polymer matrix composites as a function of sample location on LDEF p 1651 N95-23901
POSITION INDICATORS
TRISTAR 1: Evaluation methods for testing head-up display (HUD) flight symbology
[NASA-TM-4665] p 1613 N95-24030
POSITIONING
Segregated rigid and structural control for a photolithography positioning system
[DE95-002603] p 1766 N95-23134
POSITIONING DEVICES (MACHINERY)
A new containerless image furnace with electro-static positioning device p 1690 N95-23674
POSITRON ANNIHILATION
Study of radiation damages in AISI 316 and 347 steels
[DE94-627480] p 1639 N95-22609
Measurement of the left-right asymmetry in Z boson production by electron-positron collisions
[DE95-003337] p 1802 N95-22699
Precision standard model tests with polarized e(+)e(-) beams
[DE95-003367] p 1816 N95-22702
Heavy quark physics at SLD: Preliminary results
[DE95-003372] p 1806 N95-23138
Introduction to the physics of Higgs bosons
[DE95-003965] p 1809 N95-23396
Study of b(anti b) production in e(+)e(-) annihilation at radical s = 29 GeV with the aid of neural networks
[DE95-004691] p 1810 N95-23488
POSITRONS
Traps for antimatter and antihydrogen production
[DE95-002814] p 1805 N95-22927
POSTFLIGHT ANALYSIS
Low Earth orbit thermal control coatings exposure flight tests: A comparison of U.S. and Russian results
[NASA-CR-4647] p 1626 N95-22919
STS-61 mission director's post-mission report
[NASA-TM-104803] p 1617 N95-23262
Integrating O/S models during conceptual design, part 1
[NASA-CR-197903] p 1622 N95-23398
Integrating O/S models during conceptual design, part 3
[NASA-CR-197905] p 1622 N95-23400
EURECA 11 months in orbit: Initial post flight investigation results p 1623 N95-23799
POSTMISSION ANALYSIS (SPACECRAFT)
Evaluation of adhesive materials used on the Long Duration Exposure Facility
[NASA-CR-4646] p 1626 N95-22918
Integrating O/S models during conceptual design, part 3
[NASA-CR-197905] p 1622 N95-23400
EURECA 11 months in orbit: Initial post flight investigation results p 1623 N95-23799
Material inspection of EURECA first findings and recommendations p 1637 N95-23804
POTASSIUM
MHD seed recovery and regeneration, phase 2
[DE95-004308] p 1833 N95-23338
POTENTIAL ENERGY
On the (DE-) stabilization of quantum mechanical binding by potential barriers
[DE94-628433] p 1847 N95-22635
How to measure the Q(bar Q) potential in a light-front calculation
[DE95-003200] p 1848 N95-22728
Structural properties of silicon clusters: An empirical potential study
[DE94-628902] p 1805 N95-22935
POTENTIAL FIELDS
Finite-temperature scalar field theory in static de Sitter space
[DE94-628522] p 1848 N95-22743
POTENTIAL FLOW
Conjugate gradient MATHEW
[DE95-003479] p 1738 N95-23143
Accelerated panel methods using the fast multipole method p 1687 N95-23307
Combining comparison functions and finite element approximations in CFD
[NASA-TM-106851] p 1792 N95-23614
POTENTIAL GRADIENTS
A worst-case example using linesearch methods for numerical optimization with inexact gradient evaluations
[DE95-002917] p 1754 N95-22570
POWDER (PARTICLES)
High pressure neutron powder diffraction at LANSCE
[DE95-002703] p 1839 N95-22565
Transformation behavior in Al2O3-ZrO2 ceraamic composites
[DE95-001359] p 1647 N95-22688
Charge distribution analysis of catalysts under simulated reaction conditions
[DE95-003526] p 1633 N95-23064
NMR study of nanophase Al/Al-oxide powder and consolidated composites
[DE95-004655] p 1843 N95-23586
POWDER METALLURGY
Cooling rate effects on the microstructure, critical current density, and (T(sub c)) transition of one- and two-powder BSCCO-2223 Ag sheathed tapes
[DE95-004639] p 1846 N95-24171
POWDERED ALUMINUM
NMR study of nanophase Al/Al-oxide powder and consolidated composites
[DE95-004655] p 1843 N95-23586
POWER CONVERTERS
Liquid nitrogen temperature operation of a switching power converter
[NASA-TM-106867] p 1662 N95-23219
POWER EFFICIENCY
Calorimetric measurement of energy of ultrasonic cleaners
[DE95-003938] p 1800 N95-23375
Energy efficiency of electric vehicles at the 1994 American Tour de Sol
[DE95-002905] p 1664 N95-24070
POWER FACTOR CONTROLLERS
DRACULA: Dynamic range control for broadcasting and other applications
[BBC-RD-1994/13] p 1658 N95-24044
POWER GAIN
A high-power switch-mode DC power supply for dynamic loads
[DE94-016714] p 1659 N95-22504
POWER LIMITERS
Design and production of efficient current leads for 1500-A, 50-Hz service in a 77-4 K temperature gradient
[DE95-004121] p 1662 N95-23355
POWER LINES
Current estimation for electromigration, hot carriers, and voltage drop
[AD-A285794] p 1659 N95-22507
Universal Hodge bundle and Mumford isomorphisms on the abelian inductive limit of Teichmueller spaces
[DE94-634325] p 1796 N95-23660
POWER SERIES
The convergence radius of the chiral expansion in the Dyson-Schwinger approach
[DE94-012852] p 1805 N95-22925
POWER SUPPLY CIRCUITS
A high-power switch-mode DC power supply for dynamic loads
[DE94-016714] p 1659 N95-22504
PRE-MAIN SEQUENCE STARS
Observational studies of the clearing phase in proto-planetary disk systems
[NASA-CR-197900] p 1866 N95-23561
PRECESSION
Exact, E = 0, classical and quantum solutions for general power-law oscillators p 1820 N95-22959
PRECIPITATION (CHEMISTRY)
Polyazomethines containing trifluoromethylbenzene units
[NASA-CASE-LAR-14896-1] p 1649 N95-23253
Diffusion behavior of lysozyme in aqueous ammonium sulfate solutions under varying solution conditions as determined by dynamic light scattering
[DE95-004821] p 1635 N95-23380
PRECIPITATION (METEOROLOGY)
HAPEX-Sahel: Basic description of methods and data sets
[PB95-127262] p 1701 N95-22639
Streamflow and selected precipitation data for Yucca Mountain Region, southern Nevada and eastern California, water years 1986-90
[DE95-001893] p 1742 N95-23385
PRECISION
Traps for antimatter and antihydrogen production
[DE95-002814] p 1805 N95-22927
PRECONDITIONING
Preconditioning for the Navier-Stokes equations with finite-rate chemistry p 1670 N95-23421
On adaptive weighted polynomial preconditioning for Hermitian positive definite matrices
[NASA-CR-197946] p 1791 N95-23547
PREDATORS
An extension of Freedman's results on a model of predator-prey dynamics as modified by the action of a parasite
[DE94-628488] p 1796 N95-23052
PREDICATE CALCULUS
Relating multifunctions and predicate transformers through closure operators
[PB95-135646] p 1757 N95-23467
PREDICTION ANALYSIS TECHNIQUES
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 1: HARP introduction and user's guide
[NASA-TP-3452-VOL-1] p 1754 N95-22603
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 2: HARP tutorial
[NASA-TP-3452-VOL-2] p 1755 N95-22604
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 4: HARP Output (HARPO) graphics display user's guide
[NASA-TP-3452-VOL-4] p 1755 N95-22605
Additional improvements to the NASA Lewis ice accretion code LEWICE
[NASA-TM-106849] p 1665 N95-22669
Net energy analysis: Powerful tool for selecting electric power options
[DE95-002516] p 1728 N95-23133
Neural net prediction of tokamak plasma disruptions
[DE95-002616] p 1832 N95-23136
Development and verification of a resin film infusion/resin transfer molding simulation model for fabrication of advanced textile composites
[NASA-CR-197439] p 1648 N95-23179
On the accuracy of CFD-based pressure drop predictions for right-angle ducts p 1682 N95-23634
Predictions of LDEF radioactivity and comparison with measurements p 1815 N95-23818
Dimensional scaling for impact cratering and perforation p 1624 N95-23843
Tutorial on filtering, restoration, and state estimation
[TR-534] p 1793 N95-24042
PREDICTIONS
Intermediate-term earthquake prediction and seismic zoning in Northern Italy
[DE94-627689] p 1736 N95-22612
The use of cowl camber and taper to reduce rotor/stator interaction noise
[NASA-CR-195421] p 1799 N95-22675
PREDICTOR-CORRECTOR METHODS
Orders of predictor-corrector pairs for second-order ODE's
[PB95-140612] p 1790 N95-23237
Numerical study of the SSME nozzle flow fields during transient operations: A comparison of the animated results with test p 1673 N95-23434
PREFLIGHT ANALYSIS
Integrating O/S models during conceptual design, part 1
[NASA-CR-197903] p 1622 N95-23398
Integrating O/S models during conceptual design, part 3
[NASA-CR-197905] p 1622 N95-23400
PRELAUNCH TESTS
Integrating O/S models during conceptual design, part 1
[NASA-CR-197903] p 1622 N95-23398

Integrating O/S models during conceptual design, part 3
[NASA-CR-197905] p 1622 N95-23400

PREMIXED FLAMES
Sensitivity of combustion-acoustic instabilities to boundary conditions for premixed gas turbine combustors
[NASA-TM-106890] p 1614 N95-23550
Microgravity combustion science: 1995 program update
[NASA-TM-106858] p 1626 N95-24004

PREMIXING
Effects of jet strength on NOx formation in premixed impinging jet combustion with minimum heat losses
[NAL-TR-1237T] p 1637 N95-24181

PREPREGS
Biotransformation of an uncured composite material p 1629 N95-23033

PREPROCESSING
Preprocessing: Geocoding of AVIRIS data using navigation, engineering, DEM, and radar tracking system data p 1707 N95-23876

PRESIDENTIAL REPORTS
Hey! What's Space Station Freedom?
[NASA-TM-110531] p 1620 N95-22542

PRESSURE BROADENING
Theoretical calculations of pressure broadening coefficients for H2O perturbed by hydrogen or helium gas
[NASA-CR-197345] p 1636 N95-23545

PRESSURE DISTRIBUTION
Study of the pressure field in rotating homogeneous turbulent flows
[PB94-189107] p 1665 N95-22585
Wing pressure distributions from subsonic tests of a high-wing transport model --- in the Langley 14- by 22-Foot Subsonic Wind Tunnel
[NASA-TM-4583] p 1607 N95-22802
Three-dimensional unsteady flow calculations in an advanced gas generator turbine p 1671 N95-23425
Modeling of non-spherical droplet dynamics p 1685 N95-23647
Numerical study of base pressure characteristic curve for a four-engine clustered nozzle configuration p 1625 N95-23655

PRESSURE EFFECTS
Method development for compensating temperature effects in pressure sensitive paint measurements p 1650 N95-23291
A controlled variation scheme for convection treatment in pressure-based algorithm p 1677 N95-23448
Theory of pressure-induced islands and self-healing in three-dimensional toroidal magnetohydrodynamic equilibria
[NIFS-321] p 1836 N95-23589
Annealing of nitrogen-doped ZnSe at high pressures: Toward suppression of native defect formation
[DE95-003420] p 1844 N95-24010

PRESSURE GRADIENTS
Application of CFD analysis to design support and problem resolution for ASRM and RSRM p 1685 N95-23649

PRESSURE OSCILLATIONS
Active control of panel vibrations induced by a boundary layer flow
[NASA-CR-197867] p 1608 N95-23182
Time-accurate unsteady flow simulations supporting the SRM T+68-second pressure spike anomaly investigation (STS-54B) p 1685 N95-23650

PRESSURE PULSES
System for determining aerodynamic imbalance
[NASA-CASE-ARC-11913-1] p 1688 N95-23377

PRESSURE REDUCTION
Morphology of extinguished monolithic JA2 grains fired in a 30-mm Solid Propellant Electrothermal Chemical (SPETC) gun
[AD-A285792] p 1652 N95-22506

PRESSURE SENSORS
Dynamic response of a transducer mounted at one end of an acoustical cavity which is subjected to a specified pressure at the open end of the cavity
[DE95-004192] p 1799 N95-23379
Impeller flow field characterization with a laser two-focus velocimeter p 1675 N95-23440

PRESTRESSING
Finite-difference solutions of the alternate turbopump development high-pressure oxidizer turbopump pump-end ball-bearing cavity flows p 1678 N95-23617

PREVENTION
Adaptation of the advanced spray combustion code to cavitating flow problems p 1681 N95-23629

PRIMERS (COATINGS)
Organic coating technology for the protection of aircraft against corrosion p 1644 N95-23513

PRIMITIVE EQUATIONS
A numerical study of interannual wind forcing effects on the California current system, 1980-1983
[AD-A286023] p 1743 N95-23074

PRINTED CIRCUITS
Planar magnetic component development
[DE95-003311] p 1661 N95-22896

PRINTING
NASAwide electronic publishing system: Electronic printing and duplicating, stage-2 evaluation report (GSFC)
[NASA-TM-104615] p 1856 N95-23209

PRISMS
PRISM Spectrograph Optical Design
[NASA-CR-197965] p 1828 N95-24035

PRIVACY
Security clearances: Consideration of sexual orientation in the clearance process. Report to Congressional requesters
[GAO/NSIAD-95-21] p 1853 N95-23588

PROBABILITY DENSITY FUNCTIONS
Statistics of multi-look AIRSAR imagery: A comparison of theory with measurements p 1714 N95-23947

PROBABILITY THEORY
Stochastic decision analysis p 1854 N95-23305
Combinatorial semantics
[TR-563] p 1792 N95-23793
Properties of probabilistic pushdown automata
[TR-554] p 1760 N95-24056
Martin-Lof tests can help too
[TR-541] p 1797 N95-24063

PROBLEM SOLVING
Towards method-independent knowledge acquisition
[AD-A285823] p 1766 N95-22512
BEM solution to simulate the curvature driven deformation of a profile that is pressed into a plate of hot glass
[PB95-138913] p 1648 N95-23145
The initial-value problem for viscous channel flows
[NASA-CR-195034] p 1667 N95-23207
Two portable parallel tridiagonal solvers
[DE94-019044] p 1763 N95-23243
Spontaneous wave packet reduction
[DE94-634280] p 1851 N95-23454
Linearizing W-algebras
[DE94-634324] p 1790 N95-23457
Quasisymmetry equations for conventional stellarators
[NIFS-324] p 1836 N95-23572
Recent advances in Lanczos-based iterative methods for nonsymmetric linear systems
[NASA-CR-197950] p 1791 N95-23611
High performance techniques for space mission scheduling p 1618 N95-23758
Solution and reasoning reuse in space planning and scheduling applications p 1618 N95-23760
Empirical results on scheduling and dynamic backtracking p 1618 N95-23761
Integrating planning and reactive control p 1618 N95-23763
Automatic generation of efficient orderings of events for scheduling applications p 1618 N95-23764

PROCEDURES
Scientific and technical photography at NASA Langley Research Center p 1690 N95-23290
Integrating O/S models during conceptual design, part 2
[NASA-CR-197904] p 1622 N95-23399

PROCESS CONTROL (INDUSTRY)
Society of the plastic industry process emission initiatives p 1629 N95-23036
Vision-sensing image analysis for GTAW process control
[DE95-003936] p 1695 N95-23373
Investigation of arc length versus flange thickness while using an arc voltage controller
[DE95-003937] p 1695 N95-23374
Assessment of resin transfer molding process for the XM6 discharger, ERDEC SSP 93-64
[NIAR-94-2] p 1650 N95-23932

PRODUCT DEVELOPMENT
Product stewardship in the composites industry p 1628 N95-23027
The US molten carbonate fuel-cell development and commercialization effort
[DE94-019096] p 1728 N95-23162
Problems of predicting material property retention during long term service p 1644 N95-23514

PRODUCTION COSTS
A manufacturing database of advanced materials used in spacecraft structures p 1623 N95-23279
Information technology standards process guide
[DE95-003967] p 1857 N95-23574

PRODUCTION PLANNING
Scheduling with genetic algorithms p 1761 N95-23762
Automatic generation of efficient orderings of events for scheduling applications p 1618 N95-23764

PRODUCTIVITY
The associate principal astronomer telescope operations model p 1779 N95-23743

PROGRAM VERIFICATION (COMPUTERS)
Specification and verification of gate-level VHDL models of synchronous and asynchronous circuits
[NASA-CR-191608] p 1762 N95-22830
Temporal operators viewed as predicate transformers
[PB95-138996] p 1757 N95-23152
Operator procedure verification with a rapidly reconfigurable simulator p 1618 N95-23679
Attention focusing and anomaly detection in systems monitoring p 1769 N95-23683
Fracture mechanics life analytical methods verification testing
[NASA-CR-196555] p 1697 N95-24106

PROGRAMMING ENVIRONMENTS
OPUS: A new generation Knowledge Engineering Environment p 1760 N95-24176

PROGRAMMING LANGUAGES
LCM 3.0: A language for describing conceptual models. Syntax definition
[PB95-128005] p 1755 N95-22652
Algebra of lines and boxes
[PB95-130456] p 1787 N95-22768
DUALITY: A simple formalism for the analysis of UNITY
[PB95-135703] p 1763 N95-23166
Using Dedal to share and reuse distributed engineering design information p 1768 N95-23678
On helping by parity-like languages
[TR-553] p 1759 N95-23935

PROGRESS
Military bases: Environmental impact at closing installations. Report to Congressional requesters
[GAO/NSIAD-95-70] p 1735 N95-24057

PROJECT MANAGEMENT
Computer software design description for the Treated Effluent Disposal Facility (TEDF), Project L-045H, Operator Training Station (OTS)
[DE95-003065] p 1759 N95-24006
Search Hanford accessible reports electronically system configuration management plan
[DE95-004493] p 1857 N95-24089

PROJECT PLANNING
Structural Arrangement Trade Study. Volume 1: Reusable Hydrogen Composite Tank System (RHCTS) and Graphite Composite Primary Structures (GCPS). Executive summary
[NASA-CR-197685] p 1621 N95-23188

PROJECTILE CRATERING
Natural and orbital debris particles on LDEF's trailing and forward-facing surfaces p 1869 N95-23833
Debris and meteoroid proportions deduced from impact crater residue analysis p 1869 N95-23834
Image and compositional characteristics of the LDEF Big Guy impact crater p 1700 N95-23838
The effect of impact angle on craters formed by hypervelocity particles p 1700 N95-23839
Experimental investigation of the relationship between impact crater morphology and impacting particle velocity and direction p 1700 N95-23840
Determining orbital particle parameters of impacts into germanium using morphology analysis and calibration data from hypervelocity impact experiments in the laboratory p 1700 N95-23841
Cratering and penetration experiments in Teflon targets at velocities from 1 to 7 km/s p 1700 N95-23842

PROJECTILES
High-velocity penetrators
[DE95-001886] p 1698 N95-22500
Projectile penetration into representative targets
[DE95-003089] p 1698 N95-22726
SIMS chemical and isotopic analysis of impact features from LDEF experiments AO187-1 and AO187-2 p 1637 N95-23837

PROJECTIVE GEOMETRY
The Euler series of restricted Chow varieties
[DE94-628418] p 1785 N95-22626

PROPAGATION MODES
D3-D program overview
[DE95-003879] p 1837 N95-24086

PROPAGATION VELOCITY
Quench propagation study for full-length RHIC dipole magnets
[DE94-014089] p 1816 N95-22926

PROPELLANT CHEMISTRY
Advanced liquid oxygen (LO2) propellant conditioning concept testing
[NASA-TM-108477] p 1652 N95-22672

PROPELLANT COMBUSTION
A numerical procedure for analysis of finite rate reacting flows p 1671 N95-23422

PROPELLANT GRAINS
Ignition transient calculations in the Space Shuttle solid rocket motor p 1625 N95-23640
PROPELLANTS
Morphology of extinguished monolithic JA2 grains fired in a 30-mm Solid Propellant Electrothermal Chemical (SPETC) gun
| AD-A285792 | p 1652 N95-22506
PROPELLER BLADES
System for determining aerodynamic imbalance
| NASA-CASE-ARC-11913-1 | p 1688 N95-23377
PROPULSION
Eleventh Workshop for Computational Fluid Dynamic Applications in Rocket Propulsion
| NASA-CP-3221-PT-2 | p 1668 N95-23412
A generic efficient adaptive grid scheme for rocket propulsion modeling p 1670 N95-23418
Institute for Computational Mechanics in Propulsion (ICOMP)
| NASA-TM-106884 | p 1677 N95-23464
Eleventh Workshop for Computational Fluid Dynamic Applications in Rocket Propulsion, part 1
| NASA-CP-3221-PT-1 | p 1678 N95-23615
Airborne rotary air separator study
| NASA-CR-189099 | p 1614 N95-24053
PROPULSION SYSTEM CONFIGURATIONS
Alert-derivative bimodal space power and propulsion systems
| DE95-002754 | p 1624 N95-22905
Predicted performance of an integrated modular engine system
| NASA-CR-190787 | p 1625 N95-23791
Development of sensors for ceramic components in advanced propulsion systems
| NASA-CR-195324 | p 1689 N95-23795
PROPULSION SYSTEM PERFORMANCE
Alert-derivative bimodal space power and propulsion systems
| DE95-002754 | p 1624 N95-22905
Damage-mitigating control of a reusable rocket engine for high performance and extended life
| NASA-CR-4640 | p 1654 N95-23195
Radiation/convection coupling in rocket motors and plumes p 1669 N95-23414
An RL10A-3-3A rocket engine model using the rocket engine transient simulator (ROCETS) software
| NASA-CR-190786 | p 1625 N95-23790
Predicted performance of an integrated modular engine system
| NASA-CR-190787 | p 1625 N95-23791
Development of sensors for ceramic components in advanced propulsion systems
| NASA-CR-195324 | p 1689 N95-23795
PROTACTINIUM
The electronic structure of heavy element complexes
| DE95-003407 | p 1806 N95-23082
PROTECTIVE CLOTHING
Skin exposure: Assessing the hazard in the workplace p 1628 N95-23030
PROTECTIVE COATINGS
Advanced reflector materials for solar concentrators
| DE95-000248 | p 1726 N95-22547
The corrosion protection of 2219-T87 aluminum by organic and inorganic zinc-rich primers
| NASA-TP-3543 | p 1641 N95-23186
Evaluation of thermal barrier and PS-200 self-lubricating coatings in an air-cooled rotary engine
| NASA-CR-195445 | p 1614 N95-23222
Protective coating for ceramic materials
| NASA-CASE-ARC-11969-1-CU | p 1649 N95-23394
Corrosion protection measures for CFC/metal joints of fuel integral tank structures of advanced military aircraft p 1644 N95-23510
Performance characterization of EURECA retroreflectors with fluoropolymer-filled SiO(x) protective coatings p 1651 N95-23802
Effect of the space environment on materials flown on the EURECA/TICCE-HVI experiment p 1623 N95-23803
Atomic oxygen interactions with protected organic materials on the Long Duration Exposure Facility (LDEF) p 1627 N95-23909
Organic matrix composite protective coatings for space applications p 1627 N95-23914
Robotic weld overlay coatings for erosion control
| DE95-002624 | p 1696 N95-24141
PROTEIN SYNTHESIS
Open problems of computational molecular biology
| DE95-000895 | p 1745 N95-22866
Analysis of structural domains required for phytochrome function by in vitro mutagenesis
| DE94-016230 | p 1745 N95-22884
PROTEINS
Comparison of the rate constants for energy transfer in the light-harvesting protein, C-phycocyanin, calculated from Foerster's theory and experimentally measured by time-resolved fluorescence spectroscopy
| DE94-014961 | p 1745 N95-22590
General crystal in prebiotic context
| DE94-628475 | p 1840 N95-22774
Regulation of alcohol fermentation in Escherichia coli
| DE94-016227 | p 1745 N95-22874
Analysis of structural domains required for phytochrome function by in vitro mutagenesis
| DE94-016230 | p 1745 N95-22884
An improved system for exon recognition and gene modeling in human DNA sequences
| DE94-017863 | p 1746 N95-22890
Protein folding and protein metallocluster studies using synchrotron small angler x ray scattering
| DE95-003339 | p 1746 N95-22897
Activation of the jun-D gene in human myeloid cells by 1-(beta)-D-arabinofuranosylcytosine
| DE94-016591 | p 1746 N95-22912
Rearrangement of RAG-1 recombinase gene in radiation-sensitive wasted mice
| DE94-017083 | p 1746 N95-22913
The origin of chirality in protein amino acids
| DE94-628491 | p 1747 N95-23058
Diffusion behavior of lysozyme in aqueous ammonium sulfate solutions under varying solution conditions as determined by dynamic light scattering
| DE95-004821 | p 1635 N95-23380
A comparative study of the effects of clofibrate, ciprofibrate, WY-14,643, and di-(2-ethylhexyl)-phthalate on liver protein expression in mice
| DE94-016587 | p 1748 N95-23771
Relationships between pigment composition variation and reflectance for plant species from a coastal savannah in California p 1709 N95-23889
PROTOCOL (COMPUTERS)
Precise clock synchronization protocol
| PB95-127247 | p 1687 N95-22536
Layered Electrical Product Application Protocol (AP)
| DE95-001524 | p 1754 N95-22548
Specification and verification of gate-level VHDL models of synchronous and asynchronous circuits
| NASA-CR-191608 | p 1762 N95-22830
Hierarchical membership protocol for synchronous distributed systems
| PB95-138947 | p 1763 N95-23129
Automatic verification of regular protocols in P/T nets
| PB95-138921 | p 1789 N95-23146
Verifying sequentially consistent memory using interface refinement
| PB95-139002 | p 1752 N95-23153
Application Protocol, Initial Graphics Exchange Specification (IGES), Layered Electrical Product
| DE95-004266 | p 1757 N95-23337
Modelling and analysis of a high speed data bus with predicate/transition nets
| PB95-140695 | p 1764 N95-23538
Using Dedal to share and reuse distributed engineering design information p 1768 N95-23678
Algorithms for categorizing multiprocessor communication under invalidate and update-based coherence protocols
| TR-533-REV | p 1759 N95-23928
Eliminating useless messages in write-update protocols on scalable multiprocessors
| TR-539 | p 1764 N95-24037
A computational theory of grounding in natural language conversation
| TR-545 | p 1760 N95-24058
Using simple page placement policies to reduce the cost of cache fills in coherent shared-memory systems
| TR-535 | p 1753 N95-24177
Lazy release consistency for hardware-coherent multiprocessors
| TR-547 | p 1765 N95-24184
PROTON BEAMS
Search for scalar and vector leptoquarks in electron-proton collisions at radical S = 300 GeV
| DE94-785267 | p 1810 N95-23475
High current induction linacs
| DE95-003442 | p 1818 N95-24014
PROTON RESONANCE
Phonon characteristics of high (T sub c) superconductors from neutron Doppler broadening measurements
| DE95-003703 | p 1844 N95-24076
PROTON-PROTON REACTIONS
Searches for the H-dibaryon at the AGS
| DE95-003091 | p 1802 N95-22727
Search for second generation leptoquarks at CDF
| DE94-018983 | p 1805 N95-22939
Testing QCD with jet physics at CDF
| DE94-018980 | p 1807 N95-23196
Search for top quark at CDF
| DE95-003748 | p 1809 N95-23406
PROTONS
Dimuon production in proton-nucleus interactions
| DE95-002613 | p 1801 N95-22551
Hot proton anisotropies and cool proton temperatures in the outer magnetosphere
| DE95-002719 | p 1736 N95-22850
Exotic atoms
| DE95-003199 | p 1805 N95-22881
An upper bound for the proton temperature anisotrophy
| DE95-002752 | p 1737 N95-22903
Geometrical interpretation for the outer SU(3) outer multiplicity label p 1814 N95-22968
ESTAR, PSTAR, ASTAR: A PC package for calculating stopping powers and ranges of electrons, protons and helium ions, version 2
| DE94-634435 | p 1811 N95-23773
Measurement of trapped proton fluences in main stack of P0006 experiment p 1815 N95-23812
Contribution of proton-induced short range secondaries to the LET spectra on LDEF p 1815 N95-23813
PROTOTYPES
The STAR EM calorimeter design and small prototype test results
| DE95-004592 | p 1689 N95-23583
Toward an automated signature recognition toolkit for mission operations p 1659 N95-23682
PROVING
Stoermer-Cowell: Straight, summed and split. An overview
| PB95-139341 | p 1789 N95-23200
Fourth order difference methods for hyperbolic IBVP's
| NASA-CR-197955 | p 1791 N95-23548
PSEUDOMONAS
Biotransformation of an uncured composite material p 1629 N95-23033
PSEUDOPOTENTIALS
Electrical resistivity of liquid alkali metals and non-local pseudopotential
| DE94-627417 | p 1639 N95-22608
Non local pseudopotentials, transport properties of liquid noble metals
| DE94-627416 | p 1640 N95-22840
PUBLIC HEALTH
How health risk from radiation is assessed
| DE95-003477 | p 1749 N95-23142
Closing the circle on the splitting of the atom: The environmental legacy of nuclear weapons production in the United States and what the Department of Energy is doing about it p 1818 N95-23562
PULSARS
Using the shield for thermal energy storage in PULSAR
| DE95-002457 | p 1829 N95-22645
Gamma ray emission from radio pulsars
| NASA-CR-197917 | p 1871 N95-22910
ROSAT observation program
| NASA-CR-197683 | p 1866 N95-23595
PULSE COMMUNICATION
Proposal of a Modified EBU method for reliable evaluation of picture quality
| NHK-LABS-NOTE-431 | p 1863 N95-24180
PULSED LASERS
Coherent control in simple quantum systems p 1826 N95-23005
PULSED RADIATION
Production of high contrast ultrashort laser pulses for short scale length plasma experiments
| DE95-003640 | p 1690 N95-22595
Pulsed Ion Beam Surface Treatment for preparing rapidly solidified corrosion resistant alloy surfaces
| DE94-012072 | p 1640 N95-22835
ROSAT observation program
| NASA-CR-197683 | p 1866 N95-23595
PUMP IMPELLERS
Impeller flow field characterization with a laser two-focus velocimeter p 1675 N95-23440
Comparison between predicted and experimentally measured flow fields at the exit of the SSME HPFTP impeller p 1679 N95-23622
Use of blade lean in turbomachinery redesign p 1680 N95-23625
CFD parametric study of consortium impeller p 1680 N95-23626
Incompressible Navier-Stokes calculations in pump flows p 1680 N95-23627
PUMPS
Current status in cavitation modeling p 1681 N95-23632
PYROLYSIS
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
| DE95-001135 | p 1687 N95-22682

High surface area, high permeability carbon monoliths
[DE95-004555] p 1650 N95-23577
PYROXENES
Mapping of the Ronda peridotite massif (Spain) from AVIRIS spectro-imaging survey: A first attempt
p 1707 N95-23878

Q

Q FACTORS
Alpha spectral analysis via artificial neural networks
[DE95-004567] p 1767 N95-23578
QUADRATIC PROGRAMMING
A new look at the simultaneous analysis and design of structures p 1700 N95-23327
QUADRUPOLES
Multipole contribution from an off-axis orbit in an IR quadrupole and the consequences on the dynamic aperture
[DE95-002874] p 1816 N95-22567
Interdigital-H linac for unstable nuclei at INS
[DE94-765448] p 1816 N95-22644
A heavy ion linac complex for unstable nuclei
[DE94-765443] p 1816 N95-22848
Phase space analysis in anisotropic optical systems
p 1826 N95-23007
QUALITY
The airline quality report, 1994
[NIAR-94-11] p 1610 N95-24012
Approaches to 100 Gbit/sq. in. recording density
p 1690 N95-24128
QUALITY CONTROL
Product stewardship in the composites industry
p 1628 N95-23027
Technical report series on global modeling and data assimilation. Volume 4: Documentation of the Goddard Earth Observing System (GEOS) data assimilation system, version 1
[NASA-TM-104606-VOL-4] p 1740 N95-23529
Extraction of auxiliary data from AVIRIS distribution tape for spectral, radiometric, and geometric quality assessment p 1706 N95-23875
Assessment of resin transfer molding process for the XM6 discharger, ERDEC SSP 93-64
[NIAR-94-2] p 1650 N95-23932
Optical storage media data integrity studies
p 1829 N95-24130
QUANTITATIVE ANALYSIS
Evaluation of neutron techniques for illicit substance detection
[DE95-002988] p 1632 N95-22764
Nonlinear thermoviscoelastic behaviour in complex materials
[PB95-140653] p 1630 N95-23537
The effects of AVIRIS atmospheric calibration methodology on identification and quantitative mapping of surface mineralogy, Drum Mountains, Utah
p 1705 N95-23870
Extraction of auxiliary data from AVIRIS distribution tape for spectral, radiometric, and geometric quality assessment p 1706 N95-23875
Laboratory spectra of field samples as a check on two atmospheric correction methods p 1711 N95-23894
Chemical recognition software
[DE95-003346] p 1636 N95-24007
QUANTUM CHROMODYNAMICS
Commensurate scale relations: Precise tests of quantum chromodynamics without scale or scheme ambiguity
[DE95-002785] p 1847 N95-22566
New preliminary results on the physics of charm hadroproduction subprocesses
[DE95-002530] p 1801 N95-22646
Perturbative QCD tests from the LEP, HERA, and TEVATRON colliders
[DE95-001285] p 1816 N95-22684
Bottom-quark production from muon-jet and dimuon events in p(bar p)-interactions at the square root of s = 1.8 TeV
[DE95-001286] p 1801 N95-22685
QCD test in three-jet Z(sup 0) decays at SLD and detector development for H(sup 0) yields gamma gamma searches in high energy hadron colliders
[DE95-003336] p 1848 N95-22698
QCD improved exclusive rare B-decays at the heavy b-quark limit
[DE94-628609] p 1802 N95-22720
How to measure the Q(bar Q) potential in a light-front calculation
[DE95-003200] p 1848 N95-22728
Chiral symmetry breaking in QCD with linearly rising confinement potential
[DE94-628559] p 1848 N95-22744
Spontaneous breaking of chiral symmetry as a consequence of confinement
[DE94-628560] p 1849 N95-22745
The problem of phase transition and the heavy ion collisions at very high energies
[DE94-628584] p 1816 N95-22785
Baryon number fluctuations in a quark-hadron phase transition
[DE94-628585] p 1804 N95-22786
Search for second generation leptoquarks at CDF
[DE94-018983] p 1805 N95-22939
Boson mapping techniques applied to constant gauge fields in QCD p 1814 N95-22969
Singlet quarks beyond the top at the tevatron
[PB95-139127] p 1807 N95-23158
Testing QCD with jet physics at CDF
[DE94-018980] p 1807 N95-23196
Properties of jets in Z events from 1.8 TeV (bar p)p collisions
[DE94-018982] p 1808 N95-23197
Measurement of correlated b quark cross sections at CDF
[DE95-004240] p 1808 N95-23336
The impact of QCD and light-cone quantum mechanics on nuclear physics
[DE95-004293] p 1851 N95-23352
Theoretical aspects of electroweak and other interactions in medium energy nuclear physics
[DE95-004341] p 1808 N95-23357
Spin physics in the next decade
[DE95-003727] p 1809 N95-23403
Study of b(anti b) production in e(+)e(-) annihilation at radical s = 29 GeV with the aid of neural networks
[DE95-004691] p 1810 N95-23488
QUANTUM EFFICIENCY
Resonant infrared detector with substantially unit quantum efficiency
[NASA-CASE-ARC-11940-1-SB] p 1827 N95-23378
QUANTUM ELECTRODYNAMICS
A space-time lattice version of scalar electrodynamics
[DE94-628577] p 1850 N95-22784
The omega pi(sup 0)-transient form factor within effective chiral Lagrangian approach
[DE94-628612] p 1850 N95-22812
QUANTUM MECHANICS
Resonant shallow donor magnetopolaron effect in a GaAs/AlGaAs quantum dot in high magnetic fields
[DE94-629039] p 1798 N95-22497
Berry phase by description of the quantum systems in the Kustaanheimo-Stiefel bundle
[DE94-628410] p 1847 N95-22620
On the (DE-) stabilization of quantum mechanical binding by potential barriers
[DE94-628433] p 1847 N95-22635
First quantized noncritical relativistic Polyakov string
[DE94-628513] p 1848 N95-22738
The torsion space nucleic acids molecular mechanics program DUPLEX: Surveying conformation space by potential energy minimization
[DE94-017707] p 1805 N95-22889
Algebraic theory of molecules p 1814 N95-22958
Exact, E = 0, classical and quantum solutions for general power-law oscillators p 1820 N95-22959
A supersymmetric family of harmonic oscillators simulating H-bonds in DNA p 1748 N95-22963
Molecular vibrational states during a collision
p 1814 N95-22964
A possible generalization of the harmonic oscillator potential p 1822 N95-22970
Harmonic oscillator in quantum rotational spectra: Molecules and nuclei p 1814 N95-22972
Covariant deformed oscillator algebras
p 1797 N95-22978
Localization in deformed quantum mechanics
p 1823 N95-22979
Wigner distribution function and entropy of the damped harmonic oscillator within the theory of the open quantum systems p 1798 N95-22990
Covariant harmonic oscillators and coupled harmonic oscillators p 1825 N95-22992
On pseudosupersymmetric oscillators and reality of relativistic energies for vector mesons
p 1815 N95-22994
Supersymmetric oscillator in optics
p 1826 N95-23002
Coherent control in simple quantum systems
p 1826 N95-23005
The impact of QCD and light-cone quantum mechanics on nuclear physics
[DE95-004293] p 1851 N95-23352
Spontaneous wave packet reduction
[DE94-634280] p 1851 N95-23454
QUANTUM NUMBERS
Coherent state constructions of bases for some physically relevant group chains p 1814 N95-22966
QUANTUM OPTICS
Second International Workshop on Harmonic Oscillators
[NASA-CP-3286] p 1820 N95-22957
Slightly anharmonic systems in quantum optics
p 1826 N95-23004
Phase space analysis in anisotropic optical systems
p 1826 N95-23007
QUANTUM STATISTICS
q-bosons and the q-analogue quantized field
p 1814 N95-22984
QUANTUM THEORY
Unification of electromagnetic, strong and weak interaction
[DE94-628570] p 1655 N95-22746
One loop renormalization of Chern-Simons field theory in operator regularization
[DE94-628508] p 1796 N95-22751
Lectures on 2D gauge theories. Topological aspects and path integral techniques
[DE94-628509] p 1849 N95-22752
Gauge dependence and new kind of two-dimensional gravity theory with trivial quantum corrections
[DE94-628502] p 1850 N95-22776
A space-time lattice version of scalar electrodynamics
[DE94-628577] p 1850 N95-22784
(pi)- and a(sub 1)-meson physics in current algebra at the quark level
[DE94-628611] p 1804 N95-22811
Quantum field between moving mirrors: A three dimensional example p 1821 N95-22965
Scattering problem for quantum system with time-dependent periodic Hamiltonian
[DE94-635421] p 1797 N95-23965
The kinetics of quantum system with time-dependent periodic Hamiltonian
[DE94-635422] p 1797 N95-23966
The point interactions in the quantum problem of three particles with internal structure
[DE94-635423] p 1851 N95-23967
Quantum fluctuations of D(sub 5d) polarons on C(sub 60) molecules
[DE94-635787] p 1812 N95-23985
Subband quantum scattering times for AlGaAs/GaAs obtained using digital filtering
[NASA-TM-106873] p 1846 N95-24188
QUANTUM WELLS
Optical absorption in an indirect-gap semiconductor quantum well systems
[DE94-628878] p 1849 N95-22759
Two-photon absorption in an indirect-gap semiconductor quantum well systems 1. Interband transitions
[DE94-628879] p 1849 N95-22760
Two-photon absorption in an indirect-gap semiconductor quantum well systems 2. Excitonic transitions
[DE94-628880] p 1849 N95-22761
Photoemission study of quantum confinement by a finite barrier: Cu/Co(wedge)/Cu(100)
[DE95-002913] p 1840 N95-22762
Spin polarized photoemission studies of magnetic quantum well states
[DE95-004218] p 1851 N95-23335
QUARK MODELS
Experimental results on polarized structure functions in deep inelastic lepton-nucleon scattering
[DE95-002782] p 1801 N95-22521
QCD improved exclusive rare B-decays at the heavy b-quark limit
[DE94-628609] p 1802 N95-22720
(pi)- and a(sub 1)-meson physics in current algebra at the quark level
[DE94-628611] p 1804 N95-22811
The convergence radius of the chiral expansion in the Dyson-Schwinger approach
[DE94-012852] p 1805 N95-22925
QUARKS
Dimuon production in proton-nucleus interactions
[DE95-002613] p 1801 N95-22551
Commensurate scale relations: Precise tests of quantum chromodynamics without scale or scheme ambiguity
[DE95-002785] p 1847 N95-22566
New preliminary results on the physics of charm hadroproduction subprocesses
[DE95-002530] p 1801 N95-22646
Bottom-quark production from muon-jet and dimuon events in p(bar p)-interactions at the square root of s = 1.8 TeV
[DE95-001286] p 1801 N95-22685
QCD improved exclusive rare B-decays at the heavy b-quark limit
[DE94-628609] p 1802 N95-22720
How to measure the Q(bar Q) potential in a light-front calculation
[DE95-003200] p 1848 N95-22728
Chiral symmetry breaking in QCD with linearly rising confinement potential
[DE94-628559] p 1848 N95-22744
Spontaneous breaking of chiral symmetry as a consequence of confinement
[DE94-628560] p 1849 N95-22745

Chiral anomalies in non-leptonic decays within chiral perturbation theory at the quark level
[DE94-628613] p 1849 N95-22753
On the D yields K-bar(sup *)e(sup +)(nu)(sub e) form factors
[DE94-628614] p 1803 N95-22754
To the problem of D-meson leptonic and semileptonic decays
[DE94-628615] p 1803 N95-22755
The problem of phase transition and the heavy ion collisions at very high energies
[DE94-628584] p 1816 N95-22785
The U(3) x U(3) Nambu - Jona-Lasinio model with the gluon condensate and axial anomaly at finite temperature
[DE94-628588] p 1804 N95-22787
Hadrons of arbitrary spin and heavy quark symmetry
[DE94-628597] p 1804 N95-22789
The decays of D(sup *)-mesons
[DE94-628610] p 1804 N95-22810
The convergence radius of the chiral expansion in the Dyson-Schwinger approach
[DE94-012852] p 1805 N95-22925
Search for second generation leptoquarks at CDF
[DE94-018983] p 1805 N95-22939
Heavy quark physics at SLD: Preliminary results
[DE95-003372] p 1806 N95-23138
Flavour dependence of form factors in heavy meson decays
[PB95-139101] p 1807 N95-23156
Singlet quarks beyond the top at the tevatron
[PB95-139127] p 1807 N95-23158
Measurement of correlated b quark cross sections at CDF
[DE95-004240] p 1808 N95-23336
Search for top quark at CDF
[DE95-003748] p 1809 N95-23406
Search for scalar and vector leptoquarks in electron-proton collisions at radical S = 300 GeV
[DE94-785267] p 1810 N95-23475
Electroweak physics from the Tevatron
[DE95-002213] p 1810 N95-23530
A measurement of the mass of the W vector boson at CDF
[DE95-003498] p 1813 N95-24016

QUARTZ
Reflectivity studies on adsorbed block copolymers under shear
[DE95-003676] p 1649 N95-23568

QUASARS
Multiband VLBI imaging of the jet in 3C 345
[PB95-139275] p 1866 N95-23468

QUATERNIONS
Notes on oscillator-like interactions of various spin relativistic particles p 1815 N95-22997

QUENCHING (COOLING)
Quench propagation study for full-length RHIC dipole magnets
[DE94-014089] p 1816 N95-22926

QUERY LANGUAGES
Overview of Ph.D. theses and memoranda, 1993
[PB95-135190] p 1756 N95-23071
Modelling and analysis of a high speed data bus with predicate/transition nets
[PB95-140695] p 1764 N95-23538

R

RACAH COEFFICIENT
The role of SU(2) 3n-j coefficients in SU(3)
[DE95-002726] p 1796 N95-22900

RACETRACKS (PARTICLE ACCELERATORS)
The project of high free electron laser using race-track microtron-recuperator
[DE94-634034] p 1692 N95-23657

RADAR DATA
Combining optical and microwave remote sensing data of forest vegetation: MAC Europe 1991
[PB95-127312] p 1717 N95-22538
Monitoring land use and degradation using satellite and airborne data p 1707 N95-23880
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 3: AIRSAR Workshop
[NASA-CR-197354-VOL-3] p 1712 N95-23938
AIRSAR views of aerolian terrain p 1713 N95-23941
Forest investigations by polarimetric AIRSAR data in the Harz mountains p 1713 N95-23944
Comparison of inversion models using AIRSAR data for Death Valley, California p 1713 N95-23945
Geologic mapping using integrated AIRSAR, AVIRIS, and TIMS data p 1714 N95-23946
Statistics of multi-look AIRSAR imagery: A comparison of theory with measurements p 1714 N95-23947
Current and future use of TOPSAR digital topographic data for volcanological research p 1714 N95-23949
MAC Europe 1991 campaign: AIRSAR/AVIRIS data integration for agricultural test site classification p 1715 N95-23952
Measurement of ocean wave spectra using polarimetric AIRSAR data p 1715 N95-23953
An improved algorithm for retrieval of snow wetness using C-band AIRSAR p 1715 N95-23954
Polarimetric radar data decomposition and interpretation p 1715 N95-23955
Classification and soil moisture determination of agricultural fields p 1716 N95-23958
Relating P-band AIRSAR backscatter to forest stand parameters p 1716 N95-23959
Soil moisture retrieval in the Oberpfaffenhofen testsite using MAC Europe AIRSAR data p 1716 N95-23960
Microwave dielectric properties of boreal forest trees p 1716 N95-23961
ASF archive issues: Current status, past history, and questions for the future p 1861 N95-24133

RADAR ECHOES
Unusual radar echoes from the Greenland ice sheet p 1714 N95-23951

RADAR EQUIPMENT
A perspective on space robotics in Japan p 1697 N95-23695

RADAR IMAGERY
Remote identification of a gravel laden Pleistocene river bed p 1712 N95-23921
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 3: AIRSAR Workshop
[NASA-CR-197354-VOL-3] p 1712 N95-23938
Interferometric synthetic aperture radar imagery of the Gulf Stream p 1712 N95-23939
AIRSAR views of aerolian terrain p 1713 N95-23941
Glaciological studies in the central Andes using AIRSAR/TOPSAR p 1713 N95-23942
Estimation of biophysical properties of upland Sitka spruce (Picea sitchensis) plantations p 1713 N95-23943
Forest investigations by polarimetric AIRSAR data in the Harz mountains p 1713 N95-23944
Statistics of multi-look AIRSAR imagery: A comparison of theory with measurements p 1714 N95-23947
AIRSAR deployment in Australia, September 1993: Management and objectives p 1714 N95-23948
Preliminary analysis of the sensitivity of AIRSAR images to soil moisture variations p 1714 N95-23950
MAC Europe 1991 campaign: AIRSAR/AVIRIS data integration for agricultural test site classification p 1715 N95-23952
Measurement of ocean wave spectra using polarimetric AIRSAR data p 1715 N95-23953
Polarimetric radar data decomposition and interpretation p 1715 N95-23955
Synergy between optical and microwave remote sensing to derive soil and vegetation parameters from MAC Europe 1991 Experiment p 1715 N95-23956
SAR terrain classifier and mapper of biophysical attributes p 1715 N95-23957
Relating P-band AIRSAR backscatter to forest stand parameters p 1716 N95-23959
Soil moisture retrieval in the Oberpfaffenhofen testsite using MAC Europe AIRSAR data p 1716 N95-23960

RADAR MAPS
Differential GPS and system integration of the Low Visibility Landing and Surface Operations (LVLASO) demonstration p 1611 N95-23318
MAX-91: Polarimetric SAR results on Montespertoli site p 1712 N95-23940
Geologic mapping using integrated AIRSAR, AVIRIS, and TIMS data p 1714 N95-23946
Unusual radar echoes from the Greenland ice sheet p 1714 N95-23951

RADAR MEASUREMENT
Study of atmospheric parameters measurements using MM-wave radar in synergy with LITE-2 p 1741 N95-23278

RADAR SCATTERING
A uniform geometrical optics and an extended uniform geometrical theory of diffraction for evaluating high frequency EM fields near smooth caustics and composite shadow boundaries
[NASA-CR-197934] p 1657 N95-23391
Interferometric synthetic aperture radar imagery of the Gulf Stream p 1712 N95-23939
Estimation of biophysical properties of upland Sitka spruce (Picea sitchensis) plantations p 1713 N95-23943
Preliminary analysis of the sensitivity of AIRSAR images to soil moisture variations p 1714 N95-23950
Unusual radar echoes from the Greenland ice sheet p 1714 N95-23951
Polarimetric radar data decomposition and interpretation p 1715 N95-23955
Synergy between optical and microwave remote sensing to derive soil and vegetation parameters from MAC Europe 1991 Experiment p 1715 N95-23956
SAR terrain classifier and mapper of biophysical attributes p 1715 N95-23957
Classification and soil moisture determination of agricultural fields p 1716 N95-23958
Relating P-band AIRSAR backscatter to forest stand parameters p 1716 N95-23959
Soil moisture retrieval in the Oberpfaffenhofen testsite using MAC Europe AIRSAR data p 1716 N95-23960
Microwave dielectric properties of boreal forest trees p 1716 N95-23961

RADAR SIGNATURES
AIRSAR views of aerolian terrain p 1713 N95-23941
Measurement of ocean wave spectra using polarimetric AIRSAR data p 1715 N95-23953

RADAR TRACKING
SWIFT BOAT 1994: Using a fast chase boat to investigate offshore weather features in conjunction with WSR-88D observations
[PB94-195146] p 1742 N95-22651
Motion-sensitive optical correlator using a VanderLugt correlator
[NASA-CASE-NPO-18769-1-CU] p 1827 N95-23045

RADIAL FLOW
Enhanced analysis and users manual for radial-inflow turbine conceptual design code RTD
[NASA-CR-195454] p 1609 N95-23462
Physical mechanism determining the radial electric field and its radial structure in a toroidal plasma
[NIFS-313] p 1835 N95-23534
Current-profile flattening and hot core shift due to the nonlinear development of resistive kink mode
[NIFS-311] p 1835 N95-23564

RADIAL VELOCITY
Unsteady flow simulations in support of the SSME HEX turning vane cracking investigation with the ATD HPOTP p 1679 N95-23621

RADIANCE
A tool for manual endmember selection and spectral unmixing p 1701 N95-23846
AVIRIS calibration using the cloud-shadow method p 1702 N95-23849
Instantaneous field of view and spatial sampling of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1702 N95-23851
Comparison of methods for calibrating AVIRIS data to ground reflectance p 1703 N95-23854
Estimation of aerosol optical depth and additional atmospheric parameters for the calculation of apparent reflectance from radiance measured by the Airborne Visible/Infrared Imaging Spectrometer p 1704 N95-23863
A proposed update to the solar irradiance spectrum used in LOWTRAN and MODTRAN p 1705 N95-23865

RADIANT FLUX DENSITY
Radiation/convection coupling in rocket motors and plumes p 1669 N95-23414

RADIATION
How health risk from radiation is assessed
[DE95-003477] p 1749 N95-23142

RADIATION ABSORPTION
Theoretical studies of spectroscopic problems of importance for atmospheric radiation measurements p 1741 N95-23329
Computer modeling of the sensitivity of a laser water vapor sensor to variations in temperature and air speed p 1692 N95-23330

RADIATION CHEMISTRY
Test procedure for cation exchange chromatography
[DE95-003770] p 1808 N95-23350
Annual report of the Osaka Laboratory for Radiation Chemistry Japan Atomic Energy Research Institute, (No. 26)
[DE94-785277] p 1626 N95-23477

RADIATION COUNTERS
QCD test in three-jet Z(sup 0) decays at SLD and detector development for H(sup 0) yields gamma gamma searches in high energy hadron colliders
[DE95-003336] p 1848 N95-22698
The probabilistic structure of sprays: Implications for measurements by in site particle counters
[DE95-002483] p 1666 N95-23081
VLPC characterization for the Dzero upgrade
[DE95-003742] p 1818 N95-24084

RADIATION DAMAGE
Study of radiation damages in AISI 316 and 347 steels
[DE94-627480] p 1639 N95-22609
Rearrangement of RAG-1 recombinase gene in radiation-sensitive wasted mice
[DE94-017083] p 1746 N95-22913

Cation disorder determined by MAS Al-27 NMR in high dose neutron irradiated spinel
| DE95-003681 | p 1842 N95-23266
Application of electron paramagnetic resonance imaging to the characterization of the Ultem(R) exposed to 1 MeV electrons. Correlation of radical density data to tiger code calculations p 1815 N95-23328
The effect of simulated low earth orbit radiation on polyimides (UV degradation study) p 1651 N95-23903
The surface properties of fluorinated polyimides exposed to VUV and atomic oxygen p 1651 N95-23904
Temperature effects on ion irradiation damage in MgAl2O4 spinel single crystals
| DE95-003679 | p 1844 N95-24073

RADIATION DETECTORS
SVX(prime), the new CDF silicon vertex detector
| DE94-018986 | p 1689 N95-23521
Doing photons with MERLIN 2 at Oroville p 1815 N95-23816
TRACKER: A three-dimensional raytracing program for ionospheric radio propagation
| DE95-003510 | p 1658 N95-24015

RADIATION DISTRIBUTION
Gamma ray emission from radio pulsars
| NASA-CR-197917 | p 1871 N95-22910
q-bosons and the q-analogue quantized field p 1814 N95-22984

RADIATION DOSAGE
How health risk from radiation is assessed
| DE95-003477 | p 1749 N95-23142
Preliminary results of radiation measurements on EURECA p 1872 N95-23801
Absorbed dose and LET spectra measurements on LDEF p 1815 N95-23810
Fission foil measurements of neutron and proton fluences in the A0015 experiment p 1815 N95-23811
Germination, growth rates, and electron microscope analysis of tomato seeds flown on the LDEF p 1748 N95-23821

RADIATION EFFECTS
Study of photorefractive non-linearities in the 3-5 and 2-4 semi-insulator compounds: The effect of electron irradiation
| PB94-189057 | p 1839 N95-22584
Modeling NO(x) emissions in turbulent jet flames: Effects of buoyancy and radiation
| DE94-016621 | p 1633 N95-22886
Summary of solar cell data from the Long Duration Exposure Facility (LDEF)
| NASA-CR-196539 | p 1727 N95-22904
Genetic effects on heavy ions in drosophila
| NASA-CR-197916 | p 1746 N95-22911
COYOTE 2: A Finite Element Computer Program for noonlinear heat conduction problems
| DE95-002848 | p 1666 N95-22914
How health risk from radiation is assessed
| DE95-003477 | p 1749 N95-23142
Annual report of the Osaka Laboratory for Radiation Chemistry Japan Atomic Energy Research Institute, (No. 26)
| DE94-785277 | p 1626 N95-23477
Preliminary results of radiation measurements on EURECA p 1872 N95-23801
Contribution of proton-induced short range secondaries to the LET spectra on LDEF p 1815 N95-23813
Germination, growth rates, and electron microscope analysis of tomato seeds flown on the LDEF p 1748 N95-23821
Temperature effects on ion irradiation damage in MgAl2O4 spinel single crystals
| DE95-003679 | p 1844 N95-24073
Effect of dynamically charged helium on mechanical properties of vanadium-base alloys
| DE95-004613 | p 1646 N95-24153
A phenomenological model for the effect of nanocrystalline microstructure on irradiation-induced amorphization in U3Si
| DE95-004631 | p 1846 N95-24169

RADIATION HARDENING
SVX(prime), the new CDF silicon vertex detector
| DE94-018986 | p 1689 N95-23521

RADIATION HAZARDS
Genetic effects on heavy ions in drosophila
| NASA-CR-197916 | p 1746 N95-22911

RADIATION MEASUREMENT
Preliminary results of radiation measurements on EURECA p 1872 N95-23801
LDEF contributions to cosmic ray and radiation environments research p 1872 N95-23805
Fission foil measurements of neutron and proton fluences in the A0015 experiment p 1815 N95-23811
Predictions of LDEF radioactivity and comparison with measurements p 1815 N95-23818
Status of LDEF radiation modeling p 1815 N95-23819

RADIATION SHIELDING
Thermal outgassing studies on machinable tungsten and TZM molybdenum alloy
| DE95-002984 | p 1638 N95-22592
Using the shield for thermal energy storage in PULSAR
| DE95-002457 | p 1829 N95-22645
Closing the circle on the splitting of the atom: The environmental legacy of nuclear weapons production in the United States and what the Department of Energy is doing about it p 1818 N95-23562
Preliminary results of radiation measurements on EURECA p 1872 N95-23801
Contribution of proton-induced short range secondaries to the LET spectra on LDEF p 1815 N95-23813

RADIATION SOURCES
Large-sized and highly radioactive H-3 and Cd-109 Langmuir-Blodgett films
| DE94-785270 | p 1811 N95-23775
Some thoughts of future experiments with the new generation of storage rings
| DE95-004602 | p 1818 N95-24162
Atomic physics at high brilliance synchrotron sources: Proceedings
| DE95-006077 | p 1813 N95-24174

RADIATION SPECTRA
Alpha spectral analysis via artificial neural networks
| DE95-004567 | p 1767 N95-23578

RADIATIVE TRANSFER
Radiation/convection coupling in rocket motors and plumes p 1669 N95-23414
Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 1 p 1703 N95-23856
Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 2 p 1703 N95-23857
A proposed update to the solar irradiance spectrum used in LOWTRAN and MODTRAN p 1705 N95-23865
Atmospheric correction of AVIRIS data of Monterey Bay contaminated by thin cirrus clouds p 1710 N95-23890
Thermal radiant exitance model performance: Soils and forests
| DE95-003619 | p 1721 N95-24148
Land surface temperature measurements from EOS MODIS data
| NASA-CR-197969 | p 1721 N95-24190

RADICALS
Magnetic resonance and optical spectroscopic studies of carotenoids
| DE95-003729 | p 1631 N95-22575
Jacobson radicals in matrix near rings
| DE94-628424 | p 1796 N95-22808

RADII
Note on the computational complexity of j-radii of polytopes in (R sup n)
| PB95-139358 | p 1790 N95-23231

RADIO ASTRONOMY
Gamma ray emission from radio pulsars
| NASA-CR-197917 | p 1871 N95-22910

RADIO COMMUNICATION
Investigation of Federal Standard 1045 high-frequency ALE radio performance in the Southern Trans-Auroral Zone
| PB94-204831 | p 1655 N95-22636
Utilizing a TDRS satellite for direct broadcast satellite-radio propagation experiments and demonstrations p 1622 N95-22814

RADIO FREQUENCIES
Investigation of Federal Standard 1045 high-frequency ALE radio performance in the Southern Trans-Auroral Zone
| PB94-204831 | p 1655 N95-22636
A heavy ion linac complex for unstable nuclei
| DE94-765443 | p 1816 N95-22848
Advanced technologies for a compact RF linac FEL
| DE95-003674 | p 1692 N95-24072

RADIO RECEIVERS
Investigation of Federal Standard 1045 high-frequency ALE radio performance in the Southern Trans-Auroral Zone
| PB94-204831 | p 1655 N95-22636

RADIO TRANSMISSION
TRACKER: A three-dimensional raytracing program for ionospheric radio propagation
| DE95-003510 | p 1658 N95-24015

RADIO TRANSMITTERS
Investigation of Federal Standard 1045 high-frequency ALE radio performance in the Southern Trans-Auroral Zone
| PB94-204831 | p 1655 N95-22636

RADIO WAVES
Utilizing a TDRS satellite for direct broadcast satellite-radio propagation experiments and demonstrations p 1622 N95-22814
TRACKER: A three-dimensional raytracing program for ionospheric radio propagation
| DE95-003510 | p 1658 N95-24015

RADIOACTIVE AGE DETERMINATION
OU3 sediment dating and sedimentation rates
| DE95-001891 | p 1734 N95-23384

RADIOACTIVE CONTAMINANTS
OU3 sediment dating and sedimentation rates
| DE95-001891 | p 1734 N95-23384

RADIOACTIVE DECAY
The decays of D(sup *)-mesons
| DE94-628610 | p 1804 N95-22810
Neutrinoless double beta decay and the solar neutrino problem
| DE94-628633 | p 1812 N95-23785

RADIOACTIVE ISOTOPES
Laser light induced drift for atoms of radioactive isotopes Na-22 and Na-24
| DE94-635759 | p 1812 N95-23976

RADIOACTIVE MATERIALS
Radioisotope thermoelectric generator licensed hardware package and certification tests
| DE95-003039 | p 1661 N95-22799

RADIOACTIVE WASTES
Closing the circle on the splitting of the atom: The environmental legacy of nuclear weapons production in the United States and what the Department of Energy is doing about it p 1818 N95-23562
Characterization of Type 304L stainless steel solid-state closure welds for radioactive waste containment
| DE94-016539 | p 1645 N95-23980

RADIOACTIVITY
Large-sized and highly radioactive H-3 and Cd-109 Langmuir-Blodgett films
| DE94-785270 | p 1811 N95-23775
Status of LDEF activation measurements and archive p 1815 N95-23817
Predictions of LDEF radioactivity and comparison with measurements p 1815 N95-23818

RADIOISOTOPE BATTERIES
Radioisotope thermoelectric generator transportation system subsystem 143 software development plan
| DE95-003774 | p 1662 N95-23351

RADIOLYSIS
Magnetic resonance and optical spectroscopic studies of carotenoids
| DE95-003729 | p 1631 N95-22575
Test procedure for cation exchange chromatography
| DE95-003770 | p 1808 N95-23350
Time-resolved EPR studies of the H atom: A stable heavy isotope of muonium
| DE95-004614 | p 1810 N95-23491

RADIOMETERS
Twelve month performance evaluation for the rotating shadowband radiometer
| DE95-002847 | p 1726 N95-22554
SeaWiFS technical report series. Volume 25: Ocean optics protocols for SeaWiFS validation, revision 1
| NASA-TM-104566-VOL-25-REV- | p 1743 N95-22671
Design of a differential radiometer for atmospheric radiative flux measurements
| DE95-002701 | p 1739 N95-23244
Doing photons with MERLIN 2 at Oroville p 1815 N95-23816
Airborne Visible/Infrared Imaging Spectrometer (AVIRIS): Recent improvements to the sensor p 1690 N95-23852

RADIOMETRIC CORRECTION
Use of data from the AVIRIS onboard calibrator p 1704 N95-23861
Use of the Airborne Visible/Infrared Imaging Spectrometer to calibrate the optical sensor on board the Japanese Earth Resources Satellite-1 p 1624 N95-23864
A role for AVIRIS in the Landsat and Advanced Land Remote Sensing Systems program p 1705 N95-23866
Classification of high dimensional multispectral image data p 1705 N95-23868
Extraction of auxiliary data from AVIRIS distribution tape for spectral, radiometric, and geometric quality assessment p 1706 N95-23875

RADIOMETRIC RESOLUTION
Design of a differential radiometer for atmospheric radiative flux measurements
| DE95-002701 | p 1739 N95-23244

RAILGUN ACCELERATORS
The railplug: Development of a new ignitor for internal combustion engines
| DE95-004375 | p 1695 N95-23342

RAIN
Accuracy of radar rainfall estimates compared to raingauge measurements and a hydrological application
| PB95-127296 | p 1741 N95-22640

RAIN GAGES
Accuracy of radar rainfall estimates compared to raingauge measurements and a hydrological application
|PB95-127296| p 1741 N95-22640
RAIN IMPACT DAMAGE
Effects of wind on rainfall simulation. Spatial distribution of water application, kinetic energy, and overland flow under single full-cone nozzle sprays
|PB95-127304| p 1717 N95-22537
RAINDROPS
Effects of wind on rainfall simulation. Spatial distribution of water application, kinetic energy, and overland flow under single full-cone nozzle sprays
|PB95-127304| p 1717 N95-22537
RAMAN SPECTRA
Progress towards the synthesis of polymeric nitrogen
|DE94-017547| p 1841 N95-22860
RAMAN SPECTROSCOPY
Remote detection of trace effluents using resonance Raman spectroscopy
|DE94-016858| p 1633 N95-22887
Raman-shifting an ArF excimer laser to generate new lines for obtaining optical diagnostic based information in flow fields p 1692 N95-23303
Krypton isotope analysis using near-resonant stimulated Raman spectroscopy
|DE95-005061| p 1635 N95-23348
RANDOM ACCESS
Petabyte mass memory system using the Newell Opticel(TM) p 1753 N95-24119
RANDOM NOISE
The effect of signal noise on the remote sensing of Foliar biochemical concentration p 1708 N95-23884
RANDOM PROCESSES
Martin-Lof tests can help too
|TR-541| p 1797 N95-24063
RANDOM VARIABLES
Fuzziness and randomness in an optimization framework
|DE94-628383| p 1755 N95-22616
RANDOM WALK
Strong collision approach to calculation of depolarization function for neutron beam passing through ferromagnetic bulk domains
|DE94-628847| p 1803 N95-22758
RANGE (EXTREMES)
ESTAR, PSTAR, ASTAR: A PC package for calculating stopping powers and ranges of electrons, protons and helium ions, version 2
|DE94-634435| p 1811 N95-23773
RARE EARTH ELEMENTS
Hydrogen vibrational density of states of adsorbed water on rare-earth modified zirconia
|DE95-001127| p 1632 N95-22681
RARE GAS-HALIDE LASERS
Raman-shifting an ArF excimer laser to generate new lines for obtaining optical diagnostic based information in flow fields p 1692 N95-23303
RAREFIED GAS DYNAMICS
Particle kinetic simulation of high altitude hypervelocity flight
|NASA-CR-197383| p 1664 N95-22481
Monte Carlo simulation of rarefied nitrogen gases contained between parallel plates using the statistical inelastic cross-section model
|NAL-TR-1229T| p 1687 N95-24082
RAREFIED GASES
Monte Carlo simulation of rarefied nitrogen gases contained between parallel plates using the statistical inelastic cross-section model
|NAL-TR-1229T| p 1687 N95-24082
RATES (PER TIME)
Improved small satellite access of the space network
|NASA-CR-197863| p 1657 N95-22944
High data rate recorder development at MIT Haystack Observatory p 1690 N95-24118
Analysis of the request patterns to the NSSDC on-line archive p 1882 N95-24137
RATINGS
Criteria for evaluation of grid generation systems p 1669 N95-23416
The airline quality report, 1994
|NIAR-94-11| p 1610 N95-24012
RAYLEIGH SCATTERING
Instantaneous 2D velocity and temperature measurements in high speed flows based on spectrally resolved molecular Rayleigh scattering
|NASA-TM-106883| p 1688 N95-23461
RDX
Simulation of cookoff results in a small scale test
|DSTO-TR-0090| p 1653 N95-23668
REACTING FLOW
Towards a generalized computational fluid dynamics technique for all Mach numbers p 1670 N95-23420
Preconditioning for the Navier-Stokes equations with finite-rate chemistry p 1670 N95-23421
A numerical procedure for analysis of finite rate reacting flows p 1671 N95-23422
A controlled variation scheme for convection treatment in pressure-based algorithm p 1677 N95-23448
Flow diagnostics, chemically reacting turbulent flow modeling and turbulent mixing: A summary of project studies in combustion
|NASA-CR-197348| p 1687 N95-24022
REACTION KINETICS
Energy Conversion and Storage Program
|DE95-003796| p 1725 N95-22501
Comparison of the rate constants for energy transfer in the light-harvesting protein, C-phycocyanin, calculated from Foerster's theory and experimentally measured by time-resolved fluorescence spectroscopy
|DE94-014961| p 1745 N95-22590
Glass science tutorial: Lecture 2, operating electric glass melters
|DE95-002965| p 1647 N95-22648
On the formation of iron(3) oxides via oxidation of iron(2)
|DE94-018392| p 1632 N95-22857
Ethylene oxidation chemistry in a well-stirred reactor
|DE95-004823| p 1635 N95-23381
Reduced dime production in solar-simulator-pumped continuous wave iodine lasers based on model simulations and scaling and pumping studies
|NASA-TP-3486| p 1691 N95-23411
A numerical procedure for analysis of finite rate reacting flows p 1671 N95-23422
CFD flowfield simulation of Delta Launch Vehicles in a power-on configuration p 1673 N95-23433
Sensitivity of combustion-acoustic instabilities to boundary conditions for premixed gas turbine combustors
|NASA-TM-106890| p 1614 N95-23550
REACTION-DIFFUSION EQUATIONS
Diffusion terms in systems of reaction diffusion equations can lead to blow up
|DE94-628408| p 1785 N95-22618
Dynamical behaviour of the coupled diffusion map lattice
|DE94-628481| p 1841 N95-23022
REACTIVITY
Structure, melting, and reactivity of nickel clusters from numerical simulations
|DE95-002911| p 1638 N95-22531
REACTOR CORES
Dry critical experiments and analyses performed in support of the Topaz-2 Safety Program
|DE95-002724| p 1817 N95-23245
The q profile evolution and enhanced core confinement of high (beta)(sub p) plasmas in D3-D
|DE95-003878| p 1834 N95-23371
REACTOR DESIGN
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
|DE95-000362| p 1634 N95-23164
Dry critical experiments and analyses performed in support of the Topaz-2 Safety Program
|DE95-002724| p 1817 N95-23245
REACTOR MATERIALS
Effect of dynamically charged helium on mechanical properties of vanadium-base alloys
|DE95-004613| p 1646 N95-24153
REACTOR SAFETY
Dry critical experiments and analyses performed in support of the Topaz-2 Safety Program
|DE95-002724| p 1817 N95-23245
Closing the circle on the splitting of the atom: The environmental legacy of nuclear weapons production in the United States and what the Department of Energy is doing about it p 1818 N95-23562
READING
Verifying sequentially consistent memory using interface refinement
|PB95-139002| p 1752 N95-23153
REAL NUMBERS
Set games
|PB95-140786| p 1794 N95-23539
REAL TIME OPERATION
Investigation of Federal Standard 1045 high-frequency ALE radio performance in the Southern Trans-Auroral Zone
|PB94-204831| p 1655 N95-22636
An automated computer misuse detection system for UNICOS
|DE95-000929| p 1762 N95-22680
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
|DE95-001135| p 1687 N95-22682
Toward an automated signature recognition toolkit for mission operations p 1659 N95-23682
Performance results of cooperating expert systems in a distributed real-time monitoring system p 1761 N95-23688
Subsumption-based architecture for autonomous movement planning for planetary rovers p 1771 N95-23690
Design of teleoperation system with a force-reflecting real-time simulator p 1778 N95-23733
Real-time tracking using stereo and motion: Visual perception for space robotics p 1778 N95-23739
A self-organizing neural network architecture for auditory and speech perception with applications to acoustic and other temporal prediction problems
|AD-A285640| p 1800 N95-23782
Field observations using an AOTF polarimetric imaging spectrometer p 1702 N95-23850
Real-world shepherding: Combining vision, manipulation, and planning in real time
|TR-530| p 1783 N95-24001
Chemical recognition software
|DE95-003346| p 1636 N95-24007
The TRAINS project: A case study in building a conversational planning agent
|TR-532| p 1659 N95-24193
RECEIVERS
Parallel digital modem using multirate digital filter banks
|NASA-CR-197331| p 1761 N95-22478
RECOMBINATION REACTIONS
Time-resolved EPR studies of the H atom: A stable heavy isotope of muonium
|DE95-004614| p 1810 N95-23491
RECOMMENDATIONS
A roadmap for regulatory survival in the 1990s p 1628 N95-23026
Aviation Accident Investigation Symposium. Volume 1: Industry recommendations and Safety Board responses
|PB94-917005| p 1611 N95-24105
RECONSTRUCTION
Holographic interferometric tomography for reconstructing flow fields p 1690 N95-23287
RECORDING HEADS
High data rate recorder development at MIT Haystack Observatory p 1690 N95-24118
A comparison of rotary- and stationary-head tape recorders p 1690 N95-24122
RECORDING INSTRUMENTS
High data rate recorder development at MIT Haystack Observatory p 1690 N95-24118
RECRYSTALLIZATION
Growth of single crystals of organic salts with large second-order optical nonlinearities by solution processes for devices
|NASA-CR-197963| p 1843 N95-23563
RECURSIVE FUNCTIONS
Tutorial on filtering, restoration, and state estimation
|TR-534| p 1793 N95-24042
RECYCLING
Chemical recycling of scrap composites p 1629 N95-23034
The Louisiana State University waste-to-energy incinerator
|DE95-004417| p 1728 N95-23344
RED SHIFT
Ionic core effects on the Mie resonance in lithium clusters
|DE94-014974| p 1805 N95-22870
Search for millimeterwave CO emission in damped Lyman-alpha systems
|PB95-139259| p 1868 N95-23607
REDUNDANCY
Morphing hands and virtual tools (or What good is an extra degree of freedom?)
|TR-551| p 1783 N95-24036
REDUNDANCY ENCODING
Commercialization of JPL Virtual Reality calibration and redundant manipulator control technologies p 1768 N95-23676
REED-SOLOMON CODES
Mappings between codewords of two distinct (N,K) Reed-Solomon codes over GF(2(sup J))
|NASA-CASE-NPO-18771-1-CU| p 1754 N95-22577
REENTRY VEHICLES
Moving mass trim control for aerospace vehicles
|DE95-002602| p 1622 N95-23532
REFINING
Transformation behavior in Al2O3-ZrO2 ceraamic composites
|DE95-001359| p 1647 N95-22688
REFLECTANCE
Advanced reflector materials for solar concentrators
|DE95-000248| p 1726 N95-22547
Laser-plasma instability in hohlraums
|DE95-000914| p 1829 N95-22676
A uniform geometrical optics and an extended uniform geometrical theory of diffraction for evaluating high frequency EM fields near smooth caustics and composite shadow boundaries
|NASA-CR-197934| p 1657 N95-23391

Reflectivity studies on adsorbed block copolymers under shear
| DE95-003676 | p 1649 N95-23568
Use of spectral analogy to evaluate canopy reflectance sensitivity to leaf optical property p 1701 N95-23845
Comparison of methods for calibrating AVIRIS data to ground reflectance p 1703 N95-23854
The US Geological Survey, digital spectral reflectance library: version 1: 0.2 to 3.0 microns p 1703 N95-23855
Spectral decomposition of AVIRIS data p 1704 N95-23859
The effects of AVIRIS atmospheric calibration methodology on identification and quantitative mapping of surface mineralogy, Drum Mountains, Utah p 1705 N95-23870
AVIRIS spectra correlated with the chlorophyll concentration of a forest canopy p 1705 N95-23871
Changes in chemical and optical properties of thin film metal mirrors on LDEF p 1651 N95-23907
Unusual radar echoes from the Greenland ice sheet p 1714 N95-23951
A simple, closed-form expression for the x ray reflectivity from superlattices with cumulative roughness
| DE95-004633 | p 1846 N95-24170

REFLECTOR ANTENNAS
Passive intermodulation generation in wire mesh deployable reflector antennas p 1656 N95-22816

REFLECTORS
Passive intermodulation generation in wire mesh deployable reflector antennas p 1656 N95-22816
Durability of reflector materials in the space environment p 1651 N95-23912

REFRACTIVITY
Study of photorefractive non-linearities in the 3-5 and 2-4 semi-insulator compounds: The effect of electron irradiation
| PB94-189057 | p 1839 N95-22584
Reflectance control for multicrystalline-silicon photovoltaic modules using textured-dielectric coatings
| DE95-004532 | p 1731 N95-24155

REFRIGERATORS
NASA advanced refrigerator/freezer technology development project overview
| NASA-TM-106309 | p 1747 N95-23177

REFUELING
New pellet production and acceleration technologies for high speed pellet injection system HIPEL in Large Helical Device
| NISF-326 | p 1835 N95-23566

REGRESSION ANALYSIS
Estimation of crown closure from AVIRIS data using regression analysis p 1709 N95-23886
Determining coniferous forest cover and forest fragmentation with NOAA-9 advanced very high resolution radiometer data p 1720 N95-24103

REGRESSION COEFFICIENTS
Asymptotic justification for a modified GLS procedure to estimate ARMA parameters
| PB95-135166 | p 1788 N95-23070

REGULATIONS
A roadmap for regulatory survival in the 1990s p 1628 N95-23026

REGULATORY MECHANISMS (BIOLOGY)
Activation of the jun-D gene in human myeloid cells by 1-(beta)-D-arabinofuranosylcytosine
| DE94-016591 | p 1746 N95-22912

REINFORCED PLASTICS
Society of the plastic industry process emission initiatives p 1629 N95-23036

REINFORCING FIBERS
Method of producing a silicon carbide fiber reinforced strontium aluminosilicate glass-ceramic matrix composite
| NASA-CASE-LEW-15263-2 | p 1627 N95-22563
Chemical recycling of scrap composites p 1629 N95-23034

RELATIONSHIPS
Jackson system development, entity-relationship analysis and data flow models: A comparative study
| PB95-127338 | p 1855 N95-22523

RELATIVE BIOLOGICAL EFFECTIVENESS (RBE)
Genetic effects on heavy ions in drosophila
| NASA-CR-197916 | p 1746 N95-22911

RELATIVISTIC PARTICLES
(pi)N correlations at AGS
| DE95-002933 | p 1801 N95-22656
Relativistic particle with torsion and charged particle in a constant electromagnetic field: Identity of evolution
| DE94-628506 | p 1803 N95-22778
The relativistic many body problem with an oscillator interaction p 1824 N95-22991
Notes on oscillator-like interactions of various spin relativistic particles p 1815 N95-22997
Design study of longitudinal dynamics of the drive beam in 1 TeV relativistic klystron two-beam accelerator
| DE95-004683 | p 1817 N95-23485
Design study of beam dynamics issues for 1 TeVnext linear collider based on the relativistic-klystron two-beam accelerator
| DE95-004673 | p 1817 N95-23493

RELATIVISTIC THEORY
First quantized noncritical relativistic Polyakov string
| DE94-628513 | p 1848 N95-22738
Does the relativity principle violate?
| DE94-635420 | p 1851 N95-23964

RELATIVITY
Does the relativity principle violate?
| DE94-635420 | p 1851 N95-23964

RELAXATION METHOD (MATHEMATICS)
Stability and efficiency of waveform relaxation methods
| PB95-138863 | p 1789 N95-23173

RELIABILITY
The MAMMOTH project p 1753 N95-24126
Architecture and evolution of Goddard Space Flight Center Distributed Active Archive Center p 1862 N95-24134
Design of a high-temperature superconductor current lead for electric utility SMES
| DE95-004604 | p 1664 N95-24163

RELIABILITY ANALYSIS
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 3: HARP Graphics Oriented (GO) input user's guide
| NASA-TP-3452-VOL-3 | p 1753 N95-22479
Current estimation for electromigration, hot carriers, and voltage drop
| AD-A285794 | p 1659 N95-22507
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 1: HARP introduction and user's guide
| NASA-TP-3452-VOL-1 | p 1754 N95-22603
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 2: HARP tutorial
| NASA-TP-3452-VOL-2 | p 1755 N95-22604
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 4: HARP Output (HARPO) graphics display user's guide
| NASA-TP-3452-VOL-4 | p 1755 N95-22605
Reliability analysis in the Office of Safety, Environmental, and Mission Assurance (OSEMA) p 1698 N95-23302
Integrating O/S models during conceptual design, part 2
| NASA-CR-197904 | p 1622 N95-23399

RELIABILITY ENGINEERING
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 3: HARP Graphics Oriented (GO) input user's guide
| NASA-TP-3452-VOL-3 | p 1753 N95-22479
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 4: HARP Output (HARPO) graphics display user's guide
| NASA-TP-3452-VOL-4 | p 1755 N95-22605
Reliability analysis in the Office of Safety, Environmental, and Mission Assurance (OSEMA) p 1698 N95-23302

RELIEF MAPS
Path planning for planetary rover using extended elevation map p 1771 N95-23689

RELIEF VALVES
Navier-Stokes flow field analysis of compressible flow in a pressure relief valve p 1679 N95-23618

REMOTE CONTROL
The next decade of space robotics p 1768 N95-23673
JPL space robotics: Present accomplishments and future thrusts p 1697 N95-23697
A US-Japan collaborative robotics research program p 1772 N95-23698
Space science experimentation automation and support p 1775 N95-23718
Robotic servicing system for space material experiment p 1697 N95-23722
Robotics and telepresence for moon missions p 1776 N95-23725
Intelligent monitoring system applied to super long distance telerobotic tasks p 1777 N95-23726
Manipulating flexible parts using a teleoperated system with time delay: An experiment p 1777 N95-23729
Visually guided grasping to study teleprogrammation within the BAROCO testbed p 1777 N95-23731
Design of teleoperation system with a force-reflecting real-time simulator p 1778 N95-23733
Telerobotics test bed for space structure assembly p 1618 N95-23734

REMOTE HANDLING
Design of teleoperation system with a force-reflecting real-time simulator p 1778 N95-23733

REMOTE MANIPULATOR SYSTEM
Commercialization of JPL Virtual Reality calibration and redundant manipulator control technologies p 1768 N95-23676
A perspective on space robotics in Japan p 1697 N95-23695
Space robotic experiment in JEM flight demonstration p 1697 N95-23701
Hardware interface unit for control of shuttle RMS vibrations p 1697 N95-23706
Development of Japanese experiment module remote manipulator system p 1752 N95-23708
Design of teleoperation system with a force-reflecting real-time simulator p 1778 N95-23733

REMOTE SENSING
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer
| NASA-CR-197368 | p 1735 N95-22482
A multispectral scanner survey of the Tonopah Test Range, Nevada. Date of survey: August 1993
| DE95-003920 | p 1717 N95-22503
Combining optical and microwave remote sensing data of forest vegetation: MAC Europe 1991
| PB95-127312 | p 1717 N95-22538
HAPEX-Sahel: Basic description of methods and data sets
| PB95-127262 | p 1701 N95-22639
Civilian satellite remote sensing: A strategic approach
| PB95-109633 | p 1717 N95-22713
Programmable hyperspectral image mapper with on-array processing
| NASA-CASE-NPO-17794-1-CU | p 1819 N95-22765
Remote detection of trace effluents using resonance Raman spectroscopy
| DE94-016858 | p 1633 N95-22887
TIMED Imaging Photometer Experiment (TIPE)
| NASA-CR-197431 | p 1688 N95-23087
Upgrade of the 92 GHz airborne multi-channel meteorological radiometer (AMMR)
| NASA-CR-197875 | p 1742 N95-23208
Study of atmospheric parameters measurements using MM-wave radar in synergy with LITE-2 p 1741 N95-23278
FAME: A forest assessment and monitoring environment scenario
| PB95-139309 | p 1718 N95-23471
Ocean observations with EOS/MODIS: Algorithm development and post launch studies
| NASA-CR-197894 | p 1718 N95-23473
Software agents for the dissemination of remote terrestrial sensing data p 1721 N95-23675
Attention focusing and anomaly detection in systems monitoring p 1769 N95-23683
A data analysis assistant p 1761 N95-23748
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 1: AVIRIS Workshop
| NASA-CR-197877-VOL-1 | p 1701 N95-23844
Use of spectral analogy to evaluate canopy reflectance sensitivity to leaf optical property p 1701 N95-23845
A tool for manual endmember selection and spectral unmixing p 1701 N95-23846
Lithologic discrimination and alteration mapping from AVIRIS Data, Socorro, New Mexico p 1701 N95-23847
Automating spectral unmixing of AVIRIS data using convex geometry concepts p 1702 N95-23848
AVIRIS calibration using the cloud-shadow method p 1702 N95-23849
Field observations using an AOTF polarimetric imaging spectrometer p 1702 N95-23850
Instantaneous field of view and spatial sampling of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1702 N95-23851
Discrimination of poorly exposed lithologies in AVIRIS data p 1703 N95-23858
AVIRIS and TIMS data processing and distribution at the land processes distributed active archive center p 1706 N95-23872
Classification of the LCVF AVIRIS test site with a Kohonen artificial neural network p 1706 N95-23874
Extraction of auxiliary data from AVIRIS distribution tape for spectral, radiometric, and geometric quality assessment p 1706 N95-23875
Preprocessing: Geocoding of AVIRIS data using navigation, engineering, DEM, and radar tracking system data p 1707 N95-23876
Mapping of the Ronda peridotite massif (Spain) from AVIRIS spectro-imaging survey: A first attempt p 1707 N95-23878
Spectral variations in a collection of AVIRIS imagery p 1707 N95-23879
The red edge in arid region vegetation: 340-1060 nm spectra p 1708 N95-23881
Temporal changes in endmember abundances, liquid water and water vapor over vegetation at Jasper Ridge p 1708 N95-23882
The effect of signal noise on the remote sensing of Foliar biochemical concentration p 1708 N95-23884

Application of MAC-Europe AVIRIS data to the analysis of various alteration stages in the Landdmannalauger Hydrothermal Area (South Iceland) p 1709 N95-23885
Estimation of crown closure from AVIRIS data using regression analysis p 1709 N95-23886
Relationships between pigment composition variation and reflectance for plant species from a coastal savannah in California p 1709 N95-23889
Investigations on the 1.7 micron residual absorption feature in the vegetation reflection spectrum p 1710 N95-23891
A comparison of spectral mixture analysis an NDVI for ascertaining ecological variables p 1710 N95-23892
Using AVIRIS for in-flight calibration of the spectral shifts of SPOT-HRV and of AVHRR? p 1710 N95-23893
Determination of semi-arid landscape endmembers and seasonal trends using convex geometry spectral unmixing techniques p 1711 N95-23895
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 2: TIMS Workshop
|NASA-CR-197876-VOL-2| p 1711 N95-23917
Mineralogic variability of the Kelso Dunes, Mojave Desert, California derived from Thermal Infrared Multispectral Scanner (TIMS) data p 1711 N95-23920
Remote identification of a gravel laden Pleistocene river bed p 1712 N95-23921
Interferometric synthetic aperture radar imagery of the Gulf Stream p 1712 N95-23939
AIRSAR views of aerolian terrain p 1713 N95-23941
Forest investigations by polarimetric AIRSAR data in the Harz mountains p 1713 N95-23944
Geologic mapping using integrated AIRSAR, AVIRIS, and TIMS data p 1714 N95-23946
AIRSAR deployment in Australia, September 1993: Management and objectives p 1714 N95-23948
Synergy between optical and microwave remote sensing to derive soil and vegetation parameters from MAC Europe 1991 Experiment p 1715 N95-23956
Soil moisture retrieval in the Oberpfaffenhofen testsite using MAC Europe AIRSAR data p 1716 N95-23960
Chemical recognition software
|DE95-003346| p 1636 N95-24007
Geographic information analysis: An ecological approach for the management of wildlife on the forest landscape
|NASA-CR-197941| p 1719 N95-24094
Comparison of 7.5-minute and 1-degree digital elevation models p 1719 N95-24095
Measuring forest landscape patterns in the Cascade Range of Oregon, USA p 1719 N95-24096
A preliminary comparison of Landsat Thematic Mapper and SPOT-1 HRV multispectral data for estimating coniferous forest volume p 1719 N95-24097
Old-growth and mature forests near spotted owl nests in western Oregon p 1719 N95-24098
Forest and wildlife habitat analysis using remote sensing and geographic information systems p 1720 N95-24100
Determining coniferous forest cover and forest fragmentation with NOAA-9 advanced very high resolution radiometer data p 1720 N95-24103
Land surface temperature measurements from EOS MODIS data
|NASA-CR-197969| p 1721 N95-24190

REMOTE SENSORS
SeaWiFS technical report series. Volume 25: Ocean optics protocols for SeaWiFS validation, revision 1
|NASA-TM-104566-VOL-25-REV-| p 1743 N95-22671
Remote detection of trace effluents using resonance Raman spectroscopy
|DE94-016858| p 1633 N95-22887
Long range targeting for space based rendezvous
|NASA-CR-197890| p 1757 N95-23388
Airborne Visible/Infrared Imaging Spectrometer (AVIRIS): Recent improvements to the sensor p 1690 N95-23852
Remote sensor test range update
|DE95-003629| p 1735 N95-24018

RENORMALIZATION GROUP METHODS
Asymptotically exact solution of the multi-channel resonant-level model
|DE94-629040| p 1801 N95-22498
One loop renormalization of Chern-Simons field theory in operator regularization
|DE94-628508| p 1796 N95-22751

REPLACING
Corrosion prevention with environmentally compliant materials: A design challenge p 1644 N95-23511

REPORTS
FY 1994 scientific and technical reports, articles, papers, and presentations
|NASA-TM-108480| p 1856 N95-23225
Military bases: Environmental impact at closing installations. Report to Congressional requesters

|DE95-002655| p 1626 N95-24142
Defense technology plan
|AD-A285415| p 1903 N95-24178
Defense science and technology strategy
|AD-A285414| p 1903 N95-24179

RESEARCH MANAGEMENT
Defense technology plan
|AD-A285415| p 1903 N95-24178
Defense science and technology strategy
|AD-A285414| p 1903 N95-24179
The TRAINS project: A case study in building a conversational planning agent
|TR-532| p 1659 N95-24193

RESEARCH PROJECTS
High magnetic fields in the USA
|DE95-002716| p 1798 N95-22552
Director's discretionary fund report for fiscal year 1994
|NASA-TM-108848| p 1872 N95-22920
Stochastic decision analysis p 1854 N95-23305
Teacher Enhancement Institute p 1853 N95-23312
Langley Research Center Strategic Plan for Education p 1853 N95-23316
NASA university program management information system, FY 1994
|NASA-TM-110345| p 1856 N95-23364

RESEARCH VEHICLES
Differential GPS and system integration of the Low Visibility Landing and Surface Operations (LVLASO) demonstration p 1611 N95-23318

RESERVOIRS
OU3 sediment dating and sedimentation rates
|DE95-001891| p 1734 N95-23384

RESIDUAL STRENGTH
Residual strength of thin panels with cracks p 1700 N95-23311

RESIDUAL STRESS
Statistically generated weighted curve fit of residual functions for modal analysis of structures
|NASA-TM-108481| p 1699 N95-22950

RESIDUES
Extraction and detection of pesticide residues from air filter inserts using supercritical carbon dioxide
|DE95-004579| p 1735 N95-23580
Analytical electron microscopy of LDEF impactor residues p 1869 N95-23832
Natural and orbital debris particles on LDEF's trailing and forward-facing surfaces p 1869 N95-23833
Debris and meteoroid proportions deduced from impact crater residue analysis p 1869 N95-23834
Micro-abrasion package capture cell experiment on the trailing edge of LDEF: Impactor chemistry and whipple bumper shield efficiencies p 1624 N95-23835
Secondary ion mass spectrometry (SIMS) analysis of hypervelocity microparticle impact sites on LDEF surfaces p 1637 N95-23836
SIMS chemical and isotopic analysis of impact features from LDEF experiments AO187-1 and AO187-2 p 1637 N95-23837
Image and compositional characteristics of the LDEF Big Guy impact crater p 1700 N95-23838
The effect of impact angle on craters formed by hypervelocity particles p 1700 N95-23839

RESIN MATRIX COMPOSITES
Chemical recycling of scrap composites p 1629 N95-23034
Nonlinear thermoviscoelastic behaviour in complex materials
|PB95-140653| p 1630 N95-23537
Surface characterization of LDEF carbon fiber/polymer matrix composites p 1631 N95-23900

RESIN TRANSFER MOLDING
Development and verification of a resin film infusion/resin transfer molding simulation model for fabrication of advanced textile composites
|NASA-CR-197439| p 1648 N95-23179
Assessment of resin transfer molding process for the XM6 discharger, ERDEC SSP 93-64
|NIAR-94-2| p 1650 N95-23932

RESINS
Biotransformation of an uncured composite material p 1629 N95-23033

RESISTANCE HEATING
The DIII-D divertor cryopump system: Design and operational experience
|DE95-003007| p 1693 N95-22796
Current-profile flattening and hot core shift due to the nonlinear development of resistive kink mode
|NIFS-311| p 1835 N95-23564
Characterization of Type 304L stainless steel solid-state closure welds for radioactive waste containment
|DE94-016539| p 1645 N95-23980

RESONANCE
Ionic core effects on the Mie resonance in lithium clusters
|DE94-014974| p 1805 N95-22870
Time-periodic solutions of some forced nonlinear wave equations: Analysis, approximations and applications
|PB95-135083| p 1788 N95-22932
Harmonic oscillators and resonance series generated by a periodic unstable classical orbit p 1825 N95-22999
Structure and evolution of long-lived spiral patterns in galaxies
|PB95-139242| p 1868 N95-23228
Computational modelling of Er(3+): Garnet laser materials p 1692 N95-23326
Electromagnetic production of pions on the nucleon
|DE95-004658| p 1811 N95-23587
Navier-Stokes flow field analysis of compressible flow in a pressure relief valve p 1679 N95-23618

RESONANCE SCATTERING
Remote detection of trace effluents using resonance Raman spectroscopy
|DE94-016858| p 1633 N95-22887

RESONANT FREQUENCIES
Resonant shallow donor magnetopolaron effect in a GaAs/AlGaAs quantum dot in high magnetic fields
|DE94-629039| p 1798 N95-22497
Interdigital-H linac for unstable nuclei at INS
|DE94-765448| p 1816 N95-22644
Phonon characteristics of high (T sub c) superconductors from neutron Doppler broadening measurements
|DE95-003703| p 1844 N95-24076

RESOURCE ALLOCATION
Applications of dynamic scheduling technique to space related problems: Some case studies p 1618 N95-23759

RESOURCES MANAGEMENT
Net energy analysis: Powerful tool for selecting electric power options
|DE95-002516| p 1728 N95-23133

RESPONSE TIME (COMPUTERS)
Optimizing tertiary storage organization and access for spatio-temporal datasets p 1861 N95-24131

RESTORATION
Ghost images and feasibility of reconstructions with the Richardson-Lucy algorithm
| DE95-002351 | p 1756 N95-23079
Revitalization of the Gemenc-area, Baja, Hungary. 1: A study on hydrological possibilities to revitalise the ecosystem in the Keselyues-area. 2: Towards the restoration of the Gyueruesalj floodplain
| PB95-139283 | p 1718 N95-23469
Tutorial on filtering, restoration, and state estimation
| TR-534 | p 1793 N95-24042
RETENTION (PSYCHOLOGY)
Functions of external cues in prospective memory
| DOT/FAA/AM-95/9 | p 1750 N95-24088
RETROREFLECTION
Double pass retroreflection for corrosion detection in aircraft structures p 1642 N95-23503
Performance characterization of EURECA retroreflectors with fluoropolymer-filled SiO(x) protective coatings p 1651 N95-23802
RETROREFLECTORS
Performance characterization of EURECA retroreflectors with fluoropolymer-filled SiO(x) protective coatings p 1651 N95-23802
REUSABLE HEAT SHIELDING
Robotic system for the servicing of the orbiter thermal protection system p 1697 N95-23724
REUSABLE ROCKET ENGINES
Damage-mitigating control of a reusable rocket engine for high performance and extended life
| NASA-CR-4640 | p 1654 N95-23195
REVERSE FIELD PINCH
Generation of fast electrons in reversed field pinches by the equilibrium grad (vert bar)B(vert bar) force
| DE95-004467 | p 1809 N95-23363
REYNOLDS NUMBER
Wing pressure distributions from subsonic tests of a high-wing transport model --- in the Langley 14- by 22-Foot Subsonic Wind Tunnel
| NASA-TM-4583 | p 1607 N95-22802
Design of a variable area diffuser for a 15-inch Mach 6 open-jet tunnel p 1617 N95-23309
On the accuracy of CFD-based pressure drop predictions for right-angle ducts p 1682 N95-23634
REYNOLDS STRESS
Development of an algebraic stress/two-layer model for calculating thrust chamber flow fields p 1675 N95-23442
RHYTHM (BIOLOGY)
The 1993 Gordon Research Conference on Chronobiology
| NASA-CR-197990 | p 1748 N95-24047
RIBONUCLEIC ACIDS
Open problems of computational molecular biology
| DE95-000895 | p 1745 N95-22866
The torsion space nucleic acids molecular mechanics program DUPLEX: Surveying conformation space by potential energy minimization
| DE94-017707 | p 1805 N95-22889
Rearrangement of RAG-1 recombinase gene in radiation-sensitive wasted mice
| DE94-017083 | p 1746 N95-22913
Molecular relics from chemical evolution and the origin of life
| DE94-628493 | p 1747 N95-23060
Cellular interactions in the suprachiasmatic nucleus
| AD-A285639 | p 1749 N95-23780
RIBS (SUPPORTS)
The influence of swirl brakes and a tip discharge orifice on the rotordynamic forces generated by discharge-to-suction leakage flows in shrouded centrifugal pumps p 1680 N95-23628
RIEMANN MANIFOLD
Anti-invariant submanifolds of trans-Sasakian manifolds
| DE94-628413 | p 1829 N95-22622
A new method of constructing scalar-flat Kaehler surfaces
| DE94-628419 | p 1785 N95-22627
Hausdorff dimension of Julia sets of complex Henon mappings
| DE94-628420 | p 1785 N95-22628
On the scalar curvature of minimal hypersurfaces
| DE94-628516 | p 1796 N95-22741
Semi-symmetric manifolds satisfying certain curvature conditions
| DE94-628414 | p 1788 N95-22922
Universal Hodge bundle and Mumford isomorphisms on the abelian inductive limit of Teichmueller spaces
| DE94-634325 | p 1796 N95-23660
On certain N-sheeted coverings of curves and symmetric numerical semigroups which cannot be realized as Weierstrass semigroups
| DE94-634328 | p 1797 N95-23661
The exchange algebra for Liouville field on Riemann surfaces with h greater than 1 genus
| DE94-635446 | p 1792 N95-23971
RIGID STRUCTURES
High-velocity penetrators
| DE95-001886 | p 1698 N95-22500
Segregated rigid and structural control for a photolithography positioning system
| DE95-002603 | p 1766 N95-23134
RINGS (MATHEMATICS)
Algebraic description of the elliptic cohomology of classifying spaces
| PB95-110797 | p 1788 N95-23076
RISK
How health risk from radiation is assessed
| DE95-003477 | p 1749 N95-23142
RIVER BASINS
Remote identification of a gravel laden Pleistocene river bed p 1712 N95-23921
RL-10-A-3 ENGINE
An RL10A-3-3A rocket engine model using the rocket engine transient simulator (ROCETS) software
| NASA-CR-190786 | p 1625 N95-23790
ROBOT ARMS
Controlling under-actuated robot arms using a high speed dynamics process
| NASA-CASE-NPO-18498-1-CU | p 1692 N95-22543
A microcontroller-based three degree-of-freedom manipulator testbed
| NASA-CR-197423 | p 1696 N95-23409
Commercialization of JPL Virtual Reality calibration and redundant manipulator control technologies p 1768 N95-23676
Very fast motion planning for highly dexterous-articulated robots p 1771 N95-23691
ASI's space automation and robotics programs: The second step p 1697 N95-23696
Space robotic experiment in JEM flight demonstration p 1697 N95-23701
Development of Advanced Robotic Hand System for space application p 1752 N95-23704
A three-finger multisensory hand for dexterous space robotic tasks p 1752 N95-23705
Robot arm system for automatic satellite capture and berthing p 1752 N95-23709
Robust control of multi-jointed arm with a decentralized autonomous control mechanism p 1659 N95-23710
Automatic satellite capture and berthing with robot arm (ASCABRA) p 1623 N95-23713
Dexterous Orbital Servicing System (DOSS) p 1752 N95-23723
Truss structure tele-manipulation experiment using ETS-7 p 1623 N95-23726
Antenna-assembling mechanism test on ETS-7 p 1623 N95-23727
Mark Tracking: Position/orientation measurements using 4-circle mark and its tracking experiments p 1778 N95-23736
Real-world shepherding: Combining vision, manipulation, and planning in real time
| TR-530 | p 1783 N95-24001
Morphing hands and virtual tools (or What good is an extra degree of freedom?)
| TR-551 | p 1783 N95-24036
ROBOT CONTROL
A certainty grid to object boundary algorithm
| PB94-203510 | p 1755 N95-22637
A microcontroller-based three degree-of-freedom manipulator testbed
| NASA-CR-197423 | p 1696 N95-23409
Commercialization of JPL Virtual Reality calibration and redundant manipulator control technologies p 1768 N95-23676
Very fast motion planning for highly dexterous-articulated robots p 1771 N95-23691
Control technique for planetary rover p 1771 N95-23692
Autonomous navigation system for the Marsokhod rover project p 1771 N95-23693
Lunar rover technology demonstrations with Dante and Ratler p 1697 N95-23694
ASI's space automation and robotics programs: The second step p 1697 N95-23696
A US-Japan collaborative robotics research program p 1772 N95-23698
Design and development status of ETS-7, an RVD and space robot experiment satellite p 1623 N95-23700
The Charlotte (TM) intra-vehicular robot p 1697 N95-23703
A three-finger multisensory hand for dexterous space robotic tasks p 1752 N95-23705
Hardware interface unit for control of shuttle RMS vibrations p 1697 N95-23706
Development of Japanese experiment module remote manipulator system p 1752 N95-23708
Interactive autonomy and robotic skills p 1777 N95-23730
Telerobotics test bed for space structure assembly p 1618 N95-23734
Telepresence control of a dual-arm dexterous robot p 1752 N95-23735
Terrain modelling and motion planning for an autonomous exploration rover p 1721 N95-23765
Morphing hands and virtual tools (or What good is an extra degree of freedom?)
| TR-551 | p 1783 N95-24036
Robot skill learning through intelligent experimentation
| TR-567 | p 1784 N95-24038
ROBOT DYNAMICS
Path planning for planetary rover using extended elevation map p 1771 N95-23689
Subsumption-based architecture for autonomous movement planning for planetary rovers p 1771 N95-23690
Very fast motion planning for highly dexterous-articulated robots p 1771 N95-23691
Control technique for planetary rover p 1771 N95-23692
Lunar rover technology demonstrations with Dante and Ratler p 1697 N95-23694
A US-Japan collaborative robotics research program p 1772 N95-23698
Robotic experiment with a force reflecting handcontroller onboard MIR space station p 1752 N95-23707
ROBOT SENSORS
A microcontroller-based three degree-of-freedom manipulator testbed
| NASA-CR-197423 | p 1696 N95-23409
Control technique for planetary rover p 1771 N95-23692
Lunar rover technology demonstrations with Dante and Ratler p 1697 N95-23694
Terrain modelling and motion planning for an autonomous exploration rover p 1721 N95-23765
ROBOTICS
Controlling under-actuated robot arms using a high speed dynamics process
| NASA-CASE-NPO-18498-1-CU | p 1692 N95-22543
Sensor-based control of rocket thrust chamber feature location for automated braze paste dispensing
| DE94-016559 | p 1624 N95-22885
Robotic all-terrain lunar exploration rover (RATLER) FY93 program status report
| DE95-003589 | p 1694 N95-23065
Simulation and off-line programming systems comparison
| DE95-002267 | p 1766 N95-23078
A microcontroller-based three degree-of-freedom manipulator testbed
| NASA-CR-197423 | p 1696 N95-23409
Third International Symposium on Artificial Intelligence, Robotics, and Automation for Space 1994
| NASA-CR-197340 | p 1767 N95-23672
Path planning for planetary rover using extended elevation map p 1771 N95-23689
Subsumption-based architecture for autonomous movement planning for planetary rovers p 1771 N95-23690
Very fast motion planning for highly dexterous-articulated robots p 1771 N95-23691
Control technique for planetary rover p 1771 N95-23692
Autonomous navigation system for the Marsokhod rover project p 1771 N95-23693
Lunar rover technology demonstrations with Dante and Ratler p 1697 N95-23694
A perspective on space robotics in Japan p 1697 N95-23695
ASI's space automation and robotics programs: The second step p 1697 N95-23696
Robotics research at Canadian Space Agency p 1772 N95-23699
Design and development status of ETS-7, an RVD and space robot experiment satellite p 1623 N95-23700
Space robotic experiment in JEM flight demonstration p 1697 N95-23701
A three-finger multisensory hand for dexterous space robotic tasks p 1752 N95-23705

Robotic experiment with a force reflecting handcontroller onboard MIR space station p 1752 N95-23707
Development of Japanese experiment module remote manipulator system p 1752 N95-23708
Robust control of multi-jointed arm with a decentralized autonomous control mechanism p 1659 N95-23710
Automation and crew time saving in the space experiment p 1752 N95-23715
Robotic servicing system for space material experiment p 1697 N95-23722

Robotic system for the servicing of the orbiter thermal protection system p 1697 N95-23724
Robotics and telepresence for moon missions p 1776 N95-23725
Interactive autonomy and robotic skills p 1777 N95-23730
Planetary stations and Abyssal Benthic Laboratories: An overview of parallel approaches for long-term investigation in extreme environments p 1752 N95-23732
Design of teleoperation system with a force-reflecting real-time simulator p 1778 N95-23733
Telerobotics test bed for space structure assembly p 1618 N95-23734
A fuzzy structural matching scheme for space robotics vision p 1778 N95-23737
Real-time tracking using stereo and motion: Visual perception for space robotics p 1778 N95-23739
Terrain modelling and motion planning for an autonomous exploration rover p 1721 N95-23765
Robot skill learning through intelligent experimentation |TR-567| p 1784 N95-24038
The growth of the UniTree mass storage system at the NASA Center for Computational Sciences: Some lessons learned p 1862 N95-24135

ROBOTS
Controlling under-actuated robot arms using a high speed dynamics process
|NASA-CASE-NPO-18498-1-CU| p 1692 N95-22543
Simulation and off-line programming systems comparison
|DE95-002267| p 1766 N95-23078
The next decade of space robotics p 1768 N95-23673
Very fast motion planning for highly dexterous-articulated robots p 1771 N95-23691
Lunar rover technology demonstrations with Dante and Ratler p 1697 N95-23694
JPL space robotics: Present accomplishments and future thrusts p 1697 N95-23697
Concept verification of three dimensional free motion simulator for space robot p 1618 N95-23702
The Charlotte (TM) intra-vehicular robot p 1697 N95-23703
Robotic servicing system for space material experiment p 1697 N95-23722
Robotic system for the servicing of the orbiter thermal protection system p 1697 N95-23724
Visually guided grasping to study teleprogrammation within the BAROCO testbed p 1777 N95-23731
Telepresence control of a dual-arm dexterous robot p 1752 N95-23735
Mark Tracking: Position/orientation measurements using 4-circle mark and its tracking experiments p 1778 N95-23736
A fuzzy structural matching scheme for space robotics vision p 1778 N95-23737
Terrain modelling and motion planning for an autonomous exploration rover p 1721 N95-23765

ROBUSTNESS (MATHEMATICS)
Design of high performance multivariable control systems for supermaneuverable aircraft at high angle of attack
|NASA-CR-197661| p 1615 N95-22908
Benchmark problems in computational aeroacoustics p 1800 N95-23315
Progress in advanced spray combustion code integration p 1637 N95-23644
Robust control of multi-jointed arm with a decentralized autonomous control mechanism p 1659 N95-23710

ROCKET ENGINE DESIGN
Status of axisymmetric CFD of an eleven inch diameter hybrid rocket motor p 1686 N95-23651
Predicted performance of an integrated modular engine system
|NASA-CR-190787| p 1625 N95-23791

ROCKET ENGINES
STS-59 Space Shuttle mission report
|NASA-TM-110527| p 1619 N95-23093
STS-62 Space Shuttle mission report
|NASA-TM-110450| p 1619 N95-23094
Radiation/convection coupling in rocket motors and plumes p 1669 N95-23414
Non-intrusive measurements in a rocket engine combustor p 1625 N95-23439
Impeller flow field characterization with a laser two-focus velocimeter p 1675 N95-23440
Three-D CFD analysis of hydrostatic bearings p 1678 N95-23616
CFD parametric study of consortium impeller p 1680 N95-23626
On the accuracy of CFD-based pressure drop predictions for right-angle ducts p 1682 N95-23634

ROCKET EXHAUST
Radiation/convection coupling in rocket motors and plumes p 1669 N95-23414

ROCKET NOZZLES
Heat transfer in rocket engine combustion chambers and nozzles p 1668 N95-23413
Computational Fluid Dynamic (CFD) analysis of axisymmetric plume and base flow of film/dump cooled rocket nozzle p 1673 N95-23431
Four-nozzle benchmark wind tunnel model USA code solutions for simulation of multiple rocket base flow recirculation at 145,000 feet altitude p 1686 N95-23654
Numerical study of base pressure characteristic curve for a four-engine clustered nozzle configuration p 1625 N95-23655

ROCKET THRUST
Sensor-based control of rocket thrust chamber feature location for automated braze paste dispensing
|DE94-016559| p 1624 N95-22885
Development of an algebraic stress/two-layer model for calculating thrust chamber flow fields p 1675 N95-23442

ROCKS
Lithologic discrimination and alteration mapping from AVIRIS Data, Socorro, New Mexico p 1701 N95-23847

ROLL
Pitch sensor system
|AD-D016488| p 1799 N95-22863
Feedback control laws for highly maneuverable aircraft
|NASA-CR-197944| p 1615 N95-23410

RONCHI TEST
EUV metrology of multilayer optics
|DE95-003036| p 1819 N95-22723

ROOM TEMPERATURE
Liquid nitrogen temperature operation of a switching power converter
|NASA-TM-106867| p 1662 N95-23219

ROSAT MISSION
ROSAT observation program
|NASA-CR-197683| p 1866 N95-23595

ROTARY ENGINES
Evaluation of thermal barrier and PS-200 self-lubricating coatings in an air-cooled rotary engine
|NASA-CR-195445| p 1614 N95-23222

ROTARY WING AIRCRAFT
System for determining aerodynamic imbalance
|NASA-CASE-ARC-11913-1| p 1688 N95-23377

ROTARY WINGS
Integrated aerodynamic/dynamic/structural optimization of helicopter rotor blades using multilevel decomposition
|NASA-TP-3465| p 1612 N95-22953
System for determining aerodynamic imbalance
|NASA-CASE-ARC-11913-1| p 1688 N95-23377

ROTATING FLUIDS
Study of the pressure field in rotating homogeneous turbulent flows
|PB94-189107| p 1665 N95-22585

ROTATING GENERATORS
Computer simulation of a magnetohydrodynamic dynamo 2
|NIFS-320| p 1836 N95-23590

ROTATION
Harmonic oscillator in quantum rotational spectra: Molecules and nuclei p 1814 N95-22972
Flavour dependence of form factors in heavy meson decays
|PB95-139101| p 1807 N95-23156
Structure and evolution of long-lived spiral patterns in galaxies
|PB95-139242| p 1868 N95-23228
Computer simulation of a magnetohydrodynamic dynamo 2
|NIFS-320| p 1836 N95-23590
Flow and heat transfer in 180-degree turn square ducts: Effects of turning configuration and system rotation p 1682 N95-23636
D3-D program overview
|DE95-003879| p 1837 N95-24086

ROTATIONAL STATES
Energy transfer dynamics in isolated and in colliding highly vibrationally excited molecules
|AD-A265771| p 1806 N95-23077

ROTOR BLADES (TURBOMACHINERY)
Navier-Stokes analysis of an oxidizer turbine blade with tip clearance with and without a mini-shroud p 1672 N95-23428
Enhanced analysis and users manual for radial-inflow turbine conceptual design code RTD
|NASA-CR-195454| p 1609 N95-23462
Optimization of a centrifugal impeller design through CFD analysis p 1680 N95-23624
CFD parametric study of consortium impeller p 1680 N95-23626

ROTOR BODY INTERACTIONS
An investigation of helicopter dynamic coupling using an analytical model
|NASA-CR-197420| p 1612 N95-23217

ROTOR DYNAMICS
Coherent state constructions of bases for some physically relevant group chains p 1814 N95-22966
Influence of backup bearings and support structure dynamics on the behavior of rotors with active supports
|NASA-CR-197438| p 1694 N95-23190
Dynamic modelling and response characteristics of a magnetic bearing rotor system including auxiliary bearings
|NASA-CR-197859| p 1694 N95-23213
Synchronous dynamics of a coupled shaft/bearing/housing system with auxiliary support from a clearance bearing: Analysis and experiment
|NASA-CR-197858| p 1695 N95-23214
Evaluation of thermal barrier and PS-200 self-lubricating coatings in an air-cooled rotary engine
|NASA-CR-195445| p 1614 N95-23222
The influence of swirl brakes and a tip discharge orifice on the rotordynamic forces generated by discharge-to-suction leakage flows in shrouded centrifugal pumps p 1680 N95-23628

ROTORS
Influence of backup bearings and support structure dynamics on the behavior of rotors with active supports
|NASA-CR-197438| p 1694 N95-23190
Thin tailored composite wing for civil tiltrotor p 1613 N95-23317

ROUTES
High surface area, high permeability carbon monoliths
|DE95-004555| p 1650 N95-23577

ROVER PROJECT
Autonomous navigation system for the Marsokhod rover project p 1771 N95-23693

ROVING VEHICLES
Robotic all-terrain lunar exploration rover (RATLER) FY93 program status report
|DE95-003589| p 1694 N95-23065
Path planning for planetary rover using extended elevation map p 1771 N95-23689
Subsumption-based architecture for autonomous movement planning for planetary rovers p 1771 N95-23690
Control technique for planetary rover p 1771 N95-23692
A perspective on space robotics in Japan p 1697 N95-23695
Small image laser range finder for planetary rover p 1692 N95-23712
Terrain modelling and motion planning for an autonomous exploration rover p 1721 N95-23765

RUBBER
Neutron scattering analysis of rubber carbon black composite structure
|DE95-002735| p 1646 N95-22553

RUNGE-KUTTA METHOD
Numerical computation of aerodynamics and heat transfer in a turbine cascade and a turn-around duct using advanced turbulence models p 1675 N95-23444

RUNWAY CONDITIONS
Guidance and control requirements for high-speed Rollout and Turnoff (ROTO)
|NASA-CR-195026| p 1614 N95-22674

RUNWAYS
Aircraft accident report. Runway overrun following rejected takeoff. Continental airlines flight 795, McDonnell Douglas MD-82, N18835, LaGuardia Airport, Flushing, NY, 2 March 1994
|PB95-910401| p 1610 N95-23609

RUSSIAN FEDERATION
BROND-2.1. Russian evaluated neutron reaction data library
|DE94-634417| p 1810 N95-23458

RUTHENIUM
Supported transition metal catalysts for para- to ortho-hydrogen conversion
|NASA-CR-197907| p 1634 N95-23252
Microstructure and composition of a SNS Josephson junction using CaRuO3 as the metallic barrier
|DE95-004611| p 1845 N95-24152

S

S MATRIX THEORY
Harmonic oscillator representation in the theory of scattering and nuclear reactions p 1814 N95-22967
Scattering problem for quantum system with time-dependent periodic Hamiltonian
|DE94-635421| p 1797 N95-23965

S WAVES
More about the q-deformed H-atom wave functions: Normal and abnormal series
| DE94-628434 | p 1801 N95-22643
(pi)- and a(sub 1)-meson physics in current algebra at the quark level
| DE94-628611 | p 1804 N95-22811
Tomographic analysis of the three-dimensional variation of the seismic velocity structure of the shallow crust underlying Southern New England
| AD-A279406 | p 1739 N95-23247

SADDLE POINTS
A prescribing geodesic curvature problem
| DE94-628503 | p 1787 N95-22750

SAFETY
Radioisotope thermoelectric generator licensed hardware package and certification tests
| DE95-003039 | p 1661 N95-22799
Skin exposure: Assessing the hazard in the workplace p 1628 N95-23030
Mishap risk control for advanced aerospace/composite materials p 1628 N95-23031
Fire hazard considerations for composites in vehicle design p 1628 N95-23032
Microgravity experiments safety and integration requirements document tree
| NASA-CR-195447 | p 1855 N95-23206
Search Hanford accessible reports electronically system requirements specification
| DE95-004367 | p 1856 N95-23340

SAFETY FACTORS
Corrosion detection and monitoring of aircraft structures: An overview p 1644 N95-23515
Closing the circle on the splitting of the atom: The environmental legacy of nuclear weapons production in the United States and what the Department of Energy is doing about it p 1818 N95-23562

SAFETY MANAGEMENT
A review of civil aviation fatal accidents in which lost/disoriented was a cause/factor: 1981-1990
| DOT/FAA/AM-95/1 | p 1611 N95-24071
Aviation Accident Investigation Symposium. Volume 1: Industry recommendations and Safety Board responses
| PB94-917005 | p 1611 N95-24105

SALMONELLA
Regulation of alcohol fermentation in Escherichia coli
| DE94-016227 | p 1745 N95-22874

SALT BATHS
Corrosion of landing gear steels p 1642 N95-23500

SALT SPRAY TESTS
Corrosion of landing gear steels p 1642 N95-23500

SALTS
Diffusion behavior of lysozyme in aqueous ammonium sulfate solutions under varying solution conditions as determined by dynamic light scattering
| DE95-004821 | p 1635 N95-23380
Laboratory studies of the sensitivity of tropospheric ozone to the chemistry of sea salt aerosol
| DE95-003607 | p 1735 N95-24147

SALYUT SPACE STATION
Structure and properties of polymeric composite materials during 1501 days outer space exposure at Salyut-7 orbital station p 1652 N95-23915

SAMPLING
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring
| DE95-001135 | p 1687 N95-22682
Instantaneous field of view and spatial sampling of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1702 N95-23851

SANDS
Theoretical estimates of high frequency acoustic attenuation and backscattering from suspended sand particles in the ocean and in an estuary
| DSTO-TR-0078 | p 1743 N95-23667

SANDWICH STRUCTURES
Deflections of anisotropic sandwich beams with variable face sheets and core thicknesses p 1700 N95-23310

SAPPHIRE
Surface structural dependence of cesium adsorption on the (alpha)-Al2O3(0001) surface
| DE95-002610 | p 1842 N95-23135

SATELLITE ATTITUDE CONTROL
The Starpicker expert system: A problem in expertise capture p 1623 N95-23721
Improved AVHRR data navigation using automated land feature recognition to correct a satellite orbital model
| CSIRO-TR-34 | p 1718 N95-24026

SATELLITE COMMUNICATION
Adaptive beamforming in a CDMA mobile satellite communications system p 1655 N95-22815
The possibilities for mobile and fixed services up to the 20/30 GHz frequency bands p 1656 N95-22817
Improved small satellite access of the space network
| NASA-CR-197863 | p 1657 N95-22944

SATELLITE CONTROL
Robot arm system for automatic satellite capture and berthing p 1752 N95-23709
A scheduling and diagnostic system for scientific satellite GEOTAIL using expert system p 1781 N95-23753

SATELLITE DRAG
Calculation of satellite drag coefficients
| AD-A285118 | p 1622 N95-23781

SATELLITE IMAGERY
SeaWiFS technical report series. Volume 25: Ocean optics protocols for SeaWiFS validation, revision 1
| NASA-TM-104566-VOL-25-REV- | p 1743 N95-22671
Infrared algorithm development for ocean observations with EOS/MODIS
| NASA-CR-197851 | p 1743 N95-23212
FAME: A forest assessment and monitoring environment scenario
| PB95-139309 | p 1718 N95-23471
AVIRIS calibration using the cloud-shadow method p 1702 N95-23849
Simulation of landsat thematic mapper imagery using AVIRIS hyperspectral imagery p 1705 N95-23869
Measurements of canopy chemistry with 1992 AVIRIS data at Blackhawk Island and Harvard Forest p 1706 N95-23873
Preprocessing: Geocoding of AVIRIS data using navigation, engineering, DEM, and radar tracking system data p 1707 N95-23876
The data facility of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1707 N95-23877
Spectral variations in a collection of AVIRIS imagery p 1707 N95-23879
Monitoring land use and degradation using satellite and airborne data p 1707 N95-23880
The red edge in arid region vegetation: 340-1060 nm spectra p 1708 N95-23881
Temporal changes in endmember abundances, liquid water and water vapor over vegetation at Jasper Ridge p 1708 N95-23882
Mapping and monitoring changes in vegetation communities of Jasper Ridge, CA, using spectral fractions derived from AVIRIS images p 1708 N95-23883
The effect of signal noise on the remote sensing of Foliar biochemical concentration p 1708 N95-23884
Application of MAC-Europe AVIRIS data to the analysis of various alteration stages in the Landdmannalauger Hydrothermal Area (South Iceland) p 1709 N95-23885
Estimation of crown closure from AVIRIS data using regression analysis p 1709 N95-23886
Atmospheric correction of AVIRIS data of Monterey Bay contaminated by thin cirrus clouds p 1710 N95-23890
Investigations on the 1.7 micron residual absorption feature in the vegetation reflection spectrum p 1710 N95-23891
A comparison of spectral mixture analysis an NDVI for ascertaining ecological variables p 1710 N95-23892
Using AVIRIS for in-flight calibration of the spectral shifts of SPOT-HRV and of AVHRR? p 1710 N95-23893
Laboratory spectra of field samples as a check on two atmospheric correction methods p 1711 N95-23894
Determination of semi-arid landscape endmembers and seasonal trends using convex geometry spectral unmixing techniques p 1711 N95-23895
Forest and wildlife habitat analysis using remote sensing and geographic information systems p 1720 N95-24100
Analysis of conifer forest regeneration using Landsat Thematic Mapper data p 1720 N95-24101
Determining successional stage of temperate coniferous forests with Landsat satellite data p 1720 N95-24102
Determining coniferous forest cover and forest fragmentation with NOAA-9 advanced very high resolution radiometer data p 1720 N95-24103
Dynamics and pattern of a managed coniferous forest landscape in Oregon p 1720 N95-24104

SATELLITE INSTRUMENTS
On-orbit science in a small package: Managing the ALEXIS satellite and experiments
| DE94-014426 | p 1621 N95-22868
TIMED Imaging Photometer Experiment (TIPE)
| NASA-CR-197431 | p 1688 N95-23087

SATELLITE NAVIGATION SYSTEMS
Improved AVHRR data navigation using automated land feature recognition to correct a satellite orbital model
| CSIRO-TR-34 | p 1718 N95-24026

SATELLITE NETWORKS
Improved small satellite access of the space network
| NASA-CR-197863 | p 1657 N95-22944

SATELLITE OBSERVATION
Civilian satellite remote sensing: A strategic approach
| PB95-109633 | p 1717 N95-22713
GPS survey of the western Tien Shan
| NASA-CR-197901 | p 1717 N95-22832
Global electric field determination in the Earth's outer magnetosphere using energetic charged particles
| NASA-CR-197392 | p 1737 N95-22945
TIMED Imaging Photometer Experiment (TIPE)
| NASA-CR-197431 | p 1688 N95-23087
Infrared algorithm development for ocean observations with EOS/MODIS
| NASA-CR-197851 | p 1743 N95-23212
Investigation of the role of gravity waves in the generation of equatorial bubbles
| NASA-CR-197962 | p 1739 N95-23272
Ocean observations with EOS/MODIS: Algorithm development and post launch studies
| NASA-CR-197894 | p 1718 N95-23473
Validation data for land surface temperature determination from satellites
| CSIRO-TR-33 | p 1718 N95-23597
Use of the Airborne Visible/Infrared Imaging Spectrometer to calibrate the optical sensor on board the Japanese Earth Resources Satellite-1 p 1624 N95-23864
Measurements of canopy chemistry with 1992 AVIRIS data at Blackhawk Island and Harvard Forest p 1706 N95-23873
Atmospheric correction of AVIRIS data of Monterey Bay contaminated by thin cirrus clouds p 1710 N95-23890
Determination of semi-arid landscape endmembers and seasonal trends using convex geometry spectral unmixing techniques p 1711 N95-23895
Architecture and evolution of Goddard Space Flight Center Distributed Active Archive Center p 1862 N95-24134

SATELLITE ORBITS
Improved AVHRR data navigation using automated land feature recognition to correct a satellite orbital model
| CSIRO-TR-34 | p 1718 N95-24026

SATELLITE ORIENTATION
The Starpicker expert system: A problem in expertise capture p 1623 N95-23721

SATELLITE TRANSMISSION
Utilizing a TDRS satellite for direct broadcast satellite-radio propagation experiments and demonstrations p 1622 N95-22814

SATELLITE-BORNE INSTRUMENTS
Validation data for land surface temperature determination from satellites
| CSIRO-TR-33 | p 1718 N95-23597
An intelligent ground operator support system p 1769 N95-23681

SATELLITES
Active vision in satellite scene analysis p 1778 N95-23738

SATURN RINGS
Charging of interplanetary grains
| NASA-CR-198032 | p 1869 N95-24066

SATURN 5 LAUNCH VEHICLES
Axisymmetric computational fluid dynamics analysis of Saturn V/S1-C/F1 nozzle and plume p 1672 N95-23430

SAWTOOTH WAVEFORMS
Fast potential change in sawteeth in JIPP T-IIU tokamak plasmas
| NIFS-327 | p 1835 N95-23533

SCALARS
On the scalar curvature of minimal hypersurfaces
| DE94-628516 | p 1796 N95-22741
Finite-temperature scalar field theory in static de Sitter space
| DE94-628522 | p 1848 N95-22743
A space-time lattice version of scalar electrodynamics
| DE94-628577 | p 1850 N95-22784
Level set techniques applied to unsteady detonation propagation
| DE95-002741 | p 1666 N95-22901
The relativistic many body problem with an oscillator interaction p 1824 N95-22991
The Duffin-Kemmer-Petiau oscillator p 1825 N95-22998
Optimally scaled systems for second order scalar singularity perturbed problems
| PB95-138814 | p 1789 N95-23169
Two portable parallel tridiagonal solvers
| DE94-019044 | p 1763 N95-23243
Search for scalar and vector leptoquarks in electron-proton collisions at radical S = 300 GeV
| DE94-785267 | p 1810 N95-23475

SCALE MODELS
The viability of establishing collaborative, reconfigurable research environments for the Human Performance Research Laboratory at NASA Ames
| NASA-CR-197384 | p 1753 N95-22480

SCALING LAWS
On inertial range scaling laws
| DE95-004515 | p 1677 N95-23484
Dimensional scaling for impact cratering and perforation p 1624 N95-23843

Experimental achievement of toroidal beta beyond that predicted by 'Troyon' scaling
| DE95-003880 | p 1837 N95-24087

SCANNERS
Color orthophotography: To scan or not
| DE95-002749 | p 1689 N95-24069

SCANNING
Color orthophotography: To scan or not
| DE95-002749 | p 1689 N95-24069

SCANNING ELECTRON MICROSCOPY
Morphology of extinguished monolithic JA2 grains fired in a 30-mm Solid Propellant Electrothermal Chemical (SPETC) gun
| AD-A285792 | p 1652 N95-22506
Germination, growth rates, and electron microscope analysis of tomato seeds flown on the LDEF
p 1748 N95-23821
Image and compositional characteristics of the LDEF Big Guy impact crater p 1700 N95-23838

SCATTERING
Investigation of mechanical properties and their relation to the internal structure of nanocrystalline metals and composites
| DE95-001151 | p 1627 N95-22683
Long range potentials and multiple scattering theory in complex systems
| DE94-628881 | p 1804 N95-22791
Protein folding and protein metallocluster studies using synchrotron small angler x ray scattering
| DE95-003339 | p 1746 N95-22897
An upper bound for the proton temperature anisotrophy
| DE95-002752 | p 1737 N95-22903
Higgs searches and WW scattering
| PB95-139143 | p 1807 N95-23160
LDEF environment modeling updates
p 1637 N95-23797
Scattering problem for quantum system with time-dependent periodic Hamiltonian
| DE94-635421 | p 1797 N95-23965
Pauli-blocking effects in neutron-alpha reactions
| DE94-016358 | p 1813 N95-24046

SCATTERING FUNCTIONS
The point interactions in the quantum problem of three particles with internal structure
| DE94-635423 | p 1851 N95-23967
Subband quantum scattering times for AlGaAs/GaAs obtained using digital filtering
| NASA-TM-106873 | p 1846 N95-24188

SCENE ANALYSIS
Active vision in satellite scene analysis
p 1778 N95-23738
A self-organizing neural network architecture for auditory and speech perception with applications to acoustic and other temporal prediction problems
| AD-A285640 | p 1800 N95-23782

SCHEDULES
Cost and schedule analytical techniques development
| NASA-CR-196548 | p 1853 N95-22891
DTS: Building custom, intelligent schedulers
p 1779 N95-23744
A scheduling and diagnostic system for scientific satellite GEOTAIL using expert system p 1781 N95-23753
Automatic generation of efficient orderings of events for scheduling applications p 1618 N95-23764

SCHEDULING
Task scheduling in dataflow computer architectures
p 1753 N95-23301
Microarchitecture support for dynamic scheduling of acyclic task graphs
| CSRD-1207 | p 1791 N95-23600
An intelligent ground operator support system
p 1769 N95-23681
Distributed intelligence for ground/space systems
p 1770 N95-23685
Planning and scheduling the Hubble Space Telescope: Practical application of advanced techniques
p 1779 N95-23740
A constraint-logic based implementation of the coarse-grained approach to data acquisition scheduling of the International Ultraviolet Explorer orbiting observatory p 1779 N95-23741
Robust telescope scheduling p 1779 N95-23742
DTS: Building custom, intelligent schedulers
p 1779 N95-23744
Graphical timeline editing p 1761 N95-23746
A format for the interchange of scheduling models
p 1780 N95-23747
Coordinating complex decision support activities across distributed applications p 1761 N95-23749
CRI planning and scheduling for space
p 1617 N95-23751
A scheduling and diagnostic system for scientific satellite GEOTAIL using expert system p 1781 N95-23753
Design and implementation of an experiment scheduling system for the ACTS satellite p 1620 N95-23756
High performance techniques for space mission scheduling p 1618 N95-23758
Applications of dynamic scheduling technique to space related problems: Some case studies
p 1618 N95-23759
Solution and reasoning reuse in space planning and scheduling applications p 1618 N95-23760
Empirical results on scheduling and dynamic backtracking p 1618 N95-23761
Scheduling with genetic algorithms
p 1761 N95-23762
Automatic generation of efficient orderings of events for scheduling applications p 1618 N95-23764
Loop scheduling for heterogeneity
| TR-540 | p 1764 N95-23936
Constraint based scheduling for the Goddard Space Flight Center distributed Active Archive Center's data archive and distribution system p 1859 N95-24121
Scheduler-conscious synchronization
| TR-550 | p 1765 N95-24183

SCHROEDINGER EQUATION
Solutions for the vector k-constrained KP hierarchy
| DE94-628431 | p 1786 N95-22633
More about the q-deformed H-atom wave functions: Normal and abnormal series
| DE94-628434 | p 1801 N95-22643
Dirac canonical quantization and Faddeev-Jackiw symplectic quantization of higher order Lagrangians
| DE94-628428 | p 1796 N95-22788
Algebraic theory of molecules p 1814 N95-22958
Harmonic oscillator representation in the theory of scattering and nuclear reactions p 1814 N95-22967
A possible generalization of the harmonic oscillator potential p 1822 N95-22970
A method of solving simple harmonic oscillator Schroedinger equation p 1797 N95-22989
The relativistic many body problem with an oscillator interaction p 1824 N95-22991
Disorder-induced breakdown of soliton and polaron particles
| DE95-003694 | p 1808 N95-23267
Spontaneous wave packet reduction
| DE94-634280 | p 1851 N95-23454

SCHWARZ-CHRISTOFFEL TRANSFORMATION
Schwarz-Christoffel methods for multiply-elongated regions
| DE94-019048 | p 1790 N95-23536

SCIENCE
Teacher Enhancement Institute p 1853 N95-23312

SCIENTIFIC SATELLITES
On-orbit science in a small package: Managing the ALEXIS satellite and experiments
| DE94-014426 | p 1621 N95-22868
A constraint-logic based implementation of the coarse-grained approach to data acquisition scheduling of the International Ultraviolet Explorer orbiting observatory p 1779 N95-23741
A scheduling and diagnostic system for scientific satellite GEOTAIL using expert system p 1781 N95-23753

SCINTILLATING FIBERS
Performance of a large scale scintillating fiber tracker using VLPC readout
| DE95-003746 | p 1871 N95-23370

SCINTILLATION COUNTERS
Performance of a large scale scintillating fiber tracker using VLPC readout
| DE95-003746 | p 1871 N95-23370
Thermal effects on the STAR electromagnetic calorimeter
| DE95-004663 | p 1688 N95-23492

SCRAP
Chemical recycling of scrap composites
p 1629 N95-23034

SEA ICE
Unusual radar echoes from the Greenland ice sheet
p 1714 N95-23951

SEA SURFACE TEMPERATURE
Infrared algorithm development for ocean observations with EOS/MODIS
| NASA-CR-197851 | p 1743 N95-23212

SEALERS
Method for forming a glove attachment
| NASA-CASE-MSC-21632-1 | p 1750 N95-22766

SEALING
The sound insulations of studio doors. Part 2: Door seals
| BBC-RD-1994/15 | p 1654 N95-24045

SECONDARY FLOW
Three-dimensional unsteady flow calculations in an advanced gas generator turbine p 1671 N95-23425

SECONDARY ION MASS SPECTROMETRY
Secondary ion mass spectrometry (SIMS) analysis of hypervelocity microparticle impact sites on LDEF surfaces p 1637 N95-23836
SIMS chemical and isotopic analysis of impact features from LDEF experiments AO187-1 and AO187-2
p 1637 N95-23837

SECURITY
Information technology standards process guide
| DE95-003967 | p 1857 N95-23574
Security clearances: Consideration of sexual orientation in the clearance process. Report to Congressional requesters
| GAO/NSIAD-95-21 | p 1853 N95-23588

SEDIMENTARY ROCKS
Energy flux and hydrogeology of thermal anomalies in the Gulf of Mexico Basin - South Texas example
| DE95-003341 | p 1743 N95-22695

SEDIMENTS
OU3 sediment dating and sedimentation rates
| DE95-001891 | p 1734 N95-23384
Remote identification of a gravel laden Pleistocene river bed p 1712 N95-23921

SEEDS
Germination, growth rates, and electron microscope analysis of tomato seeds flown on the LDEF
p 1748 N95-23821

SEISMIC ENERGY
Axial focusing of energy from a hypervelocity impact on earth
| DE95-003347 | p 1740 N95-24008

SEISMIC WAVES
Intermediate-term earthquake prediction and seismic zoning in Northern Italy
| DE94-627689 | p 1736 N95-22612
Axial focusing of impact energy in the earth's interior: A possible link to flood basalts and hotspots
| DE95-003357 | p 1741 N95-24009

SEISMOLOGY
Intermediate-term earthquake prediction and seismic zoning in Northern Italy
| DE94-627689 | p 1736 N95-22612
Seismic hazards at Kilauea and Mauna Loa volcanoes, Hawaii
| DE94-012109 | p 1737 N95-22924
Seismic evidence of conjugate normal faulting: The 1994 Devil Canyon earthquake sequence near Challis, Idaho
| DE95-002052 | p 1740 N95-23386
Axial focusing of impact energy in the earth's interior: A possible link to flood basalts and hotspots
| DE95-003357 | p 1741 N95-24009

SELECTION
Gas cooled leads. Part 1: Theoretical Study. Part 2: Frost free lead optimized for a specific current. Part 3: Frost free lead optimized for a large current range
| DE95-002657 | p 1660 N95-22716
Supersymmetric singlet majorons and cosmology
| DE94-628571 | p 1850 N95-22783
Real lasers and other deformed objects
p 1692 N95-23001

SELECTIVE DISSEMINATION OF INFORMATION
Software agents for the dissemination of remote terrestrial sensing data p 1721 N95-23675

SELF CONSISTENT FIELDS
Computational studies of metal-metal and metal-ligand interactions
| NASA-CR-197862 | p 1641 N95-23215
Symmetry breaking in O4(+): An application of the Brueckner coupled-cluster method
| NASA-CR-197981 | p 1810 N95-23459

SELF ORGANIZING SYSTEMS
Complexity in plasma: A grand view of self-organization
| NIFS-318 | p 1835 N95-23528

SELF PROPAGATION
Level set techniques applied to unsteady detonation propagation
| DE95-002741 | p 1666 N95-22901

SEMANTICS
Browsing semantics in the tower model
| PB95-127221 | p 1855 N95-22534
Algebra of lines and boxes
| PB95-130456 | p 1787 N95-22768
Algebraic semantics of basic message sequence charts
| PB95-138970 | p 1657 N95-23151
DUALITY: A simple formalism for the analysis of UNITY
| PB95-135703 | p 1763 N95-23166
Relating multifunctions and predicate transformers through closure operators
| PB95-135646 | p 1757 N95-23467
Modelling and analysis of a high speed data bus with predicate/transition nets
| PB95-140695 | p 1764 N95-23538
Combinatorial semantics
| TR-563 | p 1792 N95-23793

SEMICONDUCTOR DEVICES
Plasmo-magnetoelastic waves in a semiconducting heterostructure. 1: Plasmo-elastic longitudinal modes. 2: Sh-magnetoelastic modes
| PB95-138822 | p 1833 N95-23170
Method of making a semiconductor device using a nanochannel glass matrix
| AD-D016383 | p 1662 N95-23241
Measurement and analysis of scatter from silicon wafers
| DE95-002411 | p 1827 N95-23531
Extraction of the surface recombination velocity of passivated phosphorus-doped silicon emitters
| DE95-004539 | p 1845 N95-24156
Particle transport in plasma reactors
| DE95-004541 | p 1837 N95-24158
SEMICONDUCTORS (MATERIALS)
Magnetic field effects on strong-coupling polaron in quantum dots
| DE94-629038 | p 1847 N95-22496
Resonant shallow donor magnetopolaron effect in a GaAs/AlGaAs quantum dot in high magnetic fields
| DE94-629039 | p 1798 N95-22497
Large-area triple-junction a-Si alloy production scaleup
| DE95-000245 | p 1726 N95-22546
High gain GaAs Photoconductive Semiconductor Switches for impulse sources
| DE95-001885 | p 1659 N95-22549
Metallization and incomplete melting of a semiconductor surface at high temperature
| DE94-627342 | p 1660 N95-22591
A special percolation problem in ceramic composites
| DE94-627641 | p 1647 N95-22611
Method and system for electron beam lithography
| AD-D016554 | p 1660 N95-22709
Chemical vapor deposition in low pressure batch furnaces
| DE95-003035 | p 1632 N95-22722
Optical absorption in an indirect-gap semiconductor quantum well systems
| DE94-628878 | p 1849 N95-22759
Two-photon absorption in an indirect-gap semiconductor quantum well systems 1. Interband transitions
| DE94-628879 | p 1849 N95-22760
Two-photon absorption in an indirect-gap semiconductor quantum well systems 2. Excitonic transitions
| DE94-628880 | p 1849 N95-22761
Photoemission study of quantum confinement by a finite barrier: Cu/Co(wedge)/Cu(100)
| DE95-002913 | p 1840 N95-22762
High gain GaAs photoconductive semiconductor switches: Measurement of filament velocity and reduced trigger energy
| DE95-001884 | p 1661 N95-22844
Computational modeling of properties
| NAS-CR-196544 | p 1841 N95-22907
Nanophase materials: Synthesis, properties, applications
| AD-A286013 | p 1627 N95-22940
Strong-coupling polaron effect in quantum dots
| DE94-628485 | p 1850 N95-23049
Thermal effects on the STAR electromagnetic calorimeter
| DE95-004663 | p 1688 N95-23492
Mechanical design of the CDF SVX 2 silicon vertex detector
| DE94-018985 | p 1689 N95-23520
SVX(prime), the new CDF silicon vertex detector
| DE94-018986 | p 1689 N95-23521
Profiling and light scattering studies of Si surfaces
| DE95-002931 | p 1828 N95-24005
Carbon doping of III-V compound semiconductors
| DE95-003431 | p 1844 N95-24013
SENSITIVITY
Computer modeling of the sensitivity of a laser water vapor sensor to variations in temperature and air speed p 1692 N95-23330
Long-baseline neutrino oscillation experiments
| DE95-004636 | p 1870 N95-23584
Search for millimeterwave CO emission in damped Lyman-alpha systems
| PB95-139259 | p 1868 N95-23607
Preliminary analysis of the sensitivity of AIRSAR images to soil moisture variations p 1714 N95-23950
SEQUENCING
An improved system for exon recognition and gene modeling in human DNA sequences
| DE94-017863 | p 1746 N95-22890
Protein folding and protein metallocluster studies using synchrotron small angler x ray scattering
| DE95-003339 | p 1746 N95-22897
Performance of single-keyword and multiple-keyword pattern matching algorithms
| PB95-138954 | p 1756 N95-23150
Ishikawa iteration process for nonlinear Lipschitz strongly accretive mappings
| DE94-634284 | p 1792 N95-23658
Reevaluation of the significance of sequence information for speech recognition
| TR-555 | p 1658 N95-23794
Phonetic set hashing: A novel scheme for transforming phone sequences to words
| TR-538 | p 1658 N95-24039
Proposal of a Modified EBU method for reliable evaluation of picture quality
| NHK-LABS-NOTE-431 | p 1863 N95-24180
SEQUENTIAL ANALYSIS
Analytic sets and games in Banach spaces
| PB95-108080 | p 1787 N95-22837
SEQUENTIAL COMPUTERS
Microarchitecture support for dynamic scheduling of acyclic task graphs
| CSRD-1207 | p 1791 N95-23600
SEQUENTIAL CONTROL
Integrating O/S models during conceptual design, part 2
| NASA-CR-197904 | p 1622 N95-23399
An operations and command systems for the extreme ultraviolet explorer p 1770 N95-23687
SERIES EXPANSION
Coherent state constructions of bases for some physically relevant group chains p 1814 N95-22966
Taylor series expansion and modified extended Prony analysis for localization
| DE95-003671 | p 1758 N95-23567
SERUMS
Activation of the jun-D gene in human myeloid cells by 1-(beta)-D-arabinofuranosylcytosine
| DE94-016591 | p 1746 N95-22912
SERVICE LIFE
Product stewardship in the composites industry p 1628 N95-23027
Damage-mitigating control of a reusable rocket engine for high performance and extended life
| NASA-CR-4640 | p 1654 N95-23195
Oklahoma City air logistics center (USAF) aging aircraft corrosion program p 1607 N95-23519
SERVOCONTROL
Vision-based planning and execution of precision grasps
| TR-546 | p 1784 N95-24185
SERVOMECHANISMS
Controlling under-actuated robot arms using a high speed dynamics process
| NASA-CASE-NPO-18498-1-CU | p 1692 N95-22543
SET THEORY
Is omega* - (mu) absolutely countably compact?
| PB95-127981 | p 1785 N95-22528
Countable space with a closed subspace without continuous extender
| PB95-127973 | p 1785 N95-22533
Entropy of Z(sup d) subshifts of finite type
| PB95-108072 | p 1787 N95-22836
Analytic sets and games in Banach spaces
| PB95-108080 | p 1787 N95-22837
Reevaluation of the significance of sequence information for speech recognition
| TR-555 | p 1658 N95-23794
Effective category and measure in abstract complexity theory
| TR-529 | p 1792 N95-23929
Optimal advice
| TR-527 | p 1792 N95-23931
Reducibility classes of P-selective sets
| TR-524 | p 1792 N95-24002
Witness-isomorphic reductions and the local search problem
| TR-522 | p 1793 N95-24003
Large sets in AC(exp 0): A Kolmogorov complexity related property and some applications
| TR-556 | p 1797 N95-24029
On the size of sets with weak membership properties
| TR-557 | p 1793 N95-24034
Logspace reducibility and self-reducibility: Models and equivalences
| TR-544 | p 1760 N95-24059
Semi-membership algorithms: Some recent advances
| TR-526 | p 1760 N95-24092
Polynomial-time membership comparable sets
| TR-552 | p 1793 N95-24182
The satanic notations: Counting classes beyond #P and other definitional adventures
| TR-561 | p 1793 N95-24194
SEWAGE TREATMENT
Resource recovery and epidemiology of anaerobic wastewater treatment process in a controlled ecological life support system
| NASA-CR-197930 | p 1751 N95-23474
SEYFERT GALAXIES
ROSAT observation program
| NASA-CR-197683 | p 1866 N95-23595
Near infrared and optical spectroscopy of FSC10214+4724
| NASA-CR-197966 | p 1828 N95-24068
SH WAVES
Plasmo-magnetoelastic waves in a semiconducting heterostructure. 1: Plasmo-elastic longitudinal modes. 2: Sh-magnetoelastic modes
| PB95-138822 | p 1833 N95-23170
SHAFTS (MACHINE ELEMENTS)
Synchronous dynamics of a coupled shaft/bearing/housing system with auxiliary support from a clearance bearing: Analysis and experiment
| NASA-CR-197858 | p 1695 N95-23214
SHAPES
Shapes and stability of algebraic nuclear models p 1814 N95-22974
Phonon-induced anomalous specific heat of a model nanocrystal by computer simulation
| DE95-004653 | p 1843 N95-23585
SHEAR FLOW
Three-dimensional structure in a supersonic jet: Behavior near centerline
| NASA-TM-106869 | p 1668 N95-23220
Direct numerical simulations and modeling of a spatially-evolving turbulent wake p 1687 N95-23289
Direct numerical simulation of sheared turbulent flow p 1687 N95-23296
SHEAR LAYERS
Computational Fluid Dynamic (CFD) analysis of axisymmetric plume and base flow of film/dump cooled rocket nozzle p 1673 N95-23431
SHEAR STRENGTH
Interlaminar shear test method development for long term durability testing of composites p 1631 N95-23300
SHEAR STRESS
High-lift flow-physics flight experiments on a subsonic civil transport aircraft (B737-100) p 1609 N95-23333
SHELL STABILITY
The development of shell imperfection measurement techniques
| TAE-712 | p 1699 N95-23923
SHIPS
Endeavor: Now and then
| NASA-TM-110539 | p 1620 N95-23664
SHOCK LAYERS
Entropy jump across an inviscid shock wave
| NASA-CR-195046 | p 1678 N95-23596
SHOCK LOADS
Impact shock and penetration fragmentation in porous media
| DE94-018900 | p 1868 N95-23656
SHOCK WAVE INTERACTION
Mach 10 computational study of a three-dimensional scramjet inlet flow field
| NASA-TM-4602 | p 1667 N95-23210
A generic efficient adaptive grid scheme for rocket propulsion modeling p 1670 N95-23418
Supersonic flow and shock formation in turbine tip gaps p 1672 N95-23429
SHOCK WAVE PROPAGATION
The effect of a non-zero shock width on wave propagation in multi-dimensions
| DE95-002748 | p 1666 N95-22902
Entropy jump across an inviscid shock wave
| NASA-CR-195046 | p 1678 N95-23596
SHOCK WAVES
Nonlinear generalized functions and nonconservative shock simulations
| DE95-003307 | p 1795 N95-22734
Langmuir-like waves and radiation in planetary foreshocks
| NASA-CR-197376 | p 1869 N95-22828
Entropy jump across an inviscid shock wave
| NASA-CR-195046 | p 1678 N95-23596
Axial focusing of impact energy in the earth's interior: A possible link to flood basalts and hotspots
| DE95-003357 | p 1741 N95-24009
Investigation of infra-red and nonequilibrium air radiation
| NASA-CR-197977 | p 1741 N95-24041
SHROUDED TURBINES
Navier-Stokes analysis of an oxidizer turbine blade with tip clearance with and without a mini-shroud p 1672 N95-23428
SHROUDS
Optimization of a centrifugal impeller design through CFD analysis p 1680 N95-23624
Use of blade lean in turbomachinery redesign p 1680 N95-23625
SHUTTLE IMAGING RADAR
AIRSAR deployment in Australia, September 1993: Management and objectives p 1714 N95-23948

Preliminary analysis of the sensitivity of AIRSAR images to soil moisture variations p 1714 N95-23950

SIDESLIP

Wing pressure distributions from subsonic tests of a high-wing transport model --- in the Langley 14- by 22-Foot Subsonic Wind Tunnel
| NASA-TM-4583 | p 1607 N95-22802

SIGNAL ANALYSIS

Simulation of landsat thematic mapper imagery using AVIRIS hyperspectral imagery p 1705 N95-23869

SIGNAL DETECTION

Parallel digital modem using multirate digital filter banks
| NASA-CR-197331 | p 1761 N95-22478

Capacitive acoustic wave detector and method of using same
| NASA-CASE-LAR-13890-1 | p 1799 N95-22921

SIGNAL PROCESSING

Parallel digital modem using multirate digital filter banks
| NASA-CR-197331 | p 1761 N95-22478

Maximum-likelihood spectral estimation and adaptive filtering techniques with application to airborne Doppler weather radar
| NASA-CR-197699 | p 1658 N95-23670

Active vision in satellite scene analysis p 1778 N95-23738

VLSI for high-speed digital signal processing
| AD-A285643 | p 1663 N95-23783

SIGNAL TO NOISE RATIOS

The effect of signal noise on the remote sensing of Foliar biochemical concentration p 1708 N95-23884

SIGNAL TRANSMISSION

A self-organizing neural network architecture for auditory and speech perception with applications to acoustic and other temporal prediction problems
| AD-A285640 | p 1800 N95-23782

SIGNATURE ANALYSIS

Toward an automated signature recognition toolkit for mission operations p 1659 N95-23682

Remote sensor test range update
| DE95-003629 | p 1735 N95-24018

SIGNATURES

Experience with CANDID: Comparison algorithm for navigating digital image databases
| DE95-000869 | p 1855 N95-22515

SILICATES

Supported transition metal catalysts for para- to ortho-hydrogen conversion
| NASA-CR-197907 | p 1634 N95-23252

SILICIDES

Dislocation decomposition, dissociation, and deformation in MoSi2 and (alpha)-Al2O3 single crystals
| DE95-002715 | p 1839 N95-22653

SILICON

Twelve month performance evaluation for the rotating shadowband radiometer
| DE95-002847 | p 1726 N95-22554

Advanced growth and surface analysis system for in situ studies of interface formation
| DE95-002850 | p 1838 N95-22555

World's first 15%-efficient multicrystalline silicon modules
| DE95-002604 | p 1727 N95-22650

Structural properties of silicon clusters: An empirical potential study
| DE94-628902 | p 1805 N95-22935

Mechanical design of the CDF SVX 2 silicon vertex detector
| DE94-018985 | p 1689 N95-23520

SVX(prime), the new CDF silicon vertex detector
| DE94-018986 | p 1689 N95-23521

Measurement and analysis of scatter from silicon wafers
| DE95-002411 | p 1827 N95-23531

Development of microchannel plate x-ray optics
| NASA-CR-197935 | p 1866 N95-23540

Cu deposition using a permanent magnet electron cyclotron resonance microwave plasma source
| DE94-017768 | p 1650 N95-23981

Profiling and light scattering studies of Si surfaces
| DE95-002931 | p 1828 N95-24005

Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides
| DE95-004531 | p 1731 N95-24090

Extraction of the surface recombination velocity of passivated phosphorus-doped silicon emitters
| DE95-004539 | p 1845 N95-24156

Crystalline-silicon photovoltaics: Necessary and sufficient
| DE95-004540 | p 1731 N95-24157

SILICON ALLOYS

Continuous roll-to-roll amorphous-silicon photovoltaic manufacturing technology
| DE95-000243 | p 1728 N95-23061

SILICON CARBIDES

Method of producing a silicon carbide fiber reinforced strontium aluminosilicate glass-ceramic matrix composite
| NASA-CASE-LEW-15263-2 | p 1627 N95-22563

Research on defects and transport in amorphous-silicon-based semiconductors
| DE94-011888 | p 1660 N95-22586

SILICON DIOXIDE

Protective coating for ceramic materials
| NASA-CASE-ARC-11969-1-CU | p 1649 N95-23394

SILICON FILMS

Chemical vapor deposition in low pressure batch furnaces
| DE95-003035 | p 1632 N95-22722

SILICON NITRIDES

Evolution of oxidation and creep damage mechanisms in HIPed silicon nitride materials
| DE95-001360 | p 1647 N95-22689

Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides
| DE95-004531 | p 1731 N95-24090

SILICON OXIDES

Four space application material coatings on the Long-Duration Exposure Facility (LDEF) p 1651 N95-23913

Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides
| DE95-004531 | p 1731 N95-24090

SILICONE RUBBER

Method for forming a glove attachment
| NASA-CASE-MSC-21632-1 | p 1750 N95-22766

SILICONES

Four space application material coatings on the Long-Duration Exposure Facility (LDEF) p 1651 N95-23913

SILVER

Some aspects of critical currents in Ag sheathed Bi2Sr2Ca2Cu3O10 composite tapes: A summary
| DE95-003952 | p 1842 N95-23354

Measurements of the optical properties of thin films of silver and silver oxide p 1651 N95-23906

Durability of reflector materials in the space environment p 1651 N95-23912

SILVER ALLOYS

Durability of reflector materials in the space environment p 1651 N95-23912

SILVER OXIDES

Measurements of the optical properties of thin films of silver and silver oxide p 1651 N95-23906

SIMD (COMPUTERS)

Towards the Teraflop CFD
| NASA-CR-197947 | p 1764 N95-23594

Unstructured grids on SIMD torus machines
| NASA-CR-197954 | p 1758 N95-23610

SIMULATION

Structure and evolution of long-lived spiral patterns in galaxies
| PB95-139242 | p 1868 N95-23228

Holographic interferometric tomography for reconstructing flow fields p 1690 N95-23287

Structured adaptive grid generation using algebraic methods p 1669 N95-23417

Consistency and Monte Carlo simulation of a data driven version of smooth goodness-of-fit tests
| PB95-141255 | p 1794 N95-23559

Unsteady flow simulations in support of the SSME HEX turning vane cracking investigation with the ATD HPOTP p 1679 N95-23621

Simulation of cookoff results in a small scale test
| DSTO-TR-0090 | p 1653 N95-23668

SIMULATORS

Combining optical and microwave remote sensing data of forest vegetation: MAC Europe 1991
| PB95-127312 | p 1717 N95-22538

Design of teleoperation system with a force-reflecting real-time simulator p 1778 N95-23733

SIMULTANEOUS EQUATIONS

Nonlinear thermoviscoelastic behaviour in complex materials
| PB95-140653 | p 1630 N95-23537

SINGLE CRYSTALS

Dislocation decomposition, dissociation, and deformation in MoSi2 and (alpha)-Al2O3 single crystals
| DE95-002715 | p 1839 N95-22653

Motion-sensitive optical correlator using a VanderLugt correlator
| NASA-CASE-NPO-18769-1-CU | p 1827 N95-23045

Cation disorder determined by MAS Al-27 NMR in high dose neutron irradiated spinel
| DE95-003681 | p 1842 N95-23266

Effect on c-axis transport properties of a critical state in Bi2Sr2CaCu2O8
| DE95-003695 | p 1843 N95-23366

Growth of single crystals of organic salts with large second-order optical nonlinearities by solution processes for devices
| NASA-CR-197963 | p 1843 N95-23563

Electrochemical studies of perovskite mixed conductors
| DE95-003704 | p 1636 N95-23573

Temperature effects on ion irradiation damage in MgAl2O4 spinel single crystals
| DE95-003679 | p 1844 N95-24073

SINGLE STAGE TO ORBIT VEHICLES

Structural Arrangement Trade Study. Volume 1: Reusable Hydrogen Composite Tank System (RHCTS) and Graphite Composite Primary Structures (GCPS). Executive summary
| NASA-CR-197685 | p 1621 N95-23188

Structural arrangement trade study. Volume 3: Reusable Hydrogen Composite Tank System (RHCTS) and Graphite Composite Primary Structures (GCPS). Addendum
| NASA-CR-197687 | p 1621 N95-23189

SINGULARITY (MATHEMATICS)

A wall interference assessment/correction system
| NASA-CR-197421 | p 1667 N95-23183

SINTERING

Numerical simulation of axisymmetric viscous sintering
| PB95-138889 | p 1667 N95-23175

SISO (CONTROL SYSTEMS)

Adaptive control of linear systems based on approximate models
| PB95-139333 | p 1767 N95-23199

SITTING POSITION

A multibody/finite element analysis approach for modeling of crash dynamic responses
| NIAR-94-3 | p 1610 N95-24050

SIZE (DIMENSIONS)

Petabyte mass memory system using the Newell Optical(TM) p 1753 N95-24119

SIZE DISTRIBUTION

Mass transport through polycrystalline microstructures
| DE95-004552 | p 1811 N95-23576

High surface area, high permeability carbon monoliths
| DE95-004555 | p 1650 N95-23577

SKIN (ANATOMY)

Skin exposure: Assessing the hazard in the workplace p 1628 N95-23030

SKY SURVEYS (ASTRONOMY)

IRAS sky survey atlas: Explanatory supplement
| NASA-CR-197335 | p 1865 N95-22539

ROSAT observation program
| NASA-CR-197683 | p 1866 N95-23595

Telescope loading: A problem reduction approach p 1781 N95-23757

SLABS

Numerical Tokamak Project code comparison
| DE95-003475 | p 1831 N95-22899

SLAGS

Application of CFD analysis to design support and problem resolution for ASRM and RSRM p 1685 N95-23649

SLITS

Thermal outgassing studies on machinable tungsten and TZM molybdenum alloy
| DE95-002984 | p 1638 N95-22592

SLOTS

Ignition transient calculations in the Space Shuttle solid rocket motor p 1625 N95-23640

SLUSH

A summary of the slush hydrogen technology program for the National Aero-Space Plane
| NASA-TM-106863 | p 1653 N95-24186

SLUSH HYDROGEN

A summary of the slush hydrogen technology program for the National Aero-Space Plane
| NASA-TM-106863 | p 1653 N95-24186

SMART STRUCTURES

A coupled layerwise analysis of the thermopiezoelectric response of smart composite beams beams
| NASA-TM-106889 | p 1630 N95-23463

SMOKE

Modeling aerosol emissions from the combustion of composite materials p 1629 N95-23038

Remote sensing of smoke, clouds, and fire using AVIRIS data p 1704 N95-23860

Aircraft fires, smoke toxicity, and survival: An overview
| DOT/FAA/AM-95/8 | p 1610 N95-24024

SMOOTHING

Iterative solutions of nonlinear equations in smooth Banach spaces
| DE94-634287 | p 1790 N95-23455

Tutorial on filtering, restoration, and state estimation
| TR-534 | p 1793 N95-24042

SNOW

Unusual radar echoes from the Greenland ice sheet p 1714 N95-23951

An improved algorithm for retrieval of snow wetness using C-band AIRSAR p 1715 N95-23954

SNOW COVER
Glaciological studies in the central Andes using AIRSAR/TOPSAR p 1713 N95-23942
Unusual radar echoes from the Greenland ice sheet p 1714 N95-23951
An improved algorithm for retrieval of snow wetness using C-band AIRSAR p 1715 N95-23954
SODIUM
Ethanol synthesis and water gas shift over bifunctional sulfide catalysts
|DE94-017376| p 1634 N95-23202
SODIUM 22
Laser light induced drift for atoms of radioactive isotopes Na-22 and Na-24
|DE94-635759| p 1812 N95-23976
SODIUM 24
Laser light induced drift for atoms of radioactive isotopes Na-22 and Na-24
|DE94-635759| p 1812 N95-23976
SOFTWARE ENGINEERING
Jackson system development, entity-relationship analysis and data flow models: A comparative study
|PB95-127338| p 1855 N95-22523
Software for the generalized eigenproblem on distributed memory architectures
|DE95-002999| p 1755 N95-22690
Investigation of the role of gravity waves in the generation of equatorial bubbles
|NASA-CR-197962| p 1739 N95-23272
Radioisotope thermoelectric generator transportation system subsystem 143 software development plan
|DE95-003774| p 1662 N95-23351
Three-dimensional viscous flow analysis inside a turbine volute p 1674 N95-23437
Software agents for the dissemination of remote terrestrial sensing data p 1721 N95-23675
Utilizing inheritance in requirements engineering p 1768 N95-23677
Using Dedal to share and reuse distributed engineering design information p 1768 N95-23678
AMPHION: Specification-based programming for scientific subroutine libraries p 1761 N95-23680
An operations and command systems for the extreme ultraviolet explorer p 1770 N95-23687
A toolbox and record for scientific models p 1775 N95-23716
Computer software design description for the Treated Effluent Disposal Facility (TEDF), Project L-045H, Operator Training Station (OTS)
|DE95-003065| p 1759 N95-24006
OPUS: A new generation Knowledge Engineering Environment p 1760 N95-24176
SOFTWARE REUSE
Software agents for the dissemination of remote terrestrial sensing data p 1721 N95-23675
Using Dedal to share and reuse distributed engineering design information p 1768 N95-23678
AMPHION: Specification-based programming for scientific subroutine libraries p 1761 N95-23680
Constraint based scheduling for the Goddard Space Flight Center distributed Active Archive Center's data archive and distribution system p 1859 N95-24121
SOFTWARE TOOLS
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 3: HARP Graphics Oriented (GO) input user's guide
|NASA-TP-3452-VOL-3| p 1753 N95-22479
Browsing semantics in the tower model
|PB95-127221| p 1855 N95-22534
Partitioning methods for unstructured finite element meshes
|PB95-130555| p 1785 N95-22544
Extensible PDE Solvers package users manual
|DE95-003333| p 1786 N95-22696
Performance of single-keyword and multiple-keyword pattern matching algorithms
|PB95-138954| p 1756 N95-23150
Long range targeting for space based rendezvous
|NASA-CR-197890| p 1757 N95-23388
Criteria for evaluation of grid generation systems p 1669 N95-23416
Toward an automated signature recognition toolkit for mission operations p 1659 N95-23682
An expert system for diagnosing anomalies of spacecraft p 1770 N95-23684
A toolbox and record for scientific models p 1775 N95-23716
DTS: Building custom, intelligent schedulers p 1779 N95-23744
A data analysis assistant p 1761 N95-23748
Modeling actions and operations to support mission preparation p 1617 N95-23750
CRI planning and scheduling for space p 1617 N95-23751
Artificial intelligence techniques for scheduling Space Shuttle missions p 1781 N95-23755
GPP user's guide: A general-purpose postprocessor for wind turbine data analysis
|DE95-000293| p 1730 N95-23776
The US Geological Survey, digital spectral reflectance library: version 1: 0.2 to 3.0 microns p 1703 N95-23855
Extraction of auxiliary data from AVIRIS distribution tape for spectral, radiometric, and geometric quality assessment p 1706 N95-23875
SOIL EROSION
Effects of wind on rainfall simulation. Spatial distribution of water application, kinetic energy, and overland flow under single full-cone nozzle sprays
|PB95-127304| p 1717 N95-22537
SOIL MAPPING
Geophysical investigations in the 100 Areas: Fiscal year 1991 through December 1993
|DE95-001573| p 1736 N95-22843
Classification of high dimensional multispectral image data p 1705 N95-23868
Mapping of the Ronda peridotite massif (Spain) from AVIRIS spectro-imaging survey: A first attempt p 1707 N95-23878
Synergy between optical and microwave remote sensing to derive soil and vegetation parameters from MAC Europe 1991 Experiment p 1715 N95-23956
SOIL MOISTURE
HAPEX-Sahel: Basic description of methods and data sets
|PB95-127262| p 1701 N95-22639
Preliminary analysis of the sensitivity of AIRSAR images to soil moisture variations p 1714 N95-23950
Synergy between optical and microwave remote sensing to derive soil and vegetation parameters from MAC Europe 1991 Experiment p 1715 N95-23956
Classification and soil moisture determination of agricultural fields p 1716 N95-23958
Soil moisture retrieval in the Oberpfaffenhofen testsite using MAC Europe AIRSAR data p 1716 N95-23960
Implementation of a soil-canopy scheme into the CSIRO GCM: Regional aspects of the model response
|CSIRO-TR-32| p 1721 N95-24192
SOIL SAMPLING
Application of MAC-Europe AVIRIS data to the analysis of various alteration stages in the Landdmannalauger Hydrothermal Area (South Iceland) p 1709 N95-23885
SOIL SCIENCE
HAPEX-Sahel: Basic description of methods and data sets
|PB95-127262| p 1701 N95-22639
SOILS
Basic data sets description and preliminary results of EFEDA-Spain
|PB95-139291| p 1740 N95-23470
Temporal changes in endmember abundances, liquid water and water vapor over vegetation at Jasper Ridge p 1708 N95-23882
Thermal radiant exitance model performance: Soils and forests
|DE95-003619| p 1721 N95-24148
SOLAR ACTIVITY
Space Science for the 21st Century. Strategic Plan for 1995-2000
|NASA-TM-110546| p 1617 N95-22947
Solar-geophysical data number 602, October 1994. Part 1: (Prompt reports). Data for September, August 1994, and late data
|PB95-149357| p 1870 N95-23925
Solar-geophysical data number 602, October 1994. Part 2: (Comprehensive reports). Data for April 1994, and miscellaneous
|PB95-149365| p 1870 N95-23926
SOLAR ARRAYS
Summary of solar cell data from the Long Duration Exposure Facility (LDEF)
|NASA-CR-196539| p 1727 N95-22904
Design of a GaAs/Ge solar array for unmanned aerial vehicles
|NASA-TM-106870| p 1728 N95-23259
SOLAR CELLS
Research on defects and transport in amorphous-silicon-based semiconductors
|DE94-011888| p 1660 N95-22586
Polycrystalline CuInSe2 and CdTePV solar cells
|DE95-000244| p 1727 N95-22842
Summary of solar cell data from the Long Duration Exposure Facility (LDEF)
|NASA-CR-196539| p 1727 N95-22904
Continuous roll-to-roll amorphous-silicon photovoltaic manufacturing technology
|DE95-000243| p 1728 N95-23061
Design of a GaAs/Ge solar array for unmanned aerial vehicles
|NASA-TM-106870| p 1728 N95-23259
Hydrogen and fuel cells for energy storage
|DE95-723907| p 1729 N95-23382
Rapid thermal processing of high-efficiency silicon solar cells with controlled in-situ annealing
|DE95-004729| p 1730 N95-23489
Telerobotics test bed for space structure assembly p 1618 N95-23734
Automated solar cell assembly teamed process research
|DE95-000299| p 1730 N95-23777
Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides
|DE95-004531| p 1731 N95-24090
Reflectance control for multicrystalline-silicon photovoltaic modules using textured-dielectric coatings
|DE95-004532| p 1731 N95-24155
SOLAR COLLECTORS
Advanced reflector materials for solar concentrators
|DE95-000248| p 1726 N95-22547
Twelve month performance evaluation for the rotating shadowband radiometer
|DE95-002847| p 1726 N95-22554
SOLAR CORONA
Plasma properties and magnetic field structure of the solar corona, based on coordinated Max 1991 observations from SERTS, the VLA, and magnetographs
|NASA-CR-197864| p 1870 N95-23181
SOLAR CORPUSCULAR RADIATION
Characteristics of low energy ions in the Heavy Ions In Space (HIIS) experiment p 1815 N95-23807
Results from the Heavy Ions In Space (HIIS) experiment on the ionic charge state of solar energetic particles p 1870 N95-23808
SOLAR DYNAMIC POWER SYSTEMS
Overview of the solar dynamic ground test demonstration program at the NASA Lewis Research Center
|NASA-TM-106876| p 1625 N95-23450
SOLAR ENERGY
Southeast Regional Experiment Station
|DE95-000903| p 1726 N95-22518
Hydrogen and fuel cells for energy storage
|DE95-723907| p 1729 N95-23382
Solar photochemistry: Twenty years of progress, what's been accomplished, and where does it lead?
|DE95-004007| p 1730 N95-23778
SOLAR ENERGY CONVERSION
Renewable Energy Sources Brno 1993
|DE94-633975| p 1727 N95-22855
SOLAR FLARES
Investigation of physical parameters in stellar flares observed by GINGA
|NASA-CR-196547| p 1868 N95-23205
LDEF contributions to cosmic ray and radiation environments research p 1872 N95-23805
Solar-geophysical data number 602, October 1994. Part 1: (Prompt reports). Data for September, August 1994, and late data
|PB95-149357| p 1870 N95-23925
Solar-geophysical data number 602, October 1994. Part 2: (Comprehensive reports). Data for April 1994, and miscellaneous
|PB95-149365| p 1870 N95-23926
SOLAR FLUX
Comparison of methods for calibrating AVIRIS data to ground reflectance p 1703 N95-23854
SOLAR MAGNETIC FIELD
Plasma properties and magnetic field structure of the solar corona, based on coordinated Max 1991 observations from SERTS, the VLA, and magnetographs
|NASA-CR-197864| p 1870 N95-23181
Solar-geophysical data number 602, October 1994. Part 1: (Prompt reports). Data for September, August 1994, and late data
|PB95-149357| p 1870 N95-23925
SOLAR NEUTRINOS
Neutrino masses and mixing
|DE94-628632| p 1812 N95-23784
Neutrinoless double beta decay and the solar neutrino problem
|DE94-628633| p 1812 N95-23785
SOLAR OSCILLATIONS
Solar mass loss, solar lithium, and solar oscillations
|DE94-018262| p 1870 N95-22938
SOLAR PROMINENCES
Solar-geophysical data number 602, October 1994. Part 2: (Comprehensive reports). Data for April 1994, and miscellaneous
|PB95-149365| p 1870 N95-23926
SOLAR RADIATION
Plasma properties and magnetic field structure of the solar corona, based on coordinated Max 1991 observations from SERTS, the VLA, and magnetographs
|NASA-CR-197864| p 1870 N95-23181
A proposed update to the solar irradiance spectrum used in LOWTRAN and MODTRAN p 1705 N95-23865

SOLAR RADIO BURSTS
Solar-geophysical data number 602, October 1994. Part 2: (Comprehensive reports). Data for April 1994, and miscellaneous
|PB95-149365| p 1870 N95-23926
SOLAR RADIO EMISSION
Solar-geophysical data number 602, October 1994. Part 1: (Prompt reports). Data for September, August 1994, and late data
|PB95-149357| p 1870 N95-23925
SOLAR REFLECTORS
Advanced reflector materials for solar concentrators
|DE95-000248| p 1726 N95-22547
SOLAR SYSTEM
Space Science for the 21st Century. Strategic Plan for 1995-2000
|NASA-TM-110546| p 1617 N95-22947
Origins of interstellar and solar system: Carbonaceous materials
|NASA-CR-197436| p 1867 N95-23013
SOLAR SYSTEM EVOLUTION
Origins of interstellar and solar system: Carbonaceous materials
|NASA-CR-197436| p 1867 N95-23013
SOLAR WIND
Solar mass loss, solar lithium, and solar oscillations
|DE94-018262| p 1870 N95-22938
Physics of magnetospheric boundary layers
|NASA-CR-197920| p 1739 N95-23271
Germination, growth rates, and electron microscope analysis of tomato seeds flown on the LDEF p 1748 N95-23821
SOLAR X-RAYS
Solar-geophysical data number 602, October 1994. Part 2: (Comprehensive reports). Data for April 1994, and miscellaneous
|PB95-149365| p 1870 N95-23926
SOLDERING
Solderability preservation through the use of organic inhibitors
|DE95-003633| p 1664 N95-24149
SOLDERS
Analysis of physiochemical processes during solder aging
|DE95-003811| p 1638 N95-22576
SOLID CRYOGENS
Exotic atoms
|DE95-003199| p 1805 N95-22881
SOLID ELECTROLYTES
Vapor deposition of thin-film Y-doped ZrO2 for electrochemical device applications
|DE95-003705| p 1649 N95-23268
SOLID LUBRICANTS
Evaluation of thermal barrier and PS-200 self-lubricating coatings in an air-cooled rotary engine
|NASA-CR-195445| p 1614 N95-23222
SOLID MECHANICS
Institute for Computational Mechanics in Propulsion (ICOMP)
|NASA-TM-106884| p 1677 N95-23464
SOLID PHASES
Quick connect coupling
|NASA-CASE-ARC-11921-2| p 1695 N95-23376
Deformation of C15 Laves phase alloys
|DE95-003636| p 1646 N95-24067
SOLID PROPELLANT ROCKET ENGINES
Eleventh Workshop for Computational Fluid Dynamic Applications in Rocket Propulsion
|NASA-CP-3221-PT-2| p 1668 N95-23412
Advanced multi-phase flow CFD model development for solid rocket motor flowfield analysis p 1683 N95-23638
Ignition transient calculations in the Space Shuttle solid rocket motor p 1625 N95-23640
SOLID PROPELLANTS
Morphology of extinguished monolithic JA2 grains fired in a 30-mm Solid Propellant Electrothermal Chemical (SPETC) gun
|AD-A285792| p 1652 N95-22506
SOLID STATE
Characterization of Type 304L stainless steel solid-state closure welds for radioactive waste containment
|DE94-016539| p 1645 N95-23980
SOLID STATE DEVICES
Measurements of striae in CR+ doped YAG laser crystals p 1847 N95-23285
SOLID STATE LASERS
Non-intrusive measurements in a rocket engine combustor p 1625 N95-23439
SOLID SURFACES
Profiling and light scattering studies of Si surfaces
|DE95-002931| p 1828 N95-24005
SOLID WASTES
Biotransformation of an uncured composite material p 1629 N95-23033
The Louisiana State University waste-to-energy incinerator
|DE95-004417| p 1728 N95-23344
SOLID-SOLID INTERFACES
Propagation of waves at the loosely bonded interface of two porous elastic half-spaces
|DE94-628477| p 1800 N95-23018
SOLIDS
Influence of porosity and two-phase flow on diffusional/thermal instability of a deflagrating energetic material
|DE95-002592| p 1634 N95-23122
SOLITARY WAVES
Solutions for the vector k-constrained KP hierarchy
|DE94-628431| p 1786 N95-22633
Disorder-induced breakdown of soliton and polaron particles
|DE95-003694| p 1808 N95-23267
(Phi)(sup 4) kinks: Statistical mechanics
|DE95-003693| p 1794 N95-23349
Theoretical aspects of electroweak and other interactions in medium energy nuclear physics
|DE95-004341| p 1808 N95-23357
SOLUBILITY
Tough, soluble, aromatic, thermoplastic copolyimides
|NASA-CASE-LAR-15205-1| p 1648 N95-22882
SOLUTES
EXTRA.M: A computing code system for analysis of the Purex process with mixer settlers for reprocessing
|DE94-785273| p 1635 N95-23476
SOLVATION
Solvation of isolated transition metal ions
|DE95-002978| p 1638 N95-22571
SOLVENT EXTRACTION
EXTRA.M: A computing code system for analysis of the Purex process with mixer settlers for reprocessing
|DE94-785273| p 1635 N95-23476
SOLVENTS
Tough, soluble, aromatic, thermoplastic copolyimides
|NASA-CASE-LAR-15205-1| p 1648 N95-22882
Polyazomethines containing trifluoromethylbenzene units
|NASA-CASE-LAR-14896-1| p 1649 N95-23253
SOUND DETECTING AND RANGING
Pitch sensor system
|AD-D016488| p 1799 N95-22863
SOUND FIXING AND RANGING
DRACULA: Dynamic range control for broadcasting and other applications
|BBC-RD-1994/13| p 1658 N95-24044
SOUND TRANSMISSION
The sound insulations of studio doors. Part 2: Door seals
|BBC-RD-1994/15| p 1654 N95-24045
SOUND WAVES
Capacitive acoustic wave detector and method of using same
|NASA-CASE-LAR-13890-1| p 1799 N95-22921
Benchmark problems in computational aeroacoustics p 1800 N95-23315
A self-organizing neural network architecture for auditory and speech perception with applications to acoustic and other temporal prediction problems
|AD-A285640| p 1800 N95-23782
The sound insulations of studio doors. Part 2: Door seals
|BBC-RD-1994/15| p 1654 N95-24045
SPACE BASES
Planetary stations and Abyssal Benthic Laboratories: An overview of parallel approaches for long-term investigation in extreme environments p 1752 N95-23732
SPACE CHARGE
Design study of longitudinal dynamics of the drive beam in 1 TeV relativistic klystron two-beam accelerator
|DE95-004683| p 1817 N95-23485
SPACE COMMERCIALIZATION
Superconductivity devices: Commercial use of space
|NASA-CR-197885| p 1648 N95-22883
SPACE COMMUNICATION
Effects of modulation index on telecommunications
|AD-A286018| p 1657 N95-23023
SPACE DEBRIS
Effect of the space environment on materials flown on the EURECA/TICCE-HVI experiment p 1623 N95-23803
Status of LDEF contributions to current knowledge of meteoroid and manmade debris environments and their effects on spacecraft in LEO p 1623 N95-23822
LDEF meteoroid and debris special investigation group investigations and activities at the Johnson Space Center p 1623 N95-23823
Micrometeoroids and debris on LDEF comparison with MIR data p 1623 N95-23824
Small craters on the meteoroid and space debris impact experiment p 1623 N95-23825
Penetration rates over 30 years in the space age p 1624 N95-23827
LDEF Interplanetary Dust Experiment (IDE) results p 1869 N95-23828
The orbital characteristics of debris particle rings as derived from IDE observations of multiple orbit intersections with LDEF p 1869 N95-23829
Orbital debris and meteoroid population as estimated from LDEF impact data p 1869 N95-23830
Analytical electron microscopy of LDEF impactor residues p 1869 N95-23832
Natural and orbital debris particles on LDEF's trailing and forward-facing surfaces p 1869 N95-23833
Debris and meteoroid proportions deduced from impact crater residue analysis p 1869 N95-23834
SIMS chemical and isotopic analysis of impact features from LDEF experiments AO187-1 and AO187-2 p 1637 N95-23837
Image and compositional characteristics of the LDEF Big Guy impact crater p 1700 N95-23838
The effect of impact angle on craters formed by hypervelocity particles p 1700 N95-23839
Experimental investigation of the relationship between impact crater morphology and impacting particle velocity and direction p 1700 N95-23840
SPACE ENVIRONMENT SIMULATION
Overview of the solar dynamic ground test demonstration program at the NASA Lewis Research Center
|NASA-TM-106876| p 1625 N95-23450
SPACE ERECTABLE STRUCTURES
Hey! What's Space Station Freedom?
|NASA-TM-110531| p 1620 N95-22542
SPACE EXPLORATION
Space Science for the 21st Century. Strategic Plan for 1995-2000
|NASA-TM-110546| p 1617 N95-22947
The next decade of space robotics p 1768 N95-23673
Very fast motion planning for highly dexterous-articulated robots p 1771 N95-23691
JPL space robotics: Present accomplishments and future thrusts p 1697 N95-23697
Robotics research at Canadian Space Agency p 1772 N95-23699
Active vision in satellite scene analysis p 1778 N95-23738
SPACE LABORATORIES
Hey! What's Space Station Freedom?
|NASA-TM-110531| p 1620 N95-22542
Interactive autonomy and robotic skills p 1777 N95-23730
SPACE MAINTENANCE
STS-61 Space Shuttle mission report
|NASA-TM-110545| p 1619 N95-23187
SPACE MISSIONS
STS-59 Space Shuttle mission report
|NASA-TM-110527| p 1619 N95-23093
STS-62 Space Shuttle mission report
|NASA-TM-110450| p 1619 N95-23094
STS-61 Space Shuttle mission report
|NASA-TM-110545| p 1619 N95-23187
Reliability analysis in the Office of Safety, Environmental, and Mission Assurance (OSEMA) p 1698 N95-23302
Robotics and telepresence for moon missions p 1776 N95-23725
High performance techniques for space mission scheduling p 1618 N95-23758
SPACE PLASMAS
Langmuir-like waves and radiation in planetary foreshocks
|NASA-CR-197376| p 1869 N95-22828
Magnetospheric space plasma investigations
|NASA-CR-197405| p 1831 N95-22955
The high latitude ionosphere-magnetosphere transition region: Simulation and data comparison
|NASA-CR-197404| p 1737 N95-22956
Semikinetic modeling and observations of high-latitude plasma outflow
|NASA-CR-197403| p 1831 N95-23008
Electromagnetic radiation in the plasma environment around the shuttle
|NASA-TM-106891| p 1738 N95-23116
Modeling of nonequilibrium space plasma flows
|NASA-CR-197432| p 1833 N95-23211
Modification and damping of Alfven waves in a magnetized dusty plasma
|NIFS-312| p 1834 N95-23523
Charging of interplanetary grains
|NASA-CR-198032| p 1869 N95-24066
SPACE PLATFORMS
Hey! What's Space Station Freedom?
|NASA-TM-110531| p 1620 N95-22542
Attention focusing and anomaly detection in systems monitoring p 1769 N95-23683

SPACE PROGRAMS
Effects of modulation index on telecommunications
| AD-A286018 | p 1657 N95-23023
SPACE SHUTTLE BOOSTERS
Ignition transient calculations in the Space Shuttle solid rocket motor p 1625 N95-23640
SPACE SHUTTLE MAIN ENGINE
STS-59 Space Shuttle mission report
| NASA-TM-110527 | p 1619 N95-23093
STS-62 Space Shuttle mission report
| NASA-TM-110450 | p 1619 N95-23094
Prediction of incidence and surface roughness effects on turbine performance p 1671 N95-23424
Numerical study of the SSME nozzle flow fields during transient operations: A comparison of the animated results with test p 1673 N95-23434
Phase 2: HGM air flow tests in support of HEX vane investigation p 1674 N95-23438
Detailed measurements in the SSME high pressure fuel turbine with smooth rotor blades p 1675 N95-23441
Development of an algebraic stress/two-layer model for calculating thrust chamber flow fields p 1675 N95-23442
Computational Fluid Dynamics (CFD) analyses in support of Space Shuttle Main Engine (SSME) heat exchanger (HX) vane cracking investigation p 1679 N95-23619
Three-D flow analysis of the alternate SSME HPOT TAD p 1679 N95-23620
Unsteady flow simulations in support of the SSME HEX turning vane cracking investigation with the ATD HPOTP p 1679 N95-23621
Comparison between predicted and experimentally measured flow fields at the exit of the SSME HPFTP impeller p 1679 N95-23622
SPACE SHUTTLE MISSIONS
Summary of OARE flight calibration measurements
| NASA-TM-109159 | p 1688 N95-23012
STS-61 mission director's post-mission report
| NASA-TM-104803 | p 1617 N95-23262
Newton in space

LDEF environment modeling updates p 1637 N95-23797
EURECA 11 months in orbit: Initial post flight investigation results p 1623 N95-23799
Dosimetric results on EURECA p 1872 N95-23800
LDEF contributions to cosmic ray and radiation environments research p 1872 N95-23805
Characteristics of low energy ions in the Heavy Ions In Space (HIIS) experiment p 1815 N95-23807
Results from the Heavy Ions In Space (HIIS) experiment on the ionic charge state of solar energetic particles p 1870 N95-23808
Early results from the ultra heavy cosmic ray experiment p 1872 N95-23809
Absorbed dose and LET spectra measurements on LDEF p 1815 N95-23810
Fission foil measurements of neutron and proton fluences in the A0015 experiment p 1815 N95-23811
Measurement of trapped proton fluences in main stack of P0006 experiment p 1815 N95-23812
Charge, energy and LET spectra of high LET primary and secondary particles in CR-39 plastic nuclear track detectors of the P0006 experiment p 1815 N95-23814
Predictions of LET spectra measured on LDEF p 1815 N95-23815
Germination, growth rates, and electron microscope analysis of tomato seeds flown on the LDEF p 1748 N95-23821
Determining orbital particle parameters of impacts into germanium using morphology analysis and calibration data from hypervelocity impact experiments in the laboratory p 1700 N95-23841
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 2
| NASA-CP-3275-PT-2 | p 1899 N95-23896
Further investigations of experiment A0034 atomic oxygen stimulated outgassing p 1651 N95-23908
Whisker/Cone growth on the thermal control surfaces experiment no. S0069 p 1651 N95-23911
Overview of the LDEF MSIG databasing activities p 1864 N95-23916
Space Shuttle mission: STS-67
| NASA-TM-110509 | p 1620 N95-24027
USML-1 Glovebox experiments
| NASA-CR-196574 | p 1653 N95-24026
SPACECRAFT ANTENNAS
Antenna-assembling mechanism test on ETS-7 p 1623 N95-23727
SPACECRAFT COMPONENTS
Be-10 in terrestrial bauxite and industrial aluminum: An LDEF fallout p 1646 N95-23820
Small craters on the meteoroid and space debris impact experiment p 1623 N95-23825
SPACECRAFT CONFIGURATIONS
Mir hardware heritage
| NASA-RP-1357 | p 1621 N95-23249
SPACECRAFT CONSTRUCTION MATERIALS
Evaluation of adhesive materials used on the Long Duration Exposure Facility
| NASA-CR-4646 | p 1626 N95-22918
Outgassing considerations for composites in space applications p 1629 N95-23037
Atomic oxygen durability evaluation of protected polymers using thermal energy plasma systems
| NASA-TM-106855 | p 1626 N95-23270
LDEF materials results for spacecraft applications: Executive summary
| NASA-CP-3261 | p 1617 N95-23549
Outgassing products from orbiter TPS materials p 1637 N95-23798
Effect of the space environment on materials flown on the EURECA/TICCE-HVI experiment p 1623 N95-23803
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 2
| NASA-CP-3275-PT-2 | p 1899 N95-23896

Summary and review of Materials Special Investigation Group evaluations of hardware from the Long Duration Exposure Facility p 1638 N95-23897
Recent results from Long Duration Exposure Facility materials testing p 1638 N95-23898
LDEF polymeric materials: A summary of Langley characterization p 1651 N95-23899
Surface characterization of LDEF carbon fiber/polymer matrix composites p 1631 N95-23900
Space environmental effects on polymer matrix composites as a function of sample location on LDEF p 1651 N95-23901
Collection and review of metals data obtained from LDEF experiment specimens and support hardware p 1646 N95-23905
Changes in chemical and optical properties of thin film metal mirrors on LDEF p 1651 N95-23907
Further investigations of experiment A0034 atomic oxygen stimulated outgassing p 1651 N95-23908
Trend analysis of in-situ spectral reflectance data from the Thermal Control Surfaces Experiment (TCSE) p 1631 N95-23910
Durability of reflector materials in the space environment p 1651 N95-23912
Four space application material coatings on the Long-Duration Exposure Facility (LDEF) p 1651 N95-23913
Organic matrix composite protective coatings for space applications p 1627 N95-23914
Overview of the LDEF MSIG databasing activities p 1864 N95-23916
Vaccum Gas Tungsten Arc Welding, phase 1 | NASA-CR-197979 | p 1696 N95-24064

SPACECRAFT CONTAMINATION
Outgassing considerations for composites in space applications p 1629 N95-23037
Summary and review of Materials Special Investigation Group evaluations of hardware from the Long Duration Exposure Facility p 1638 N95-23897
Collection and review of metals data obtained from LDEF experiment specimens and support hardware p 1646 N95-23905

SPACECRAFT CONTROL
Operator procedure verification with a rapidly reconfigurable simulator p 1618 N95-23679
Distributed intelligence for ground/space systems p 1770 N95-23685
Formalizing procedures for operations automation, operator training and spacecraft autonomy p 1752 N95-23720

SPACECRAFT DESIGN
Weight minimization of structural components for launch in space shuttle | NASA-TM-4586 | p 1698 N95-22805
A manufacturing database of advanced materials used in spacecraft structures p 1623 N95-23279
LDEF materials results for spacecraft applications: Executive summary | NASA-CP-3261 | p 1617 N95-23549
An operations and command systems for the extreme ultraviolet explorer p 1770 N95-23687
Design and development status of ETS-7, an RVD and space robot experiment satellite p 1623 N95-23700
Space robotic experiment in JEM flight demonstration p 1697 N95-23701
Effect of the space environment on materials flown on the EURECA/TICCE-HVI experiment p 1623 N95-23803

SPACECRAFT DOCKING
Automatic satellite capture and berthing with robot arm (ASCABRA) p 1623 N95-23713
Autonomous spacecraft executive and its application to rendezvous and docking p 1623 N95-23719

SPACECRAFT ELECTRONIC EQUIPMENT
Design and application of electromechanical actuators for deep space missions | NASA-CR-197957 | p 1694 N95-22909

SPACECRAFT ENVIRONMENTS
Quick look report of acceleration measurements on Mir Space Station during Mir-16 | NASA-TM-106835 | p 1621 N95-22667
Summary of OARE flight calibration measurements | NASA-TM-109159 | p 1688 N95-23012

SPACECRAFT GUIDANCE
Autonomous spacecraft executive and its application to rendezvous and docking p 1623 N95-23719

SPACECRAFT INSTRUMENTS
Design and development status of ETS-7, an RVD and space robot experiment satellite p 1623 N95-23700
Automatic commanding of the Mars Observer Camera p 1620 N95-23754
Use of the Airborne Visible/Infrared Imaging Spectrometer to calibrate the optical sensor on board the Japanese Earth Resources Satellite-1 p 1624 N95-23864

SPACECRAFT MAINTENANCE
STS-61 Space Shuttle mission report | NASA-TM-110545 | p 1619 N95-23187
Integrating O/S models during conceptual design, part 1 | NASA-CR-197903 | p 1622 N95-23398
Integrating O/S models during conceptual design, part 3 | NASA-CR-197905 | p 1622 N95-23400
Robotic system for the servicing of the orbiter thermal protection system p 1697 N95-23724

SPACECRAFT MODELS
An operations and command systems for the extreme ultraviolet explorer p 1770 N95-23687
Dynamical model and numerical simulations for Engineering Test Satellite-6 | NAL-TR-1239 | p 1622 N95-24049

SPACECRAFT MODULES
Living in space | NASA-TM-110536 | p 1751 N95-23274

SPACECRAFT POWER SUPPLIES
Ground-based and space-based laser beam power applications | NASA-TM-106744 | p 1691 N95-22670
Alert-derivative bimodal space power and propulsion systems | DE95-002754 | p 1624 N95-22905

SPACECRAFT PROPULSION
An RL10A-3-3A rocket engine model using the rocket engine transient simulator (ROCETS) software | NASA-CR-190786 | p 1625 N95-23790
Predicted performance of an integrated modular engine system | NASA-CR-190787 | p 1625 N95-23791

SPACECRAFT RECOVERY
Robot arm system for automatic satellite capture and berthing p 1752 N95-23709
Automatic satellite capture and berthing with robot arm (ASCABRA) p 1623 N95-23713

SPACECRAFT SHIELDING
Robotic system for the servicing of the orbiter thermal protection system p 1697 N95-23724
LDEF meteoroid and debris special investigation group investigations and activities at the Johnson Space Center p 1623 N95-23823
Micro-abrasion package capture cell experiment on the trailing edge of LDEF: Impactor chemistry and whipple bumper shield efficiencies p 1624 N95-23835

SPACECRAFT STRUCTURES
Structural Arrangement Trade Study. Volume 1: Reusable Hydrogen Composite Tank System (RHCTS) and Graphite Composite Primary Structures (GCPS). Executive summary | NASA-CR-197685 | p 1621 N95-23188
Structural arrangement trade study. Volume 3: Reusable Hydrogen Composite Tank System (RHCTS) and Graphite Composite Primary Structures (GCPS). Addendum | NASA-CR-197687 | p 1621 N95-23189
A manufacturing database of advanced materials used in spacecraft structures p 1623 N95-23279
Telerobotics test bed for space structure assembly p 1618 N95-23734
LDEF meteoroid and debris special investigation group investigations and activities at the Johnson Space Center p 1623 N95-23823
Penetration rates over 30 years in the space age p 1624 N95-23827
LDEF Interplanetary Dust Experiment (IDE) results p 1869 N95-23828
SIMS chemical and isotopic analysis of impact features from LDEF experiments AO187-1 and AO187-2 p 1637 N95-23837
Image and compositional characteristics of the LDEF Big Guy impact crater p 1700 N95-23838

SPACECREWS
The Charlotte (TM) intra-vehicular robot p 1697 N95-23703
Telepresence control of a dual-arm dexterous robot p 1752 N95-23735
Space Shuttle mission: STS-67 | NASA-TM-110509 | p 1620 N95-24027

SPACELAB
Graphical timeline editing p 1761 N95-23746

SPALLATION
Status of helium-production reaction studies with a spallation neutron source | DE95-002816 | p 1806 N95-23137
Neutron compton scattering | PB95-139135 | p 1807 N95-23159
Phonon characteristics of high (T sub c) superconductors from neutron Doppler broadening measurements | DE95-003703 | p 1844 N95-24076

SPATIAL DISTRIBUTION
Nonparametric measure of spatial interaction in point patterns | PB95-127965 | p 1793 N95-22527
Measurements and modeling of impurity source distributions from the Tore Supra outboard pump limiter | DE95-003097 | p 1831 N95-22800
Measuring forest landscape patterns in the Cascade Range of Oregon, USA p 1719 N95-24096
Hierarchical analysis of spatial pattern and processes of Douglas-fir forests p 1719 N95-24099

SPATIAL RESOLUTION
Instantaneous field of view and spatial sampling of the Airborne Visible/Infrared Imaging Spectrometer (AVIRIS) p 1702 N95-23851

SPECIFIC HEAT
Associated with aerospace vehicles development of methodologies for the estimation of thermal properties p 1700 N95-23321
Phonon-induced anomalous specific heat of a model nanocrystal by computer simulation | DE95-004653 | p 1843 N95-23585
Experimental and theoretical studies on the C15 intermetallic compounds MV2 (M = Zr, Hf and Ta): Elasticity and phase stability | DE95-003723 | p 1845 N95-24079

SPECIFICATIONS
Method for building and evaluating formal specifications of object-oriented conceptual models of database systems | PB95-127353 | p 1855 N95-22525
LCM 3.0: A language for describing conceptual models. Syntax definition | PB95-128005 | p 1755 N95-22652
Handling qualities of the High Speed Civil Transport p 1616 N95-23325
Influence of technology on magnetic tape storage device characteristics p 1690 N95-24127

SPECTRA
Multiband VLBI imaging of the jet in 3C 345 | PB95-139275 | p 1866 N95-23468

SPECTRAL BANDS
Programmable hyperspectral image mapper with on-array processing | NASA-CASE-NPO-17794-1-CU | p 1819 N95-22765
A tool for manual endmember selection and spectral unmixing p 1701 N95-23846
Optimal band selection for dimensionality reduction of hyperspectral imagery p 1709 N95-23887
Estimation of spectral emissivity in the thermal infrared p 1711 N95-23918
A preliminary comparison of Landsat Thematic Mapper and SPOT-1 HRV multispectral data for estimating coniferous forest volume p 1719 N95-24097

SPECTRAL EMISSION
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 2: TIMS Workshop | NASA-CR-197876-VOL-2 | p 1711 N95-23917
Estimation of spectral emissivity in the thermal infrared p 1711 N95-23918
The difference between laboratory and in-situ pixel-averaged emissivity: The effects on temperature-emissivity separation p 1711 N95-23919
Mineralogic variability of the Kelso Dunes, Mojave Desert, California derived from Thermal Infrared Multispectral Scanner (TIMS) data p 1711 N95-23920

SPECTRAL LINE WIDTH
Theoretical calculations of pressure broadening coefficients for H2O perturbed by hydrogen or helium gas | NASA-CR-197345 | p 1636 N95-23545

SPECTRAL METHODS
Spectral application of the theorem for the essential quasi-Fredholm spectrum | DE94-628430 | p 1795 N95-22632
The spectral content of the torque loads on a turbine gear tooth | DE95-002188 | p 1694 N95-23056
The detection and analysis of galvanic damage in BMI/graphite fiber composites p 1631 N95-23502
The use of electrochemical impedance spectroscopy to predict the corrosion of aluminum-lithium alloys in marine environments p 1637 N95-23504
Investigation of infra-red and nonequilibrium air radiation | NASA-CR-197977 | p 1741 N95-24041

SPECTRAL REFLECTANCE
Use of spectral analogy to evaluate canopy reflectance sensitivity to leaf optical property p 1701 N95-23845
The US Geological Survey, digital spectral reflectance library: version 1: 0.2 to 3.0 microns p 1703 N95-23855
Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 1 p 1703 N95-23856
Application of a two-stream radiative transfer model for leaf lignin and cellulose concentrations from spectral reflectance measurements, part 2 p 1703 N95-23857

Estimation of aerosol optical depth and additional atmospheric parameters for the calculation of apparent reflectance from radiance measured by the Airborne Visible/Infrared Imaging Spectrometer
p 1704 N95-23863
Measurements of canopy chemistry with 1992 AVIRIS data at Blackhawk Island and Harvard Forest
p 1706 N95-23873
Temporal changes in endmember abundances, liquid water and water vapor over vegetation at Jasper Ridge
p 1708 N95-23882
The effect of signal noise on the remote sensing of Foliar biochemical concentration p 1708 N95-23884
Estimation of crown closure from AVIRIS data using regression analysis p 1709 N95-23886
Objective determination of image end-members in spectral mixture analysis of AVIRIS data
p 1709 N95-23888
Relationships between pigment composition variation and reflectance for plant species from a coastal savannah in California p 1709 N95-23889
Atmospheric correction of AVIRIS data of Monterey Bay contaminated by thin cirrus clouds p 1710 N95-23890
Investigations on the 1.7 micron residual absorption feature in the vegetation reflection spectrum
p 1710 N95-23891
A comparison of spectral mixture analysis an NDVI for ascertaining ecological variables p 1710 N95-23892
Using AVIRIS for in-flight calibration of the spectral shifts of SPOT-HRV and of AVHRR? p 1710 N95-23893
Laboratory spectra of field samples as a check on two atmospheric correction methods p 1711 N95-23894
Determination of semi-arid landscape endmembers and seasonal trends using convex geometry spectral unmixing techniques p 1711 N95-23895
Trend analysis of in-situ spectral reflectance data from the Thermal Control Surfaces Experiment (TCSE)
p 1631 N95-23910
Reflectance control for multicrystalline-silicon photovoltaic modules using textured-dielectric coatings
|DE95-004532| p 1731 N95-24155

SPECTRAL RESOLUTION
The US Geological Survey, digital spectral reflectance library: version 1: 0.2 to 3.0 microns
p 1703 N95-23855
Measurements of canopy chemistry with 1992 AVIRIS data at Blackhawk Island and Harvard Forest
p 1706 N95-23873
Spectral variations in a collection of AVIRIS imagery
p 1707 N95-23879
The red edge in arid region vegetation: 340-1060 nm spectra p 1708 N95-23881

SPECTRAL SENSITIVITY
Using AVIRIS for in-flight calibration of the spectral shifts of SPOT-HRV and of AVHRR? p 1710 N95-23893

SPECTRAL SIGNATURES
A tool for manual endmember selection and spectral unmixing p 1701 N95-23846
Investigations on the 1.7 micron residual absorption feature in the vegetation reflection spectrum
p 1710 N95-23891
Determining coniferous forest cover and forest fragmentation with NOAA-9 advanced very high resolution radiometer data p 1720 N95-24103

SPECTROGRAPHS
PRISM Spectrograph Optical Design
|NASA-CR-197965| p 1828 N95-24035

SPECTROSCOPIC ANALYSIS
Recent developments in inductively coupled plasma source magnetic sector multiple collector mass spectrometry
|DE95-003002| p 1830 N95-22793
Decomposition mechanisms in thermally-aged thin-film explosives
|DE95-000741| p 1652 N95-22838
The corrosion protection of 2219-T87 aluminum by organic and inorganic zinc-rich primers
|NASA-TP-3543| p 1641 N95-23186
Theoretical studies of spectroscopic problems of importance for atmospheric radiation measurements
p 1741 N95-23329
Secondary ion mass spectrometry (SIMS) analysis of hypervelocity microparticle impact sites on LDEF surfaces p 1637 N95-23836
Experimental and theoretical studies on the C15 intermetallic compounds MV2 (M = Zr, Hf and Ta): Elasticity and phase stability
|DE95-003723| p 1845 N95-24079

SPECTROSCOPY
The TEXT neutral lithium beam edge density diagnostic
|DE95-003256| p 1830 N95-22719
The use of electrochemical impedance spectroscopy to predict the corrosion of aluminum-lithium alloys in marine environments p 1637 N95-23504

SPECTRUM ANALYSIS
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer
|NASA-CR-197368| p 1735 N95-22482
Alpha spectral analysis via artificial neural networks
|DE95-004567| p 1767 N95-23578
A tool for manual endmember selection and spectral unmixing p 1701 N95-23846
Automating spectral unmixing of AVIRIS data using convex geometry concepts p 1702 N95-23848
The US Geological Survey, digital spectral reflectance library: version 1: 0.2 to 3.0 microns
p 1703 N95-23855
Discrimination of poorly exposed lithologies in AVIRIS data p 1703 N95-23858
Estimating dry grass residues using landscape integration analysis p 1705 N95-23867
Mapping and monitoring changes in vegetation communities of Jasper Ridge, CA, using spectral fractions derived from AVIRIS images p 1708 N95-23883
The effect of signal noise on the remote sensing of Foliar biochemical concentration p 1708 N95-23884
Application of MAC-Europe AVIRIS data to the analysis of various alteration stages in the Landdmannalauger Hydrothermal Area (South Iceland)
p 1709 N95-23885
Objective determination of image end-members in spectral mixture analysis of AVIRIS data
p 1709 N95-23888
A comparison of spectral mixture analysis an NDVI for ascertaining ecological variables p 1710 N95-23892
PCLOOK: An interactive code for spectral analysis
|DE94-635415| p 1759 N95-23963
Phonon characteristics of high (T sub c) superconductors from neutron Doppler broadening measurements
|DE95-003703| p 1844 N95-24076
Determining successional stage of temperate coniferous forests with Landsat satellite data p 1720 N95-24102

SPEECH
Spoken dialogue understanding and local context
|TR-523| p 1658 N95-23937

SPEECH DEFECTS
Spoken dialogue understanding and local context
|TR-523| p 1658 N95-23937

SPEECH RECOGNITION
Reevaluation of the significance of sequence information for speech recognition
|TR-555| p 1658 N95-23794
Spoken dialogue understanding and local context
|TR-523| p 1658 N95-23937
Phonetic set hashing: A novel scheme for transforming phone sequences to words
|TR-538| p 1658 N95-24039

SPHERICAL COORDINATES
A computer model in general 3-D curvilinear coordinates for the prediction of the turbulent flow field in a jet induced ram combustor
|NAL-TR-1240T| p 1687 N95-24051

SPHERICAL SHELLS
Computer simulation of a magnetohydrodynamic dynamo 2
|NIFS-320| p 1836 N95-23590

SPIN
The chirality operators for Heisenberg spin systems
|DE94-629043| p 1847 N95-22545

SPIN DECOUPLING
Strong-coupling behaviour of two t-J chains with interchain single-electron hopping
|DE94-629041| p 1838 N95-22499

SPIN DYNAMICS
Strong-coupling behaviour of two t-J chains with interchain single-electron hopping
|DE94-629041| p 1838 N95-22499
Experimental results on polarized structure functions in deep inelastic lepton-nucleon scattering
|DE95-002782| p 1801 N95-22521
Deformed Heisenberg algebra and fractional spin field in 2+1 dimensions
|DE94-628507| p 1850 N95-22779
Block spins and chirality in Heisenberg model on Kagome and triangular lattices
|DE94-629044| p 1840 N95-22845

SPIN-LATTICE RELAXATION
Lattice relaxation study on self-trapped exciton and biexciton in neutral and charged fullerenes
|DE94-635788| p 1844 N95-23986

SPIN-SPIN COUPLING
Boson mapping techniques applied to constant gauge fields in QCD p 1814 N95-22969

SPINE
Design of a cervical spine gross motion simulator for standard size human and anthropomorphic dummy adult and child
|NIAR-94-16| p 1751 N95-24021
A multibody/finite element analysis approach for modeling of crash dynamic responses
|NIAR-94-3| p 1610 N95-24050

SPINEL
Cation disorder determined by MAS Al-27 NMR in high dose neutron irradiated spinel
|DE95-003681| p 1842 N95-23266
Mapping of the Ronda peridotite massif (Spain) from AVIRIS spectro-imaging survey: A first attempt
p 1707 N95-23878
Temperature effects on ion irradiation damage in MgAl2O4 spinel single crystals
|DE95-003679| p 1844 N95-24073

SPINOR GROUPS
Generalized phase transformations of spinor fields
|DE94-628505| p 1656 N95-22841

SPIRAL GALAXIES
Structure and evolution of long-lived spiral patterns in galaxies
|PB95-139242| p 1868 N95-23228

SPORES
Effect of hyperbaric carbon dioxide on spores and vegetative cells of bacillus stearothermophilus
|AD-A280115| p 1747 N95-23251

SPOT (FRENCH SATELLITE)
A preliminary comparison of Landsat Thematic Mapper and SPOT-1 HRV multispectral data for estimating coniferous forest volume p 1719 N95-24097

SPRAY CHARACTERISTICS
Spray combustion experiments and numerical predictions p 1637 N95-23643

SPRAYERS
The probabilistic structure of sprays: Implications for measurements by in site particle counters
|DE95-002483| p 1666 N95-23081
Adaptation of the advanced spray combustion code to cavitating flow problems p 1681 N95-23629

SPUTTERING
Large-area triple-junction a-Si alloy production scaleup
|DE95-000245| p 1726 N95-22546
MOCVD of gallium and calcium sulfides for improved phosphor processing
|DE95-000918| p 1631 N95-22677

SQUEEZED STATES (QUANTUM THEORY)
Nonclassical light in interferometric measurements
p 1822 N95-22976
Noisy bases in Hilbert space: A new class of thermal coherent states and their properties
p 1823 N95-22980

STABILITY
Shapes and stability of algebraic nuclear models
p 1814 N95-22974
Thin tailored composite wing for civil tiltrotor
p 1613 N95-23317
Dynamic disturbance decoupling of nonlinear systems and linearization
|PB95-141248| p 1767 N95-23558

STABILITY TESTS
High beta and second stability region transport and stability analysis
|DE95-003411| p 1832 N95-23147

STABILIZATION
On the (DE-) stabilization of quantum mechanical binding by potential barriers
|DE94-628433| p 1847 N95-22635

STABILIZED PLATFORMS
Preprocessing: Geocoding of AVIRIS data using navigation, engineering, DEM, and radar tracking system data p 1707 N95-23876

STAGNATION PRESSURE
GGOT total pressure loss control concept evaluation
p 1672 N95-23427

STAINLESS STEELS
Study of radiation damages in AISI 316 and 347 steels
|DE94-627480| p 1639 N95-22609
Pulsed Ion Beam Surface Treatment for preparing rapidly solidified corrosion resistant alloy surfaces
|DE94-012072| p 1640 N95-22835
Long-term aging of type 308 stainless steel welds: Effects on properties and microstructure
|DE94-018961| p 1640 N95-23132
Explosive bonding and its application in the Advanced Photon Source front-end and beamline components design
|DE95-004132| p 1696 N95-23397
Specific features of corrosion behavior of stainless maraging steels for aerospace application
p 1642 N95-23501
Be-10 in terrestrial bauxite and industrial aluminum: An LDEF fallout p 1646 N95-23820
Characterization of Type 304L stainless steel solid-state closure welds for radioactive waste containment
|DE94-016539| p 1645 N95-23980

STANDARD MODEL (PARTICLE PHYSICS)
Precision standard model tests with polarized e(+)e(-) beams
| DE95-003367 | p 1816 N95-22702
The charm physics potential of a Tau-Charm Factory
| DE95-003369 | p 1802 N95-22703
Introduction to the physics of Higgs bosons
| DE95-003965 | p 1809 N95-23396
A measurement of the mass of the W vector boson at CDF
| DE95-003498 | p 1813 N95-24016
STANDARDIZATION
Algebraic semantics of basic message sequence charts
| PB95-138970 | p 1657 N95-23151
STANDARDS
A draft standard for message passing in a distributed memory environment
| DE94-019159 | p 1657 N95-23075
STAR FORMATION
Origins of interstellar and solar system: Carbonaceous materials
| NASA-CR-197436 | p 1867 N95-23013
STAR TRACKERS
The Starpicker expert system: A problem in expertise capture p 1623 N95-23721
STATE ESTIMATION
Tutorial on filtering, restoration, and state estimation
| TR-534 | p 1793 N95-24042
STATIC PRESSURE
Numerical simulation of steady and unsteady viscous flow in turbomachinery using pressure based algorithm p 1671 N95-23426
GGOT total pressure loss control concept evaluation p 1672 N95-23427
STATIC STABILITY
Handling qualities of the High Speed Civil Transport p 1616 N95-23325
STATIC TESTS
Corrosion protection measures for CFC/metal joints of fuel integral tank structures of advanced military aircraft p 1644 N95-23510
STATIC THRUST
An approximate theoretical method for modeling the static thrust performance of non-axisymmetric two-dimensional convergent-divergent nozzles
| NASA-CR-195050 | p 1608 N95-23193
STATISTICAL ANALYSIS
Nonparametric measure of spatial interaction in point patterns
| PB95-127965 | p 1793 N95-22527
Collecting operational event data for statistical analysis
| DE95-002020 | p 1793 N95-22550
An improved system for exon recognition and gene modeling in human DNA sequences
| DE94-017863 | p 1746 N95-22890
Static parametric fluctuations give nonstatistical behaviour in uncoupled chaotic systems
| DE94-628478 | p 1794 N95-23019
The probabilistic structure of sprays: Implications for measurements by in site particle counters
| DE95-002483 | p 1666 N95-23081
On-line, adaptive state estimator for active noise control p 1784 N95-23308
A wavenumber-partitioning scheme for two-dimensional statistical closures
| DE95-004514 | p 1677 N95-23483
Technical report series on global modeling and data assimilation. Volume 4: Documentation of the Goddard Earth Observing System (GEOS) data assimilation system, version 1
| NASA-TM-104606-VOL-4 | p 1740 N95-23529
POD assessment of NDI procedures using a round robin test
| AGARD-R-809 | p 1697 N95-23602
A tool for manual endmember selection and spectral unmixing p 1701 N95-23846
Spectral variations in a collection of AVIRIS imagery p 1707 N95-23879
Optimal band selection for dimensionality reduction of hyperspectral imagery p 1709 N95-23887
Laboratory spectra of field samples as a check on two atmospheric correction methods p 1711 N95-23894
A theory for the morphology of Laplacian growth from statistics of equivalent many-body Hamiltonian systems
| DE94-014473 | p 1799 N95-23979
STATISTICAL DISTRIBUTIONS
Statistical properties of the time histories of cosmic gamma-ray bursts detected by the BATSE experiment of the Compton gamma-ray observatory
| NASA-CR-197425 | p 1871 N95-23546
STATISTICAL MECHANICS
Study of frustrated systems via dissipative maps
| PB95-139093 | p 1799 N95-23155
(Phi)(sup 4) kinks: Statistical mechanics
| DE95-003693 | p 1794 N95-23349
A theory for the morphology of Laplacian growth from statistics of equivalent many-body Hamiltonian systems
| DE94-014473 | p 1799 N95-23979
STATISTICAL TESTS
Consistency and Monte Carlo simulation of a data driven version of smooth goodness-of-fit tests
| PB95-141255 | p 1794 N95-23559
STATORS
Enhanced analysis and users manual for radial-inflow turbine conceptual design code RTD
| NASA-CR-195454 | p 1609 N95-23462
STDN (NETWORK)
Improved AVHRR data navigation using automated land feature recognition to correct a satellite orbital model
| CSIRO-TR-34 | p 1718 N95-24026
STEADY FLOW
A perspective on unstructured grid flow solvers
| NASA-CR-195025 | p 1788 N95-22931
Numerical simulation of steady and unsteady viscous flow in turbomachinery using pressure based algorithm p 1671 N95-23426
Aerodynamic design and analysis of a highly loaded turbine exhaust p 1673 N95-23435
STEADY STATE
Status of axisymmetric CFD of an eleven inch diameter hybrid rocket motor p 1686 N95-23651
Experimental achievement of toroidal beta beyond that predicted by 'Troyon' scaling
| DE95-003880 | p 1837 N95-24087
STEADY STATE CREEP
Thermal activation of steady-state creep in polycrystalline copper
| DE94-627394 | p 1839 N95-22607
STEAROTHERMOPHILUS
Effect of hyperbaric carbon dioxide on spores and vegetative cells of bacillus stearothermophilus
| AD-A280115 | p 1747 N95-23251
STEEL STRUCTURES
Corrosion control acceptance criteria for sacrificial anode type, cathodic protection systems (user guide)
| AD-A285275 | p 1662 N95-23117
STEELS
Corrosion of landing gear steels p 1642 N95-23500
STELLAR EVOLUTION
Origins of interstellar and solar system: Carbonaceous materials
| NASA-CR-197436 | p 1867 N95-23013
STELLAR FLARES
Investigation of physical parameters in stellar flares observed by GINGA
| NASA-CR-196547 | p 1868 N95-23205
STELLAR MASS
Solar mass loss, solar lithium, and solar oscillations
| DE94-018262 | p 1870 N95-22938
STELLAR MASS ACCRETION
Observational studies of the clearing phase in proto-planetary disk systems
| NASA-CR-197900 | p 1866 N95-23561
STELLAR MODELS
Gamma ray emission from radio pulsars
| NASA-CR-197917 | p 1871 N95-22910
STELLAR PHYSICS
Origins of interstellar and solar system: Carbonaceous materials
| NASA-CR-197436 | p 1867 N95-23013
Investigation of physical parameters in stellar flares observed by GINGA
| NASA-CR-196547 | p 1868 N95-23205
STELLAR RADIATION
Gamma ray emission from radio pulsars
| NASA-CR-197917 | p 1871 N95-22910
STELLAR SPECTRA
Long term variability of B supergiant winds
| NASA-CR-197925 | p 1865 N95-23401
Mass loss in the interacting semi-detached binary delta librae
| NASA-CR-197924 | p 1866 N95-23402
A study of EUV emission from the O4f star Zeta Puppis
| NASA-CR-197350 | p 1871 N95-23472
STELLAR WINDS
Long term variability of B supergiant winds
| NASA-CR-197925 | p 1865 N95-23401
A study of EUV emission from the O4f star Zeta Puppis
| NASA-CR-197350 | p 1871 N95-23472
STELLARATORS
Conceptual design of a 20-kA current lead using forced-flow cooling and Ag-alloy-sheathed Bi-2223 high-temperature superconductors
| DE95-002916 | p 1660 N95-22569
Physical mechanism determining the radial electric field and its radial structure in a toroidal plasma
| NIFS-313 | p 1835 N95-23534
Quasisymmetry equations for conventional stellarators
| NIFS-324 | p 1836 N95-23572
Theory of pressure-induced islands and self-healing in three-dimensional toroidal magnetohydrodynamic equilibria
| NIFS-321 | p 1836 N95-23589
Effect of satellite helical harmonics on the stellarator configuration
| NIFS-328 | p 1609 N95-23787
STEREOSCOPIC VISION
Autonomous navigation system for the Marsokhod rover project p 1771 N95-23693
A fuzzy structural matching scheme for space robotics vision p 1778 N95-23737
Full resolution hologram-like autostereoscopic display
| NASA-CR-197913 | p 1689 N95-23789
STEREOSCOPY
Full resolution hologram-like autostereoscopic display
| NASA-CR-197913 | p 1689 N95-23789
STIFFNESS
Vibration-damping structural component
| AD-D016550 | p 1693 N95-22707
Integrated aerodynamic/dynamic/structural optimization of helicopter rotor blades using multilevel decomposition
| NASA-TP-3465 | p 1612 N95-22953
Fabric geometry distortion during composites processing p 1631 N95-23288
Deflections of anisotropic sandwich beams with variable face sheets and core thicknesses p 1700 N95-23310
Three-D CFD analysis of hydrostatic bearings p 1678 N95-23616
STOCHASTIC PROCESSES
The propagation of travelling waves for stochastic generalized KPP equations
| DE94-628473 | p 1787 N95-22772
Langmuir-like waves and radiation in planetary foreshocks
| NASA-CR-197376 | p 1869 N95-22828
Stochastic decision analysis p 1854 N95-23305
Spontaneous wave packet reduction
| DE94-634280 | p 1851 N95-23454
Light-traffic analysis for queues with spatially distributed arrivals
| PB95-140802 | p 1767 N95-23556
STOICHIOMETRY
Particle size dependence in Fischer-Tropsch synthesis
| DE95-003124 | p 1633 N95-22876
NO decomposition in non-reducing atmospheres
| DE95-004324 | p 1634 N95-23339
Carbon doping of III-V compound semiconductors
| DE95-003431 | p 1844 N95-24013
STOKES FLOW
BEm-BDF scheme for curvature driven moving stokes flows
| PB95-138905 | p 1667 N95-23144
Numerical simulation of axisymmetric viscous sintering
| PB95-138889 | p 1667 N95-23175
On the breakup of viscous liquid threads
| NASA-CR-195023 | p 1678 N95-23544
STOPPING POWER
ESTAR, PSTAR, ASTAR: A PC package for calculating stopping powers and ranges of electrons, protons and helium ions, version 2
| DE94-634435 | p 1811 N95-23773
STORAGE RINGS (PARTICLE ACCELERATORS)
Thermal outgassing studies on machinable tungsten and TZM molybdenum alloy
| DE95-002984 | p 1638 N95-22592
Ion rings for magnetic fusion
| DE94-017606 | p 1832 N95-23120
Spin physics in the next decade
| DE95-003727 | p 1809 N95-23403
STORAGE STABILITY
Test procedure for anion exchange chromatography
| DE95-003767 | p 1809 N95-23407
Fourth NASA Goddard Conference on Mass Storage Systems and Technologies
| NASA-CP-3295 | p 1857 N95-24108
A kinetic study of hydrolysis of polyester elastomer in magnetic tape p 1652 N95-24124
STORAGE TANKS
Multi-fuel reformers for fuel cells used in transportation: Assessment of hydrogen storage technologies
| DE94-017655 | p 1727 N95-22861
STRAIN GAGES
Optical fiber strain sensor with improved linearity range
| NASA-CASE-LAR-14857-1-SB | p 1819 N95-22807
STRAIN MEASUREMENT
Method and apparatus for measuring the strain developed in a coated surface
| NASA-CASE-ARC-11938-1-C | p 1688 N95-23263
Internal strain measurement using pulsed neutron diffraction at LANSCE
| DE95-003677 | p 1842 N95-23365

Development of sensors for ceramic components in advanced propulsion systems
| NASA-CR-195324 | p 1689 N95-23795

STRAIN RATE
Exfoliation corrosion and stress corrosion cracking behaviour of Al-Li alloys p 1641 N95-23498

STRANDS
Light emission-or-absorbance-based binding assays for polynucleic acids
| AD-D016557 | p 1632 N95-22710

STRATEGY
Defense science and technology strategy
| AD-A285414 | p 1903 N95-24179

STRATIFICATION
Partition of real symmetric matrices according to the multiplicities of their eigenvalues
| PB95-139846 | p 1790 N95-23235

STRATOSPHERE
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer
| NASA-CR-197368 | p 1735 N95-22482
Oxidants and oxidation in the Earth's atmosphere
| NASA-CR-197945 | p 1734 N95-23460

STREAMS
CO2 and waste policy: Monitoring results 1991/1992 and main problems
| PB95-133799 | p 1733 N95-23126
Streamflow and selected precipitation data for Yucca Mountain Region, southern Nevada and eastern California, water years 1986-90
| DE95-001893 | p 1742 N95-23385

STRESS (PHYSIOLOGY)
Interrelations between nervous system and immune system in stress situations
| PB95-135521 | p 1748 N95-22770

STRESS ANALYSIS
Deflections of anisotropic sandwich beams with variable face sheets and core thicknesses p 1700 N95-23310
Associated with aerospace vehicles development of methodologies for the estimation of thermal properties p 1700 N95-23321

STRESS CORROSION CRACKING
The role of grain boundary chemistry and structure in the environmentally-assisted intergranular cracking of nickel-base alloys
| DE95-002941 | p 1638 N95-22532
The corrosion and protection of advanced aluminium - lithium airframe alloys p 1641 N95-23497
Exfoliation corrosion and stress corrosion cracking behaviour of Al-Li alloys p 1641 N95-23498
Corrosion of landing gear steels p 1642 N95-23500
Specific features of corrosion behavior of stainless maraging steels for aerospace application p 1642 N95-23501

STRESS INTENSITY FACTORS
Stress intensity factors and crack mouth openings for bridged cracks emanating from circular holes
| AR-008-408 | p 1699 N95-22952

STRESS MEASUREMENT
Internal strain measurement using pulsed neutron diffraction at LANSCE
| DE95-003677 | p 1842 N95-23365

STRESS TENSORS
Finite-temperature scalar field theory in static de Sitter space
| DE94-628522 | p 1848 N95-22743

STRESSES
The effect of elastic stress on Ostwald Ripening Phenomena
| DE95-002599 | p 1646 N95-24140

STRIATION
Measurements of striae in CR+ doped YAG laser crystals p 1847 N95-23285

STRING THEORY
Twistor-like type 2 superstring with the heterotic (2,0) and (4,0) worldsheet supersymmetry
| DE94-628510 | p 1848 N95-22735
First quantized noncritical relativistic Polyakov string
| DE94-628513 | p 1848 N95-22738
Topologically stable Z - strings in the supersymmetric standard model
| DE94-628517 | p 1848 N95-22742
Chiral symmetry breaking in QCD with linearly rising confinement potential
| DE94-628559 | p 1848 N95-22744
Spontaneous breaking of chiral symmetry as a consequence of confinement
| DE94-628560 | p 1849 N95-22745
Effective (mu)-term in superstring theory
| DE94-634326 | p 1851 N95-23922

STRINGS
Performance of single-keyword and multiple-keyword pattern matching algorithms
| PB95-138954 | p 1756 N95-23150

STRONG INTERACTIONS (FIELD THEORY)
Unification of electromagnetic, strong and weak interaction
| DE94-628570 | p 1655 N95-22746
The problem of phase transition and the heavy ion collisions at very high energies
| DE94-628584 | p 1816 N95-22785

STRONTIUM COMPOUNDS
Effect on c-axis transport properties of a critical state in Bi2Sr2CaCu2O8
| DE95-003695 | p 1843 N95-23366

STRONTIUM OXIDES
Some aspects of critical currents in Ag sheathed Bi2Sr2Ca2Cu3O10 composite tapes: A summary
| DE95-003952 | p 1842 N95-23354
Cooling rate effects on the microstructure, critical current density, and (T(sub c)) transition of one- and two-powder BSCCO-2223 Ag sheathed tapes
| DE95-004639 | p 1846 N95-24171

STRUCTURAL ANALYSIS
Statistically generated weighted curve fit of residual functions for modal analysis of structures
| NASA-TM-108481 | p 1699 N95-22950
Computational control of flexible aerospace systems
| NASA-CR-197902 | p 1621 N95-23260
Vision-sensing image analysis for GTAW process control
| DE95-003936 | p 1695 N95-23373

STRUCTURAL BASINS
Energy flux and hydrogeology of thermal anomalies in the Gulf of Mexico Basin - South Texas example
| DE95-003341 | p 1743 N95-22695

STRUCTURAL DESIGN
Hey! What's Space Station Freedom?
| NASA-TM-110531 | p 1620 N95-22542
Weight minimization of structural components for launch in space shuttle
| NASA-TM-4586 | p 1698 N95-22805
Integrated aerodynamic/dynamic/structural optimization of helicopter rotor blades using multilevel decomposition
| NASA-TP-3465 | p 1612 N95-22953
A new look at the simultaneous analysis and design of structures p 1700 N95-23327

STRUCTURAL ENGINEERING
Infinite possibilities: Computational structures technology p 1700 N95-23280

STRUCTURAL STRAIN
Method and apparatus for measuring the strain developed in a coated surface
| NASA-CASE-ARC-11938-1-C | p 1688 N95-23263

STRUCTURAL VIBRATION
Active control of panel vibrations induced by a boundary layer flow
| NASA-CR-197867 | p 1608 N95-23182
Gearbox vibration diagnostic analyzer
| NASA-CR-189141 | p 1696 N95-23792

STRUCTURAL WEIGHT
Weight minimization of structural components for launch in space shuttle
| NASA-TM-4586 | p 1698 N95-22805

STRUCTURED PROGRAMMING
Effective management of classified documents using the library document system
| AD-A286021 | p 1855 N95-23024

STRUCTURES
Flow measuring structures
| PB95-127254 | p 1665 N95-22638

SUBMERGING
Grassman and hyperKaehler structures on some spaces of sections of holomorphic bundles
| PB95-109104 | p 1795 N95-22712

SUBMILLIMETER WAVES
High power Josephson effect sources
| AD-A285808 | p 1838 N95-22511
Interstellar molecules in the large magellanic cloud
| PB95-139267 | p 1868 N95-23230

SUBROUTINES
AMPHION: Specification-based programming for scientific subroutine libraries p 1761 N95-23680

SUBSONIC FLOW
Wing pressure distributions from subsonic tests of a high-wing transport model --- in the Langley 14- by 22-Foot Subsonic Wind Tunnel
| NASA-TM-4583 | p 1607 N95-22802
Towards a generalized computational fluid dynamics technique for all Mach numbers p 1670 N95-23420

SUBSONIC SPEED
Inner loop flight control for the High-Speed Civil Transport p 1616 N95-23314
High-lift flow-physics flight experiments on a subsonic civil transport aircraft (B737-100) p 1609 N95-23333

SUBSTITUTES
Fibonacci chain polynomials: Identities from self-similarity p 1814 N95-22962

SUBSTRATES
Vibration-damping structural component
| AD-D016550 | p 1693 N95-22707
Method and system for electron beam lithography
| AD-D016554 | p 1660 N95-22709
Surface growth of two kinds of particles deposition models
| DE94-628480 | p 1841 N95-23021
Surface structural dependence of cesium adsorption on the (alpha)-Al2O3(0001) surface
| DE95-002610 | p 1842 N95-23135
Preparation of high quality YBa2Cu3O(7-delta) thick films on flexible Ni-based alloy substrates with textured buffer layers
| DE95-003686 | p 1645 N95-23571
Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides
| DE95-004531 | p 1731 N95-24090

SULFATES
MHD seed recovery and regeneration, phase 2
| DE95-004308 | p 1833 N95-23338

SULFIDATION
Charge distribution analysis of catalysts under simulated reaction conditions
| DE95-003526 | p 1633 N95-23064

SULFUR
Compendium of NASA data base for the Global Tropospheric Experiment's Pacific Exploratory Mission West-A (PEM West-A)
| NASA-TM-109177 | p 1733 N95-23009

SULFUR HEXAFLUORIDE
Performance of the 0.3-meter transonic cryogenic tunnel with air, nitrogen, and sulfur hexafluoride media under closed loop automatic control
| NASA-CR-195052 | p 1668 N95-23257

SULFUR ISOTOPES
Rate coefficients for the electron-impact excitation, ionization and recombination of He-like ions, S XV, Ca XIX and Fe XXV, and related processes
| ISAS-R-657 | p 1811 N95-23604

SUM RULES
Fermion-spin transformation to implement the charge-spin separation
| DE94-629035 | p 1800 N95-22495

SUMS
Second derivative of the likelihood of an exact ARMA model
| PB95-135158 | p 1788 N95-23069

SUN
Space Science for the 21st Century. Strategic Plan for 1995-2000
| NASA-TM-110546 | p 1617 N95-22947

SUPERCOMPUTERS
Evaluation of a Multiple Instruction/Multiple Data (MIMD) parallel computer for CFD applications
| AD-A285796 | p 1762 N95-22509
Towards the Teraflop CFD
| NASA-CR-197947 | p 1764 N95-23594
Unstructured grids on SIMD torus machines
| NASA-CR-197954 | p 1758 N95-23610
Transferring ecosystem simulation codes to supercomputers
| NASA-TM-4662 | p 1759 N95-24052

SUPERCONDUCTING DEVICES
Superconductivity devices: Commercial use of space
| NASA-CR-197885 | p 1648 N95-22883
Undulators for short wavelength FEL amplifiers
| DE95-004690 | p 1692 N95-23487

SUPERCONDUCTING FILMS
Superconducting Tl2Ba2CaCu2O8 thin films prepared by post-annealing in a flow-through multiple-zone furnace
| DE95-002745 | p 1838 N95-22520
Analyses, algorithms, and computations for models of high-temperature superconductivity
| DE95-003290 | p 1661 N95-22733
High Tc superconducting bolometric and nonbolometric infrared (IR) detectors
| NASA-CR-197868 | p 1827 N95-23224
Preparation of high quality YBa2Cu3O(7-delta) thick films on flexible Ni-based alloy substrates with textured buffer layers
| DE95-003686 | p 1645 N95-23571
Microstructure and composition of a SNS Josephson junction using CaRuO3 as the metallic barrier
| DE95-004611 | p 1845 N95-24152

SUPERCONDUCTING MAGNETS
Multipole contribution from an off-axis orbit in an IR quadrupole and the consequences on the dynamic aperture
| DE95-002874 | p 1816 N95-22567
An investigation of AC losses in two sub-size conductors for the ITER
| DE94-765449 | p 1831 N95-22849

Quench propagation study for full-length RHIC dipole magnets
| DE94-014089 | p 1816 N95-22926
TPX magnet system status
| DE95-002389 | p 1661 N95-23080
Undulators for short wavelength FEL amplifiers
| DE95-004690 | p 1692 N95-23487
Recent studies of the Large Helical Device
| NIFS-322 | p 1835 N95-23543
Design of a high-temperature superconductor current lead for electric utility SMES
| DE95-004604 | p 1664 N95-24163

SUPERCONDUCTIVITY
Multipole contribution from an off-axis orbit in an IR quadrupole and the consequences on the dynamic aperture
| DE95-002874 | p 1816 N95-22567
Surface impedance studies on the electrodynamical response of organic superconductors
| DE95-002986 | p 1660 N95-22593
A study of ceramic composite of ferroelectric BaTiO3 ceramic and superconductor YBa2Cu3O(6+delta) ceramic
| DE94-627563 | p 1647 N95-22610
Analyses, algorithms, and computations for models of high-temperature superconductivity
| DE95-003290 | p 1661 N95-22733
Correlation effects in high-Tc superconductors and heavy fermion compounds
| DE94-629057 | p 1840 N95-22846
The next Large Helical Devices
| NIFS-323 | p 1835 N95-23535
Electrochemical studies of perovskite mixed conductors
| DE95-003704 | p 1636 N95-23573
Effects of Bi and Bi2O3 additions on the microstructure and superconducting properties of powder-in-tube BSCCO (2212) tapes
| DE95-004605 | p 1845 N95-24150

SUPERCONDUCTORS (MATERIALS)
Fermion-spin transformation to implement the charge-spin separation
| DE94-629035 | p 1800 N95-22495
High power Josephson effect sources
| AD-A285808 | p 1838 N95-22511
Correlation effects in high-Tc superconductors and heavy fermion compounds
| DE94-629057 | p 1840 N95-22846
An investigation of AC losses in two sub-size conductors for the ITER
| DE94-765449 | p 1831 N95-22849
Strongly interacting fermion systems
| DE95-003405 | p 1806 N95-23054
Bose condensation, macroscopic quantum phenomena and atomic spatial correlations in superfluid He-4
| PB95-139085 | p 1850 N95-23154

SUPERCRITICAL FLUIDS
Small angle x ray scattering studies of aggregation in supercritical fluid solutions
| DE95-004576 | p 1843 N95-23579

SUPERFLUIDITY
Bose condensation, macroscopic quantum phenomena and atomic spatial correlations in superfluid He-4
| PB95-139085 | p 1850 N95-23154

SUPERGRAVITY
Topologically stable Z - strings in the supersymmetric standard model
| DE94-628517 | p 1848 N95-22742

SUPERHIGH FREQUENCIES
Utilizing a TDRS satellite for direct broadcast satellite-radio propagation experiments and demonstrations p 1622 N95-22814

SUPERLATTICES
Superlattices in thermoelectric applications
| DE95-001356 | p 1840 N95-22687
Epitaxial growth of bcc transition metal films and superlattices onto MgO (111), (011) and (001) substrates
| DE95-004629 | p 1846 N95-24168
A simple, closed-form expression for the x ray reflectivity from superlattices with cumulative roughness
| DE95-004633 | p 1846 N95-24170

SUPERPLASTIC FORMING
Technology maturation project on optimization of sheet metal forming of aluminum for use in transportation systems
| DE95-003005 | p 1654 N95-22692

SUPERSONIC COMBUSTION RAMJET ENGINES
Mach 10 computational study of a three-dimensional scramjet inlet flow field
| NASA-TM-4602 | p 1666 N95-23015
Mach 10 computational study of a three-dimensional scramjet inlet flow field
| NASA-TM-4602 | p 1667 N95-23210

SUPERSONIC FLOW
Supersonic flow and shock formation in turbine tip gaps p 1672 N95-23429
Instantaneous 2D velocity and temperature measurements in high speed flows based on spectrally resolved molecular Rayleigh scattering
| NASA-TM-106883 | p 1688 N95-23461
Validation of a Computational Fluid Dynamics (CFD) code for supersonic axisymmetric base flow p 1686 N95-23652
Supersonic laminar flow control research
| NASA-CR-197938 | p 1609 N95-23669

SUPERSONIC INLETS
Mach 10 computational study of a three-dimensional scramjet inlet flow field
| NASA-TM-4602 | p 1667 N95-23210
Supersonic flow and shock formation in turbine tip gaps p 1672 N95-23429

SUPERSONIC JET FLOW
Supersonic jet noise reductions predicted with increased jet spreading rate
| NASA-TM-106872 | p 1800 N95-23178
Three-dimensional structure in a supersonic jet: Behavior near centerline
| NASA-TM-106869 | p 1668 N95-23220

SUPERSONIC TRANSPORTS
Inner loop flight control for the High-Speed Civil Transport p 1616 N95-23314
Preliminary identification of buffet problems in high speed civil transport p 1616 N95-23319
Handling qualities of the High Speed Civil Transport p 1616 N95-23325

SUPERSONIC WIND TUNNELS
Supersonic laminar flow control research
| NASA-CR-197938 | p 1609 N95-23669

SUPERSYMMETRY
Twistor-like type 2 superstring with the heterotic (2,0) and (4,0) worldsheet supersymmetry
| DE94-628510 | p 1848 N95-22735
Aspects of sigma models
| DE94-628511 | p 1795 N95-22736
Topologically stable Z - strings in the supersymmetric standard model
| DE94-628517 | p 1848 N95-22742
Supersymmetric singlet majorons and cosmology
| DE94-628571 | p 1850 N95-22783
Supersymmetric oscillator in optics p 1826 N95-23002
Classification of (2,2) compactifications by free fermions 2
| PB95-139119 | p 1807 N95-23157
Higgs searches and WW scattering
| PB95-139143 | p 1807 N95-23160
Search for supersymmetric (tilde W)(sub 1) and (tilde Z)(sub 2) states using the D0 detector
| DE95-004581 | p 1811 N95-23581
Effective (mu)-term in superstring theory
| DE94-634326 | p 1851 N95-23922

SUPPLEMENTS
NASA Thesaurus, Supplement
| NASA-SP-7096-SUPPL-1 | p 1856 N95-23223

SUPPORT SYSTEMS
Integrating O/S models during conceptual design, part 1
| NASA-CR-197903 | p 1622 N95-23398
Integrating O/S models during conceptual design, part 2
| NASA-CR-197904 | p 1622 N95-23399
Constraint based scheduling for the Goddard Space Flight Center distributed Active Archive Center's data archive and distribution system p 1859 N95-24121

SURFACE CRACKS
Atomic oxygen interactions with protected organic materials on the Long Duration Exposure Facility (LDEF) p 1627 N95-23909

SURFACE DEFECTS
The effect of simulated low earth orbit radiation on polyimides (UV degradation study) p 1651 N95-23903
The surface properties of fluorinated polyimides exposed to VUV and atomic oxygen p 1651 N95-23904
Atomic oxygen interactions with protected organic materials on the Long Duration Exposure Facility (LDEF) p 1627 N95-23909
The development of shell imperfection measurement techniques
| TAE-712 | p 1699 N95-23923
Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides
| DE95-004531 | p 1731 N95-24090

SURFACE DIFFUSION
Analysis of physiochemical processes during solder aging
| DE95-003811 | p 1638 N95-22576

SURFACE DISTORTION
Double pass retroreflection for corrosion detection in aircraft structures p 1642 N95-23503

SURFACE ENERGY
Thermal radiant exitance model performance: Soils and forests
| DE95-003619 | p 1721 N95-24148
Implementation of a soil-canopy scheme into the CSIRO GCM: Regional aspects of the model response
| CSIRO-TR-32 | p 1721 N95-24192

SURFACE LAYERS
Metallization and incomplete melting of a semiconductor surface at high temperature
| DE94-627342 | p 1660 N95-22591

SURFACE NAVIGATION
Lunar rover technology demonstrations with Dante and Ratler p 1697 N95-23694
Terrain modelling and motion planning for an autonomous exploration rover p 1721 N95-23765

SURFACE PROPERTIES
Surface impedance studies on the electrodynamical response of organic superconductors
| DE95-002986 | p 1660 N95-22593
Glass science tutorial: Lecture 1, Chemistry and properties of oxide glasses
| DE95-002963 | p 1647 N95-22647
Guidance and control requirements for high-speed Rollout and Turnoff (ROTO)
| NASA-CR-195026 | p 1614 N95-22674
Computer simulation of the structure of ionic surfaces and interfaces
| DE95-002991 | p 1804 N95-22792
Surface structural dependence of cesium adsorption on the (alpha)-Al2O3(0001) surface
| DE95-002610 | p 1842 N95-23135
Carbon monoxide oxidation over three different states of copper: Development of a model metal oxide catalyst
| DE95-004682 | p 1636 N95-23495
Spectral decomposition of AVIRIS data p 1704 N95-23859

SURFACE REACTIONS
Advanced growth and surface analysis system for in situ studies of interface formation
| DE95-002850 | p 1838 N95-22555
Surface structural dependence of cesium adsorption on the (alpha)-Al2O3(0001) surface
| DE95-002610 | p 1842 N95-23135
In-situ detection of surface passivation or activation and of localized corrosion: Experiences and prospectives in aircraft p 1643 N95-23508
Scandinavian symposium on surface chemistry
| PB95-140687 | p 1636 N95-23554
The surface properties of fluorinated polyimides exposed to VUV and atomic oxygen p 1651 N95-23904
Collection and review of metals data obtained from LDEF experiment specimens and support hardware p 1646 N95-23905

SURFACE ROUGHNESS
Surface growth of two kinds of particles deposition models
| DE94-628480 | p 1841 N95-23021
Measurement and analysis of scatter from silicon wafers
| DE95-002411 | p 1827 N95-23531
Profiling and light scattering studies of Si surfaces
| DE95-002931 | p 1828 N95-24005
A simple, closed-form expression for the x ray reflectivity from superlattices with cumulative roughness
| DE95-004633 | p 1846 N95-24170

SURFACE ROUGHNESS EFFECTS
Prediction of incidence and surface roughness effects on turbine performance p 1671 N95-23424

SURFACE TEMPERATURE
Particle kinetic simulation of high altitude hypervelocity flight
| NASA-CR-197383 | p 1664 N95-22481
Land surface temperature measurements for EOS MODIS data
| NASA-CR-197443 | p 1717 N95-23191
Validation data for land surface temperature determination from satellites
| CSIRO-TR-33 | p 1718 N95-23597
Thermal radiant exitance model performance: Soils and forests
| DE95-003619 | p 1721 N95-24148

SURFACE TREATMENT
Pulsed Ion Beam Surface Treatment for preparing rapidly solidified corrosion resistant alloy surfaces
| DE94-012072 | p 1640 N95-22835
Experience of in-service corrosion on military aircraft p 1644 N95-23516

SURFACE VEHICLES
Fire hazard considerations for composites in vehicle design p 1628 N95-23032

SURFACE WATER
Streamflow and selected precipitation data for Yucca Mountain Region, southern Nevada and eastern California, water years 1986-90
| DE95-001893 | p 1742 N95-23385

SURFACE WAVES
Propagation of waves at the loosely bonded interface of two porous elastic half-spaces
|DE94-628477| p 1800 N95-23018
Tomographic analysis of the three-dimensional variation of the seismic velocity structure of the shallow crust underlying Southern New England
|AD-A279406| p 1739 N95-23247
SURFACTANTS
Small angle x ray scattering studies of aggregation in supercritical fluid solutions
|DE95-004576| p 1843 N95-23579
SURVEYS
A multispectral scanner survey of the Tonopah Test Range, Nevada. Date of survey: August 1993
|DE95-003920| p 1717 N95-22503
Study on possible environmental effects of a WBM cutting discharge in the north sea, one year after termination of drilling
|PB95-133740| p 1733 N95-23125
Some recent results in the analysis of greedy algorithms for assignment problems
|PB95-140620| p 1757 N95-23238
Teams and teamwork at NASA Langley Research Center p 1854 N95-23292
SURVIVAL
Aircraft fires, smoke toxicity, and survival: An overview
|DOT/FAA/AM-95/8| p 1610 N95-24024
SUSPENDING (HANGING)
Development of the dynamic motion simulator of 3D micro-gravity with a combined passive/active suspension system p 1618 N95-23711
SWEPT FORWARD WINGS
Flight test of the X-29A at high angle of attack: Flight dynamics and controls
|NASA-TP-3537| p 1612 N95-22806
SWEPT WINGS
Crossflow instability control on a swept-wing: Preliminary studies p 1609 N95-23283
SWIRLING
Experimental study of vortex breakdown in a swirling water jet
|PB95-130407| p 1665 N95-22767
Aerodynamic design and analysis of a highly loaded turbine exhaust p 1673 N95-23435
SWITCHES
High gain GaAs Photoconductive Semiconductor Switches for impulse sources
|DE95-001885| p 1659 N95-22549
High gain GaAs photoconductive semiconductor switches: Measurement of filament velocity and reduced trigger energy
|DE95-001884| p 1661 N95-22844
SWITCHING CIRCUITS
A high-power switch-mode DC power supply for dynamic loads
|DE94-016714| p 1659 N95-22504
Non-blocking crossbar permutation engine with constant routing latency
|NASA-CASE-NPO-18864-1-CU| p 1762 N95-22564
SYMBOLS
Determinants of elliptic pseudo-differential operators
|PB95-109062| p 1786 N95-22711
TRISTAR 1: Evaluation methods for testing head-up display (HUD) flight symbology
|NASA-TM-4665| p 1613 N95-24030
SYMMETRY
Lectures on homology with internal symmetries
|DE94-628409| p 1785 N95-22619
Continuous local symmetry in Ising-type models
|DE94-629045| p 1839 N95-22649
Hadrons of arbitrary spin and heavy quark symmetry
|DE94-628597| p 1804 N95-22789
An algebraic cluster model based on the harmonic oscillator basis p 1814 N95-22971
Galactic oscillator symmetry p 1822 N95-22973
Covariant harmonic oscillators and coupled harmonic oscillators p 1825 N95-22992
Quasisymmetry equations for conventional stellarators
|NIFS-324| p 1836 N95-23572
Electromagnetic production of pions on the nucleon
|DE95-004658| p 1811 N95-23587
SYNCHRONISM
Comparing data synchronization in Ada 9X and Orca
|PB95-127999| p 1754 N95-22529
Precise clock synchronization protocol
|PB95-127247| p 1687 N95-22536
Scalability of atomic primitives on distributed shared memory multiprocessors
|TR-528| p 1764 N95-23930
Scheduler-conscious synchronization
|TR-550| p 1765 N95-24183
SYNCHRONOUS PLATFORMS
Geolocation applications of the Gonets LEO messaging satellites p 1656 N95-22818
SYNCHROTRON RADIATION
Advanced growth and surface analysis system for in situ studies of interface formation
|DE95-002850| p 1838 N95-22555
A report on the Indiana University Workshop on future U.S. hadron facilities
|DE95-003951| p 1817 N95-23353
Multiband VLBI imaging of the jet in 3C 345
|PB95-139275| p 1866 N95-23468
Some thoughts of future experiments with the new generation of storage rings
|DE95-004602| p 1818 N95-24162
Atomic physics at high brilliance synchrotron sources: Proceedings
|DE95-006077| p 1813 N95-24174
SYNCHROTRONS
Preserving the high source brightness with x ray beam line optics
|DE95-003172| p 1820 N95-22877
Protein folding and protein metallocluster studies using synchrotron small angler x ray scattering
|DE95-003339| p 1746 N95-22897
SYNOPTIC MEASUREMENT
An intelligent ground operator support system p 1769 N95-23681
SYNTAX
LCM 3.0: A language for describing conceptual models. Syntax definition
|PB95-128005| p 1755 N95-22652
Graph isomorphism models for non interleaving process algebra
|PB95-110490| p 1786 N95-22714
Algebra of lines and boxes
|PB95-130456| p 1787 N95-22768
SYNTHESIS (CHEMISTRY)
Progress towards the synthesis of polymeric nitrogen
|DE94-017547| p 1841 N95-22860
Particle size dependence in Fischer-Tropsch synthesis
|DE95-003124| p 1633 N95-22876
Development of the IGT RENUGAS(reg sign) process
|DE94-017652| p 1727 N95-22888
Nanophase materials: Synthesis, properties, applications
|AD-A286013| p 1627 N95-22940
Ethanol synthesis and water gas shift over bifunctional sulfide catalysts
|DE94-017376| p 1634 N95-23202
Supported transition metal catalysts for para- to ortho-hydrogen conversion
|NASA-CR-197907| p 1634 N95-23252
Process for preparing an assembly of an article and a polyimide which resists dimensional change, delamination and debonding when exposed to changes in temperature
|NASA-CASE-LAR-14538-2| p 1649 N95-23254
Organometallic chemistry of bimetallic compounds
|DE95-004436| p 1634 N95-23345
SYNTHETIC APERTURE RADAR
Combining optical and microwave remote sensing data of forest vegetation: MAC Europe 1991
|PB95-127312| p 1717 N95-22538
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 3: AIRSAR Workshop
|NASA-CR-197354-VOL-3| p 1712 N95-23938
Interferometric synthetic aperture radar imagery of the Gulf Stream p 1712 N95-23939
MAX-91: Polarimetric SAR results on Montespertoli site p 1712 N95-23940
AIRSAR views of aerolian terrain p 1713 N95-23941
Estimation of biophysical properties of upland Sitka spruce (Picea sitchensis) plantations p 1713 N95-23943
Forest investigations by polarimetric AIRSAR data in the Harz mountains p 1713 N95-23944
Comparison of inversion models using AIRSAR data for Death Valley, California p 1713 N95-23945
Geologic mapping using integrated AIRSAR, AVIRIS, and TIMS data p 1714 N95-23946
Statistics of multi-look AIRSAR imagery: A comparison of theory with measurements p 1714 N95-23947
AIRSAR deployment in Australia, September 1993: Management and objectives p 1714 N95-23948
Current and future use of TOPSAR digital topographic data for volcanological research p 1714 N95-23949
Preliminary analysis of the sensitivity of AIRSAR images to soil moisture variations p 1714 N95-23950
Unusual radar echoes from the Greenland ice sheet p 1714 N95-23951
Measurement of ocean wave spectra using polarimetric AIRSAR data p 1715 N95-23953
An improved algorithm for retrieval of snow wetness using C-band AIRSAR p 1715 N95-23954
SAR terrain classifier and mapper of biophysical attributes p 1715 N95-23957
Classification and soil moisture determination of agricultural fields p 1716 N95-23958
Relating P-band AIRSAR backscatter to forest stand parameters p 1716 N95-23959
Soil moisture retrieval in the Oberpfaffenhofen testsite using MAC Europe AIRSAR data p 1716 N95-23960
ASF archive issues: Current status, past history, and questions for the future p 1861 N95-24133
SYNTHETIC FUELS
Energy Conversion and Storage Program
|DE95-003796| p 1725 N95-22501
SYSTEM IDENTIFICATION
System identification of the Large-Angle Magnetic Suspension Test Fixture (LAMSTF) p 1617 N95-23299
SYSTEMS ANALYSIS
Southeast Regional Experiment Station
|DE95-000903| p 1726 N95-22518
Synthesis of a large communications aperture using small antennas
|NASA-CR-197330| p 1656 N95-22852
Life support systems analysis and technical trades for a lunar outpost
|NASA-TM-109927| p 1751 N95-23194
Integrating O/S models during conceptual design, part 1
|NASA-CR-197903| p 1622 N95-23398
The effects of AVIRIS atmospheric calibration methodology on identification and quantitative mapping of surface mineralogy, Drum Mountains, Utah p 1705 N95-23870
SYSTEMS ENGINEERING
Layered Electrical Product Application Protocol (AP)
|DE95-001524| p 1754 N95-22548
CDMS: CAD data set system design description
|DE95-003218| p 1756 N95-22894
Overview of Ph.D. theses and memoranda, 1993
|PB95-135190| p 1756 N95-23071
Inner loop flight control for the High-Speed Civil Transport p 1616 N95-23314
Multidisciplinary design optimization using genetic algorithms p 1619 N95-23332
Progress report on a fully automatic Gas Tungsten Arc Welding (GTAW) system development
|DE95-004397| p 1695 N95-23343
Radioisotope thermoelectric generator transportation system subsystem 143 software development plan
|DE95-003774| p 1662 N95-23351
Integrating O/S models during conceptual design, part 1
|NASA-CR-197903| p 1622 N95-23398
Aerodynamic design and analysis of a highly loaded turbine exhaust p 1673 N95-23435
An operations and command systems for the extreme ultraviolet explorer p 1770 N95-23687
Full resolution hologram-like autostereoscopic display
|NASA-CR-197913| p 1689 N95-23789
Search Hanford accessible reports electronically system configuration management plan
|DE95-004493| p 1857 N95-24089
OPUS: A new generation Knowledge Engineering Environment p 1760 N95-24176
SYSTEMS INTEGRATION
Automation technology using Geographic Information System (GIS) p 1863 N95-23284
Differential GPS and system integration of the Low Visibility Landing and Surface Operations (LVLASO) demonstration p 1611 N95-23318
Network Event Recording Device: An automated system for network anomaly detection, and notification
|DE94-018274| p 1658 N95-23772
Automated solar cell assembly teamed process research
|DE95-000299| p 1730 N95-23777
The design of a petabyte archive and distribution system for the NASA ECS project p 1858 N95-24110
SYSTEMS MANAGEMENT
Environmental Systems Management Analysis and Reporting Network (E-SMART)
|AD-A279766| p 1732 N95-22856
Distributed VIRtual System (DIVIRS) project
|NASA-CR-197855| p 1757 N95-23180
SYSTEMS STABILITY
D3-D program overview
|DE95-003879| p 1837 N95-24086
Experimental achievement of toroidal beta beyond that predicted by 'Troyon' scaling
|DE95-003880| p 1837 N95-24087

T

TABS (CONTROL SURFACES)
Lift enhancing tabs for airfoils
|NASA-CASE-ARC-11990-1| p 1613 N95-23395

TACHYONS
Tachyons - it was the end of history?
|DE94-635439| p 1851 N95-23968
TACTILE SENSORS (ROBOTICS)
Very fast motion planning for highly dexterous-articulated robots p 1771 N95-23691
A perspective on space robotics in Japan p 1697 N95-23695
Vision-based planning and execution of precision grasps
|TR-546| p 1784 N95-24185
TAIL ASSEMBLIES
Preliminary identification of buffet problems in high speed civil transport p 1616 N95-23319
TAKEOFF
Aircraft accident report. Runway overrun following rejected takeoff. Continental airlines flight 795, McDonnell Douglas MD-82, N18835, LaGuardia Airport, Flushing, NY, 2 March 1994
|PB95-910401| p 1610 N95-23609
TANGENTS
Grassman and hyperKaehler structures on some spaces of sections of holomorphic bundles
|PB95-109104| p 1795 N95-22712
TANTALUM ALLOYS
Experimental and theoretical studies on the C15 intermetallic compounds MV2 (M = Zr, Hf and Ta): Elasticity and phase stability
|DE95-003723| p 1845 N95-24079
TAPE RECORDERS
High data rate recorder development at MIT Haystack Observatory p 1690 N95-24118
A comparison of rotary- and stationary-head tape recorders p 1690 N95-24122
A terabyte linear tape recorder p 1690 N95-24139
TAPERING
The use of cowl camber and taper to reduce rotor/stator interaction noise
|NASA-CR-195421| p 1799 N95-22675
TARGET ACQUISITION
Discrimination of poorly exposed lithologies in AVIRIS data p 1703 N95-23858
TARGETS
Light emission-or-absorbance-based binding assays for polynucleic acids
|AD-D016557| p 1632 N95-22710
Projectile penetration into representative targets
|DE95-003089| p 1698 N95-22726
CO2 and waste policy: Monitoring results 1991/1992 and main problems
|PB95-133799| p 1733 N95-23126
TASK PLANNING (ROBOTICS)
Software agents for the dissemination of remote terrestrial sensing data p 1721 N95-23675
TASKS
Integrating planning and reactive control p 1618 N95-23763
Using simulation-based projection to plan in an uncertain and temporally complex world
|TR-531| p 1853 N95-24043
TATB
Simulation of cookoff results in a small scale test
|DSTO-TR-0090| p 1653 N95-23668
TAXONOMY
Taxonomy of finite automata minimization algorithms
|PB95-139226| p 1756 N95-23131
Taxonomy of finite automata construction algorithms
|PB95-139234| p 1758 N95-23606
TAYLOR SERIES
Accelerated panel methods using the fast multipole method p 1687 N95-23307
Non-Taylor magnetohydrodynamic self-organization
|NIFS-314| p 1834 N95-23524
Taylor series expansion and modified extended Prony analysis for localization
|DE95-003671| p 1758 N95-23567
TDR SATELLITES
Improved small satellite access of the space network
|NASA-CR-197863| p 1657 N95-22944
TEACHING MACHINES
POINTER: Portable Intelligent Trainer for External Robotics p 1752 N95-23714
TEAMS
Teams and teamwork at NASA Langley Research Center p 1854 N95-23292
TEARING
Three-dimensional CTOA and constraint effects during stable tearing in a thin-sheet material
|NASA-TM-109183| p 1627 N95-22928
TECHNETIUM
EXTRA.M: A computing code system for analysis of the Purex process with mixer settlers for reprocessing
|DE94-785273| p 1635 N95-23476
TECHNOLOGY ASSESSMENT
Evaluating photovoltaic applications: A guide for utilities
|DE95-003807| p 1726 N95-22502
NASA Technology Applications Team: Commercial applications of aerospace technology
|NASA-CR-197589| p 1864 N95-22526
Euler Technology Assessment program for preliminary aircraft design employing SPLITFLOW code with Cartesian unstructured grid method
|NASA-CR-4649| p 1608 N95-22917
NASA Technology Applications Team: Commercial applications of aerospace technology
|NASA-CR-197870| p 1865 N95-23091
Euler technology assessment for preliminary aircraft design employing OVERFLOW code with multiblock structured-grid method
|NASA-CR-4651| p 1608 N95-23095
NASA advanced refrigerator/freezer technology development project overview
|NASA-TM-106309| p 1747 N95-23177
Spin physics in the next decade
|DE95-003727| p 1809 N95-23403
Motor drive technologies for the power-by-wire (PBW) program: Options, trends and tradeoffs
|NASA-TM-106885| p 1616 N95-23671
Robotics and telepresence for moon missions p 1776 N95-23725
Advanced technologies for a compact RF linac FEL
|DE95-003674| p 1692 N95-24072
Report to the Secretary of Defense. Unmanned aerial vehicles: No more Hunter systems should be bought until problems are fixed
|GAO/NSIAD-95-52| p 1613 N95-24091
Crystalline-silicon photovoltaics: Necessary and sufficient
|DE95-004540| p 1731 N95-24157
TECHNOLOGY TRANSFER
Southeast Regional Experiment Station
|DE95-000903| p 1726 N95-22518
Accuracy of radar rainfall estimates compared to raingauge measurements and a hydrological application
|PB95-127296| p 1741 N95-22640
Technology reinvestment project's focus area: Affordable polymer matrix composites for airframe structures
|PB95-136032| p 1865 N95-23168
Teacher Enhancement Institute p 1853 N95-23312
Planetary stations and Abyssal Benthic Laboratories: An overview of parallel approaches for long-term investigation in extreme environments p 1752 N95-23732
Research and Technology, 1994
|NASA-TM-106764| p 1607 N95-24025
Defense science and technology strategy
|AD-A285414| p 1903 N95-24179
TECHNOLOGY UTILIZATION
Innovative technology for contamination control in plasma processing
|DE95-000913| p 1829 N95-22519
NASA Technology Applications Team: Commercial applications of aerospace technology
|NASA-CR-197589| p 1864 N95-22526
Technology maturation project on optimization of sheet metal forming of aluminum for use in transportation systems
|DE95-003005| p 1654 N95-22692
Addendum to the Proceedings of the Third International Mobile Satellite Conference (IMSC 1993)
|NASA-CR-197343| p 1655 N95-22813
NASA Technology Applications Team: Commercial applications of aerospace technology
|NASA-CR-197870| p 1865 N95-23091
Corrosion control acceptance criteria for sacrificial anode type, cathodic protection systems (user guide)
|AD-A285275| p 1662 N95-23117
The US molten carbonate fuel-cell development and commercialization effort
|DE94-019096| p 1728 N95-23162
Technology reinvestment project's focus area: Affordable polymer matrix composites for airframe structures
|PB95-136032| p 1865 N95-23168
Teacher Enhancement Institute p 1853 N95-23312
Potential aerospace applications of high temperature superconductors p 1664 N95-23322
Teacher Enhancement Institute p 1853 N95-23324
Hydrogen and fuel cells for energy storage
|DE95-723907| p 1729 N95-23382
Endeavor: Now and then
|NASA-TM-110539| p 1620 N95-23664
Third International Symposium on Artificial Intelligence, Robotics, and Automation for Space 1994
|NASA-CR-197340| p 1767 N95-23672
The next decade of space robotics p 1768 N95-23673
Proceedings of the fuel cells 1994 contractors review meeting
|DE94-012285| p 1730 N95-23977
OPUS: A new generation Knowledge Engineering Environment p 1760 N95-24176
Defense science and technology strategy
|AD-A285414| p 1903 N95-24179
TECTONICS
Seismic hazards at Kilauea and Mauna Loa volcanoes, Hawaii
|DE94-012109| p 1737 N95-22924
TEFLON (TRADEMARK)
Cratering and penetration experiments in Teflon targets at velocities from 1 to 7 km/s p 1700 N95-23842
Recent results from Long Duration Exposure Facility materials testing p 1638 N95-23898
LDEF polymeric materials: A summary of Langley characterization p 1651 N95-23899
TELECOMMUNICATION
Synthesis of a large communications aperture using small antennas
|NASA-CR-197330| p 1656 N95-22852
Effects of modulation index on telecommunications
|AD-A286018| p 1657 N95-23023
Algebraic semantics of basic message sequence charts
|PB95-138970| p 1657 N95-23151
TELEMETRY
Improved small satellite access of the space network
|NASA-CR-197863| p 1657 N95-22944
Toward an automated signature recognition toolkit for mission operations p 1659 N95-23682
TELEOPERATORS
An intelligent ground operator support system p 1769 N95-23681
Subsumption-based architecture for autonomous movement planning for planetary rovers p 1771 N95-23690
Very fast motion planning for highly dexterous-articulated robots p 1771 N95-23691
Lunar rover technology demonstrations with Dante and Ratler p 1697 N95-23694
A perspective on space robotics in Japan p 1697 N95-23695
ASI's space automation and robotics programs: The second step p 1697 N95-23696
JPL space robotics: Present accomplishments and future thrusts p 1697 N95-23697
Robotic experiment with a force reflecting handcontroller onboard MIR space station p 1752 N95-23707
Design of teleoperation system with a force-reflecting real-time simulator p 1778 N95-23733
Telepresence control of a dual-arm dexterous robot p 1752 N95-23735
Terrain modelling and motion planning for an autonomous exploration rover p 1721 N95-23765
TELEROBOTICS
The next decade of space robotics p 1768 N95-23673
Commercialization of JPL Virtual Reality calibration and redundant manipulator control technologies p 1768 N95-23676
JPL space robotics: Present accomplishments and future thrusts p 1697 N95-23697
A US-Japan collaborative robotics research program p 1772 N95-23698
The Charlotte (TM) intra-vehicular robot p 1697 N95-23703
Development of Advanced Robotic Hand System for space application p 1752 N95-23704
POINTER: Portable Intelligent Trainer for External Robotics p 1752 N95-23714
Space science experimentation automation and support p 1775 N95-23718
Dexterous Orbital Servicing System (DOSS) p 1752 N95-23723
Truss structure tele-manipulation experiment using ETS-7 p 1623 N95-23726
Antenna-assembling mechanism test on ETS-7 p 1623 N95-23727
Intelligent monitoring system applied to super long distance telerobotic tasks p 1777 N95-23728
Manipulating flexible parts using a teleoperated system with time delay: An experiment p 1777 N95-23729
Visually guided grasping to study teleprogrammation within the BAROCO testbed p 1777 N95-23731
Telerobotics test bed for space structure assembly p 1618 N95-23734
Telepresence control of a dual-arm dexterous robot p 1752 N95-23735
Morphing hands and virtual tools (or What good is an extra degree of freedom?)
|TR-551| p 1783 N95-24036
TELESCOPES
Interstellar molecules in the large magellanic cloud
|PB95-139267| p 1868 N95-23230

Robust telescope scheduling p 1779 N95-23742
The associate principal astronomer telescope operations model p 1779 N95-23743
Telescope loading: A problem reduction approach p 1781 N95-23757
Near infrared and optical spectroscopy of FSC10214+4724
| NASA-CR-197966 | p 1828 N95-24068

TELEVISION CAMERAS
Amplified MOS Imager
| NHK-LABS-NOTE-432 | p 1690 N95-24107

TELLURIUM
Precise determinations of the isotopic compositions and atomic weights of molybdenum, tellurium, tin and tungsten using ICP source magnetic sector multiple collector mass spectrometry
| DE95-003003 | p 1632 N95-22795

TEMPERATURE CONTROL
Protective coating for ceramic materials
| NASA-CASE-ARC-11969-1-CU | p 1649 N95-23394

TEMPERATURE DEPENDENCE
Surface impedance studies on the electrodynamical response of organic superconductors
| DE95-002986 | p 1660 N95-22593
Enhancement of biomembrane functions under phase-separated conditions: A self-organized criticality phenomenon?
| DE94-628489 | p 1747 N95-23053
Non-intrusive measurements in a rocket engine combustor p 1625 N95-23439
Simulation of cookoff results in a small scale test
| DSTO-TR-0090 | p 1653 N95-23668
The effect of elastic stress on Ostwald Ripening Phenomena
| DE95-002599 | p 1646 N95-24140

TEMPERATURE DISTRIBUTION
Associated with aerospace vehicles development of methodologies for the estimation of thermal properties p 1700 N95-23321
Computer modeling of the sensitivity of a laser water vapor sensor to variations in temperature and air speed p 1692 N95-23330

TEMPERATURE EFFECTS
Temperature effects on hydrogen-induced cracking in an iron-based superalloy
| DE95-003037 | p 1639 N95-22724
Long-term aging of type 308 stainless steel welds: Effects on properties and microstructure
| DE94-018961 | p 1640 N95-23132
Liquid nitrogen temperature operation of a switching power converter
| NASA-TM-106867 | p 1662 N95-23219
Process for preparing an assembly of an article and a polyimide which resists dimensional change, delamination and debonding when exposed to changes in temperature
| NASA-CASE-LAR-14538-2 | p 1649 N95-23254
Method development for compensating temperature effects in pressure sensitive paint measurements p 1650 N95-23291
NLS base heating CFD analysis p 1673 N95-23432
A coupled layerwise analysis of the thermopiezoelectric response of smart composite beams beams
| NASA-TM-106889 | p 1630 N95-23463
Rapid thermal processing of high-efficiency silicon solar cells with controlled in-situ annealing
| DE95-004729 | p 1730 N95-23489
Thermal effects on the STAR electromagnetic calorimeter
| DE95-004663 | p 1688 N95-23492
Thermal modeling of the lithium/polymer battery
| DE95-004680 | p 1663 N95-23494
Thermoelastic theory for the response of materials functionally graded in two directions with applications to the free-edge problem
| NASA-TM-106882 | p 1699 N95-24055
Temperature effects on ion irradiation damage in MgAl2O4 spinel single crystals
| DE95-003679 | p 1844 N95-24073
Effects of Bi and Bi2O3 additions on the microstructure and superconducting properties of powder-in-tube BSCCO (2212) tapes
| DE95-004605 | p 1845 N95-24150
Design of a high-temperature superconductor current lead for electric utility SMES
| DE95-004604 | p 1664 N95-24163

TEMPERATURE GRADIENTS
Superlattices in thermoelectric applications
| DE95-001356 | p 1840 N95-22687
Numerical Tokamak Project code comparison
| DE95-003475 | p 1831 N95-22899
Design and production of efficient current leads for 1500-A, 50-Hz service in a 77-4 K temperature gradient
| DE95-004121 | p 1662 N95-23355

TEMPERATURE MEASUREMENT
Land surface temperature measurements for EOS MODIS data
| NASA-CR-197443 | p 1717 N95-23191
Instantaneous 2D velocity and temperature measurements in high speed flows based on spectrally resolved molecular Rayleigh scattering
| NASA-TM-106883 | p 1688 N95-23461
Validation data for land surface temperature determination from satellites
| CSIRO-TR-33 | p 1718 N95-23597
Development of sensors for ceramic components in advanced propulsion systems
| NASA-CR-195324 | p 1689 N95-23795
Land surface temperature measurements from EOS MODIS data
| NASA-CR-197969 | p 1721 N95-24190

TEMPERATURE PROFILES
Land surface temperature measurements for EOS MODIS data
| NASA-CR-197443 | p 1717 N95-23191

TEMPERATURE SENSORS
Computer modeling of the sensitivity of a laser water vapor sensor to variations in temperature and air speed p 1692 N95-23330

TEMPORAL DISTRIBUTION
Light-traffic analysis for queues with spatially distributed arrivals
| PB95-140802 | p 1767 N95-23556
Reevaluation of the significance of sequence information for speech recognition
| TR-555 | p 1658 N95-23794

TEMPORAL LOGIC
Temporal model theory for default logic
| PB95-127346 | p 1766 N95-22524
Temporal operators viewed as predicate transformers
| PB95-138996 | p 1757 N95-23152

TEMPORAL RESOLUTION
Temporal changes in endmember abundances, liquid water and water vapor over vegetation at Jasper Ridge p 1708 N95-23882

TENSILE CREEP
Thermal activation of steady-state creep in polycrystalline copper
| DE94-627394 | p 1839 N95-22607
Evolution of oxidation and creep damage mechanisms in HIPed silicon nitride materials
| DE95-001360 | p 1647 N95-22689

TENSILE DEFORMATION
An investigation into the effects of hydrogen on the fracture and deformation of Alloy X-750
| DE95-003206 | p 1639 N95-22732

TENSILE PROPERTIES
Long-term aging of type 308 stainless steel welds: Effects on properties and microstructure
| DE94-018961 | p 1640 N95-23132

TENSILE STRENGTH
Review of some results of the author's fatigue investigations with applications in engineering and material science
| TAE-698 | p 1699 N95-23662

TENSILE TESTS
Study of radiation damages in AISI 316 and 347 steels
| DE94-627480 | p 1639 N95-22609
An investigation into the effects of hydrogen on the fracture and deformation of Alloy X-750
| DE95-003206 | p 1639 N95-22732

TENSORS
Grassman and hyperKaehler structures on some spaces of sections of holomorphic bundles
| PB95-109104 | p 1795 N95-22712

TERMINAL BALLISTICS
Projectile penetration into representative targets
| DE95-003089 | p 1698 N95-22726

TERMINOLOGY
Glass science tutorial: Lecture 1, Chemistry and properties of oxide glasses
| DE95-002963 | p 1647 N95-22647
NASA Thesaurus, Supplement
| NASA-SP-7096-SUPPL-1 | p 1856 N95-23223

TERNARY ALLOYS
The effect of elastic stress on Ostwald Ripening Phenomena
| DE95-002599 | p 1646 N95-24140
High resolution microstructural analysis of zirconia eutectic interfaces
| DE95-003143 | p 1845 N95-24143

TERRAIN
Robotic all-terrain lunar exploration rover (RATLER) FY93 program status report
| DE95-003589 | p 1694 N95-23065
SAR terrain classifier and mapper of biophysical attributes p 1715 N95-23957
Measuring forest landscape patterns in the Cascade Range of Oregon, USA p 1719 N95-24096

TERRAIN ANALYSIS
Path planning for planetary rover using extended elevation map p 1771 N95-23689
Control technique for planetary rover p 1771 N95-23692
Autonomous navigation system for the Marsokhod rover project p 1771 N95-23693
Terrain modelling and motion planning for an autonomous exploration rover p 1721 N95-23765
Comparison of inversion models using AIRSAR data for Death Valley, California p 1713 N95-23945

TERRAIN FOLLOWING
Path planning for planetary rover using extended elevation map p 1771 N95-23689
Control technique for planetary rover p 1771 N95-23692
Lunar rover technology demonstrations with Dante and Ratler p 1697 N95-23694
Terrain modelling and motion planning for an autonomous exploration rover p 1721 N95-23765

TERRESTRIAL PLANETS
Software agents for the dissemination of remote terrestrial sensing data p 1721 N95-23675

TEST CHAMBERS
Design of a variable area diffuser for a 15-inch Mach 6 open-jet tunnel p 1617 N95-23309

TEST FACILITIES
NASA low-speed axial compressor for fundamental research
| NASA-TM-4635 | p 1616 N95-23192
System identification of the Large-Angle Magnetic Suspension Test Fixture (LAMSTF) p 1617 N95-23299
Detailed measurements in the SSME high pressure fuel turbine with smooth rotor blades p 1675 N95-23441
The influence of swirl brakes and a tip discharge orifice on the rotordynamic forces generated by discharge-to-suction leakage flows in shrouded centrifugal pumps p 1680 N95-23628
NASA procurement: Contract and management improvements at the Jet Propulsion Laboratory. Report to Congressional requesters
| GAO/NSIAD-95-40 | p 1854 N95-24054

TEST FIRING
Non-intrusive measurements in a rocket engine combustor p 1625 N95-23439

TEST STANDS
Non-intrusive measurements in a rocket engine combustor p 1625 N95-23439
Development of the dynamic motion simulator of 3D micro-gravity with a combined passive/active suspension system p 1618 N95-23711
Telerobotics test bed for space structure assembly p 1618 N95-23734
Using simple page placement policies to reduce the cost of cache fills in coherent shared-memory systems
| TR-535 | p 1753 N95-24177

TEXAS
Energy flux and hydrogeology of thermal anomalies in the Gulf of Mexico Basin - South Texas example
| DE95-003341 | p 1743 N95-22695

TEXTBOOKS
Teaching computational complexity: Resources to treasure
| TR-543 | p 1784 N95-24060

TEXTILES
Development and verification of a resin film infusion/resin transfer molding simulation model for fabrication of advanced textile composites
| NASA-CR-197439 | p 1648 N95-23179
Fabric geometry distortion during composites processing p 1631 N95-23288

TEXTS
Plinius intermediate report
| PB95-135216 | p 1648 N95-23128
Performance of single-keyword and multiple-keyword pattern matching algorithms
| PB95-138954 | p 1756 N95-23150

TEXTURES
Experience with CANDID: Comparison algorithm for navigating digital image databases
| DE95-000869 | p 1855 N95-22515
Mapping of the Ronda peridotite massif (Spain) from AVIRIS spectro-imaging survey: A first attempt p 1707 N95-23878

THALLIUM
Superconducting Tl2Ba2CaCu2O8 thin films prepared by post-annealing in a flow-through multiple-zone furnace
| DE95-002745 | p 1838 N95-22520

THALLIUM COMPOUNDS
Transport properties of Tl2Ba2CaCu2O8 meander lines
| DE95-003715 | p 1843 N95-23367

THEMATIC MAPPERS (LANDSAT)
Simulation of landsat thematic mapper imagery using AVIRIS hyperspectral imagery p 1705 N95-23869
A preliminary comparison of Landsat Thematic Mapper and SPOT-1 HRV multispectral data for estimating coniferous forest volume p 1719 N95-24097
THEMATIC MAPPING
Lithologic discrimination and alteration mapping from AVIRIS Data, Socorro, New Mexico p 1701 N95-23847
Simulation of landsat thematic mapper imagery using AVIRIS hyperspectral imagery p 1705 N95-23869
AVIRIS and TIMS data processing and distribution at the land processes distributed active archive center p 1706 N95-23872
Mapping and monitoring changes in vegetation communities of Jasper Ridge, CA, using spectral fractions derived from AVIRIS images p 1708 N95-23883
Application of MAC-Europe AVIRIS data to the analysis of various alteration stages in the Landdmannalauger Hydrothermal Area (South Iceland) p 1709 N95-23885
Measuring forest landscape patterns in the Cascade Range of Oregon, USA p 1719 N95-24096
A preliminary comparison of Landsat Thematic Mapper and SPOT-1 HRV multispectral data for estimating coniferous forest volume p 1719 N95-24097
Forest and wildlife habitat analysis using remote sensing and geographic information systems p 1720 N95-24100
Analysis of conifer forest regeneration using Landsat Thematic Mapper data p 1720 N95-24101
Determining successional stage of temperate coniferous forests with Landsat satellite data p 1720 N95-24102
Determining coniferous forest cover and forest fragmentation with NOAA-9 advanced very high resolution radiometer data p 1720 N95-24103
THEODORSEN TRANSFORMATION
Flutter analysis of composite box beams
|NASA-CR-197931| p 1615 N95-23392
THEOREM PROVING
Semi-symmetric manifolds satisfying certain curvature conditions
|DE94-628414| p 1788 N95-22922
Optimal advice
|TR-527| p 1792 N95-23931
A theory for the morphology of Laplacian growth from statistics of equivalent many-body Hamiltonian systems
|DE94-014473| p 1799 N95-23979
Reducibility classes of P-selective sets
|TR-524| p 1792 N95-24002
Large sets in AC(exp 0): A Kolmogorov complexity related property and some applications
|TR-556| p 1797 N95-24029
On the size of sets with weak membership properties
|TR-557| p 1793 N95-24034
Semi-membership algorithms: Some recent advances
|TR-526| p 1760 N95-24092
Polynomial-time membership comparable sets
|TR-552| p 1793 N95-24182
THEOREMS
Countable space with a closed subspace without continuous extender
|PB95-127973| p 1785 N95-22533
Lectures on Fermat's last theorem
|DE94-628392| p 1795 N95-22617
Effective category and measure in abstract complexity theory
|TR-529| p 1792 N95-23929
Optimal advice
|TR-527| p 1792 N95-23931
On helping by parity-like languages
|TR-553| p 1759 N95-23935
Reducibility classes of P-selective sets
|TR-524| p 1792 N95-24002
Witness-isomorphic reductions and the local search problem
|TR-522| p 1793 N95-24003
Semi-membership algorithms: Some recent advances
|TR-526| p 1760 N95-24092
THEORETICAL PHYSICS
The charm physics potential of a Tau-Charm Factory
|DE95-003369| p 1802 N95-22703
Nahm's product and W-algebra
|DE94-628504| p 1787 N95-22777
THEORIES
Ploxoma: Testbed for uncertain inference
|TR-537| p 1794 N95-23927
THERAPY
Continuation of BNCT Research Program at NEMC and MIT
|DE94-016228| p 1748 N95-22875
THERMAL ANALYSIS
Initial crystallization and growth in melt processing of large-domain YBa2Cu3O(x) for magnetic levitation
|DE95-002993| p 1839 N95-22572
Using the shield for thermal energy storage in PULSAR
|DE95-002457| p 1829 N95-22645
Design of a high-temperature superconductor current lead for electric utility SMES
|DE95-004604| p 1664 N95-24163
THERMAL BATTERIES
Thermal modeling of the lithium/polymer battery
|DE95-004680| p 1663 N95-23494
THERMAL CONDUCTIVITY
Superlattices in thermoelectric applications
|DE95-001356| p 1840 N95-22687
Associated with aerospace vehicles development of methodologies for the estimation of thermal properties p 1700 N95-23321
Design and production of efficient current leads for 1500-A, 50-Hz service in a 77-4 K temperature gradient
|DE95-004121| p 1662 N95-23355
Progress report on conductive paints, September 1, 1994-November 30, 1994
|DE95-004297| p 1649 N95-23356
Thermal modeling of the lithium/polymer battery
|DE95-004680| p 1663 N95-23494
Micro heat spreader enhanced heat transfer in MCM's
|DE95-004520| p 1663 N95-23779
THERMAL CONTROL COATINGS
Low Earth orbit thermal control coatings exposure flight tests: A comparison of U.S. and Russian results
|NASA-CR-4647| p 1626 N95-22919
Evaluation of thermal barrier and PS-200 self-lubricating coatings in an air-cooled rotary engine
|NASA-CR-195445| p 1614 N95-23222
Recent results from Long Duration Exposure Facility materials testing p 1638 N95-23898
Further investigations of experiment A0034 atomic oxygen stimulated outgassing p 1651 N95-23908
Trend analysis of in-situ spectral reflectance data from the Thermal Control Surfaces Experiment (TCSE) p 1631 N95-23910
Whisker/Cone growth on the thermal control surfaces experiment no. S0069 p 1651 N95-23911
THERMAL CYCLING TESTS
Permeability testing of composite material and adhesive bonds for the DC-XA composite feedline program
|NASA-TM-108483| p 1630 N95-23551
THERMAL DECOMPOSITION
Decomposition mechanisms in thermally-aged thin-film explosives
|DE95-000741| p 1652 N95-22838
THERMAL DEGRADATION
Test procedure for cation exchange chromatography
|DE95-003770| p 1808 N95-23350
THERMAL DIFFUSION
Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides
|DE95-004531| p 1731 N95-24090
THERMAL DIFFUSIVITY
Tritium transport, influx, and helium ash measurements on TFTR during DT operation
|DE95-003708| p 1833 N95-23269
THERMAL EMISSION
Plasma properties and magnetic field structure of the solar corona, based on coordinated Max 1991 observations from SERTS, the VLA, and magnetographs
|NASA-CR-197864| p 1870 N95-23181
AVIRIS and TIMS data processing and distribution at the land processes distributed active archive center p 1706 N95-23872
Summaries of the 4th Annual JPL Airborne Geoscience Workshop. Volume 2: TIMS Workshop
|NASA-CR-197876-VOL-2| p 1711 N95-23917
Estimation of spectral emissivity in the thermal infrared p 1711 N95-23918
The difference between laboratory and in-situ pixel-averaged emissivity: The effects on temperature-emissivity separation p 1711 N95-23919
Mineralogic variability of the Kelso Dunes, Mojave Desert, California derived from Thermal Infrared Multispectral Scanner (TIMS) data p 1711 N95-23920
THERMAL ENERGY
Using the shield for thermal energy storage in PULSAR
|DE95-002457| p 1829 N95-22645
Atomic oxygen textured polymers
|NASA-TM-106769| p 1650 N95-24187
THERMAL EXPANSION
Transformation behavior in Al2O3-ZrO2 ceraamic composites
|DE95-001359| p 1647 N95-22688
Process for preparing an assembly of an article and a polyimide which resists dimensional change, delamination and debonding when exposed to changes in temperature
|NASA-CASE-LAR-14538-2| p 1649 N95-23254
Structure and properties of polymeric composite materials during 1501 days outer space exposure at Salyut-7 orbital station p 1652 N95-23915
THERMAL INSTABILITY
Influence of porosity and two-phase flow on diffusional/thermal instability of a deflagrating energetic material
|DE95-002592| p 1634 N95-23122
THERMAL INSULATION
Performance of thin-ceramic-coated combustion chamber with gasoline and methanol as fuels in a two-stroke SI engine
|DE95-002903| p 1693 N95-22557
THERMAL MAPPING
Combining optical and microwave remote sensing data of forest vegetation: MAC Europe 1991
|PB95-127312| p 1717 N95-22538
THERMAL NEUTRONS
Mercury detection with thermal neutrons
|DE95-002061| p 1806 N95-23055
THERMAL PLASMAS
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
|DE95-000362| p 1634 N95-23164
Atomic oxygen durability evaluation of protected polymers using thermal energy plasma systems
|NASA-TM-106855| p 1626 N95-23270
THERMAL PROTECTION
Robotic system for the servicing of the orbiter thermal protection system p 1697 N95-23724
Outgassing products from orbiter TPS materials p 1637 N95-23798
THERMAL RADIATION
Land surface temperature measurements for EOS MODIS data
|NASA-CR-197443| p 1717 N95-23191
Design of a differential radiometer for atmospheric radiative flux measurements
|DE95-002701| p 1739 N95-23244
The difference between laboratory and in-situ pixel-averaged emissivity: The effects on temperature-emissivity separation p 1711 N95-23919
THERMAL REACTORS
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
|DE95-000362| p 1634 N95-23164
THERMAL STABILITY
Hydrogen vibrational density of states of adsorbed water on rare-earth modified zirconia
|DE95-001127| p 1632 N95-22681
THERMAL STRESSES
Thermal activation of steady-state creep in polycrystalline copper
|DE94-627394| p 1839 N95-22607
Associated with aerospace vehicles development of methodologies for the estimation of thermal properties p 1700 N95-23321
Automated solar cell assembly teamed process research
|DE95-000299| p 1730 N95-23777
THERMIONIC CONVERTERS
Surface structural dependence of cesium adsorption on the (alpha)-Al2O3(0001) surface
|DE95-002610| p 1842 N95-23135
THERMOCHEMISTRY
Energy Conversion and Storage Program
|DE95-003796| p 1725 N95-22501
Thermochemistry of transition metal clusters
|DE95-003144| p 1646 N95-24144
THERMODYNAMIC EQUILIBRIUM
(Phi)(sup 4) kinks: Statistical mechanics
|DE95-003693| p 1794 N95-23349
Current status in cavitation modeling p 1681 N95-23632
THERMODYNAMIC PROPERTIES
Finite-temperature scalar field theory in static de Sitter space
|DE94-628522| p 1848 N95-22743
Heat transfer in rocket engine combustion chambers and nozzles p 1668 N95-23413
Thermochemistry of transition metal clusters
|DE95-003144| p 1646 N95-24144
Microporous polyimide films for reduced dielectric applications
|DE95-004543| p 1650 N95-24159
THERMODYNAMICS
Energy Conversion and Storage Program
|DE95-003796| p 1725 N95-22501
Glass science tutorial: Lecture 2, operating electric glass melters
|DE95-002965| p 1647 N95-22648
The role of triplet correlation function in dense fluids
|DE94-628476| p 1849 N95-22775
Cumulant approach to dynamical correlation functions at finite temperatures
|DE94-628487| p 1788 N95-23051

Multi-fuel reformers for fuel cells used in transportation. Phase 1: Multi-fuel reformers
| DE95-004215 | p 1729 N95-23482

THERMOELASTICITY
Thermoelastic theory for the response of materials functionally graded in two directions with applications to the free-edge problem
| NASA-TM-106882 | p 1699 N95-24055

THERMOELECTRIC GENERATORS
Radioisotope thermoelectric generator licensed hardware package and certification tests
| DE95-003039 | p 1661 N95-22799
Radioisotope thermoelectric generator transportation system subsystem 143 software development plan
| DE95-003774 | p 1662 N95-23351

THERMOELECTRIC POWER GENERATION
Computational modeling of properties
| NAS-CR-196544 | p 1841 N95-22907

THERMOELECTRICITY
Superlattices in thermoelectric applications
| DE95-001356 | p 1840 N95-22687
Computational modeling of properties
| NAS-CR-196544 | p 1841 N95-22907

THERMOLUMINESCENCE
Dosimetric results on EURECA p 1872 N95-23800

THERMOPLASTIC RESINS
Chemical recycling of scrap composites p 1629 N95-23034

THERMOPLASTICITY
Tough, soluble, aromatic, thermoplastic copolyimides
| NASA-CASE-LAR-15205-1 | p 1648 N95-22882
Society of the plastic industry process emission initiatives p 1629 N95-23036

THERMOSPHERE
Continued studies of polar cap thermospheric dynamics
| PL-TR-94-2076 | p 1737 N95-22951
Calculation of satellite drag coefficients
| AD-A285118 | p 1622 N95-23781

THESAURI
NASA Thesaurus, Supplement
| NASA-SP-7096-SUPPL-1 | p 1856 N95-23223

THESES
Overview of Ph.D. theses and memoranda, 1993
| PB95-135190 | p 1756 N95-23071

THICK FILMS
Preparation of high quality YBa2Cu3O(7-delta) thick films on flexible Ni-based alloy substrates with textured buffer layers
| DE95-003686 | p 1645 N95-23571

THICKNESS
Investigation of arc length versus flange thickness while using an arc voltage controller
| DE95-003937 | p 1695 N95-23374

THIN FILMS
Southeast Regional Experiment Station
| DE95-000903 | p 1726 N95-22518
Superconducting Tl2Ba2CaCu2O8 thin films prepared by post-annealing in a flow-through multiple-zone furnace
| DE95-002745 | p 1838 N95-22520
Vacuum vapor deposition
| NASA-CASE-MFS-28652-1 | p 1647 N95-22558
MOCVD of gallium and calcium sulfides for improved phosphor processing
| DE95-000918 | p 1631 N95-22677
Decomposition mechanisms in thermally-aged thin-film explosives
| DE95-000741 | p 1652 N95-22838
Polycrystalline CuInSe2 and CdTePV solar cells
| DE95-000244 | p 1727 N95-22842
The 1993 Annual Conference of the Israeli Association for Crystal Growth. Program and abstracts
| DE94-633510 | p 1841 N95-22854
Micro-sensor thin-film anemometer
| NASA-CASE-LAR-15112-1-CU | p 1666 N95-22906
Orientation selection and microstructural evolution of epitaxial platinum films on (001) magnesium oxide
| DE95-003680 | p 1842 N95-23265
Vapor deposition of thin-film Y-doped ZrO2 for electrochemical device applications
| DE95-003705 | p 1649 N95-23268
Electrochemical studies of perovskite mixed conductors
| DE95-003704 | p 1636 N95-23573
Advances in research for solid oxide fuel cells
| DE95-004590 | p 1730 N95-23582
Nonlinear viscoelastic characterization of polymer materials using a dynamic-mechanical methodology p 1651 N95-23902
Measurements of the optical properties of thin films of silver and silver oxide p 1651 N95-23906
Changes in chemical and optical properties of thin film metal mirrors on LDEF p 1651 N95-23907

THIN WINGS
Thin tailored composite wing for civil tiltrotor p 1613 N95-23317

THREE BODY PROBLEM
The point interactions in the quantum problem of three particles with internal structure
| DE94-635423 | p 1851 N95-23967

THREE DIMENSIONAL FLOW
Mach 10 computational study of a three-dimensional scramjet inlet flow field
| NASA-TM-4602 | p 1666 N95-23015
Mach 10 computational study of a three-dimensional scramjet inlet flow field
| NASA-TM-4602 | p 1667 N95-23210
Holographic interferometric tomography for reconstructing flow fields p 1690 N95-23287
Three-dimensional unsteady flow calculations in an advanced gas generator turbine p 1671 N95-23425
Three-dimensional viscous flow analysis inside a turbine volute p 1674 N95-23437
Phase 2: HGM air flow tests in support of HEX vane investigation p 1674 N95-23438
On inertial range scaling laws
| DE95-004515 | p 1677 N95-23484
Three-dimensional flow analysis inside consortium impeller at design and off-design conditions p 1679 N95-23623
A fine-grid model for the ASRM aft segment with gimballed nozzle p 1685 N95-23648

THREE DIMENSIONAL MODELS
Three-dimensional CTOA and constraint effects during stable tearing in a thin-sheet material
| NASA-TM-109183 | p 1627 N95-22928
Algebraic description of atom-molecule interactions p 1814 N95-22961
Quantum field between moving mirrors: A three dimensional example p 1821 N95-22965
Three-dimensional structure in a supersonic jet: Behavior near centerline
| NASA-TM-106869 | p 1668 N95-23220
Physics of magnetospheric boundary layers
| NASA-CR-197920 | p 1739 N95-23271
Three-dimensional viscous flow analysis inside a turbine volute p 1674 N95-23437
Autonomous navigation system for the Marsokhod rover project p 1771 N95-23693
Development of the dynamic motion simulator of 3D micro-gravity with a combined passive/active suspension system p 1618 N95-23711
A computer model in general 3-D curvilinear coordinates for the prediction of the turbulent flow field in a jet induced ram combustor
| NAL-TR-1240T | p 1687 N95-24051

THREE DIMENSIONAL MOTION
Concept verification of three dimensional free motion simulator for space robot p 1618 N95-23702

THROATS
Design of a variable area diffuser for a 15-inch Mach 6 open-jet tunnel p 1617 N95-23309

THRUST CHAMBERS
Sensor-based control of rocket thrust chamber feature location for automated braze paste dispensing
| DE94-016559 | p 1624 N95-22885
Radiation/convection coupling in rocket motors and plumes p 1669 N95-23414
Development of an algebraic stress/two-layer model for calculating thrust chamber flow fields p 1675 N95-23442
CFD analysis of spray combustion and radiation in OMV thrust chamber p 1637 N95-23645

THUNDERSTORMS
Collaborative research on aircraft icing and charging processes in ice
| AD-A285102 | p 1609 N95-23201

TIMBER INVENTORY
A preliminary comparison of Landsat Thematic Mapper and SPOT-1 HRV multispectral data for estimating coniferous forest volume p 1719 N95-24097
Analysis of conifer forest regeneration using Landsat Thematic Mapper data p 1720 N95-24101

TIMBER VIGOR
Determining successional stage of temperate coniferous forests with Landsat satellite data p 1720 N95-24102

TIME DEPENDENCE
Non-zero temperature two-mode squeezing for time-dependent two-level systems
| DE94-628427 | p 1850 N95-22782
Algebraic description of atom-molecule interactions p 1814 N95-22961
Quantum field between moving mirrors: A three dimensional example p 1821 N95-22965
Harmonic oscillators and resonance series generated by a periodic unstable classical orbit p 1825 N95-22999
Temporal operators viewed as predicate transformers
| PB95-138996 | p 1757 N95-23152
Scattering problem for quantum system with time-dependent periodic Hamiltonian
| DE94-635421 | p 1797 N95-23965

TIME FUNCTIONS
Wavelet time-frequency analysis of phase-shift-key modulated signals
| AD-A285791 | p 1655 N95-22505

TIME LAG
Intelligent monitoring system applied to super long distance telerobotic tasks p 1777 N95-23728
Manipulating flexible parts using a teleoperated system with time delay: An experiment p 1777 N95-23729
Design of teleoperation system with a force-reflecting real-time simulator p 1778 N95-23733

TIME SERIES ANALYSIS
Nonlinear thermoviscoelastic behaviour in complex materials
| PB95-140653 | p 1630 N95-23537
The role of flight progress strips in en route air traffic control: A time-series analysis
| DOT/FAA/AM-95/4 | p 1611 N95-23565
Learning time series for intelligent monitoring p 1770 N95-23686
Monitoring land use and degradation using satellite and airborne data p 1707 N95-23880

TIN
Precise determinations of the isotopic compositions and atomic weights of molybdenum, tellurium, tin and tungsten using ICP source magnetic sector multiple collector mass spectrometry
| DE95-003003 | p 1632 N95-22795
Changes in chemical and optical properties of thin film metal mirrors on LDEF p 1651 N95-23907

TISSUES (BIOLOGY)
Enhancement of biomembrane functions under phase-separated conditions: A self-organized criticality phenomenon?
| DE94-628489 | p 1747 N95-23053

TITANIA
IUE observing programs: NSOSS, VEOEB, and PCOEB
| NASA-CR-197424 | p 1866 N95-23560

TITANIUM OXIDES
Nanophase materials: Synthesis, properties, applications
| AD-A286013 | p 1627 N95-22940

TOBACCO
Analysis of structural domains required for phytochrome function by in vitro mutagenesis
| DE94-016230 | p 1745 N95-22884

TOKAMAK DEVICES
Using the shield for thermal energy storage in PULSAR
| DE95-002457 | p 1829 N95-22645
Analytical and numerical studies of ion mobility near the tokamak plasma edge
| DE95-003019 | p 1830 N95-22693
Comparisons of nonlinear toroidal turbulence simulations with experiment
| DE95-003020 | p 1830 N95-22694
The DIII-D divertor cryopump system: Design and operational experience
| DE95-003007 | p 1693 N95-22796
Engineering design of a radiative divertor for DIII-D
| DE95-003008 | p 1693 N95-22798
Measurements and modeling of impurity source distributions from the Tore Supra outboard pump limiter
| DE95-003097 | p 1831 N95-22800
An investigation of AC losses in two sub-size conductors for the ITER
| DE94-765449 | p 1831 N95-22849
Runaway electrons in TEXT-U
| DE94-019218 | p 1831 N95-22862
Numerical Tokamak Project code comparison
| DE95-003475 | p 1831 N95-22899
TPX magnet system status
| DE95-002389 | p 1661 N95-23080
TFTR Ion Cyclotron Range of Frequencies (ICRF) experimental data analysis collaboration
| DE95-003409 | p 1832 N95-23084
Divertor heat and particle control experiments on the DIII-D tokamak
| DE94-017518 | p 1832 N95-23119
Neural net prediction of tokamak plasma disruptions
| DE95-002616 | p 1832 N95-23136
Tritium transport, influx, and helium ash measurements on TFTR during DT operation
| DE95-003708 | p 1833 N95-23269
Fast potential change in sawteeth in JIPP T-IIU tokamak plasmas
| NIFS-327 | p 1835 N95-23533
Physical mechanism determining the radial electric field and its radial structure in a toroidal plasma
| NIFS-313 | p 1835 N95-23534

Current-profile flattening and hot core shift due to the nonlinear development of resistive kink mode
[NIFS-311] p 1835 N95-23564
Edge fluctuation measurements by phase contrast imaging on DIII-D
[DE94-016681] p 1836 N95-23768
Gyrokinetic and global fluid simulations of tokamak microturbulence and transport
[DE95-003628] p 1837 N95-24017
A 4 MW fast wave current drive upgrade for D3-D
[DE95-003741] p 1837 N95-24083
D3-D program overview
[DE95-003879] p 1837 N95-24086
Experimental achievement of toroidal beta beyond that predicted by 'Troyon' scaling
[DE95-003880] p 1837 N95-24087
Beryllium in the ITER blanket
[DE95-004620] p 1837 N95-24165

TOMATOES
Germination, growth rates, and electron microscope analysis of tomato seeds flown on the LDEF p 1748 N95-23821

TOMOGRAPHY
Evaluation of neutron techniques for illicit substance detection
[DE95-002988] p 1632 N95-22764
Tomographic analysis of the three-dimensional variation of the seismic velocity structure of the shallow crust underlying Southern New England
[AD-A279406] p 1739 N95-23247

TOOLS
Pressurized fluid torque driver control and method
[NASA-CASE-MSC-22385-1] p 1694 N95-22892

TOPOGRAPHY
AVIRIS and TIMS data processing and distribution at the land processes distributed active archive center p 1706 N95-23872
Preprocessing: Geocoding of AVIRIS data using navigation, engineering, DEM, and radar tracking system data p 1707 N95-23876
A comparison of spectral mixture analysis an NDVI for ascertaining ecological variables p 1710 N95-23892
Determination of semi-arid landscape endmembers and seasonal trends using convex geometry spectral unmixing techniques p 1711 N95-23895
Glaciological studies in the central Andes using AIRSAR/TOPSAR p 1713 N95-23942
Estimation of biophysical properties of upland Sitka spruce (Picea sitchensis) plantations p 1713 N95-23943
Current and future use of TOPSAR digital topographic data for volcanological research p 1714 N95-23949
Profiling and light scattering studies of Si surfaces
[DE95-002931] p 1828 N95-24005

TOPOLOGY
Countable space with a closed subspace without continuous extender
[PB95-127973] p 1785 N95-22533
Lectures on homology with internal symmetries
[DE94-628409] p 1785 N95-22619
On diagonalization in map (M,G)
[DE94-628515] p 1796 N95-22740
On the scalar curvature of minimal hypersurfaces
[DE94-628516] p 1796 N95-22741
Lectures on 2D gauge theories. Topological aspects and path integral techniques
[DE94-628509] p 1849 N95-22752
AR-descriptions in translatable Frechet spaces
[PB95-138855] p 1789 N95-23149
Translation invariant Frechet subspaces of distributions
[PB95-138830] p 1789 N95-23171
CFD analysis of turbopump volutes p 1674 N95-23436
Universal Hodge bundle and Mumford isomorphisms on the abelian inductive limit of Teichmueller spaces
[DE94-634325] p 1796 N95-23660

TORCHES
Vacuum vapor deposition
[NASA-CASE-MFS-28652-1] p 1647 N95-22558

TOROIDAL PLASMAS
Analytical and numerical studies of ion mobility near the tokamak plasma edge
[DE95-003019] p 1830 N95-22693
TPX magnet system status
[DE95-002389] p 1661 N95-23080
TFTR Ion Cyclotron Range of Frequencies (ICRF) experimental data analysis collaboration
[DE95-003409] p 1832 N95-23084
Non-Taylor magnetohydrodynamic self-organization
[NIFS-314] p 1834 N95-23524
Fast potential change in sawteeth in JIPP T-IIU tokamak plasmas
[NIFS-327] p 1835 N95-23533
Physical mechanism determining the radial electric field and its radial structure in a toroidal plasma
[NIFS-313] p 1835 N95-23534
The next Large Helical Devices
[NIFS-323] p 1835 N95-23535
Current-profile flattening and hot core shift due to the nonlinear development of resistive kink mode
[NIFS-311] p 1835 N95-23564
Theory of pressure-induced islands and self-healing in three-dimensional toroidal magnetohydrodynamic equilibria
[NIFS-321] p 1836 N95-23589
Effect of satellite helical harmonics on the stellarator configuration
[NIFS-328] p 1609 N95-23787
Gyrokinetic and global fluid simulations of tokamak microturbulence and transport
[DE95-003628] p 1837 N95-24017

TORQUE
The spectral content of the torque loads on a turbine gear tooth
[DE95-002188] p 1694 N95-23056

TORQUERS
Pressurized fluid torque driver control and method
[NASA-CASE-MSC-22385-1] p 1694 N95-22892

TORSION
Relativistic particle with torsion and charged particle in a constant electromagnetic field: Identity of evolution
[DE94-628506] p 1803 N95-22778

TORUSES
The Euler series of restricted Chow varieties
[DE94-628418] p 1785 N95-22626
Unstructured grids on SIMD torus machines
[NASA-CR-197954] p 1758 N95-23610

TOTAL QUALITY MANAGEMENT
Upward appraisal as a means for improving supervisory performance and promoting process improvement, with long-term implications for organizational change p 1854 N95-23323

TOXIC HAZARDS
Skin exposure: Assessing the hazard in the workplace p 1628 N95-23030
Chemical recycling of scrap composites p 1629 N95-23034
Offgassing test methodology for composite materials p 1629 N95-23035

TOXICITY
Preliminary assessment of air toxic emissions in the natural gas industry, phase 1
[PB95-135547] p 1732 N95-22865
Modeling aerosol emissions from the combustion of composite materials p 1629 N95-23038
Aqueous alternatives for metal and composite cleaning p 1630 N95-23039
The significance of hair mineral analysis as a means for assessing internal body burdens of environmental pollutants
[DE94-633512] p 1734 N95-23541
Applied research on air pollution using nuclear-related analytical techniques
[DE94-633513] p 1734 N95-23542
Aircraft fires, smoke toxicity, and survival: An overview
[DOT/FAA/AM-95/8] p 1610 N95-24024

TOXICITY AND SAFETY HAZARD
A roadmap for regulatory survival in the 1990s p 1628 N95-23026

TRACE ELEMENTS
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer
[NASA-CR-197368] p 1735 N95-22482
Applied research on air pollution using nuclear-related analytical techniques
[DE94-633513] p 1734 N95-23542

TRACKING (POSITION)
Twelve month performance evaluation for the rotating shadowband radiometer
[DE95-002847] p 1726 N95-22554
Mark Tracking: Position/orientation measurements using 4-circle mark and its tracking experiments p 1778 N95-23736
Automatic commanding of the Mars Observer Camera p 1620 N95-23754

TRAILING EDGE FLAPS
Wing pressure distributions from subsonic tests of a high-wing transport model --- in the Langley 14- by 22-Foot Subsonic Wind Tunnel
[NASA-TM-4583] p 1607 N95-22802

TRAILING EDGES
Aeroacoustic computation of gust-blade interaction p 1800 N95-23313
Lift enhancing tabs for airfoils
[NASA-CASE-ARC-11990-1] p 1613 N95-23395

TRAINING DEVICES
Virtual reality flight control display with six-degree-of-freedom controller and spherical orientation overlay
[NASA-CASE-NPO-18733-1-CU] p 1613 N95-22578
Development of qualification guidelines for personal computer-based aviation training devices
[DOT/FAA/AM-95/6] p 1758 N95-23603

TRAINING EVALUATION
Formative and summative evaluation efforts for the Teacher Enhancement Institute conducted at the NASA Langley Research Center, summer 1994 p 1853 N95-23286

TRAJECTORY CONTROL
Nonlinear system guidance in the presence of transmission zero dynamics
[NASA-TM-4661] p 1654 N95-22804
Terrain modelling and motion planning for an autonomous exploration rover p 1721 N95-23765

TRAJECTORY PLANNING
Path planning for planetary rover using extended elevation map p 1771 N95-23689
Subsumption-based architecture for autonomous movement planning for planetary rovers p 1771 N95-23690
Very fast motion planning for highly dexterous-articulated robots p 1771 N95-23691
Control technique for planetary rover p 1771 N95-23692
Autonomous navigation system for the Marsokhod rover project p 1771 N95-23693
Lunar rover technology demonstrations with Dante and Ratler p 1697 N95-23694
A perspective on space robotics in Japan p 1697 N95-23695
Terrain modelling and motion planning for an autonomous exploration rover p 1721 N95-23765

TRANSDUCERS
Capacitive acoustic wave detector and method of using same
[NASA-CASE-LAR-13890-1] p 1799 N95-22921
Investigation of arc length versus flange thickness while using an arc voltage controller
[DE95-003937] p 1695 N95-23374
Dynamic response of a transducer mounted at one end of an acoustical cavity which is subjected to a specified pressure at the open end of the cavity
[DE95-004192] p 1799 N95-23379

TRANSFER FUNCTIONS
On-line, adaptive state estimator for active noise control p 1784 N95-23308

TRANSFORMERS
Temporal operators viewed as predicate transformers
[PB95-138996] p 1757 N95-23152
IGES transformer and NURBS in grid generation p 1669 N95-23415

TRANSIENT RESPONSE
Numerical study of the SSME nozzle flow fields during transient operations: A comparison of the animated results with test p 1673 N95-23434
User's guide and physics manual for the ScatPlus circuit code
[DE95-003755] p 1663 N95-23479

TRANSITION FLOW
Crossflow instability control on a swept-wing: Preliminary studies p 1609 N95-23283
Bursting in the near-surface boundary layer: Comparisons between realistic models and observations
[DE95-003714] p 1741 N95-24078

TRANSITION METALS
Solvation of isolated transition metal ions
[DE95-002978] p 1638 N95-22571
Magnetic multilayer physics
[DE95-003408] p 1798 N95-23083
Supported transition metal catalysts for para- to ortho-hydrogen conversion
[NASA-CR-197907] p 1634 N95-23252
Spin polarized photoemission studies of magnetic quantum well states
[DE95-004218] p 1851 N95-23335
Thermochemistry of transition metal clusters
[DE95-003144] p 1646 N95-24144
Epitaxial growth of bcc transition metal films and superlattices onto MgO (111), (011) and (001) substrates
[DE95-004629] p 1846 N95-24168

TRANSITION TEMPERATURE
Superconducting Tl2Ba2CaCu2O8 thin films prepared by post-annealing in a flow-through multiple-zone furnace
[DE95-002745] p 1838 N95-22520
Potential aerospace applications of high temperature superconductors p 1664 N95-23322
Electrochemical studies of perovskite mixed conductors
[DE95-003704] p 1636 N95-23573

Phonon characteristics of high (T sub c) superconductors from neutron Doppler broadening measurements
| DE95-003703 | p 1844 N95-24076
Cooling rate effects on the microstructure, critical current density, and (T(sub c)) transition of one- and two-powder BSCCO-2223 Ag sheathed tapes
| DE95-004639 | p 1846 N95-24171

TRANSLATING
Proceedings of the workshop on deductive databases and logic programming
| PB95-139382 | p 1758 N95-23553

TRANSMISSION ELECTRON MICROSCOPY
Transmission electron microscope studies of extraterrestrial materials
| NASA-CR-188363 | p 1633 N95-23092

TRANSMISSION RATE (COMMUNICATIONS)
Using high-performance networks to enable computational aerosciences applications
| NASA-CR-197951 | p 1764 N95-24023

TRANSMITTERS
A 4 MW fast wave current drive upgrade for D3-D
| DE95-003741 | p 1837 N95-24083

TRANSONIC WIND TUNNELS
Performance of the 0.3-meter transonic cryogenic tunnel with air, nitrogen, and sulfur hexafluoride media under closed loop automatic control
| NASA-CR-195052 | p 1668 N95-23257
Three-dimensional Navier-Stokes analysis and redesign of an imbedded bellmouth nozzle in a turbine cascade inlet section p 1671 N95-23423

TRANSPARENCE
Coordinating complex decision support activities across distributed applications p 1761 N95-23749

TRANSPONDERS
Improved small satellite access of the space network
| NASA-CR-197863 | p 1657 N95-22944

TRANSPORT AIRCRAFT
Wing pressure distributions from subsonic tests of a high-wing transport model --- in the Langley 14- by 22-Foot Subsonic Wind Tunnel
| NASA-TM-4583 | p 1607 N95-22802
Handling qualities of the High Speed Civil Transport p 1616 N95-23325
High-lift flow-physics flight experiments on a subsonic civil transport aircraft (B737-100) p 1609 N95-23333

TRANSPORT PROPERTIES
Research on defects and transport in amorphous-silicon-based semiconductors
| DE94-011888 | p 1660 N95-22586
Non local pseudopotentials, transport properties of liquid noble metals
| DE94-627416 | p 1640 N95-22840
Computational modeling of properties
| NAS-CR-196544 | p 1841 N95-22907
Turbulent transport across invariant canonical flux surfaces
| DE95-000710 | p 1832 N95-23072
Modeling of nonequilibrium space plasma flows
| NASA-CR-197432 | p 1833 N95-23211
Effect on c-axis transport properties of a critical state in Bi2Sr2CaCu2O8
| DE95-003695 | p 1843 N95-23366
Transport properties of Tl2Ba2CaCu2O8 meander lines
| DE95-003715 | p 1843 N95-23367
Mass transport through polycrystalline microstructures
| DE95-004552 | p 1811 N95-23576
High current induction linacs
| DE95-003442 | p 1818 N95-24014
Gyrokinetic and global fluid simulations of tokamak microturbulence and transport
| DE95-003628 | p 1837 N95-24017
Particle transport in plasma reactors
| DE95-004541 | p 1837 N95-24158

TRANSPORT THEORY
Comparisons of nonlinear toroidal turbulence simulations with experiment
| DE95-003020 | p 1830 N95-22694
Turbulent transport across invariant canonical flux surfaces
| DE95-000710 | p 1832 N95-23072

TRANSPORTATION
Radioisotope thermoelectric generator licensed hardware package and certification tests
| DE95-003039 | p 1661 N95-22799
Submodular linear programs on forests
| PB95-139820 | p 1758 N95-23608

TRANSPORTATION ENERGY
Multi-fuel reformers for fuel cells used in transportation: Assessment of hydrogen storage technologies
| DE94-017655 | p 1727 N95-22861

TRAPPED PARTICLES
Magnetospheric space plasma investigations
| NASA-CR-197405 | p 1831 N95-22955
Measurement of trapped proton fluences in main stack of P0006 experiment p 1815 N95-23812

TRAPPING
Traps for antimatter and antihydrogen production
| DE95-002814 | p 1805 N95-22927

TRAPS
Traps for antimatter and antihydrogen production
| DE95-002814 | p 1805 N95-22927
A brief history in time of ion traps and their achievements in science
| DE95-002815 | p 1805 N95-22936

TRAVELING WAVES
The propagation of travelling waves for stochastic generalized KPP equations
| DE94-628473 | p 1787 N95-22772

TREES (MATHEMATICS)
Trees are graceful if and only if trees with a perfect matching are strongly graceful
| PB95-139853 | p 1790 N95-23236
Effective (mu)-term in superstring theory
| DE94-634326 | p 1851 N95-23922

TREND ANALYSIS
Search Hanford accessible reports electronically system requirements specification
| DE95-004367 | p 1856 N95-23340
Trend analysis of in-situ spectral reflectance data from the Thermal Control Surfaces Experiment (TCSE) p 1631 N95-23910

TRITIUM
Exotic atoms
| DE95-003199 | p 1805 N95-22881
Tritium transport, influx, and helium ash measurements on TFTR during DT operation
| DE95-003708 | p 1833 N95-23269
Modeling of tritium recovery from lithium ceramics
| DE95-004626 | p 1838 N95-24167

TROPICAL METEOROLOGY
TOGA/COARE AMMR 1992 data processing
| NASA-CR-197289 | p 1736 N95-22867
Upgrade of the 92 GHz airborne multi-channel meteorological radiometer (AMMR)
| NASA-CR-197875 | p 1742 N95-23208
Annual tropical cyclone report, 1993
| AD-A285097 | p 1742 N95-23255

TROPICAL STORMS
Annual tropical cyclone report, 1993
| AD-A285097 | p 1742 N95-23255

TROPOSPHERE
Observation model and parameter partials for the JPL VLBI parameter estimation software MODEST, 19 94
| NASA-CR-197328 | p 1756 N95-22853
Compendium of NASA data base for the Global Tropospheric Experiment's Pacific Exploratory Mission West-A (PEM West-A)
| NASA-TM-109177 | p 1733 N95-23009
Oxidants and oxidation in the Earth's atmosphere
| NASA-CR-197945 | p 1734 N95-23460
Laboratory studies of the sensitivity of tropospheric ozone to the chemistry of sea salt aerosol
| DE95-003607 | p 1735 N95-24147

TRUSSES
Truss structure tele-manipulation experiment using ETS-7 p 1623 N95-23726
A fuzzy structural matching scheme for space robotics vision p 1778 N95-23737

TUNABLE LASERS
Raman-shifting an ArF excimer laser to generate new lines for obtaining optical diagnostic based information in flow fields p 1692 N95-23303

TUNERS
A 4 MW fast wave current drive upgrade for D3-D
| DE95-003741 | p 1837 N95-24083

TUNGSTEN
Thermal outgassing studies on machinable tungsten and TZM molybdenum alloy
| DE95-002984 | p 1638 N95-22592
Precise determinations of the isotopic compositions and atomic weights of molybdenum, tellurium, tin and tungsten using ICP source magnetic sector multiple collector mass spectrometry
| DE95-003003 | p 1632 N95-22795
Changes in chemical and optical properties of thin film metal mirrors on LDEF p 1651 N95-23907
High energy collimating fine grids
| NASA-CR-197688 | p 1871 N95-24191

TUNNEL JUNCTIONS
Dependence of the Josephson coupling of unconventional superconductors on the properties of the tunneling barrier
| DE95-004649 | p 1846 N95-24173

TURBIDITY
Turbidity of a near critical ionic fluid
| DE94-014916 | p 1633 N95-22869

TURBINE BLADES
Navier-Stokes analysis of an oxidizer turbine blade with tip clearance with and without a mini-shroud p 1672 N95-23428
Supersonic flow and shock formation in turbine tip gaps p 1672 N95-23429

TURBINE EXHAUST NOZZLES
Numerical study of base pressure characteristic curve for a four-engine clustered nozzle configuration p 1625 N95-23655

TURBINE PUMPS
Prediction of incidence and surface roughness effects on turbine performance p 1671 N95-23424
CFD analysis of turbopump volutes p 1674 N95-23436
Phase 2: HGM air flow tests in support of HEX vane investigation p 1674 N95-23438
Detailed measurements in the SSME high pressure fuel turbine with smooth rotor blades p 1675 N95-23441
Three-D CFD analysis of hydrostatic bearings p 1678 N95-23616
Finite-difference solutions of the alternate turbopump development high-pressure oxidizer turbopump pump-end ball-bearing cavity flows p 1678 N95-23617
Incompressible Navier-Stokes calculations in pump flows p 1680 N95-23627
The influence of swirl brakes and a tip discharge orifice on the rotordynamic forces generated by discharge-to-suction leakage flows in shrouded centrifugal pumps p 1680 N95-23628
Adaptation of the advanced spray combustion code to cavitating flow problems p 1681 N95-23629
An inducer CFD solution and effects associated with cavitation p 1681 N95-23631

TURBINES
Prediction of incidence and surface roughness effects on turbine performance p 1671 N95-23424
Three-dimensional unsteady flow calculations in an advanced gas generator turbine p 1671 N95-23425
GGOT total pressure loss control concept evaluation p 1672 N95-23427
Aerodynamic design and analysis of a highly loaded turbine exhaust p 1673 N95-23435
CFD analysis of turbopump volutes p 1674 N95-23436
Three-dimensional viscous flow analysis inside a turbine volute p 1674 N95-23437
Detailed measurements in the SSME high pressure fuel turbine with smooth rotor blades p 1675 N95-23441
Numerical computation of aerodynamics and heat transfer in a turbine cascade and a turn-around duct using advanced turbulence models p 1675 N95-23444
Enhanced analysis and users manual for radial-inflow turbine conceptual design code RTD
| NASA-CR-195454 | p 1609 N95-23462
Three-D flow analysis of the alternate SSME HPOT TAD p 1679 N95-23620
Unsteady flow simulations in support of the SSME HEX turning vane cracking investigation with the ATD HPOTP p 1679 N95-23621
Use of blade lean in turbomachinery redesign p 1680 N95-23625

TURBOCOMPRESSORS
NASA low-speed axial compressor for fundamental research
| NASA-TM-4635 | p 1616 N95-23192

TURBOMACHINERY
Eleventh Workshop for Computational Fluid Dynamic Applications in Rocket Propulsion
| NASA-CP-3221-PT-2 | p 1668 N95-23412
Numerical simulation of steady and unsteady viscous flow in turbomachinery using pressure based algorithm p 1671 N95-23426
Advanced turbulence models for turbomachinery p 1675 N95-23443
Use of blade lean in turbomachinery redesign p 1680 N95-23625
CFD parametric study of consortium impeller p 1680 N95-23626
Current status in cavitation modeling p 1681 N95-23632

TURBULENCE
Study of the pressure field in rotating homogeneous turbulent flows
| PB94-189107 | p 1665 N95-22585
Micro-sensor thin-film anemometer
| NASA-CASE-LAR-15112-1-CU | p 1666 N95-22906
On inertial range scaling laws
| DE95-004515 | p 1677 N95-23484

TURBULENCE EFFECTS
Turbulent transport across invariant canonical flux surfaces
| DE95-000710 | p 1832 N95-23072
Development of an algebraic stress/two-layer model for calculating thrust chamber flow fields p 1675 N95-23442

TURBULENCE MODELS
Theory of HF induced turbulence in the ionosphere: Status and challenges
| DE95-002705 | p 1739 N95-23256

Direct numerical simulations and modeling of a spatially-evolving turbulent wake p 1687 N95-23289
Development of an algebraic stress/two-layer model for calculating thrust chamber flow fields p 1675 N95-23442
Numerical computation of aerodynamics and heat transfer in a turbine cascade and a turn-around duct using advanced turbulence models p 1675 N95-23444
Liquid propellant rocket engine combustion simulation with a time-accurate CFD method p 1676 N95-23445
Advanced multi-phase flow CFD model development for solid rocket motor flowfield analysis p 1683 N95-23638
Flow diagnostics, chemically reacting turbulent flow modeling and turbulent mixing: A summary of project studies in combustion
|NASA-CR-197348| p 1687 N95-24022
Bursting in the near-surface boundary layer: Comparisons between realistic models and observations
|DE95-003714| p 1741 N95-24078

TURBULENT BOUNDARY LAYER
Detailed measurements in the SSME high pressure fuel turbine with smooth rotor blades p 1675 N95-23441
Bursting in the near-surface boundary layer: Comparisons between realistic models and observations
|DE95-003714| p 1741 N95-24078

TURBULENT COMBUSTION
Modeling NO(x) emissions in turbulent jet flames: Effects of buoyancy and radiation
|DE94-016621| p 1633 N95-22886
Effects of jet strength on NOx formation in premixed impinging jet combustion with minimum heat losses
|NAL-TR-1237T| p 1637 N95-24181

TURBULENT FLOW
Study of the pressure field in rotating homogeneous turbulent flows
|PB94-189107| p 1665 N95-22585
Experimental study of vortex breakdown in a swirling water jet
|PB95-130407| p 1665 N95-22767
Crossflow instability control on a swept-wing: Preliminary studies p 1609 N95-23283
Direct numerical simulations and modeling of a spatially-evolving turbulent wake p 1687 N95-23289
Direct numerical simulation of sheared turbulent flow p 1687 N95-23296
High-lift flow-physics flight experiments on a subsonic civil transport aircraft (B737-100) p 1609 N95-23333
Numerical simulation of steady and unsteady viscous flow in turbomachinery using pressure based algorithm p 1671 N95-23426
Advanced turbulence models for turbomachinery p 1675 N95-23443
Numerical computation of aerodynamics and heat transfer in a turbine cascade and a turn-around duct using advanced turbulence models p 1675 N95-23444
Convergence acceleration of implicit schemes in the presence of high aspect ratio grid cells p 1676 N95-23446
A controlled variation scheme for convection treatment in pressure-based algorithm p 1677 N95-23448
A wavenumber-partitioning scheme for two-dimensional statistical closures
|DE95-004514| p 1677 N95-23483
CFD parametric study of consortium impeller p 1680 N95-23626
On the accuracy of CFD-based pressure drop predictions for right-angle ducts p 1682 N95-23634
CFD modeling of turbulent duct flows for coolant channel analysis p 1682 N95-23635
Advanced multi-phase flow CFD model development for solid rocket motor flowfield analysis p 1683 N95-23638
Flow diagnostics, chemically reacting turbulent flow modeling and turbulent mixing: A summary of project studies in combustion
|NASA-CR-197348| p 1687 N95-24022
A computer model in general 3-D curvilinear coordinates for the prediction of the turbulent flow field in a jet induced ram combustor
|NAL-TR-1240T| p 1687 N95-24051
Bursting in the near-surface boundary layer: Comparisons between realistic models and observations
|DE95-003714| p 1741 N95-24078

TURBULENT MIXING
Flow diagnostics, chemically reacting turbulent flow modeling and turbulent mixing: A summary of project studies in combustion
|NASA-CR-197348| p 1687 N95-24022

TURBULENT WAKES
Direct numerical simulations and modeling of a spatially-evolving turbulent wake p 1687 N95-23289

TURING MACHINES
On helping by parity-like languages
|TR-553| p 1759 N95-23935
Logspace reducibility and self-reducibility: Models and equivalences
|TR-544| p 1760 N95-24059

TVD SCHEMES
Liquid propellant rocket engine combustion simulation with a time-accurate CFD method p 1676 N95-23445

TWO DIMENSIONAL FLOW
BEM solution to simulate the curvature driven deformation of a profile that is pressed into a plate of hot glass
|PB95-138913| p 1648 N95-23145
New robust multigrid method for 2D convection-diffusion problems
|PB95-138897| p 1789 N95-23176
On inertial range scaling laws
|DE95-004515| p 1677 N95-23484
User's guide for ECAP2D: An Euler unsteady aerodynamic and aeroelastic analysis program for two dimensional oscillating cascades, version 1.0
|NASA-CR-189146| p 1699 N95-24189

TWO DIMENSIONAL JETS
Instantaneous 2D velocity and temperature measurements in high speed flows based on spectrally resolved molecular Rayleigh scattering
|NASA-TM-106883| p 1688 N95-23461

TWO DIMENSIONAL MODELS
VLUGR2: A vectorizable adaptive grid solver for PDes in 2D
|PB95-136008| p 1789 N95-23167
Unification of some advection schemes in two dimensions
|NASA-CR-195044| p 1790 N95-23465
ROSAT observation program
|NASA-CR-197683| p 1866 N95-23595
The effect of magnetic field on the edge plasmons of two-dimensional electron gas systems
|DE94-018044| p 1837 N95-23982
Gyrokinetic and global fluid simulations of tokamak microturbulence and transport
|DE95-003628| p 1837 N95-24017

TWO PHASE FLOW
Influence of porosity and two-phase flow on diffusional/thermal instability of a deflagrating energetic material
|DE95-002592| p 1634 N95-23122
Current status in cavitation modeling p 1681 N95-23632
An interactive tool for discrete phase analysis in two-phase flows p 1683 N95-23641
Progress in advanced spray combustion code integration p 1637 N95-23644
Development of an atomization methodology for spray combustion p 1637 N95-23646

TYPE 3 BURSTS
Langmuir-like waves and radiation in planetary foreshocks
|NASA-CR-197376| p 1869 N95-22828

U

U.S.S.R.
GPS survey of the western Tien Shan
|NASA-CR-197901| p 1717 N95-22832

ULTRAHIGH FREQUENCIES
Utilizing a TDRS satellite for direct broadcast satellite-radio propagation experiments and demonstrations p 1622 N95-22814
The possibilities for mobile and fixed services up to the 20/30 GHz frequency bands p 1656 N95-22817

ULTRAHIGH VACUUM
Thermal outgassing studies on machinable tungsten and TZM molybdenum alloy
|DE95-002984| p 1638 N95-22592

ULTRASHORT PULSED LASERS
Production of high contrast ultrashort laser pulses for short scale length plasma experiments
|DE95-003640| p 1690 N95-22595

ULTRASONIC CLEANING
Calorimetric measurement of energy of ultrasonic cleaners
|DE95-003938| p 1800 N95-23375

ULTRASONIC RADIATION
Calorimetric measurement of energy of ultrasonic cleaners
|DE95-003938| p 1800 N95-23375

ULTRASONIC TESTS
High-temperature ultrasonic characterization of Ag-clad superconductor tapes
|DE95-002909| p 1838 N95-22530

ULTRAVIOLET ASTRONOMY
IUE observing programs: NSOSS, VEOEB, and PCOEB
|NASA-CR-197424| p 1866 N95-23560
Observational studies of the clearing phase in proto-planetary disk systems
|NASA-CR-197900| p 1866 N95-23561

ULTRAVIOLET RADIATION
The effect of simulated low earth orbit radiation on polyimides (UV degradation study) p 1651 N95-23903

ULTRAVIOLET SPECTRA
IUE observing programs: NSOSS, VEOEB, and PCOEB
|NASA-CR-197424| p 1866 N95-23560
Observational studies of the clearing phase in proto-planetary disk systems
|NASA-CR-197900| p 1866 N95-23561

ULTRAVIOLET SPECTROSCOPY
On the formation of iron(3) oxides via oxidation of iron(2)
|DE94-018392| p 1632 N95-22857
Advanced development of PV encapsulants
|DE95-000246| p 1728 N95-23062
Raman-shifting an ArF excimer laser to generate new lines for obtaining optical diagnostic based information in flow fields p 1692 N95-23303
Mass loss in the interacting semi-detached binary delta librae
|NASA-CR-197924| p 1866 N95-23402

UNDERWATER ACOUSTICS
Theoretical estimates of high frequency acoustic attenuation and backscattering from suspended sand particles in the ocean and in an estuary
|DSTO-TR-0078| p 1743 N95-23667

UNDERWATER ENGINEERING
Planetary stations and Abyssal Benthic Laboratories: An overview of parallel approaches for long-term investigation in extreme environments p 1752 N95-23732

UNDERWATER OPTICS
SeaWiFS technical report series. Volume 25: Ocean optics protocols for SeaWiFS validation, revision 1
|NASA-TM-104566-VOL-25-REV-| p 1743 N95-22671

UNDERWATER RESEARCH LABORATORIES
Planetary stations and Abyssal Benthic Laboratories: An overview of parallel approaches for long-term investigation in extreme environments p 1752 N95-23732

UNIFORM FLOW
Aeroacoustic computation of gust-blade interaction p 1800 N95-23313

UNIQUENESS
Time-periodic solutions of some forced nonlinear wave equations: Analysis, approximations and applications
|PB95-135083| p 1788 N95-22932
Regular graphs with four eigenvalues
|PB95-135141| p 1788 N95-23068

UNITED STATES
Closing the circle on the splitting of the atom: The environmental legacy of nuclear weapons production in the United States and what the Department of Energy is doing about it p 1818 N95-23562

UNIVERSAL TIME
Observation model and parameter partials for the JPL VLBI parameter estimation software MODEST, 19 94
|NASA-CR-197328| p 1756 N95-22853

UNIVERSE
Baryon number fluctuations in a quark-hadron phase transition
|DE94-628585| p 1804 N95-22786
Space Science for the 21st Century. Strategic Plan for 1995-2000
|NASA-TM-110546| p 1617 N95-22947
CDM and Omega in the local neighborhood
|DE95-003683| p 1868 N95-23570

UNIVERSITIES
1994 NASA-HU American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program
|NASA-CR-194972| p 1872 N95-23276
NASA university program management information system, FY 1994
|NASA-TM-110345| p 1856 N95-23364

UNIVERSITY PROGRAM
Langley Research Center Strategic Plan for Education p 1853 N95-23316
Teacher Enhancement Institute p 1853 N95-23324
NASA university program management information system, FY 1994
|NASA-TM-110345| p 1856 N95-23364
Integrating O/S models during conceptual design, part 2
|NASA-CR-197904| p 1622 N95-23399

UNIX (OPERATING SYSTEM)
Document image archive transfer from DOS to UNIX p 1761 N95-24117

UNSTEADY AERODYNAMICS
Flutter analysis of composite box beams
|NASA-CR-197931| p 1615 N95-23392
User's guide for ECAP2D: An Euler unsteady aerodynamic and aeroelastic analysis program for two dimensional oscillating cascades, version 1.0
|NASA-CR-189146| p 1699 N95-24189

UNSTEADY FLOW
A perspective on unstructured grid flow solvers
| NASA-CR-195025 | p 1788 N95-22931
A CFD study of complex missile and store configurations in relative motion
| NASA-CR-197912 | p 1612 N95-22949
Holographic interferometric tomography for reconstructing flow fields p 1690 N95-23287
Benchmark problems in computational aeroacoustics p 1800 N95-23315
Three-dimensional unsteady flow calculations in an advanced gas generator turbine p 1671 N95-23425
Numerical simulation of steady and unsteady viscous flow in turbomachinery using pressure based algorithm p 1671 N95-23426
Numerical study of the SSME nozzle flow fields during transient operations: A comparison of the animated results with test p 1673 N95-23434
Aerodynamic design and analysis of a highly loaded turbine exhaust p 1673 N95-23435
Liquid propellant rocket engine combustion simulation with a time-accurate CFD method p 1676 N95-23445
A time-accurate finite volume method valid at all flow velocities p 1676 N95-23447
Unsteady flow simulations in support of the SSME HEX turning vane cracking investigation with the ATD HPOTP p 1679 N95-23621
Time-accurate unsteady flow simulations supporting the SRM T+68-second pressure spike anomaly investigation (STS-54B) p 1685 N95-23650

UPPER ATMOSPHERE
Particle kinetic simulation of high altitude hypervelocity flight
| NASA-CR-197383 | p 1664 N95-22481

UPPER ATMOSPHERE RESEARCH SATELLITE (UARS)
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer
| NASA-CR-197368 | p 1735 N95-22482

URANIUM
Closing the circle on the splitting of the atom: The environmental legacy of nuclear weapons production in the United States and what the Department of Energy is doing about it p 1818 N95-23562

URANIUM OXIDES
A phenomenological model for the effect of nanocrystalline microstructure on irradiation-induced amorphization in U3Si
| DE95-004631 | p 1846 N95-24169

USER MANUALS (COMPUTER PROGRAMS)
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 1: HARP introduction and user's guide
| NASA-TP-3452-VOL-1 | p 1754 N95-22603
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 2: HARP tutorial
| NASA-TP-3452-VOL-2 | p 1755 N95-22604
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 4: HARP Output (HARPO) graphics display user's guide
| NASA-TP-3452-VOL-4 | p 1755 N95-22605
Extensible PDE Solvers package users manual
| DE95-003333 | p 1786 N95-22696
PRISMA GENIE data analysis manual
| PB95-130464 | p 1755 N95-22769
Long range targeting for space based rendezvous
| NASA-CR-197890 | p 1757 N95-23388
Enhanced analysis and users manual for radial-inflow turbine conceptual design code RTD
| NASA-CR-195454 | p 1609 N95-23462
User's guide and physics manual for the ScatPlus circuit code
| DE95-003755 | p 1663 N95-23479
GPP user's guide: A general-purpose postprocessor for wind turbine data analysis
| DE95-000293 | p 1730 N95-23776
User's guide for ECAP2D: An Euler unsteady aerodynamic and aeroelastic analysis program for two dimensional oscillating cascades, version 1.0
| NASA-CR-189146 | p 1699 N95-24189

USER REQUIREMENTS
Addendum to the Proceedings of the Third International Mobile Satellite Conference (IMSC 1993)
| NASA-CR-197343 | p 1655 N95-22813
The possibilities for mobile and fixed services up to the 20/30 GHz frequency bands p 1656 N95-22817
The next decade of space robotics p 1768 N95-23673
Software agents for the dissemination of remote terrestrial sensing data p 1721 N95-23675
Utilizing inheritance in requirements engineering p 1768 N95-23677
AMPHION: Specification-based programming for scientific subroutine libraries p 1761 N95-23680
Building a COTS archive for satellite data p 1861 N95-24132

UTILITIES
Evaluating photovoltaic applications: A guide for utilities
| DE95-003807 | p 1726 N95-22502

V

V-22 AIRCRAFT
Thin tailored composite wing for civil tiltrotor p 1613 N95-23317

VACUUM
Neutrinos with Zee-mass matrix in vacuum and matter
| DE94-628635 | p 1803 N95-22756

VACUUM DEPOSITION
Vacuum vapor deposition
| NASA-CASE-MFS-28652-1 | p 1647 N95-22558

VACUUM EFFECTS
Vaccum Gas Tungsten Arc Welding, phase 1
| NASA-CR-197979 | p 1696 N95-24064

VALUE
Marginalistic value for monotonic set games
| PB95-140646 | p 1794 N95-23239

VALVES
Navier-Stokes flow field analysis of compressible flow in a pressure relief valve p 1679 N95-23618

VANADIUM ALLOYS
Deformation of C15 Laves phase alloys
| DE95-003636 | p 1646 N95-24067
Experimental and theoretical studies on the C15 intermetallic compounds MV2 (M = Zr, Hf and Ta): Elasticity and phase stability
| DE95-003723 | p 1845 N95-24079
Effect of dynamically charged helium on mechanical properties of vanadium-base alloys
| DE95-004613 | p 1646 N95-24153

VANES
Phase 2: HGM air flow tests in support of HEX vane investigation p 1674 N95-23438
Unsteady flow simulations in support of the SSME HEX turning vane cracking investigation with the ATD HPOTP p 1679 N95-23621

VAPOR DEPOSITION
Large-area triple-junction a-Si alloy production scaleup
| DE95-000245 | p 1726 N95-22546
MOCVD of gallium and calcium sulfides for improved phosphor processing
| DE95-000918 | p 1631 N95-22677
Chemical vapor deposition in low pressure batch furnaces
| DE95-003035 | p 1632 N95-22722
Vapor deposition of thin-film Y-doped ZrO2 for electrochemical device applications
| DE95-003705 | p 1649 N95-23268
Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides
| DE95-004531 | p 1731 N95-24090
High energy collimating fine grids
| NASA-CR-197688 | p 1871 N95-24191

VAPOR PHASES
A generalized Eulerian-Lagrangian analysis, with application to liquid flows with vapor bubbles p 1682 N95-23633

VAPORS
Analytical Boltzmann moments for electrons in N2-O2-H2O gas mixtures
| DE95-003474 | p 1732 N95-22898
A generalized Eulerian-Lagrangian analysis, with application to liquid flows with vapor bubbles p 1682 N95-23633
NTS-spill test facility wind tunnel exhaust plume characterization
| DE95-003630 | p 1616 N95-24019

VARIABILITY
Spectral variations in a collection of AVIRIS imagery p 1707 N95-23879

VARIANCE (STATISTICS)
Objective determination of image end-members in spectral mixture analysis of AVIRIS data p 1709 N95-23888

VECTOR ANALYSIS
Algorithms for parallel and vector computations
| NASA-CR-197394 | p 1756 N95-23017

VECTOR MESONS
Once more about the omega approaches 3(pi) contact term
| DE94-633202 | p 1804 N95-22847
On pseudosupersymmetric oscillators and reality of relativistic energies for vector mesons p 1815 N95-22994
On parasupersymmetric oscillators and relativistic vector mesons in constant magnetic fields p 1815 N95-22995

VECTOR PROCESSING (COMPUTERS)
VLUGR2: A vectorizable adaptive grid solver for PDes in 2D
| PB95-136008 | p 1789 N95-23167

VECTOR QUANTIZATION
Reevaluation of the significance of sequence information for speech recognition
| TR-555 | p 1658 N95-23794

VECTOR SPACES
Countable space with a closed subspace without continuous extender
| PB95-127973 | p 1785 N95-22533
Vector bundles as direct images of line bundles
| DE94-628422 | p 1795 N95-22630
Phase space analysis in anisotropic optical systems p 1826 N95-23007
Degenerate Hamiltonian Hopf bifurcations
| PB95-138871 | p 1789 N95-23174

VECTORS (MATHEMATICS)
Two portable parallel tridiagonal solvers
| DE94-019044 | p 1763 N95-23243
An implementation of the QMR method based on coupled two-term recurrences
| NASA-CR-197956 | p 1791 N95-23612

VEGETATION
Basic data sets description and preliminary results of EFEDA-Spain
| PB95-139291 | p 1740 N95-23470
Estimating dry grass residues using landscape integration analysis p 1705 N95-23867
The red edge in arid region vegetation: 340-1060 nm spectra p 1708 N95-23881
Temporal changes in endmember abundances, liquid water and water vapor over vegetation at Jasper Ridge p 1708 N95-23882
Mapping and monitoring changes in vegetation communities of Jasper Ridge, CA, using spectral fractions derived from AVIRIS images p 1708 N95-23883

VEGETATION GROWTH
Plant metabolism and cell wall formation in space (microgravity) and on Earth
| NASA-CR-197618 | p 1745 N95-22801

VEGETATIVE INDEX
Investigations on the 1.7 micron residual absorption feature in the vegetation reflection spectrum p 1710 N95-23891
A comparison of spectral mixture analysis an NDVI for ascertaining ecological variables p 1710 N95-23892

VELOCITY DISTRIBUTION
Unsteady flow simulations in support of the SSME HEX turning vane cracking investigation with the ATD HPOTP p 1679 N95-23621

VELOCITY MEASUREMENT
Experimental study of vortex breakdown in a swirling water jet
| PB95-130407 | p 1665 N95-22767
High gain GaAs photoconductive semiconductor switches: Measurement of filament velocity and reduced trigger energy
| DE95-001884 | p 1661 N95-22844
7th International Symposium on Applications of Laser Techniques to Fluid Mechanics, volume 1
| AD-A285647 | p 1691 N95-23118
Impeller flow field characterization with a laser two-focus velocimeter p 1675 N95-23440
Detailed measurements in the SSME high pressure fuel turbine with smooth rotor blades p 1675 N95-23441
Instantaneous 2D velocity and temperature measurements in high speed flows based on spectrally resolved molecular Rayleigh scattering
| NASA-TM-106883 | p 1688 N95-23461

VENTILATION
Load calculation and system evaluation for electric vehicle climate control
| DE95-004350 | p 1695 N95-23358

VENUS (PLANET)
IUE observing programs: NSOSS, VEOEB, and PCOEB
| NASA-CR-197424 | p 1866 N95-23560

VENUS ATMOSPHERE
IUE observing programs: NSOSS, VEOEB, and PCOEB
| NASA-CR-197424 | p 1866 N95-23560

VERTICAL DISTRIBUTION
Tomographic analysis of the three-dimensional variation of the seismic velocity structure of the shallow crust underlying Southern New England
| AD-A279406 | p 1739 N95-23247
Edge fluctuation measurements by phase contrast imaging on DIII-D
| DE94-016681 | p 1836 N95-23768

VERTICAL LANDING
Flow visualization studies of VTOL aircraft models during Hover in ground effect
| NASA-TM-108860 | p 1607 N95-22666

VERTICAL TAKEOFF
Flow visualization studies of VTOL aircraft models during Hover in ground effect
[NASA-TM-108860] p 1607 N95-22666
VERTICAL TAKEOFF AIRCRAFT
Flow visualization studies of VTOL aircraft models during Hover in ground effect
[NASA-TM-108860] p 1607 N95-22666
VERY LARGE SCALE INTEGRATION
Current estimation for electromigration, hot carriers, and voltage drop
[AD-A285794] p 1659 N95-22507
VLSI for high-speed digital signal processing
[AD-A285643] p 1663 N95-23783
VERY LONG BASE INTERFEROMETRY
Observation model and parameter partials for the JPL VLBI parameter estimation software MODEST, 19 94
[NASA-CR-197328] p 1756 N95-22853
Multiband VLBI imaging of the jet in 3C 345
[PB95-139275] p 1866 N95-23468
High data rate recorder development at MIT Haystack Observatory p 1690 N95-24118
A terabyte linear tape recorder p 1690 N95-24139
VERY LOW FREQUENCIES
The effect of magnetic field on the edge plasmons of two-dimensional electron gas systems
[DE94-018044] p 1837 N95-23982
VHSIC (CIRCUITS)
Specification and verification of gate-level VHDL models of synchronous and asynchronous circuits
[NASA-CR-191608] p 1762 N95-22830
VIABILITY
The viability of establishing collaborative, reconfigurable research environments for the Human Performance Research Laboratory at NASA Ames
[NASA-CR-197384] p 1753 N95-22480
VIBRATION
Vibration-damping structural component
[AD-D016550] p 1693 N95-22707
Finite-difference solutions of the alternate turbopump development high-pressure oxidizer turbopump pump-end ball-bearing cavity flows p 1678 N95-23617
VIBRATION DAMPING
Vibration-damping structural component
[AD-D016550] p 1693 N95-22707
Active control of panel vibrations induced by a boundary layer flow
[NASA-CR-197867] p 1608 N95-23182
VIBRATION ISOLATORS
Hardware interface unit for control of shuttle RMS vibrations p 1697 N95-23706
VIBRATION MODE
Statistically generated weighted curve fit of residual functions for modal analysis of structures
[NASA-TM-108481] p 1699 N95-22950
Synchronous dynamics of a coupled shaft/bearing/housing system with auxiliary support from a clearance bearing: Analysis and experiment
[NASA-CR-197858] p 1695 N95-23214
VIBRATIONAL SPECTRA
Algebraic approach to the vibrational excitations in methane p 1814 N95-22960
Algebraic description of atom-molecule interactions p 1814 N95-22961
VIBRATIONAL STATES
Hydrogen vibrational density of states of adsorbed water on rare-earth modified zirconia
[DE95-001127] p 1632 N95-22681
Molecular vibrational states during a collision p 1814 N95-22964
Energy transfer dynamics in isolated and in colliding highly vibrationally excited molecules
[AD-A285771] p 1806 N95-23077
VIDEO COMMUNICATION
Automated synthesis of image processing procedures using AI planning techniques p 1779 N95-23745
VIDEO DATA
Video frame processor
[DE94-635414] p 1753 N95-23962
VIDEO EQUIPMENT
Method of encouraging attention by correlating video game difficulty with attention level
[NASA-CASE-LAR-15022-1] p 1749 N95-22579
Video frame processor
[DE94-635414] p 1753 N95-23962
VIDEO SIGNALS
Video frame processor
[DE94-635414] p 1753 N95-23962
VINYL POLYMERS
LDEF polymeric materials: A summary of Langley characterization p 1651 N95-23899
VIRTUAL MEMORY SYSTEMS
Distributed VIRtual System (DIVIRS) project
[NASA-CR-197855] p 1757 N95-23180
VIRTUAL REALITY
Virtual reality flight control display with six-degree-of-freedom controller and spherical orientation overlay
[NASA-CASE-NPO-18733-1-CU] p 1613 N95-22578
Commercialization of JPL Virtual Reality calibration and redundant manipulator control technologies p 1768 N95-23676
VISCOELASTIC DAMPING
Vibration-damping structural component
[AD-D016550] p 1693 N95-22707
VISCOELASTICITY
Nonlinear viscoelastic characterization of polymer materials using a dynamic-mechanical methodology p 1651 N95-23902
VISCOSITY
Development and verification of a resin film infusion/resin transfer molding simulation model for fabrication of advanced textile composites
[NASA-CR-197439] p 1648 N95-23179
VISCOUS FLOW
Quasistatic model for the motion of a viscous capillary liquid drop
[PB95-138848] p 1667 N95-23172
An assessment of viscous effects in computational simulation of benign and burst vortex flows on generic fighter wind-tunnel models using TEAM code
[NASA-CR-4650] p 1608 N95-23185
The initial-value problem for viscous channel flows
[NASA-CR-195034] p 1667 N95-23207
Preconditioning for the Navier-Stokes equations with finite-rate chemistry p 1670 N95-23421
Numerical simulation of steady and unsteady viscous flow in turbomachinery using pressure based algorithm p 1671 N95-23426
Three-dimensional viscous flow analysis inside a turbine volute p 1674 N95-23437
On the conservative interface treatment for multi-block viscous flow computations
[NASA-CR-195442] p 1677 N95-23451
VISCOUS FLUIDS
BEm-BDF scheme for curvature driven moving stokes flows
[PB95-138905] p 1667 N95-23144
VISIBILITY
Atmospheric correction of AVIRIS data of Monterey Bay contaminated by thin cirrus clouds p 1710 N95-23890
Assessing the relative contribution of biogenic and fossil processes to visibility scattering aerosols found in remote areas: Near-term Organic Research Program
[DE95-003149] p 1735 N95-24146
VISIBLE SPECTRUM
A proposed update to the solar irradiance spectrum used in LOWTRAN and MODTRAN p 1705 N95-23865
Relationships between pigment composition variation and reflectance for plant species from a coastal savannah in California p 1709 N95-23889
VISUAL ACUITY
Laser irradiation effects: A functional assessment
[AD-A285100] p 1691 N95-22937
VISUAL CONTROL
Visually guided grasping to study teleprogrammation within the BAROCO testbed p 1777 N95-23731
Mark Tracking: Position/orientation measurements using 4-circle mark and its tracking experiments p 1778 N95-23736
Vision-based planning and execution of precision grasps
[TR-546] p 1784 N95-24185
VISUAL DISCRIMINATION
Laser irradiation effects: A functional assessment
[AD-A285100] p 1691 N95-22937
VISUAL OBSERVATION
Material inspection of EURECA first findings and recommendations p 1637 N95-23804
Long term microparticle impact fluxes on LDEF determined from optical survey of Interplanetary Dust Experiment (IDE) sensors p 1623 N95-23826
Near infrared and optical spectroscopy of FSC10214+4724
[NASA-CR-197966] p 1828 N95-24068
VISUAL PERCEPTION
Laser irradiation effects: A functional assessment
[AD-A285100] p 1691 N95-22937
Real-time tracking using stereo and motion: Visual perception for space robotics p 1778 N95-23739
VISUAL SIGNALS
Cueing light configuration for aircraft navigation
[NASA-CASE-ARC-11982-1] p 1611 N95-23393
VISUAL STIMULI
Functions of external cues in prospective memory
[DOT/FAA/AM-95/9] p 1750 N95-24088
VITRIFICATION
Glass science tutorial: Lecture 1, Chemistry and properties of oxide glasses
[DE95-002963] p 1647 N95-22647
VLASOV EQUATIONS
Hot proton anisotropies and cool proton temperatures in the outer magnetosphere
[DE95-002719] p 1736 N95-22850
VOICE COMMUNICATION
Addendum to the Proceedings of the Third International Mobile Satellite Conference (IMSC 1993)
[NASA-CR-197343] p 1655 N95-22813
VOLCANOES
Classification of the LCVF AVIRIS test site with a Kohonen artificial neural network p 1706 N95-23874
Application of MAC-Europe AVIRIS data to the analysis of various alteration stages in the Landdmannalauger Hydrothermal Area (South Iceland) p 1709 N95-23885
Current and future use of TOPSAR digital topographic data for volcanological research p 1714 N95-23949
VOLCANOLOGY
Application of MAC-Europe AVIRIS data to the analysis of various alteration stages in the Landdmannalauger Hydrothermal Area (South Iceland) p 1709 N95-23885
Current and future use of TOPSAR digital topographic data for volcanological research p 1714 N95-23949
VOLTAGE CONVERTERS (DC TO DC)
A high-power switch-mode DC power supply for dynamic loads
[DE94-016714] p 1659 N95-22504
Liquid nitrogen temperature operation of a switching power converter
[NASA-TM-106867] p 1662 N95-23219
VOLTAGE REGULATORS
Investigation of arc length versus flange thickness while using an arc voltage controller
[DE95-003937] p 1695 N95-23374
VORTEX BREAKDOWN
Experimental study of vortex breakdown in a swirling water jet
[PB95-130407] p 1665 N95-22767
VORTICES
Study of the pressure field in rotating homogeneous turbulent flows
[PB94-189107] p 1665 N95-22585
Euler technology assessment for preliminary aircraft design employing OVERFLOW code with multiblock structured-grid method
[NASA-CR-4651] p 1608 N95-23095
An assessment of viscous effects in computational simulation of benign and burst vortex flows on generic fighter wind-tunnel models using TEAM code
[NASA-CR-4650] p 1608 N95-23185
The initial-value problem for viscous channel flows
[NASA-CR-195034] p 1667 N95-23207
Crossflow instability control on a swept-wing: Preliminary studies p 1609 N95-23283
Preliminary identification of buffet problems in high speed civil transport p 1616 N95-23319
Aerodynamic surface distension system for high angle of attack forebody vortex control
[NASA-CASE-ARC-11979-1] p 1612 N95-23390
Three-dimensional Navier-Stokes analysis and redesign of an imbedded bellmouth nozzle in a turbine cascade inlet section p 1671 N95-23423
A study of the vortex flow over 76/40-deg double-delta wing
[NASA-CR-195032] p 1677 N95-23466
VORTICITY
A wavenumber-partitioning scheme for two-dimensional statistical closures
[DE95-004514] p 1677 N95-23483
VULNERABILITY
Rationale for the Modular Air-system Vulnerability Estimation Network (MAVEN) methodology
[AD-A285797] p 1611 N95-22510
An automated computer misuse detection system for UNICOS
[DE95-000929] p 1762 N95-22680

W

WAFERS
Innovative technology for contamination control in plasma processing
[DE95-000913] p 1829 N95-22519
Chemical vapor deposition in low pressure batch furnaces
[DE95-003035] p 1632 N95-22722
Superconductivity devices: Commercial use of space
[NASA-CR-197885] p 1648 N95-22883
Measurement and analysis of scatter from silicon wafers
[DE95-002411] p 1827 N95-23531

WAKES
Advanced detector development, laboratory simulations, diagnostic development, and data analysis on wake physics
| PL-TR-94-2204 | p 1831 N95-22948
WALL FLOW
A wall interference assessment/correction system
| NASA-CR-197421 | p 1667 N95-23183
Development of an algebraic stress/two-layer model for calculating thrust chamber flow fields
p 1675 N95-23442
WALL PRESSURE
A wall interference assessment/correction system
| NASA-CR-197421 | p 1667 N95-23183
WALLS
Structural studies of complex carbohydrates of plant cell walls
| DE95-003099 | p 1748 N95-24075
WASTE DISPOSAL
Environmental, Safety, and Health Considerations: Composite Materials in the Aerospace Industry
| NASA-CP-3289 | p 1628 N95-23025
A roadmap for regulatory survival in the 1990s
p 1628 N95-23026
Chemical recycling of scrap composites
p 1629 N95-23034
Simulation and off-line programming systems comparison
| DE95-002267 | p 1766 N95-23078
The Louisiana State University waste-to-energy incinerator
| DE95-004417 | p 1728 N95-23344
Closing the circle on the splitting of the atom: The environmental legacy of nuclear weapons production in the United States and what the Department of Energy is doing about it p 1818 N95-23562
Characterization of Type 304L stainless steel solid-state closure welds for radioactive waste containment
| DE94-016539 | p 1645 N95-23980
WASTE TREATMENT
Biotransformation of an uncured composite material
p 1629 N95-23033
Life support systems analysis and technical trades for a lunar outpost
| NASA-TM-109927 | p 1751 N95-23194
Review of research results for the photocatalytic oxidation of hazardous wastes in air
| DE95-004004 | p 1734 N95-23480
WASTE UTILIZATION
Chemical recycling of scrap composites
p 1629 N95-23034
The Louisiana State University waste-to-energy incinerator
| DE95-004417 | p 1728 N95-23344
WASTE WATER
Resource recovery and epidemiology of anaerobic wastewater treatment process in a controlled ecological life support system
| NASA-CR-197930 | p 1751 N95-23474
WATER
Hydrogen vibrational density of states of adsorbed water on rare-earth modified zirconia
| DE95-001127 | p 1632 N95-22681
Study on possible environmental effects of a WBM cutting discharge in the north sea, one year after termination of drilling
| PB95-133740 | p 1733 N95-23125
Revitalization of the Gemenc-area, Baja, Hungary. 1: A study on hydrological possibilities to revitalise the ecosystem in the Keselyues-area. 2: Towards the restoration of the Gyueruesalj floodplain
| PB95-139283 | p 1718 N95-23469
Theoretical calculations of pressure broadening coefficients for H2O perturbed by hydrogen or helium gas
| NASA-CR-197345 | p 1636 N95-23545
A new containerless image furnace with electro-static positioning device p 1690 N95-23674
Monitoring land use and degradation using satellite and airborne data p 1707 N95-23880
Temporal changes in endmember abundances, liquid water and water vapor over vegetation at Jasper Ridge
p 1708 N95-23882
Airborne rotary air separator study
| NASA-CR-189099 | p 1614 N95-24053
WATER BALANCE
HAPEX-Sahel: Basic description of methods and data sets
| PB95-127262 | p 1701 N95-22639
Implementation of a soil-canopy scheme into the CSIRO GCM: Regional aspects of the model response
| CSIRO-TR-32 | p 1721 N95-24192
WATER COLOR
SeaWiFS technical report series. Volume 25: Ocean optics protocols for SeaWiFS validation, revision 1
| NASA-TM-104566-VOL-25-REV- | p 1743 N95-22671
WATER FLOW
Flow measuring structures
| PB95-127254 | p 1665 N95-22638
WATER MANAGEMENT
Flow measuring structures
| PB95-127254 | p 1665 N95-22638
WATER QUALITY
Effects of wind on rainfall simulation. Spatial distribution of water application, kinetic energy, and overland flow under single full-cone nozzle sprays
| PB95-127304 | p 1717 N95-22537
WATER TREATMENT
Life support systems analysis and technical trades for a lunar outpost
| NASA-TM-109927 | p 1751 N95-23194
Resource recovery and epidemiology of anaerobic wastewater treatment process in a controlled ecological life support system
| NASA-CR-197930 | p 1751 N95-23474
WATER VAPOR
Computer modeling of the sensitivity of a laser water vapor sensor to variations in temperature and air speed
p 1692 N95-23330
Temporal changes in endmember abundances, liquid water and water vapor over vegetation at Jasper Ridge
p 1708 N95-23882
Investigations on the 1.7 micron residual absorption feature in the vegetation reflection spectrum
p 1710 N95-23891
WATER WAVES
Measurement of ocean wave spectra using polarimetric AIRSAR data p 1715 N95-23953
WATERPROOFING
Robotic system for the servicing of the orbiter thermal protection system p 1697 N95-23724
WATERSHEDS
Synergy between optical and microwave remote sensing to derive soil and vegetation parameters from MAC Europe 1991 Experiment p 1715 N95-23956
WATERWAYS
Flow measuring structures
| PB95-127254 | p 1665 N95-22638
WAVE DEGRADATION
Using AVIRIS for in-flight calibration of the spectral shifts of SPOT-HRV and of AVHRR? p 1710 N95-23893
WAVE DISPERSION
Tomographic analysis of the three-dimensional variation of the seismic velocity structure of the shallow crust underlying Southern New England
| AD-A279406 | p 1739 N95-23247
WAVE EQUATIONS
Time-periodic solutions of some forced nonlinear wave equations: Analysis, approximations and applications
| PB95-135083 | p 1788 N95-22932
Pseudoclassical description of the Dirac Oscillator
p 1825 N95-22996
WAVE FRONTS
Observation model and parameter partials for the JPL VLBI parameter estimation software MODEST, 19 94
| NASA-CR-197328 | p 1756 N95-22853
WAVE FUNCTIONS
Berry phase by description of the quantum systems in the Kustaanheimo-Stiefel bundle
| DE94-628410 | p 1847 N95-22620
More about the q-deformed H-atom wave functions: Normal and abnormal series
| DE94-628434 | p 1801 N95-22643
Hadrons of arbitrary spin and heavy quark symmetry
| DE94-628597 | p 1804 N95-22789
An algebraic cluster model based on the harmonic oscillator basis p 1814 N95-22971
A Ramanujan-type measure for the Askey-Wilson polynomials p 1797 N95-22975
Coherent states for the relativistic harmonic oscillator
p 1825 N95-22993
Slightly anharmonic systems in quantum optics
p 1826 N95-23004
Bose condensation, macroscopic quantum phenomena and atomic spatial correlations in superfluid He-4
| PB95-139085 | p 1850 N95-23154
Spontaneous wave packet reduction
| DE94-634280 | p 1851 N95-23454
The point interactions in the quantum problem of three particles with internal structure
| DE94-635423 | p 1851 N95-23967
WAVE PACKETS
Spontaneous wave packet reduction
| DE94-634280 | p 1851 N95-23454
WAVE PROPAGATION
The propagation of travelling waves for stochastic generalized KPP equations
| DE94-628473 | p 1787 N95-22772
Utilizing a TDRS satellite for direct broadcast satellite-radio propagation experiments and demonstrations p 1622 N95-22814
Propagation of waves at the loosely bonded interface of two porous elastic half-spaces
| DE94-628477 | p 1800 N95-23018
Tomographic analysis of the three-dimensional variation of the seismic velocity structure of the shallow crust underlying Southern New England
| AD-A279406 | p 1739 N95-23247
Benchmark problems in computational aeroacoustics
p 1800 N95-23315
A generic efficient adaptive grid scheme for rocket propulsion modeling p 1670 N95-23418
WAVE SCATTERING
A uniform geometrical optics and an extended uniform geometrical theory of diffraction for evaluating high frequency EM fields near smooth caustics and composite shadow boundaries
| NASA-CR-197934 | p 1657 N95-23391
WAVEFORMS
Stability and efficiency of waveform relaxation methods
| PB95-138863 | p 1789 N95-23173
WAVEGUIDES
Supersymmetric oscillator in optics
p 1826 N95-23002
WAVELENGTHS
Using AVIRIS for in-flight calibration of the spectral shifts of SPOT-HRV and of AVHRR? p 1710 N95-23893
WAVELET ANALYSIS
Wavelet time-frequency analysis of phase-shift-key modulated signals
| AD-A285791 | p 1655 N95-22505
Hierarchical analysis of spatial pattern and processes of Douglas-fir forests p 1719 N95-24099
WEAK INTERACTIONS (FIELD THEORY)
Unification of electromagnetic, strong and weak interaction
| DE94-628570 | p 1655 N95-22746
WEAR TESTS
Evaluation of thermal barrier and PS-200 self-lubricating coatings in an air-cooled rotary engine
| NASA-CR-195445 | p 1614 N95-23222
WEATHER FORECASTING
SWIFT BOAT 1994: Using a fast chase boat to investigate offshore weather features in conjunction with WSR-88D observations
| PB94-195146 | p 1742 N95-22651
Annual tropical cyclone report, 1993
| AD-A285097 | p 1742 N95-23255
WEATHERING
Exfoliation corrosion and stress corrosion cracking behaviour of Al-Li alloys p 1641 N95-23498
WEIGHT (MASS)
Load calculation and system evaluation for electric vehicle climate control
| DE95-004350 | p 1695 N95-23358
WEIGHT REDUCTION
Weight minimization of structural components for launch in space shuttle
| NASA-TM-4586 | p 1698 N95-22805
Effect of the space environment on materials flown on the EURECA/TICCE-HVI experiment
p 1623 N95-23803
WEIGHTING FUNCTIONS
Statistically generated weighted curve fit of residual functions for modal analysis of structures
| NASA-TM-108481 | p 1699 N95-22950
On-line, adaptive state estimator for active noise control p 1784 N95-23308
On adaptive weighted polynomial preconditioning for Hermitian positive definite matrices
| NASA-CR-197946 | p 1791 N95-23547
WEIGHTLESSNESS
Self-generating oscillating pressure exercise device
| NASA-CASE-ARC-12000-1 | p 1751 N95-23264
Newton in space
| NASA-TM-110535 | p 1799 N95-23273
Toys in space, 2
| NASA-TM-110541 | p 1620 N95-23275
Microgravity combustion science: 1995 program update
| NASA-TM-106858 | p 1626 N95-24004
WELDABILITY
Vaccum Gas Tungsten Arc Welding, phase 1
| NASA-CR-197979 | p 1696 N95-24064
WELDED JOINTS
Vision-sensing image analysis for GTAW process control
| DE95-003936 | p 1695 N95-23373
Investigation of arc length versus flange thickness while using an arc voltage controller
| DE95-003937 | p 1695 N95-23374
Explosive bonding and its application in the Advanced Photon Source front-end and beamline components design
| DE95-004132 | p 1696 N95-23397

Characterization of Type 304L stainless steel solid-state closure welds for radioactive waste containment
| DE94-016539 | p 1645 N95-23980

WELDED STRUCTURES
Long-term aging of type 308 stainless steel welds: Effects on properties and microstructure
| DE94-018961 | p 1640 N95-23132

WELDING
Vaccum Gas Tungsten Arc Welding, phase 1
| NASA-CR-197979 | p 1696 N95-24064

WETTING
Sullivan model for wetting transition in closed system
| DE94-628472 | p 1665 N95-22771

WHISKERS (CRYSTALS)
Whisker/Cone growth on the thermal control surfaces experiment no. S0069 p 1651 N95-23911

WHITE NOISE
The propagation of travelling waves for stochastic generalized KPP equations
| DE94-628473 | p 1787 N95-22772

WIDE ANGLE LENSES
Automatic commanding of the Mars Observer Camera p 1620 N95-23754

WIENER FILTERING
Tutorial on filtering, restoration, and state estimation
| TR-534 | p 1793 N95-24042

WIGGLER MAGNETS
Undulators for short wavelength FEL amplifiers
| DE95-004690 | p 1692 N95-23487

WIGNER COEFFICIENT
Coherent state constructions of bases for some physically relevant group chains p 1814 N95-22966

WILDLIFE
Geographic information analysis: An ecological approach for the management of wildlife on the forest landscape
| NASA-CR-197941 | p 1719 N95-24094
Old-growth and mature forests near spotted owl nests in western Oregon p 1719 N95-24098
Forest and wildlife habitat analysis using remote sensing and geographic information systems p 1720 N95-24100

WIND (METEOROLOGY)
HAPEX-Sahel: Basic description of methods and data sets
| PB95-127262 | p 1701 N95-22639
Conjugate gradient MATHEW
| DE95-003479 | p 1738 N95-23143

WIND DIRECTION
Applied research on air pollution using nuclear-related analytical techniques
| DE94-633513 | p 1734 N95-23542

WIND EFFECTS
Effects of wind on rainfall simulation. Spatial distribution of water application, kinetic energy, and overland flow under single full-cone nozzle sprays
| PB95-127304 | p 1717 N95-22537
A numerical study of interannual wind forcing effects on the California current system, 1980-1983
| AD-A286023 | p 1743 N95-23074
AIRSAR views of aerolian terrain p 1713 N95-23941

WIND EROSION
Monitoring land use and degradation using satellite and airborne data p 1707 N95-23880

WIND MEASUREMENT
Continued studies of polar cap thermospheric dynamics
| PL-TR-94-2076 | p 1737 N95-22951
The effect of sensor spacing on wind measurements at the Shuttle Landing Facility
| NASA-TP-3529 | p 1742 N95-23010

WIND PRESSURE
The spectral content of the torque loads on a turbine gear tooth
| DE95-002188 | p 1694 N95-23056

WIND SHEAR
Maximum-likelihood spectral estimation and adaptive filtering techniques with application to airborne Doppler weather radar
| NASA-CR-197699 | p 1658 N95-23670

WIND TUNNEL MODELS
Dynamic response tests of inertial and optical wind-tunnel model attitude measurement devices
| NASA-TM-109182 | p 1616 N95-23011
Four-nozzle benchmark wind tunnel model USA code solutions for simulation of multiple rocket base flow recirculation at 145,000 feet altitude p 1686 N95-23654

WIND TUNNEL NOZZLES
Optimized design of a hypersonic nozzle p 1617 N95-23304
Three-dimensional Navier-Stokes analysis and redesign of an imbedded bellmouth nozzle in a turbine cascade inlet section p 1671 N95-23423
Supersonic laminar flow control research
| NASA-CR-197938 | p 1609 N95-23669

WIND TUNNEL TESTS
Wing pressure distributions from subsonic tests of a high-wing transport model --- in the Langley 14- by 22-Foot Subsonic Wind Tunnel
| NASA-TM-4583 | p 1607 N95-22802
Dynamic response tests of inertial and optical wind-tunnel model attitude measurement devices
| NASA-TM-109182 | p 1616 N95-23011
Experimental technique and assessment for measuring the convective heat transfer coefficient from natural ice accretions
| NASA-TM-106864 | p 1668 N95-23248
Experimental results for a hypersonic nozzle/afterbody flow field
| NASA-TM-4638 | p 1609 N95-23250
Performance of the 0.3-meter transonic cryogenic tunnel with air, nitrogen, and sulfur hexafluoride media under closed loop automatic control
| NASA-CR-195052 | p 1668 N95-23257
Crossflow instability control on a swept-wing: Preliminary studies p 1609 N95-23283
Preliminary identification of buffet problems in high speed civil transport p 1616 N95-23319
Instantaneous 2D velocity and temperature measurements in high speed flows based on spectrally resolved molecular Rayleigh scattering
| NASA-TM-106883 | p 1688 N95-23461
A study of the vortex flow over 76/40-deg double-delta wing
| NASA-CR-195032 | p 1677 N95-23466
Four-nozzle benchmark wind tunnel model USA code solutions for simulation of multiple rocket base flow recirculation at 145,000 feet altitude p 1686 N95-23654

WIND TUNNEL WALLS
A wall interference assessment/correction system
| NASA-CR-197421 | p 1667 N95-23183

WIND TUNNELS
NTS-spill test facility wind tunnel exhaust plume characterization
| DE95-003630 | p 1616 N95-24019

WIND TURBINES
Application requirements for wind turbine gearboxes
| DE94-011883 | p 1694 N95-22923
The spectral content of the torque loads on a turbine gear tooth
| DE95-002188 | p 1694 N95-23056
GPP: A General-Purpose Post Processor for wind turbine data analysis
| DE95-000223 | p 1729 N95-23383
GPP user's guide: A general-purpose postprocessor for wind turbine data analysis
| DE95-000293 | p 1730 N95-23776

WIND VARIATIONS
Long term variability of B supergiant winds
| NASA-CR-197925 | p 1865 N95-23401

WIND VELOCITY
The effect of sensor spacing on wind measurements at the Shuttle Landing Facility
| NASA-TP-3529 | p 1742 N95-23010
Format( )MEDIC( )Input
| DE95-003482 | p 1737 N95-23063
A numerical study of interannual wind forcing effects on the California current system, 1980-1983
| AD-A286023 | p 1743 N95-23074
NTS-spill test facility wind tunnel exhaust plume characterization
| DE95-003630 | p 1616 N95-24019

WINDING
Planar magnetic component development
| DE95-003311 | p 1661 N95-22896

WINDPOWER UTILIZATION
Renewable Energy Sources Brno 1993
| DE94-633975 | p 1727 N95-22855
Hydrogen and fuel cells for energy storage
| DE95-723907 | p 1729 N95-23382

WINDS ALOFT
Modeling of the coupled magnetospheric and neutral wind dynamos
| NASA-CR-197861 | p 1738 N95-23090

WINGS
Wing pressure distributions from subsonic tests of a high-wing transport model --- in the Langley 14- by 22-Foot Subsonic Wind Tunnel
| NASA-TM-4583 | p 1607 N95-22802
Control of flow separation in airfoil/wing design applications p 1609 N95-23294
High-lift flow-physics flight experiments on a subsonic civil transport aircraft (B737-100) p 1609 N95-23333
Lift enhancing tabs for airfoils
| NASA-CASE-ARC-11990-1 | p 1613 N95-23395

WIRE
Two-photon absorption in an indirect-gap semiconductor quantum well systems 1. Interband transitions
| DE94-628879 | p 1849 N95-22760
Two-photon absorption in an indirect-gap semiconductor quantum well systems 2. Excitonic transitions
| DE94-628880 | p 1849 N95-22761

WIRE CLOTH
Passive intermodulation generation in wire mesh deployable reflector antennas p 1656 N95-22816

WORD PROCESSING
Phonetic set hashing: A novel scheme for transforming phone sequences to words
| TR-538 | p 1658 N95-24039

WORDS (LANGUAGE)
Phonetic set hashing: A novel scheme for transforming phone sequences to words
| TR-538 | p 1658 N95-24039

WORKING FLUIDS
Current status in cavitation modeling p 1681 N95-23632

WORKSTATIONS
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 3: HARP Graphics Oriented (GO) input user's guide
| NASA-TP-3452-VOL-3 | p 1753 N95-22479
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 2: HARP tutorial
| NASA-TP-3452-VOL-2 | p 1755 N95-22604
HiRel: Hybrid Automated Reliability Predictor (HARP) integrated reliability tool system, (version 7.0). Volume 4: HARP Output (HARPO) graphics display user's guide
| NASA-TP-3452-VOL-4 | p 1755 N95-22605
Performance of single-keyword and multiple-keyword pattern matching algorithms
| PB95-138954 | p 1756 N95-23150
JPL space robotics: Present accomplishments and future thrusts p 1697 N95-23697

WOVEN COMPOSITES
Idealized textile composites for experimental/analytical correlation p 1631 N95-23277

X

X RAY ABSORPTION
Solvation of isolated transition metal ions
| DE95-002978 | p 1638 N95-22571
Ligand K-edge x-ray adsorption spectroscopic studies of the electronic structure of inorganic model complexes and metalloprotein active sites
| DE95-003338 | p 1840 N95-22851

X RAY ANALYSIS
X-ray transmission microscope development
| NASA-CR-197884 | p 1826 N95-23016
Germination, growth rates, and electron microscope analysis of tomato seeds flown on the LDEF p 1748 N95-23821
Debris and meteoroid proportions deduced from impact crater residue analysis p 1869 N95-23834
Micro-abrasion package capture cell experiment on the trailing edge of LDEF: Impactor chemistry and whipple bumper shield efficiencies p 1624 N95-23835
Microstructure and composition of a SNS Josephson junction using CaRuO3 as the metallic barrier
| DE95-004611 | p 1845 N95-24152

X RAY DETECTORS
Runaway electrons in TEXT-U
| DE94-019218 | p 1831 N95-22862

X RAY DIFFRACTION
Nondestructive evaluation of fatigue damage in aluminum 2024 by x-ray diffraction p 1698 N95-23293

X RAY IMAGERY
On-orbit science in a small package: Managing the ALEXIS satellite and experiments
| DE94-014426 | p 1621 N95-22868

X RAY INSPECTION
POD assessment of NDI procedures using a round robin test
| AGARD-R-809 | p 1697 N95-23602

X RAY LASERS
Ninth topical conference on atomic processes in plasmas
| DE95-002810 | p 1833 N95-23246

X RAY OPTICS
Preserving the high source brightness with x ray beam line optics
| DE95-003172 | p 1820 N95-22877
Development of microchannel plate x-ray optics
| NASA-CR-197935 | p 1866 N95-23540

X RAY SCATTERING
Protein folding and protein metallocluster studies using synchrotron small angler x ray scattering
| DE95-003339 | p 1746 N95-22897

Small angle x ray scattering studies of aggregation in supercritical fluid solutions
[DE95-004576] p 1843 N95-23579

X RAY SOURCES
Protein folding and protein metallocluster studies using synchrotron small angler x ray scattering
[DE95-003339] p 1746 N95-22897
X-ray transmission microscope development
[NASA-CR-197884] p 1826 N95-23016
A study of EUV emission from the O4f star Zeta Puppis
[NASA-CR-197350] p 1871 N95-23472

X RAY SPECTRA
KKR-CPA calculations of density of states and soft X ray emission from disordered Li-Mg alloys
[DE94-628882] p 1640 N95-22934

X RAY SPECTROSCOPY
Long range potentials and multiple scattering theory in complex systems
[DE94-628881] p 1804 N95-22791
Transmission electron microscope studies of extraterrestrial materials
[NASA-CR-188363] p 1633 N95-23092
Atomic physics at high brilliance synchrotron sources: Proceedings
[DE95-006077] p 1813 N95-24174

X RAY TELESCOPES
On-orbit science in a small package: Managing the ALEXIS satellite and experiments
[DE94-014426] p 1621 N95-22868

X RAYS
Preserving the high source brightness with x ray beam line optics
[DE95-003172] p 1820 N95-22877
KKR-CPA calculations of density of states and soft X ray emission from disordered Li-Mg alloys
[DE94-628882] p 1640 N95-22934
ROSAT observation program
[NASA-CR-197683] p 1866 N95-23595
A simple, closed-form expression for the x ray reflectivity from superlattices with cumulative roughness
[DE95-004633] p 1846 N95-24170

X-29 AIRCRAFT
Flight test of the X-29A at high angle of attack: Flight dynamics and controls
[NASA-TP-3537] p 1612 N95-22806

XENON
NASA 30 cm ion thruster development status
[NASA TM-106842] p 1624 N95-23221
Temperature effects on ion irradiation damage in MgAl2O4 spinel single crystals
[DE95-003679] p 1844 N95-24073

Y

YAG LASERS
Measurements of striae in CR+ doped YAG laser crystals p 1847 N95-23285

YANG-MILLS THEORY
Continuous local symmetry in Ising-type models
[DE94-629045] p 1839 N95-22649
Lectures on 2D gauge theories. Topological aspects and path integral techniques
[DE94-628509] p 1849 N95-22752

YAW
Pitch sensor system
[AD-D016488] p 1799 N95-22863
Feedback control laws for highly maneuverable aircraft
[NASA-CR-197944] p 1615 N95-23410

YBCO SUPERCONDUCTORS
Initial crystallization and growth in melt processing of large-domain YBa2Cu3O(x) for magnetic levitation
[DE95-002993] p 1839 N95-22572
A study of ceramic composite of ferroelectric BaTiO3 ceramic and superconductor YBa2Cu3O(6+delta) ceramic
[DE94-627563] p 1647 N95-22610
Microstructure and composition of a SNS Josephson junction using CaRuO3 as the metallic barrier
[DE95-004611] p 1845 N95-24152
Processing of single- and multi-domain YBa2Cu3O(x) bulk materials for levitation applications by Nd(1+x)Ba(2-x)Cu3O(y) seeding
[DE95-004615] p 1845 N95-24154

YIELD POINT
A ruggedness evaluation of procedures for damage threshold testing optical materials
[NASA-TM-4639] p 1840 N95-22803

YTTRIA-STABILIZED ZIRCONIA
Vapor deposition of thin-film Y-doped ZrO2 for electrochemical device applications
[DE95-003705] p 1649 N95-23268

YTTRIUM
Evolution of oxidation and creep damage mechanisms in HIPed silicon nitride materials
[DE95-001360] p 1647 N95-22689

YTTRIUM OXIDES
Preparation of high quality YBa2Cu3O(7-delta) thick films on flexible Ni-based alloy substrates with textured buffer layers
[DE95-003686] p 1645 N95-23571

Z

ZEOLITES
NO decomposition in non-reducing atmospheres
[DE95-004324] p 1634 N95-23339

ZINC
The corrosion protection of 2219-T87 aluminum by organic and inorganic zinc-rich primers
[NASA-TP-3543] p 1641 N95-23186

ZINC SELENIDES
Annealing of nitrogen-doped ZnSe at high pressures: Toward suppression of native defect formation
[DE95-003420] p 1844 N95-24010

ZIRCONIUM ALLOYS
Experimental and theoretical studies on the C15 intermetallic compounds MV2 (M = Zr, Hf and Ta): Elasticity and phase stability
[DE95-003723] p 1845 N95-24079

ZIRCONIUM OXIDES
Performance of thin-ceramic-coated combustion chamber with gasoline and methanol as fuels in a two-stroke SI engine
[DE95-002903] p 1693 N95-22557
Hydrogen vibrational density of states of adsorbed water on rare-earth modified zirconia
[DE95-001127] p 1632 N95-22681
Transformation behavior in Al2O3-ZrO2 ceraamic composites
[DE95-001359] p 1647 N95-22688
High resolution microstructural analysis of zirconia eutectic interfaces
[DE95-003143] p 1845 N95-24143

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing

ACKERMAN, PHILLIP L. ..... p 147 N95-10536

PERSONAL AUTHOR | PAGE NUMBER | ACCESSION NUMBER

Listings in this index are arranged alphabetically by personal author. The page number helps you locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

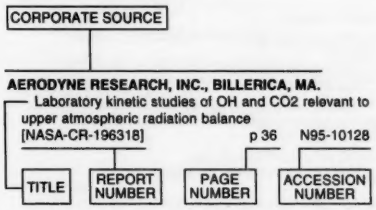
Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The accession number denotes the number by which the citation is identified. The page number helps you locate the citation in the abstract section. The titles are arranged under each corporate source in ascending accession number order.

A

ACADEMIA R. P. R., BUCHAREST (ROMANIA).
Wigner distribution function and entropy of the damped harmonic oscillator within the theory of the open quantum systems p 1798 N95-22990

ACADEMY OF SCIENCES (USSR), NOVOSIBIRSK (USSR).
Once more about the omega approaches 3(pi) contact term
|DE94-633202| p 1804 N95-22847
The project of high free electron laser using race-track microtron-recuperator
|DE94-634034| p 1692 N95-23657

ACADEMY OF SCIENCES (USSR), VLADIVOSTOK (USSR).
Coherent control in simple quantum systems p 1826 N95-23005

ACCUWAVE CORP., SANTA MONICA, CA.
Optical image correlator using orthogonal data storage
|AD-A285795| p 1819 N95-22508

ADHERENT TECHNOLOGIES, INC., ALBUQUERQUE, NM.
Chemical recycling of scrap composites p 1629 N95-23034

ADVANCED SCIENTIFIC COMPUTING CORP., EL DORADO HILLS, CA.
Comparison between predicted and experimentally measured flow fields at the exit of the SSME HPFTP impeller p 1679 N95-23622

ADVISORY GROUP FOR AERONAUTICAL RESEARCH AND DEVELOPMENT, OXFORD (ENGLAND).
POD assessment of NDI procedures using a round robin test
|AGARD-R-809| p 1697 N95-23602

ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).
Corrosion detection and management of advanced airframe materials
|AGARD-CP-565| p 1641 N95-23496
Knowledge-based guidance and control functions
|AGARD-AR-325| p 1751 N95-23601

AERO THERMO TECHNOLOGY, INC., HUNTSVILLE, AL.
Preconditioning for the Navier-Stokes equations with finite-rate chemistry p 1670 N95-23421

AEROJET-GENERAL CORP., SACRAMENTO, CA.
GGOT total pressure loss control concept evaluation p 1672 N95-23427

AEROSOFT, INC., BLACKSBURG, VA.
Towards a generalized computational fluid dynamics technique for all Mach numbers p 1670 N95-23420

AEROSPACE CORP., EL SEGUNDO, CA.
An explanation for tailward flows with positive B(sub z) in the distant tail neutral sheet during quite times
|ATR-95(7270)-1| p 1740 N95-23933

AEROSPACE CORP., LOS ANGELES, CA.
Simulation of landsat thematic mapper imagery using AVIRIS hyperspectral imagery p 1705 N95-23869

AEROSPATIALE, TOULOUSE (FRANCE).
Corrosion in service experience with aircraft in France p 1645 N95-23518

AGRICULTURAL RESEARCH SERVICE, BELTSVILLE, MD.
Spectral variations in a collection of AVIRIS imagery p 1707 N95-23879

AIR FORCE ACADEMY, CO.
Method development for compensating temperature effects in pressure sensitive paint measurements p 1650 N95-23291

AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OH.
Modeling aerosol emissions from the combustion of composite materials p 1629 N95-23038

AIR FORCE SYSTEMS COMMAND, MCCLELLAN AFB, CA.
Mishap risk control for advanced aerospace/composite materials p 1628 N95-23031

AIR PRODUCTS AND CHEMICALS, INC., ALLENTOWN, PA.
Organic coating technology for the protection of aircraft against corrosion p 1644 N95-23513

ALABAMA A & M UNIV., NORMAL, AL.
Genetic effects on heavy ions in drosophila
|NASA-CR-197916| p 1746 N95-22911

ALABAMA UNIV., HUNTSVILLE, AL.
Computational modeling of properties
|NAS-CR-196544| p 1841 N95-22907
Magnetospheric space plasma investigations
|NASA-CR-197405| p 1831 N95-22955
The high latitude ionosphere-magnetosphere transition region: Simulation and data comparison
|NASA-CR-197404| p 1737 N95-22956
Semikinetic modeling and observations of high-latitude plasma outflow
|NASA-CR-197403| p 1831 N95-23008
X-ray transmission microscope development
|NASA-CR-197884| p 1826 N95-23016
Task scheduling in dataflow computer architectures p 1753 N95-23301
Development of an algebraic stress/two-layer model for calculating thrust chamber flow fields p 1675 N95-23442
USML-1 microgravity glovebox experiment no. 1 Passive Accelerometer System
|NASA-CR-196575| p 1653 N95-23552
Growth of single crystals of organic salts with large second-order optical nonlinearities by solution processes for devices
|NASA-CR-197963| p 1843 N95-23563
Development of an atomization methodology for spray combustion p 1637 N95-23646
USML-1 Glovebox experiments
|NASA-CR-196574| p 1653 N95-24028
PRISM Spectrograph Optical Design
|NASA-CR-197965| p 1828 N95-24035

ALABAMA UNIV., TUSCALOOSA, AL.
Design and application of electromechanical actuators for deep space missions
|NASA-CR-197957| p 1694 N95-22909
Theoretical studies of spectroscopic problems of importance for atmospheric radiation measurements p 1741 N95-23329

ALABAMA UNIV., UNIVERSITY, AL.
Magnetic resonance and optical spectroscopic studies of carotenoids
|DE95-003729| p 1631 N95-22575

ALASKA UNIV., FAIRBANKS, AK.
ASF archive issues: Current status, past history, and questions for the future p 1861 N95-24133

ALCATEL ESPACE, TOULOUSE (FRANCE).
Terrain modelling and motion planning for an autonomous exploration rover p 1721 N95-23765

ALLIED-SIGNAL AEROSPACE CO., KANSAS CITY, MO.
Progress report on a fully automatic Gas Tungsten Arc Welding (GTAW) system development
|DE95-004397| p 1695 N95-23343
Vision-sensing image analysis for GTAW process control
|DE95-003936| p 1695 N95-23373
Investigation of arc length versus flange thickness while using an arc voltage controller
|DE95-003937| p 1695 N95-23374
Calorimetric measurement of energy of ultrasonic cleaners
|DE95-003938| p 1800 N95-23375

ALTAI STATE UNIV., BARNAUL (USSR).
Structure and properties of polymeric composite materials during 1501 days outer space exposure at Salyut-7 orbital station p 1652 N95-23915

AMERICAN CHEMICAL SOCIETY, WASHINGTON, DC.
Oxidants and oxidation in the Earth's atmosphere
|NASA-CR-197945| p 1734 N95-23460

APPLIED RESEARCH CORP., LANDOVER, MD.
Long term variability of B supergiant winds
|NASA-CR-197925| p 1865 N95-23401
A study of EUV emission from the O4f star Zeta Puppis
|NASA-CR-197350| p 1871 N95-23472
Observational studies of the clearing phase in proto-planetary disk systems
|NASA-CR-197900| p 1866 N95-23561

ARGONNE NATIONAL LAB., IL.
High-temperature ultrasonic characterization of Ag-clad superconductor tapes
|DE95-002909| p 1838 N95-22530
Structure, melting, and reactivity of nickel clusters from numerical simulations
|DE95-002911| p 1638 N95-22531
The influence of high-octane fuel blends on the performance of a two-stroke SI engine with knock-limited-compression ratio
|DE95-002902| p 1692 N95-22556
Performance of thin-ceramic-coated combustion chamber with gasoline and methanol as fuels in a two-stroke SI engine
|DE95-002903| p 1693 N95-22557
Support research for solid oxide fuel cells
|DE95-002910| p 1726 N95-22568
Conceptual design of a 20-kA current lead using forced-flow cooling and Ag-alloy-sheathed Bi-2223 high-temperature superconductors
|DE95-002916| p 1660 N95-22569
A worst-case example using linesearch methods for numerical optimization with inexact gradient evaluations
|DE95-002917| p 1754 N95-22570
Solvation of isolated transition metal ions
|DE95-002978| p 1638 N95-22571
Initial crystallization and growth in melt processing of large-domain YBa2Cu3O(x) for magnetic levitation
|DE95-002993| p 1839 N95-22572
Neutrino oscillation experiments with atmospheric neutrinos
|DE95-002994| p 1801 N95-22573
Thermal outgassing studies on machinable tungsten and TZM molybdenum alloy
|DE95-002984| p 1638 N95-22592
Surface impedance studies on the electrodynamical response of organic superconductors
|DE95-002986| p 1660 N95-22593
X-ray diffraction characterization of defect behavior in nanocrystalline nickel during annealing
|DE95-002992| p 1639 N95-22594

Hydrogen vibrational density of states of adsorbed water on rare-earth modified zirconia
| DE95-001127 | p 1632 N95-22681
Software for the generalized eigenproblem on distributed memory architectures
| DE95-002999 | p 1755 N95-22690
Extensible PDE Solvers package users manual
| DE95-003333 | p 1786 N95-22696
Photoemission study of quantum confinement by a finite barrier: Cu/Co(wedge)/Cu(100)
| DE95-002913 | p 1840 N95-22762
Evaluation of neutron techniques for illicit substance detection
| DE95-002988 | p 1632 N95-22764
Computer simulation of the structure of ionic surfaces and interfaces
| DE95-002991 | p 1804 N95-22792
On the formation of iron(3) oxides via oxidation of iron(2)
| DE94-018392 | p 1632 N95-22857
Computation of magnetic forces on moving conductors by using ELEKTRA and other 3-D computer codes
| DE95-003308 | p 1798 N95-22895
Activation of the jun-D gene in human myeloid cells by 1-(beta)-D-arabinofuranosylcytosine
| DE94-016591 | p 1746 N95-22912
Rearrangement of RAG-1 recombinase gene in radiation-sensitive wasted mice
| DE94-017083 | p 1746 N95-22913
Design and production of efficient current leads for 1500-A, 50-Hz service in a 77-4 K temperature gradient
| DE95-004121 | p 1662 N95-23355
Explosive bonding and its application in the Advanced Photon Source front-end and beamline components design
| DE95-004132 | p 1696 N95-23397
Squeezing out all the performance: Using Ingres for a C(sup 3)I reporting system
| DE95-004591 | p 1857 N95-23490
Time-resolved EPR studies of the H atom: A stable heavy isotope of muonium
| DE95-004614 | p 1810 N95-23491
Thermal effects on the STAR electromagnetic calorimeter
| DE95-004663 | p 1688 N95-23492
Advances in research for solid oxide fuel cells
| DE95-004590 | p 1730 N95-23582
The STAR EM calorimeter design and small prototype test results
| DE95-004592 | p 1689 N95-23583
Long-baseline neutrino oscillation experiments
| DE95-004636 | p 1870 N95-23584
Phonon-induced anomalous specific heat of a model nanocrystal by computer simulation
| DE95-004653 | p 1843 N95-23585
NMR study of nanophase Al/Al-oxide powder and consolidated composites
| DE95-004655 | p 1843 N95-23586
Electromagnetic production of pions on the nucleon
| DE95-004658 | p 1811 N95-23587
A comparative study of the effects of clofibrate, ciprofibrate, WY-14,643, and di-(2-ethylhexyl)-phthalate on liver protein expression in mice
| DE94-016587 | p 1748 N95-23771
Energy efficiency of electric vehicles at the 1994 American Tour de Sol
| DE95-002905 | p 1664 N95-24070
Effects of Bi and Bi2O3 additions on the microstructure and superconducting properties of powder-in-tube BSCCO (2212) tapes
| DE95-004605 | p 1845 N95-24150
Atoms as many-body systems
| DE95-004609 | p 1813 N95-24151
Microstructure and composition of a SNS Josephson junction using CaRuO3 as the metallic barrier
| DE95-004611 | p 1845 N95-24152
Effect of dynamically charged helium on mechanical properties of vanadium-base alloys
| DE95-004613 | p 1646 N95-24153
Processing of single- and multi-domain YBa2Cu3O(x) bulk materials for levitation applications by Nd(1+x)Ba(2-x)Cu3O(y) seeding
| DE95-004615 | p 1845 N95-24154
Some thoughts of future experiments with the new generation of storage rings
| DE95-004602 | p 1818 N95-24162
Design of a high-temperature superconductor current lead for electric utility SMES
| DE95-004604 | p 1664 N95-24163
Ultrafast, high precision gated integrator
| DE95-004616 | p 1664 N95-24164
Beryllium in the ITER blanket
| DE95-004620 | p 1837 N95-24165
Scale-invariant Lipatov kernels from t-channel unitarity
| DE95-004625 | p 1813 N95-24166
Modeling of tritium recovery from lithium ceramics
| DE95-004626 | p 1838 N95-24167
Epitaxial growth of bcc transition metal films and superlattices onto MgO (111), (011) and (001) substrates
| DE95-004629 | p 1846 N95-24168
A phenomenological model for the effect of nanocrystalline microstructure on irradiation-induced amorphization in U3Si
| DE95-004631 | p 1846 N95-24169
A simple, closed-form expression for the x ray reflectivity from superlattices with cumulative roughness
| DE95-004633 | p 1846 N95-24170
Cooling rate effects on the microstructure, critical current density, and (T(sub c)) transition of one- and two-powder BSCCO-2223 Ag sheathed tapes
| DE95-004639 | p 1846 N95-24171
Scalable, extensible, and portable numerical libraries
| DE95-004643 | p 1765 N95-24172
Dependence of the Josephson coupling of unconventional superconductors on the properties of the tunneling barrier
| DE95-004649 | p 1846 N95-24173
Atomic physics at high brilliance synchrotron sources: Proceedings
| DE95-006077 | p 1813 N95-24174

ARIZONA STATE UNIV., TEMPE, AZ.
Laboratory spectra of field samples as a check on two atmospheric correction methods p 1711 N95-23894
Mineralogic variability of the Kelso Dunes, Mojave Desert, California derived from Thermal Infrared Multispectral Scanner (TIMS) data p 1711 N95-23920
AIRSAR views of aerolian terrain p 1713 N95-23941

ARIZONA UNIV., TUCSON, AZ.
Residual strength of thin panels with cracks p 1700 N95-23311
Photochemical energy conversion by membrane-bound photoredox systems
| DE95-004405 | p 1729 N95-23361
Classification of the LCVF AVIRIS test site with a Kohonen artificial neural network p 1706 N95-23874

ARKANSAS UNIV., PINE BLUFF, AR.
Automation technology using Geographic Information System (GIS) p 1863 N95-23284

ARMY ARMAMENT RESEARCH, DEVELOPMENT AND ENGINEERING CENTER, WATERVLIET, NY.
Notch-tip damage and translaminar fracture toughness measurements from carbon/epoxy laminates
| AD-A280101 | p 1627 N95-22833

ARMY CONSTRUCTION ENGINEERING RESEARCH LAB., CHAMPAIGN, IL.
Corrosion control acceptance criteria for sacrificial anode type, cathodic protection systems (user guide)
| AD-A285275 | p 1662 N95-23117

ARMY NATICK LABS., MA.
Effect of hyperbaric carbon dioxide on spores and vegetative cells of bacillus stearothermophilus
| AD-A280115 | p 1747 N95-23251

ARMY RESEARCH LAB., ABERDEEN PROVING GROUND, MD.
Morphology of extinguished monolithic JA2 grains fired in a 30-mm Solid Propellant Electrothermal Chemical (SPETC) gun
| AD-A285792 | p 1652 N95-22506

ARMY RESEARCH LAB., WATERTOWN, MA.
Evaluation of a Multiple Instruction/Multiple Data (MIMD) parallel computer for CFD applications
| AD-A285796 | p 1762 N95-22509
Rationale for the Modular Air-system Vulnerability Estimation Network (MAVEN) methodology
| AD-A285797 | p 1611 N95-22510

AUBURN UNIV., AL.
Summary of solar cell data from the Long Duration Exposure Facility (LDEF)
| NASA-CR-196539 | p 1727 N95-22904
Influence of backup bearings and support structure dynamics on the behavior of rotors with active supports
| NASA-CR-197438 | p 1694 N95-23190
Dynamic modelling and response characteristics of a magnetic bearing rotor system including auxiliary bearings
| NASA-CR-197859 | p 1694 N95-23213
Synchronous dynamics of a coupled shaft/bearing/housing system with auxiliary support from a clearance bearing: Analysis and experiment
| NASA-CR-197858 | p 1695 N95-23214
Ignition transient calculations in the Space Shuttle solid rocket motor p 1625 N95-23640
The effect of impact angle on craters formed by hypervelocity particles p 1700 N95-23839
Aerodynamic flight control to increase payload capability of future launch vehicles
| NASA-CR-197704 | p 1619 N95-24032

AVRO INTERNATIONAL AEROSPACE, WOODFORD (ENGLAND).
Health and usage monitoring systems: Corrosion surveillance p 1607 N95-23506

B

BELGIAN CENTER FOR CORROSION STUDY, BRUSSELS (BELGIUM).
In-situ detection of surface passivation or activation and of localized corrosion: Experiences and prospectives in aircraft p 1643 N95-23508
Test method and test results for environmental assessment of aircraft materials p 1643 N95-23509

BETTIS ATOMIC POWER LAB., WEST MIFFLIN, PA.
The hydrogen embrittlement of alloy X-750
| DE95-003207 | p 1640 N95-22893

BHABHA ATOMIC RESEARCH CENTRE, BOMBAY (INDIA).
Video frame processor
| DE94-635414 | p 1753 N95-23962
Modified molecular sieves: Stationary phase for the gas chromatographic separation of hydrogen isotopes
| DE94-627282 | p 1814 N95-24175

BOEING CO., HUNTSVILLE, AL.
Scheduling with genetic algorithms p 1761 N95-23762

BOEING DEFENSE AND SPACE GROUP, SEATTLE, WA.
Evaluation of adhesive materials used on the Long Duration Exposure Facility
| NASA-CR-4646 | p 1626 N95-22918
Euler technology assessment for preliminary aircraft design employing OVERFLOW code with multiblock structured-grid method
| NASA-CR-4651 | p 1608 N95-23095
Recent results from Long Duration Exposure Facility materials testing p 1638 N95-23898
Collection and review of metals data obtained from LDEF experiment specimens and support hardware p 1646 N95-23905
Organic matrix composite protective coatings for space applications p 1627 N95-23914

BOSTON UNIV., MA.
Fabric geometry distortion during composites processing p 1631 N95-23288
A self-organizing neural network architecture for auditory and speech perception with applications to acoustic and other temporal prediction problems
| AD-A285640 | p 1800 N95-23782

BRADFORD UNIV. (ENGLAND).
Low Earth Orbit satellite/terrestrial mobile service compatibility p 1656 N95-22819

BRITISH BROADCASTING CORP., TADWORTH (ENGLAND).
DRACULA: Dynamic range control for broadcasting and other applications
| BBC-RD-1994/13 | p 1658 N95-24044
The sound insulations of studio doors. Part 2: Door seals

Optical absorption in an indirect-gap semiconductor quantum well systems
|DE94-628878| p 1849 N95-22759
Two-photon absorption in an indirect-gap semiconductor quantum well systems 1. Interband transitions
|DE94-628879| p 1849 N95-22760
Two-photon absorption in an indirect-gap semiconductor quantum well systems 2. Excitonic transitions
|DE94-628880| p 1849 N95-22761
Sullivan model for wetting transition in closed system
|DE94-628472| p 1665 N95-22771
The propagation of travelling waves for stochastic generalized KPP equations
|DE94-628473| p 1787 N95-22772
Flexural vibration of thin piezoelectric laminate circular cylinder of hexagonal symmetry
|DE94-628474| p 1698 N95-22773
General crystal in prebiotic context
|DE94-628475| p 1840 N95-22774
The role of triplet correlation function in dense fluids
|DE94-628476| p 1849 N95-22775
Gauge dependence and new kind of two-dimensional gravity theory with trivial quantum corrections
|DE94-628502| p 1850 N95-22776
Nahm's product and W-algebra
|DE94-628504| p 1787 N95-22777
Relativistic particle with torsion and charged particle in a constant electromagnetic field: Identity of evolution
|DE94-628506| p 1803 N95-22778
Deformed Heisenberg algebra and fractional spin field in 2+1 dimensions
|DE94-628507| p 1850 N95-22779
Non-zero temperature two-mode squeezing for time-dependent two-level systems
|DE94-628427| p 1850 N95-22782
Supersymmetric singlet majorons and cosmology
|DE94-628571| p 1850 N95-22783
A space-time lattice version of scalar electrodynamics
|DE94-628577| p 1850 N95-22784
The problem of phase transition and the heavy ion collisions at very high energies
|DE94-628584| p 1816 N95-22785
Baryon number fluctuations in a quark-hadron phase transition
|DE94-628585| p 1804 N95-22786
Dirac canonical quantization and Faddeev-Jackiw symplectic quantization of higher order Lagrangians
|DE94-628428| p 1796 N95-22788
Hadrons of arbitrary spin and heavy quark symmetry
|DE94-628597| p 1804 N95-22789
Results from neutrino experiments
|DE94-628604| p 1804 N95-22790
Long range potentials and multiple scattering theory in complex systems
|DE94-628881| p 1804 N95-22791
Idempotents in Banach algebra
|DE94-628429| p 1787 N95-22794
Jacobson radicals in matrix near rings
|DE94-628424| p 1796 N95-22808
Trisecant curve associated to a smooth curve in P(sub 3) of degree d greater than g+2
|DE94-628425| p 1787 N95-22809
The decays of D(sup *)-mesons
|DE94-628610| p 1804 N95-22810
(pi)- and a(sub 1)-meson physics in current algebra at the quark level
|DE94-628611| p 1804 N95-22811
The omega pi(sup 0)-transient form factor within effective chiral Lagrangian approach
|DE94-628612| p 1850 N95-22812
Variational calculations for He-3 impurities on He-4 droplets
|DE94-628469| p 1840 N95-22839
Non local pseudopotentials, transport properties of liquid noble metals
|DE94-627416| p 1640 N95-22840
Generalized phase transformations of spinor fields
|DE94-628505| p 1656 N95-22841
Block spins and chirality in Heisenberg model on Kagome and triangular lattices
|DE94-629044| p 1840 N95-22845
Correlation effects in high-Tc superconductors and heavy fermion compounds
|DE94-629057| p 1840 N95-22846
Semi-symmetric manifolds satisfying certain curvature conditions
|DE94-628414| p 1788 N95-22922
The fundamental group of complex hyperplanes arrangements
|DE94-628426| p 1796 N95-22933
KKR-CPA calculations of density of states and soft X ray emission from disordered Li-Mg alloys
|DE94-628882| p 1640 N95-22934
Structural properties of silicon clusters: An empirical potential study
|DE94-628902| p 1805 N95-22935
Propagation of waves at the loosely bonded interface of two porous elastic half-spaces
|DE94-628477| p 1800 N95-23018
Static parametric fluctuations give nonstatistical behaviour in uncoupled chaotic systems
|DE94-628478| p 1794 N95-23019
Photoinduced Bragg grating formation in optical fibres as a consequence of convective instability
|DE94-628479| p 1841 N95-23020
Surface growth of two kinds of particles deposition models
|DE94-628480| p 1841 N95-23021
Dynamical behaviour of the coupled diffusion map lattice
|DE94-628481| p 1841 N95-23022
Effect of critical field on screened dielectric breakdown growth
|DE94-628482| p 1661 N95-23046
Effects of long-range coupling on aggregation
|DE94-628483| p 1842 N95-23047
On core level electron diffraction
|DE94-628484| p 1842 N95-23048
Strong-coupling polaron effect in quantum dots
|DE94-628485| p 1850 N95-23049
Membrane phase separations, asymmetry and implications in the origin of life
|DE94-628486| p 1747 N95-23050
Cumulant approach to dynamical correlation functions at finite temperatures
|DE94-628487| p 1788 N95-23051
An extension of Freedman's results on a model of predator-prey dynamics as modified by the action of a parasite
|DE94-628488| p 1796 N95-23052
Enhancement of biomembrane functions under phase-separated conditions: A self-organized criticality phenomenon?
|DE94-628489| p 1747 N95-23053
A model for the metal-nonmetal transition in metal-molten salt solutions
|DE94-628490| p 1640 N95-23057
The origin of chirality in protein amino acids
|DE94-628491| p 1747 N95-23058
Asymptotically exact solution of a local copper-oxide model
|DE94-628492| p 1842 N95-23059
Molecular relics from chemical evolution and the origin of life
|DE94-628493| p 1747 N95-23060
Spontaneous wave packet reduction
|DE94-634280| p 1851 N95-23454
Iterative solutions of nonlinear equations in smooth Banach spaces
|DE94-634287| p 1790 N95-23455
Spinning particles in the Euclidean Taub-NUT space
|DE94-634320| p 1810 N95-23456
Linearizing W-algebras
|DE94-634324| p 1790 N95-23457
Ishikawa iteration process for nonlinear Lipschitz strongly accretive mappings
|DE94-634284| p 1792 N95-23658
Singular moduli and Arakelov intersection
|DE94-634286| p 1792 N95-23659
Universal Hodge bundle and Mumford isomorphisms on the abelian inductive limit of Teichmueller spaces
|DE94-634325| p 1796 N95-23660
On certain N-sheeted coverings of curves and symmetric numerical semigroups which cannot be realized as Weierstrass semigroups
|DE94-634328| p 1797 N95-23661
Charm-conserving strangeness-changing two body hadronic decays of charmed baryons
|DE94-628621| p 1811 N95-23770
Photoionization of O(6+) below the n=3 threshold of the reduced ion
|DE94-634436| p 1844 N95-23774
Neutrino masses and mixing
|DE94-628632| p 1812 N95-23784
Neutrinoless double beta decay and the solar neutrino problem
|DE94-628633| p 1812 N95-23785
Neutrino mass
|DE94-628634| p 1812 N95-23786
Effective (mu)-term in superstring theory
|DE94-634326| p 1851 N95-23922
The exchange algebra for Liouville field on Riemann surfaces with h greater than 1 genus
|DE94-635446| p 1792 N95-23971

Quantum fluctuations of D(sub 5d) polarons on C(sub 60) molecules
[DE94-635787] p 1812 N95-23985
Lattice relaxation study on self-trapped exciton and biexciton in neutral and charged fullerenes

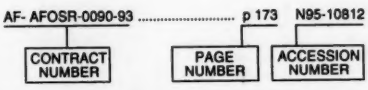
Y

YALE UNIV., NEW HAVEN, CT.
Algebraic theory of molecules p 1814 N95-22958

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The page number helps to locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

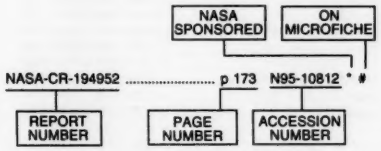
Typical Report Number Index Listing



Listings in this index are arranged alphanumerically by report number. The accession number denotes the number by which the citation is identified. The page number helps to locate the citation in the abstract section. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

APPENDIX

NASA SCIENTIFIC AND TECHNICAL INFORMATION OFFICE PRODUCTS AND SERVICES

The NASA Scientific and Technical Information (STI) Office provides for the collection and announcement of aerospace-related reports and literature obtained worldwide through agreements and exchanges. The result of the collection is the comprehensive NASA STI Database that covers aeronautics, space, and supporting disciplines.

The STI Database, documents generated or obtained by NASA, and products and services derived from or supporting the database are made available to the NASA research community and to the public. Descriptions and sources of these items are presented in the following pages.

Scientific and Technical Aerospace Reports (STAR) is an abstract journal, listing citations with abstracts for aerospace-related reports obtained from worldwide sources. *STAR* is issued on the first of each month, and announces current documents that have been entered into the NASA STI Database during the previous month. The reports are of the following types:

- NASA, NASA contractor, and NASA grantee reports;
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms;
- Translations in report form;
- NASA-owned patents and patent applications
- Other U.S. Government agency and foreign patents and patent applications
- Domestic and foreign dissertations and theses.

Journal, book, and conference literature, journal translations, and certain foreign dissertations having the same subject scope as *STAR* are announced in a companion journal, *NASA Open Volumes on Aerospace (NOVA). NOVA* is issued on the 15th of each month and is available from the NASA Center for AeroSpace Information, at the address below.

ELIGIBILITY AND REGISTRATION FOR NASA STI PRODUCTS AND SERVICES

Organizations of the type listed below that have registered with NASA can receive products and services.

- NASA offices and installations, contractors, subcontractors, grantees, and consultants;
- Other U.S. Government agencies and their contractors;
- Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
- Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
- Organizations abroad that have established reciprocal documents exchange arrangements with NASA.

The central service points—central points of document acquisition and control within qualified organizations—or individuals are eligible to register for NASA STI products and services. Domestic organizations or individuals may be eligible to receive various classes of NASA publications and services and should address their requests for registration or further information to:

ATTN: Registration Services
NASA Center for AeroSpace Information
800 Elkridge Landing Road
Linthicum Heights, MD 21090-2934
301-621-0390

Organizations abroad should direct requests to:

National Aeronautics and Space Administration
Scientific and Technical Information Office (JT)
International STI Office
Washington, DC 20546-0001
USA
703-271-5640

SUBJECT SCOPE

The subject scope of *STAR* and *NOVA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of Earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

HOW TO USE *STAR* SUBJECT CATEGORIES

Abstracts in *STAR* are categorized by 10 major subject divisions that are divided further into 76 specific subject categories. The subject divisions and categories are listed in the Table of Contents together with a note for each that defines its scope and provides any cross-references. For example:

> **16 SPACE TRANSPORTATION**
>
> Includes passenger and cargo space transportation, e.g., shuttle operations; and space rescue techniques. For related information see also *03 Air Transportation and Safety* and *18 Spacecraft Design, Testing and Performance.* For space suits see *54 Man/System Technology and Life Support.*

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents available on microfiche are designated by a pound sign (#) following the accession number.

LIMITED REPRODUCIBILITY

A note of limited reproducibility appears in the citation, if there are factors affecting the reproducibility of more than 20% of the document. These factors include faint or broken type, color photographs, black and white photographs, foldouts, dot matrix print, or some other factor that limits the reproducibility of the document. This notation also appears on the microfiche header.

NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report Number Index, patents are indexed by the NASA Case Number, and the U.S. Patent Class. Patent applications are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

Printed copies of patents (which are not microfiched) are available for purchase from the U.S. Patent and Trademark Office.

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the U.S. Patent and Trademark Office.

NASA patent application specifications are sold in both paper copy and microfiche by the NASA Center for AeroSpace Information (CASI). The N accession number should be used in ordering either paper copy or microfiche from CASI.

The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

National Aeronautics and Space Administration
Associate General Counsel for Intellectual Property
Code GP
Washington, DC 20546-0001

SOURCES FOR DOCUMENTS

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below, and their addresses are listed on page A-6. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: CASI. Sold by the NASA Center for AeroSpace Information. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page A-7.

NOTE ON ORDERING DOCUMENTS: When ordering publications from NASA CASI, use the N accession number or other report number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: ESDU. Pricing information on specific data, computer programs, and details on Engineering Sciences Data Unit (ESDU) topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address, both of which are on page A-6.

Avail: Fachinformationszentrum Karlsruhe. Gesellschaft für wissenschaftlich-technische Information mbH 76344 Eggenstein-Leopoldshafen, Germany.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, CA. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration (JBD-4), Public Documents Room (Room 1H23), Washington, DC 20546-0001, or public document rooms located at NASA installations, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: NTIS. Sold by the National Technical Information Service. Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) are available. For information concerning this service, consult the NTIS Subscription Section, Springfield, VA 22161.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free. (See discussion of NASA patents and patent applications on page A-3.)

Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed on page A-6. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 53 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 53 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on page A-8. These libraries are *not* sales outlets. A local library can contact a regional depository to help locate specific reports, or direct contact may be made by an individual.

PUBLIC COLLECTION OF NASA DOCUMENTS

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

SUBMITTING DOCUMENTS

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those you will transmit to NASA, DOD, or DOE through the

usual contract- or grant-reporting channels), please send them for consideration to the NASA Center for AeroSpace Information, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR's* companion journal, *NOVA*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on a public sale at the NASA Center for AeroSpace Information. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

STAR is publicly available on annual subscription from the NASA Center for AeroSpace Information (CASI). 1995 *STAR* subscription prices are $100.00/domestic and $125.00/foreign. Single copy prices: $33.00/domestic, $41.00/foreign.

An annual, cumulative *STAR Index* is also available at $70.00/domestic and foreign.

STAR is available to registered users on annual subscription from the NASA Center for AeroSpace Information, ATTN: Registration Services, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.

IMPORTANT NOTICE

For users not registered at the NASA CASI, prepayment is required. Additionally, a shipping and handling fee of $1.00 per document for delivery within the United States and $9.00 per document for delivery outside the United States is charged.

For users registered at the NASA CASI, document orders may be invoiced at the end of the month, charged against a deposit account, or paid by check or credit card. NASA CASI accepts American Express, Diners' Club, MasterCard, and VISA credit cards. There are no shipping and handling charges. To register at the NASA CASI, please request a registration form through the NASA Access Help Desk at the address or numbers below.
